Bid documents are available only online from eMaryland Marketplace (eMM). Those are the only official documents to be used by Bidders for this Invitation for Bid (IFB). The Bidders shall print on their own stationary the required documents for submitting their bid (as Construction BID Form, Bid Proposal Affidavit, BID Bond, etc.) and submit to the Owner (DPSCS, Division of Capital Construction and Facilities Maintenance) in a sealed envelope which clearly indicates that it contains a sealed bid for this project with the bid due date and the name and address of the Bidder.

Minority Business Enterprises (MBEs) are encouraged to participate and respond to this request for Bid.

CONFORMED DOCUMENT 3 APRIL 2015: This project manual contains sections revised during bidding, and is published for the Contractor's convenience for use during construction. It does not replace the Contract Documents, which comprise the Bid Documents plus revisions issued as Addenda.

CONSTRUCTION BID FORM

DO NOT USE THIS FORM FOR SUBMITTING THE BID. USE FORM PROVIDED BY THE ISSUING OFFICE.

CONSTRUCTION BID FORM

Date Submitted:_____

STATE OF MARYLAND
Department of Public Safety and Correctional Services (DPSCS)
Division of Capital Construction and Facilities Maintenance (DCCFM)
Carl Lazerow; Director and Procurement Officer
6776 Reisterstown Road, Suite 201, Plaza Office Center
Baltimore, Maryland 21215-2341
DPSCS CONTRACT NO: KT-000-150-C01

Gentlemen:

The undersigned hereby submits its Bid for the construction of the following Contract:

BCDC Youth Detention Center, Baltimore Detention Center, Baltimore, Maryland

1. The undersigned has received, read, and fully understands:

   The Drawings and Project Manual for the project, dated February 5, 2015 as prepared by PSA-Dewberry + Penza Bailey Architects, a Joint Venture, including the "Instructions to Bidders," and the "General Conditions," contained therein.

   Addenda to above numbered and dated:

   _____
   (Insert all addendum numbers and respective issue dates)

   _____
   (Insert all addendum numbers and respective issue dates)

   _____
   (Insert all addendum numbers and respective issue dates)

   _____
   (Insert all addendum numbers and respective issue dates)

2. The undersigned has examined the site, existing structures, access roads, existing utilities, fencing, and all existing conditions that affect the construction bid.

3. The undersigned is able to provide all the materials, products, labor, equipment, supervision, managerial and professional services necessary for the Contract, and is able

_____ _____
(Sign for Identification) Firm Name (Please PRINT or Type)

to construct the Contract as intended by the Contract Documents (Drawings, Project Manual, and Addenda).

4. The undersigned is able to complete this project within the stipulated calendar days and/or critical completion dates specified in the Contract Documents.

5. The undersigned understands that this Construction Bid Form must be completed and submitted by the Bidder in its entirety to be considered a responsive Bid. Failure to completely fill in all blanks, including Unit Price Schedule, may be cause for rejection of Bid.

6. The undersigned understands that the Minority Business Enterprise (MBE) Utilization overall total goal shall be **THIRTY PERCENT (30%) of the BID with SUBGOAL REQUIREMENTS,** as stated below and in the General Conditions of the Contract between Owner and Contractor, Section 10. The minimum percentage of MBE participation as proposed by the Bidder shall be documented and maintained at the time of contract award.

   Subgoals: **7%** African American-owned MBE, **4%** Asian-owned MBE;

   If a bidder is unable to achieve the MBE Utilization goal, the bidder shall request a waiver on forms **DPSCS OS 01A MBE (**MBE Utilization and Fair Solicitation Affidavit and Participation Schedule)**, DPSCS OS 01B MBE (**MBE Participation Waiver Guidance), & **DPSCS OS 01C MBE** (Good Faith Efforts Documentation to Support Waiver Request).

7. The undersigned understands that the Veteran Owned Small Business Enterprise (VSBE) Utilization overall total goal shall be **ONE PERCENT (1%) of the BID,** as stated below and in the General Conditions of the Contract between Owner and Contractor, Section 10. The minimum percentage of VSBE participation as proposed by the Bidder shall be documented and maintained at the time of contract award. If a bidder is unable to achieve the VSBE Utilization goal, the bidder shall request a waiver on forms **DPSCS OS 11B MBE** (VSBE Waiver Guidance) and **DPSCS OS 11C MBE** (VSBE Good Faith Effort Documentation to Support Waiver Request).

8. The undersigned understands that the completed MBE forms **DPSCS OS 01A MBE** (MBE Utilization and Fair Solicitation Affidavit and Participation Schedule) and **DPSCS 0S 11A MBE** (VSBE Utilization Fair Solicitation Affidavit Participation Schedule with Instructions) **MUST BE SUBMITTED WITH THE BID**.

   The undersigned also understands that if the undersigned fails to submit these forms with the Bid as required, the procurement officer shall deem the Bid non-responsive. The undersigned clearly understands that failure to comply with the affirmative action plan requirement may cause the Bid to be considered non-responsive.

(Sign for Identification) Firm Name (Please PRINT or Type)

9. The undersigned understands that if the undersigned is the apparent Awardee, the undersigned shall submit to the State the MBE documentation as herein stated and specified in Section 10 of the "State of Maryland General Conditions."

   The undersigned understands that the completed MBE forms **DPSCS OS 03A MBE** (MBE Subcontractor Project Participation Certification), **DPSCS 0S 03B MBE** (MBE Prime Project Participation Certification), and **DPSCS OS 04 MBE** (Outreach Efforts Compliance Statement), as applicable, must be submitted within 10 working days of notification of apparent awardee.

10. The undersigned provides its eMaryland Market Place Vendor ID on Page 14 of this Construction Bid Form.

Having carefully examined the "Instructions to Bidders", the "General Conditions", technical specifications, drawings and addenda, and having received clarification from the State on any and all issues, questions and items of conflict or upon which any doubt arose, the undersigned proposes to furnish all materials, labor, equipment, supervision, managerial, and professional services necessary for the project in accordance with the contract documents.

(This Space is Intentionally Left Blank)

(Sign for Identification) Firm Name (Please PRINT or Type)

A. AWARD OF CONTRACT:

The **Contract** will be awarded to the responsible Bidder submitting the lowest responsive **LUMP SUM BID PRICE**, which shall include the total cost to complete all the work specified in the solicitation documents inclusive of the **LUMP SUM PRICE** for the **SPECIALTY ALLOWANCE SCHEDULE A** and the **LUMP SUM PRICE** for the **UNIT PRICE SCHEDULE B,** in accordance with DPSCS "Instructions To Bidders For Construction Contracts"**.** The State reserves the right to reject any or all bids, at its sole discretion, in the interest of the State of Maryland.

The BID: The **LUMP SUM PRICE** for construction of the Project as described in Section 01 10 00 – Summary, within the limits defined in the Contract Documents, inclusive of Contractor's staging area, temporary facilities, fencing, and access drives, and all other Work as written, drawn, and/or indicated in the Contract Documents. The **LUMP SUM BID PRICE** includes all work in place including the required demarcation line terminations/interface points for structures and utility systems as described in the Summary of Work and as otherwise required by the Contract Documents. The price shall include all materials and labor, overhead, profit, applicable fees, permits and sales tax, to provide a complete and fully operational system inclusive of any other associated Work. Work shall be performed within the time identified herein.

The SPECIALTY ALLOWANCE SCHEDULE A and UNIT PRICE SCHEDULE B: The **LUMP SUM PRICE** for the **SPECIALTY ALLOWANCE SCHEDULE A** and the **UNIT PRICE SCHEDULE B** is as described in Section 01 21 00 Specialty Allowances, and Section 01 22 00 Unit Price Allowances. These **LUMP SUM PRICES** include all work in place including the required demarcation line terminations/interface points for structures and utility systems as described in the Summary of Work and as otherwise required by the Contract Documents. The price shall include all materials and labor, overhead, profit, applicable fees, permits, and sales tax, to provide a complete and fully operational system inclusive of any other associated Work. Work shall be performed within the time identified herein.

It is understood that the **BID** price will remain firm for a time period of **one hundred and twenty (120) calendar days from the Bid Opening Date**; and that if the undersigned be notified of acceptance of this proposal within this time period, the undersigned shall execute a contract for the above stated compensation(s); and shall complete the contract work in accordance with the sequences called for within the Contract Documents; and in accordance with and within the duration indicated hereinafter from the Notice-to-Proceed (NTP) date, and furthermore agrees that if the work is not completed within the time period specified, the Contractor will be liable for Liquidated Damages as specified in the "General Conditions", Section 7.06.O.

(Sign for Identification) Firm Name (Please PRINT or Type)

B. **BID:** The following **LUMP SUM BID PRICE,** includes **LUMP SUM TOTAL PRICE** for the **SPECIALTY ALLOWANCE SCHEDULE A** and the **LUMP SUM TOTAL PRICE** for the **UNIT PRICE SCHEDULE B**, as required by the Contract Documents:

_____ Dollars
Written

($)_____
Figures

Failure to properly and completely fill in all blanks, may be cause for rejection of this Bid.

C. SPECIALTY ALLOWANCE - SCHEDULE A:

The Specialty Allowance Prices in **Specialty Allowance Schedule A** are for contractual purposes as indicated and shall be included in the **LUMP SUM BID (Paragraph B, above)**. Prices shall remain in effect for the duration of the Contract. The Specialty Allowance shall be used only as directed and approved by the Owner indicating amounts to be charged to the allowance. The Specialty Allowance shall include all material, labor, incidentals, other direct and indirect costs, overhead, taxes, insurance, profits, applicable fees, permits, and sales tax. Work shall be performed within the time identified.

The Contractor is responsible, through the Contractor's Construction Inspection and Testing Firm (CCITF), to determine measurement of material and quantities per the Contractor's Quality Control Program. The State reserves the right to verify materials and quantities through the State's Construction Inspection and Testing Firm (SCITF). Payment for any Construction Allowance items will be made on the basis of the quantities as actually measured in place where applicable. All items of work required for **Specialty Allowance Schedule A** shall be completed in compliance with the Contract Documents for this Project.

Specialty Allowance Schedule A is provided in the Contract as an Allowance for use by the Owner. All items of work may or may not be utilized during the Contract Period. All remaining and unused portions of the Allowance shall revert to and be credited to the State, or may be used for any other Contract work as requested by the Owner. The Contractor will not be allowed to submit a claim against the State should the items be eliminated entirely or in part.

D. UNIT PRICE SCHEDULE B:

The Unit Prices in **Unit Price Schedule B** are for contractual purposes as indicated and shall be included in the **LUMP SUM BID (Paragraph B, above)**. Prices shall remain in effect for the duration of the Contract. The Unit Prices are for work beyond the limits of work indicated in the Contract documents and will be used to increase or decrease the Contract Sum. The Unit Price will be used only as directed by the Owner indicating amounts to be charged to the allowance. The Unit Prices shall include all material, labor, incidentals, other direct and indirect costs, overhead, taxes, insurance, profits, applicable fees, permits, and sales tax. Work shall be performed within this Contract time.

The Contractor is responsible, through the Contractor's Construction Inspection and Testing Firm (CCITF), to determine measurement of material and quantities per the Contractor's Quality Control Program. The State reserves the right to verify materials and quantities through the State's Construction Inspection and Testing Firm (SCITF). Payment for any Unit Price items will be made on the basis of the quantities as actually measured in place where applicable. All items of work required for **Unit Price Schedule B** shall be completed in compliance with the Contract Documents for this Project.

Unit Price Schedule B is provided in the Contract for use by the Owner. All items of work may or may not be utilized during the Contract Period. All remaining and unused portions of the Allowance shall revert to and be credited to the State, or may be used for any other Contract work as requested by the Owner. The Contractor will not be allowed to submit a claim against the State should the items be eliminated entirely or in part.

UNIT PRICE SCHEDULE B

H. CONSTRUCTION PERIOD START DATE:

"Start Date" is the date stipulated in the "Notice to Proceed" (NTP) for the Contractor to begin as defined in Section 7.01 of the State of Maryland General Conditions.

I. CONTRACT TIME AND COMPLETION DATE:

In accordance with the State of Maryland General Conditions the **Substantial Completion Date** for the contract shall not exceed **Five Hundred Forty-eight (548) calendar days** from the Notice-to-Proceed (NTP) date. The following is a breakdown of the required schedule milestones and their respective completion calendar days:

CONSTRUCTION PHASE MILESTONES	CALENDAR DAYS PER PHASE	CUMULATIVE CALENDAR DAYS
Construction Notice-to-Proceed	0	0
Pre-Commissioning Completion	488	488
Commissioning: Includes all Commissioning Completion & LEED Testing Completion and Final Inspection	60	548
SUBSTANTIAL COMPLETION		**548**

J. LIQUIDATED DAMAGES:

Liquidated damages will be assessed on a per calendar day basis commencing on the day following the date established for the Substantial Completion Milestone. Liquidated damages will accrue until the Work is accepted and approved for use under the requirements established in the State of Maryland General Conditions Article 7.12, Substantial Completion and Final Inspection.

1. If Substantial Completion Milestone is not met, including all successful Commissioning and LEED testing, the Contractor shall be liable for liquidated damages of **Two Thousand-Five Hundred ($2,500.00)** Dollars for each calendar day, as provided in the General Conditions, Section 7.06, until the Substantial Completion is achieved.

K. BIDDERS KEY PERSONNEL QUALIFICATION REQUIREMENTS

It is agreed that if the undersigned is the apparent awardee, the undersigned shall submit to the State the Key Personnel Qualification documentation as specified in Section 00 15 20, Bidder's Key Personnel Qualification Requirements. Qualifications of each of the required Key Personnel shall be submitted not later than ten (10) working days of notification of apparent awardee.

(Sign for Identification) Firm Name (Please PRINT or Type)

L. PRELIMINARY PROGRESS SCHEDULE:

As required by the “State of Maryland Instructions to Bidders" and the “State of Maryland General Conditions,"the Contractor shall submit, within fourteen (14) calendar days following execution of the Contract, the Preliminary Progress Schedule in Gantt Bar Chart format, showing the intended start date (NTP), each milestone completion date noted above. The fully cost loaded Project CPM schedule shall be submitted to the State within thirty (30) calendar days following Notice-to-Proceed per Specification Section 01 32 00 of the Project Manual.

M. BID BONDS:

Submitted with this Bid shall be a fully executed Bid Bond in the amount of **5%** of the **TOTAL BID** (Base Bid + Allowances). Bid Bonds, except those of the three low bidders, will be returned after the Bid opening. Other bid bonds will be returned after the related contract has been executed. If no Bid has been accepted within one hundred and twenty (120) calendar days after the Bid opening, then any bond may be returned upon demand of the Bidder.

N. BID DOCUMENT AVAILABILITY:

Bid documents are available only online from eMaryland Marketplace (eMM). Those are the only official documents to be used by Bidders for this Invitation for Bid (IFB). The Bidders shall print on their own stationery the required documents for submitting their bid (such as Construction Bid Form, Bid Proposal Affidavit, Bid Bond, etc.) and submit to the Owner (DPSCS, Division of Capital Construction and Facilities Maintenance) in a sealed envelope which clearly indicates it contains a sealed bid for this project with the **project name, contract number, bid due date, and the name and address of the Bidder**.

SECTION 001520

APPARENT AWARDEE'S KEY PERSONNEL QUALIFICATION REQUIREMENTS

SECTION 00 15 20 – APPARENT AWARDEE'S KEY PERSONNEL QUALIFICATION REQUIREMENTS

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. This section is subject to the State of Maryland Department of Public Safety and Correctional Services General Conditions of the Contact between Owner and Contractor.

1.2 ADDITIONAL INFORMATION REQUIRED TO BE SUPPLIED BY THE APPARENT AWARDEE

A. This Section identifies specific requirements for Qualifications of the General Contractor's (Apparent Awardee's) Key Personnel.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION

3.1 The apparent awardee shall submit the following information in accordance with the qualifications requirements stated herein.

3.2 Qualifications of each of the required Key Personnel, as noted herein, shall be submitted not later than ten (10) working days of notification of apparent Awardee.

3.3 INFORMATION REQUIRED:

APPARENT AWARDEE'S KEY PERSONNEL QUALIFICATION REQUIREMENTS

1. INTRODUCTION

1.1. The purpose of this Section is to seek key personnel qualification information from General Contractor who is the apparent awardee (herein referred to as "Apparent Awardee") for this construction contract.

2. PROCUREMENT AGENCY

These Qualification Requirements are set forth on behalf of the Owner.

2.1. Issuing Office:

State of Maryland, Department of Public Safety and Correctional Services (DPSCS)

Division of Capital Construction & Facilities Maintenance (DCC&FM)

6776 Reisterstown Rd, Suite 201

Baltimore, MD 21215

2.2. Procurement Officer:

Carl L. Lazerow, Director

DCC&FM

Email: cllazerow@dpscs.state.md.us

2.3. Contract Management Specialist:

Andreana Aytch

DCC&FM

Email: aaytch@dpscs.state.md.us

3. GENERAL INFORMATION

3.1. The Contract Management Specialist shall be the sole point of contact with the Owner for the purposes of preparation and submission of Qualifications. All questions on this Section are to be directed to the Contract Management Specialist.

4. REQUEST FOR PROPOSAL DOCUMENTS

4.1. This document constitutes the entire Key Personnel Qualifications package.

5. PRE-PROPOSAL WALK-THROUGH

5.1. See Invitation to Bid documents.

6. MANDATORY KEY PERSONNEL QUALIFICATION CRITERIA (Minimum Qualifications)

6.1. An unsatisfactory response to any item in the category titled "Mandatory Key Personnel Criteria" will be considered sufficient cause to disqualify an applicant from further consideration for Project Qualification.

6.2. The Apparent Awardee shall provide resume documentation with the qualifications for the following Project key personnel which meet or exceed the following criteria:

6.3. Apparent Awardee shall manage the Project with a Project Superintendent who has a minimum of 10 years of correctional and institutional facility experience which includes at least two (2) completed institutional projects of $15 million, or more, of similar type and complexity to the Project where the individual was the Project Superintendent; **RESUME REQUIRED FROM APPARENT AWARDEE;** AND

6.4. Apparent Awardee shall manage the Project with a Project Manager who has a minimum of 10 years of correctional and institutional facility experience which includes at least two (2) completed institutional projects of $15 million, or more, of similar type and complexity to the Project where the individual was the Project Manager; **RESUME REQUIRED FROM APPARENT AWARDEE;** AND

6.5. Apparent Awardee shall engage a full time LEED Construction Coordinator to manage the LEED certification requirements and LEED construction process on behalf of the Construction team. This individual must be LEED AP, but preferably LEED AP BD+C. The LEED Construction Coordinator must have a minimum of 8 years of LEED project experience, including LEED Silver or greater certified completed projects of similar size and complexity to this Project; **RESUME REQUIRED FROM APPARENT AWARDEE;** AND

6.6. Apparent Awardee shall engage a full time **Security Detention Construction Coordinator (SDCC)** to manage, coordinate, and ensure compliance with all Security related construction work and requirements, including integration with other new construction. The SDCC shall manage all Detention Equipment (doors, windows, hardware, enclosures, furnishings, materials, etc.), and all Security Electronic systems. This individual or firm must have a minimum of 8 years of Security detention equipment and systems project experience within correctional facilities, including two (2) completed correctional projects of $15 million or more; **RESUME REQUIRED FROM APPARENT AWARDEE;** AND

6.7. Apparent Awardee shall engage a **Commissioning Construction Coordinator** to manage, coordinate, and ensure compliance with all Commissioning requirements. This individual or firm must have a minimum of 8 years of project experience with the Commissioning of systems within institutional facilities of projects greater than $15 million; **RESUME REQUIRED FROM APPARENT AWARDEE;** AND

6.8. Substitutions during construction of the key personnel requested above must meet State approval and must meet the qualifications defined herein and as defined within the Project Manual and Contract Documents.

7. QUALIFICATION SUBMISSION CONTENT

7.1. Bid documents are generally subject to the Maryland Public Information Act ("PIA") except that certain documents permitted by PIA are exempt from public disclosure. Clearly mark any information that is considered confidential and privileged.

7.2. The Key Personnel Qualifications shall be submitted **not later than ten (10) working days of notification of apparent Award** and structured in the following manner addressing all the Mandatory Key Personnel Qualification Criteria listed in Paragraph 7, above. Information shall be satisfactory for posting and publication, unless expressly waived by the Contract Management Specialist, as follows:

7.2.1. Key Personnel Qualification Form (Attachment A)

7.2.2. **RESUMES REQUIRED FROM APPARENT AWARDEE** for each of the Key Personnel noted above.

F. Attach each Key Personnel's resumes. At a minimum, resumes shall include:

1. Name
2. Role in this Project
3. Project Experience: Provide project requirements noted herein for Key Personnel. Provide brief project description with responsibility of submitted firm or individual. Project description shall include year completed, and project size.
4. Years of experience: Total____; Years with Current Firm____;
5. Registrations, Professional Affiliations, and/or Professional Certifications
6. Education;
7. Other qualifications pertinent to this Project.
8. **Resume must be a maximum of 1 Page**

SECTION 001530

LIST OF PREQUALIFIED DETENTION EQUIPMENT AND SECURITY ELECTRONICS CONTRACTORS

SECTION 00 15 30 - LIST OF PREQUALIFIED DETENTION EQUIPMENT CONTRACTORS (DEC) AND/OR SECURITY ELECTRONICS CONTRACTORS (SEC)

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. This section is subject to the State of Maryland Department of Public Safety and Correctional Services General Conditions of the Contact between Owner and Contractor.

B. This Section includes the List of Prequalified Detention Equipment and Security Electronics Contractors as determined by an evaluation of mandatory criteria set forth by the State.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION

3.1 On January 15, 2015, the State issued the ***"Request for Qualifications and Information for the Prequalification of Detention Equipment Contractors (DEC) and/or Security Electronics Contractors (SEC)"*** *for the* ***BCDC Youth Detention Center***. The State reviewed the submitted responses for compliance with the requirements and mandatory criteria set forth within the aforementioned Request for Qualifications**.**

3.2 In accordance with State of Maryland regulations, in addition to the Prequalified firms listed below, other prospective Detention Equipment Contractors and/or Security Electronics Contractors have the opportunity to submit their qualifications in accordance with the ***"Request for Qualifications and Information for the Prequalification of Detention Equipment Contractors (DEC) and/or Security Electronics Contractors (SEC)",*** **Attachment 1** to this Section 00 15 30.

A. Qualifications must be submitted no later than **2:00 pm, EST**, **February 17, 2015**.

B. POSTING OF ADDITIONS TO PREQUALIFICATION LIST:

1. If deemed responsive and in compliance with the requirements and mandatory criteria set forth within the aforementioned **Request for Qualifications and Information,** a revised list of prequalified Detention Equipment Contractors and Security Equipment Contractors will be posted on eMarylandMarketplace (eMM) no later than **February 19, 2015**:

   https://ebidmarketplace.com/publicVenSolList.asp

2. Furthermore, the revised list of prequalified Detention Equipment Contractors and Security Equipment Contractors will be included in the earliest issued **Addendum**, but no later than **February 26, 2015**.

3.3 The following is a **LIST OF PREQUALIFIED DETENTION EQUIPMENT CONTRACTORS (DEC) AND/OR SECURITY ELECTRONICS CONTRACTORS (SEC)** found to be compliant with all mandatory criteria (no ranking was applied):

REQUEST FOR QUALIFICATIONS AND INFORMATION FOR THE PREQUALIFICATION OF DETENTION EQUIPMENT CONTRACTORS (DEC) AND/OR SECURITY ELECTRONICS CONTRACTORS (SEC)

BCDC YOUTH DETENTION CENTER.

1. INTRODUCTION

1.1. **PROJECT DESCRIPTION:** Department of Public Safety and Correctional Services (DPSCS), State of Maryland is set to construct a 60-cell new Youth Detention Center (YDC) facility in Baltimore City (herein referred to as "Project") for housing juvenile detainees charged as adults. The Facility, to be used by the Division of Pre-trial Detention and Services (DPDS), will include functions of housing, administration, security, medical, mental health, education, food services, visiting, recreation, etc. for 50 male and 10 female juveniles. The 3-story building totals approximately 61,604 gross sq. ft.: 37,929 gross sq. ft. of new construction; and 23,675 gross sq. ft. of renovation to SUI building. The project site is bounded by Eager Street to North, Forrest Street to the West, Greenmount Street to the East, and Truxton Street to the South.

1.1.1. The entire facility will be a maximum custody facility with related security detention systems and furnishings, and security electronics systems throughout.

1.1.2. The project will achieve at a minimum LEED Silver rating with the USGBC.

1.1.3. The project services will include commissioning and training.

1.2. The purpose of this **Request** is to seek qualifications information from:

1.2.1. **Detention Equipment Subcontractors (herein referred to as "Detention Equipment Contractors (DEC)")** interested in bidding for this construction contract and pre-qualify the competent Security Electronics Contractors.

1.2.2. **Security Electronics Subcontractors (herein referred to as "Security Electronics Contractor (SEC)")** interested in bidding for this construction contract and pre-qualify the competent Security Electronics Contractors.

1.3. List of current pre-qualified Detention Equipment Contractors and Security Electronics Contractors is included within this Invitation for Bids (IFB) and its related Bid documents.

1.3.1. **The project shall include, but not be limited to, Detention Equipment as follows:**

1) Detention Hollow Metal Doors and Frames – doors and frames shall be

constructed of commercial quality galvannealed steel, meet UL-752 Bullet Penetration and ASTM F 1450-12A Door Assembly Impact tests, as well as, other mandatory performance tests and requirements, and be manufactured by the following acceptable manufacturers: Chief Industries; Habersham Metal Product Co.

2) Detention Stainless Steel Windows – windows shall be constructed of 14 GA Stainless Steel and includes tool resisting steel bars, meet ASTM A 627-03 Security Steel Performance requirements, as well as, other mandatory quality performance tests and requirements, and be manufactured by the following acceptable manufacturers: C.M. Security Group, Inc.; Hope's Security Windows; Willo Products.

3) Detention Hollow Metal Windows – windows shall be constructed of 12 GA galvannealed hollow metal and includes tool resisting steel bars, meet mandatory performance tests and requirements, and be manufactured by the following acceptable manufacturers: Chief Industries; Habersham Metal Product Co.

4) Detention Enclosures – enclosures include detention bar grille partitions, bar grille doors, detention woven mesh assemblies, meet mandatory performance tests and requirements, and be manufactured by the following acceptable manufacturers: Kane Manufacturing Corp.; PDI, Inc.; or approved equal.

5) Detention Hardware – hardware includes detention hinges, detention electric locks, detention mechanical locks, detention closers, detention position switches, detention door accessories, sliding door locking devices, and security fasteners, and meet mandatory performance tests and requirements.

6) Detention Furnishings and Equipment – furnishings and equipment include detention mirrors, detention shower seats and stools, detention access panels, detention pistol lockers, detention deal drawers, and detention grab bars. The following shall be owner furnished and contractor installed: detention tables and chairs, detention bunks and desks, shelves, meet mandatory performance tests and requirements, and be manufactured by the following acceptable manufacturers: Chief Industries; Norix Group, Inc.; PDI, Inc.;

7) Detention Glazing – glazing types shall be laminated tempered glass, glass clad polycarbonate, laminated polycarbonate, and low-E insulating unit with glass clad polycarbonate. Types also vary in thickness, and fire resistance, forced-entry and ballistic resistance ratings. Glazing shall meet mandatory quality performance tests and requirements, especially ballistic resistance and forced-entry resistant performance tests.

1.3.2. **The project shall include, but not be limited to Security Electronics as follows:**

1) Programmable Logic Controller (PLC) – Designed for correctional control applications, the PLC: controls and monitors devices; activates relays; provides power to lock and unlock doors; opens and closes valves; turns on and off power to lights and receptacles; monitors sensors; monitors inputs from door position switches, duress push buttons, wireless duress system devices, perimeter detection devices, and other alarm devices.

2) Closed Circuit Television (CCTV) – Standalone, IP based network video management system that is serially integrated into the overall control system. The CCTV system manages and controls the video signals throughout the facility and consists of IP cameras (mega-pixel and conventional), dedicated network electronics, servers and storage devices. The NVR system provides digital storage of video from the cameras throughout the facility.

3) Intercommunication System (Intercom) – means of audio communication from fixed stations throughout the buildings to the control consoles with limited use of

distributed intelligence. Intelligent exchanges allow full switching control. The intercom system includes automated overhead paging capabilities with schedule annunciation.

4) Backbone System Cabling – Fiber Optic Cabling system that supports video, voice and data as indicated in the Project Documents relative to the implementation of the Security Electronics Systems.

5) Graphical User Interface (GUI) – interface between all of the sub-systems and the operator, to primarily include a computer, touchscreen monitor and the GUI software. The GUI software is configured with graphics representing the floor plans of the facility and the control/monitoring icons.

6) State of the art correctional control system.

7) Cabling systems will be routed overhead via square duct and cable tray. Cable tray is only to be used within the security equipment room; all wire and cable outside of the room will be in conduit.

8) Security equipment will be housed in wall mount NEMA enclosures and in 19" vertical equipment racks.

1.4. The proposed Facility is of utmost importance to the State and citizens of Maryland and must meet the scheduled completion date and the performance and quality goals to be provided in the subsequent.

1.5. Detention Equipment Contractors and Security Electronics Contractors must meet or exceed the mandatory qualifications stated herein to be prequalified to pursue the Detention Equipment **and/or** Security Electronics for this Project in the IFB phase.

2. PROCUREMENT AGENCY

2.1. **Issuing Office and Owner:**

State of Maryland, Department of Public Safety and Correctional Services (DPSCS)

Division of Capital Construction & Facilities Maintenance (DCC&FM)

6776 Reisterstown Rd, Suite 201

Baltimore, MD 21215

2.2. **Contract Management Specialist:**

Ed Hochstedt, DCC&FM, (410) 585-3040

Email: ehochstedt@dpscs.state.md.us

2.3. **Architect:**

Daniel Bailey, Penza Bailey Architects, (410) 435-6677

Email: dbailey@penzabailey.com

3. GENERAL INFORMATION AND SUBMITTAL OF QUALIFICATIONS

3.1. This document and attachments constitute the entire Request for Qualifications package.

3.2. **All questions shall be submitted to the Contract Management Specialist and copied to the Architect by email only, no later than 4:00 PM EST on February 13, 2015. NO PHONE CALLS.**

3.3. **An attached "pdf" file of the required qualification forms and information shall be submitted by email to the Contract Management Specialist, and copied to the Architect, on or before 2:00 PM EST on February 17, 2015, in order to be considered. Late proposals will not be accepted. The email subject line shall read "RFQ for YDC DEC and SEC".**

3.4. **Responsiveness to RFQ:** Only responsive applications will be considered and evaluated. A responsive application must be completed according to the instructions, and include all required forms and requested information.

3.5. **Arrears and Debarment Status:** By submitting an application, the DEC and SEC certifies that neither it nor any affiliated entity is currently listed on the debarred Contractor's list published by the State of Maryland Board of Public Works. Additionally, the DEC and SEC shall not be in arrears with State of Maryland corporate income and property taxes.

4. MANDATORY CRITERIA (Minimum Qualifications)

4.1. **Mandatory Construction Experience –** DEC and/or SEC must submit evidence of the continuous provision of successful Detention Equipment and/or Security Electronic construction Work for institutional facilities for a minimum of 5 years. This Work shall include, but not be limited to, the design, provision (furnishing and installation), testing and troubleshooting of all aspects of detention equipment/systems, and/or an integrated security electronics system. The DEC and/or SEC shall have exhibited dependable performance, quality workmanship, prompt maintenance service, and have readily available spare parts. The minimum experience requirements for prequalification include the following:

4.1.1. **Project Experience Qualification Submission Requirements:**

1) Detention Equipment Work: of at least three (3) building construction projects where the Detention Equipment Work was $1 million or more (Detention Equipment Contract costs only, without General Contractor markups) and completed within the past seven (7) years by the Detention Equipment Contractor, where the Detention Equipment Contractor was the prime Detention Equipment Contractor; AND/OR

2) Security Electronics Work: of at least three (3) building construction projects where the Security Electronics Work was $1 million or more (Security Electronics Contract costs only, without General Contractor markups) and completed within the past seven (7) years by the Security Electronics Contractor, where the Security Electronics Contractor was the prime Security Electronics Contractor; AND/OR

3) **If the submitting entity intends to prequalify for both the Detention Equipment Work and the Security Electronics Work, the same project may be used if that project meets the minimum criteria noted in 4.4.1, 1) and 2). (Hence, a total of three (3) projects would be submitted if those projects qualified for both Detention Equipment and Security Electronics Work).**

4.1.2. **All of the projects in 4.4.1 must have been public sector, maximum-security type correctional facilities, and completed and operational for one (1) year.**

5. MANDATORY KEY PERSONNEL QUALIFICATIONS

5.1. The DEC's and SEC's Project Manager and Key Personnel must have been involved in the role for which they will perform on this project on a minimum of two of the projects listed in 4.1.1; Show evidence of past performance as required; AND

5.2. DEC and/or SEC shall closely collaborate with the General Contractor's Security Detention Construction Coordinator (SDCC) in the performance of its Work; AND

5.3. Substitutions during construction of the personnel requested above must meet State approval and must meet the qualifications defined herein.

5.4. **Personnel Qualification Submission Requirements:**

5.4.1. **DEC:** shall provide one (1) resume for the **DEC's Project Manager**. Project Manager shall have a minimum of 10 years of Detention Facility experience. It is preferred that this experience shall be with Correctional Facilities, including institutional experience with projects of equal scope, quality, type, and complexity to that required herein.

5.4.2. **SEC:** shall provide resumes for the **SEC's Project Manager and Security Electronics Network Engineer or Electronics Programmer** noted below. Project Manager shall have a minimum of 10 years of Security Facility experience, and the Key Personnel shall have a minimum of 7 years experience. It is preferred that this experience shall be with Correctional Facilities, including institutional experience with projects of equal scope, quality, type, and complexity to that required herein.

1) **SEC Project Manager:** SEC Project Manager shall be factory trained and certified in the major systems and subsystems to be provided. SEC Project Manager shall be certified by one of the professional associations related to Security Electronics and integrated control systems.

2) **Security Electronics Network Engineer or Electronics Programmer:** Network Engineer or Electronics Programmer shall be factory trained and certified in network integration, design and troubleshooting of hardware and software components of the specified network solution(s). Network Engineer or Electronics Programmer shall be educated or trained in computer engineering and experienced in the project applications specifically for of security controls integration.

6. OWNER'S RIGHTS AND LIABILITIES

6.1. The State reserves and holds the following rights and options which may be exercised at its sole discretion with respect to the RFQ.

6.1.1. To prequalify responsible and responsive DEC's and SEC's, based upon the submitted proposal, any subsequent clarifications or changes thereto, and the State's evaluation and recommendations, that meets the mandatory requirements as set forth herein, and that best satisfies the requirements and the goals, objectives of the RFQ, the best interest of the State, and the public interest in general.

6.1.2. To supplement, amend, or otherwise modify the proposal requirements at any time after receipt of proposals.

6.1.3. To seek and receive clarifications on any proposal at any time during the procurement process.

7. PROPOSAL CONTENT

7.1. **The RFQ content shall be organized in the following manner addressing all Selection Criteria listed in Sections 4 and 5 above:**

- Cover Letter: Brief one page.
- Application for Prequalification (Attachment A)
- Resumes for Key Personnel listed herein.
- Qualifying Completed Projects (Attachment B)

REQUEST FOR PROPOSAL

REQUEST FOR QUALIFICATIONS AND INFORMATION FOR THE PREQUALIFICATION OF DETENTION EQUIPMENT AND/OR SECURITY ELECTRONICS CONTRACTORS FOR THE CONSTRUCTION OF THE BCDC YOUTH DETENTION CENTER, BALTIMORE, MARYLAND

ATTACHMENT 1A

APPLICATION FOR PREQUALIFICATION

A set of attachments and any additional information should be included with each set.

1. ARE YOU SUBMITTING FOR DETENTION EQUIPMENT CONTRACTOR PREQUALIFICATION?

YES		NO	

2. ARE YOU SUBMITTING FOR SECURITY ELECTRONICS CONTRACTOR PREQUALIFICATION?

YES		NO	

3. Detention Equipment Contractor (DEC) or Security Electronics Contractor (SEC) Name

   (Provide all names under which the applicant does business):

   Is the DEC or SEC related to another firm as a parent, subsidiary, or affiliate?

YES		NO	

   If yes, provide names and addresses for all affiliated, parent and/or subsidiary companies, and state the nature of each affiliation.

4. Address:

5. Tax Identification Number (EIN/SSN):

6. Is DEC or SEC a corporation?

YES		NO	

   If yes, what is the State of incorporation?

7. If not incorporated, specify method and date of organization:

8. Provide a brief history of the Detention Equipment and/or Security Electronics Contractor and reflect project experience similar to that required for this project (**limit to space below**):

9. Provide contact information including name, title, phone number and email address of the person who can respond authoritatively to any questions regarding this response:

Name		Title	
Phone		Email	

10. **Mandatory Construction Experience – Project Experience:** Use **Attachment B** for description of Detention Equipment and/or Security Electronic portions of Projects in conformance with Paragraphs 4.1.1.

11. **Mandatory Key Personnel Qualifications:** Attach resumes for each of the Key Personnel in conformance with Paragraphs 5.4.1 and 5.4.2. (**Limit each resume to one page**)

12. Provide a brief understanding and approach of the scope, quality, interfaces, integrations, and technical aspects of the Detention Equipment and/or Security Electronics work. The understanding shall include the following (**limit to one page if submitting for only one prequalification category; if submitting for both DEC and SEC, limit to two pages**):

13. If there is any additional information the Detention Equipment Contractor and/or Security Electronics Contractor would like to provide, please attach (**limit to 1 page**).

Signed By		Phone No.	
Printed Name		Title

4. Architect: _____

Contact		Email	

5. Contractor: _____

Contact		Email	

6. DEC or SEC Work Contract Completion Date: _____

7A. Detention Equipment Portion of Project (if submitting for DEC): Provide an understanding of the Detention Work, equipment, systems, furnishings involved, and services for which the DEC had responsibility (**limit to space below**):

7B. Security Electronics Portion of Project (if submitting for SEC): Provide an understanding of the Security Electronics Work, systems and integrations involved, and services for which the SEC had responsibility (**limit to space below**):

8. Total DEC Contract Value (if submitting for DEC): $

Total SEC Contract Value (if submitting for SEC): $

Value of DEC Change Orders (if submitting for DEC): $

Value of SEC Change Orders (if submitting for SEC): $

9. Was SEC or DEC Contractor the Prime SEC or DEC Contractor? YES NO

10. Was Project a Correctional Facility? YES NO

SECTION 00 15 40 - SECURITY

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Security program.

B. Entry control.

C. Personnel identification.

D. Project security

E. Fire protection

F. Executive Directive OPS.110.0002 dated 4-4-14

G. Secretary's Directive 04-07 dated 10-17-07

H. Criminal History Security Background Check

1.2 RELATED SECTIONS

A. Summary of Work: Contractor use of premises.

1.3 REFERENCES

A. DEPARTMENT OF PUBLIC SAFETY AND CORRECTIONAL SERVICES, State of Maryland EXECUTIVE DIRECTIVE OPS.110.0002, Custody and Security – Correctional Facility Construction Projects, dated April 4, 2014, (total of 4 pages) - attached. Refer to Appendix A.

B. DEPARTMENT OF PUBLIC SAFETY AND CORRECTIONAL SERVICES, State of Maryland SECRETARY'S DIRECTIVE – 04-07, dated October 17, 2007, (total of 6 pages) – attached. Refer to Appendix B.

C. DEPARTMENT OF PUBLIC SAFETY AND CORRECTIONAL SERVICES, Criminal History Security Background Check form (1 page) – attached. Refer to Appendix C.

1.4 SECURITY PROGRAM

A. Establish a Security Program as directed by Department's Representative to delineate identification process of Contractor's work force. Identify conduct of Contractor's employees in areas of inmate occupancy.

B. Provide outline of Contractor's responsibility for all materials, supplies, and resources during the Contract period.

C. Protect work existing on premises and Department's operations from theft, vandalism and unauthorized entry.

D. Initiate construction related security program in compliance with the Maryland Department of Public Safety and Correctional Institution prior to job mobilization.

E. Maintain program throughout construction period until Department acceptance precludes the need for Contractor security.

F. Projects that are located inside the secured perimeter of the correctional facility will have inmates present on site. Therefore, access to the site will be restrictive. All employees of the Contractor shall be subject to all rules and regulations of the facility. All vehicles shall have doors and tool bins locked at all times. Tools, equipment, materials, etc. shall be completely inaccessible to inmates at all times. All vehicles shall be removed at the end of each workday. All vehicles that must be left on site shall be disabled and shall have all doors, bins, etc. locked.

1.5 PERSONNEL IDENTIFICATION AND BACKGROUND CHECK

1. Employee List: Provide to DPSCS for identification purposes, a list of employees of Contractor, subcontractors, and other firms providing services for or otherwise assigned to this Project.
2. Complete “Criminal History Security Background Check” form for each employee expected to work on the project and give it to the Department’s representative.
3. Provide photographs and photo identification badges as directed by the Department’s Representative.
4. The Department’s Representative will maintain list and copies of photographs including negative, if applicable, on site.
5. Update list of accredited persons employed by Contractor on site. Report personnel changes to the Department’s Representative when they occur. Maintain the list and submit copies to Department on request.

B. Background Checks: The Department will conduct a criminal background investigation on all Contractor employees.

1. A positive finding of arrest and/or conviction will automatically result in denial to work on this Project.
2. The Department may reject any proposed employee based on the findings of the background check.
3. After an employee is cleared and approved to work on the project, the individual will be scheduled for a department issued photo identification card (in accordance with 1.7 below).

C. Orientation

1. Employees cleared to work on the project may be required to attend a briefing or orientation regarding working inside the secure perimeter of an occupied correctional facility.

1.6 ENTRY CONTROL

A. Allow entrance into project iste only to authorized persons with proper identification.

B. Maintain log of workmen and visitors; to be made available to DPSCS on request.

1.7 PERSONNEL IDENTIFICATION

A. The Contractor shall obtain an identification card from the institution for each person authorized to enter premises, including all employees of all Contractors and subcontractors.

B. The card shall include personal photograph, name and assigned number, expiration date and name of employer.

1.8 PROJECT SECURITY

A. General:

1. Project that are located inside the secured perimeter of the correctional facility. The following rules and regulations shall be adhered by:

a. Construction personnel are prohibited from talking to inmates.

b. Construction personnel are prohibited from giving to or receiving anything from inmates.

c. Alcoholic beverages, tobacco and drugs: PROHIBITED.

d. Construction and personnel vehicles will not be left in unattended running condition.

2. Additional facility rules and regulations are as follows:

a. The Contractor shall keep a daily inventory of all tools. Any lost or missing tools shall be reported immediately to the Department. The Contractor shall not let any tools lay around that are not in use.

b. The Contractor shall insure that all supplies and materials not being used are securely stored.

c. The Contractor shall chain and lock all ladders to a secure area when not in use.

d. All vehicles when not in use must be kept locked at all times. No keys are to be left in vehicles.

e. Under no circumstances is glue or gas to be left unattended. The Contractor must dispose of these items off the property at the end of each workday.

f. No type of debris shall be left lying around. Any materials not used must be taken to the storage area.

g. No contact permitted with the inmates.

h. These rules and regulations will be reviewed at the initiation conference prior to the Contractor commencing the work.

B. Construction Materials and Tools:

1. Flammable Liquids:

a. Maintain flammable liquid (e.g., gasoline, fuels, etc.) containers in locked condition at all times.

b. Remove containers at end of each workday.

2. Tools: Maintain tools and related equipment (e.g., hack saw blades, etc.) in protective custody at all times.

C. Construction Personnel Vehicle Parking:

1. Parking spaces, for privately owned vehicles operated by construction personnel will be limited. Construction personnel are not to park within 3 blocks of the perimeter of the Baltimore City Corrections Complex so as not to consume spaces for Corrections employees.

2. The Department's Representative will not assign areas within the Project site for limited Construction personnel parking, other than for a few Department key personnel. If needed, the Department's Representative will notify the Contractor of spaces or areas for parking.

3. Vehicle inspections may be conducted at discretion of the State for the duration of the Contract.

1.9 FIRE PROTECTION

A. General: Protect and maintain fire department facilities (e.g., hydrants, wires, cables, ducts, manholes, posts, poles, signals, alarm boxes, etc.) at all times.

1. Maintain unobstructed access to the following at all times: Fire hydrants, fire department hose connections, and fire alarm boxes.

2. Immediately notify the Fire Department in the event of accidental damage to fire department facilities.

3. Immediately restore damaged facilities to original condition at no increase to contract sum.

a. Restoration: Approved by Fire Department authorized representative.

B. Fire Department Vehicle/Equipment Access: Provide and maintain temporary vehicle/equipment access roads during construction.

Gregg L. Hershberger
Secretary

Carroll
Deputy Secretary
for Operations

.01 Purpose.

This directive updates existing policy and designates responsibilities for security and control during capital construction projects at a Department of Public Safety and Correctional Services (Department) correctional facility.

.02 Scope.

This directive applies to units of the Department responsible for security and control at a Department correctional facility.

.03 Policy.

A. The Department shall establish safeguards during a capital construction project at a correctional facility to maximize security for and control of individuals at the affected Department correctional facility.

B. The Department shall establish safeguards during a capital construction project at a correctional facility that minimize the operational impact on the correctional facility caused by a capital construction project and the individuals responsible for completing the capital construction project.

.04 Definitions.

A. In this directive, the following terms have the meanings indicated.

B. Terms Defined.

(1) Capital Construction Project.

(a) "Capital construction project (project)" means developing, executing, and completing a plan intended to build, modify, renovate, improve, dismantle, or maintain a Department correctional facility.

(b) "Capital construction project (project)" includes a capital maintenance project.

(2) "Construction document" means a written communication, picture, drawing, or other text or graphic communication related to a capital construction project.

(3) "Contractor" means the person obligated to the Department to provide, in part or in whole, materials and services related to completing a capital construction project.

(4) "Contractor's employee" means an individual working for a contractor or a sub-contractor performing tasks related to the contractor's obligations to the Department for a capital construction project.

.05 Responsibility/Procedure.

A. A managing official in cooperation with the Director of Security Operations has operational oversight of security during a project at the managing official's correctional facility.

B. The Division of Capital Construction and Facilities Maintenance (DCCFM) employee designated by the Director of DCCFM as the manager for a project at a correctional facility shall liaison between the affected managing official and Director of Security Operations, or a designee, and the contractor to ensure that:

(1) Security and control measures are included in the planning for the project;

(2) Department approved security and control measures are included in the construction documents presented to the contractor at the work initiation conference;

(3) Effective measures are established to ensure continuous security and control at the correctional facility during the capital construction project; and

(4) The contractor:

(a) And each contractor's employee who will be working at the correctional facility is aware of the security requirements established for the project before work begins by:

(i) Providing each contractor's employee a copy of the security requirements established for the project;

(ii) Having each contractor's employee acknowledges receipt of the security requirements by signing a copy of the security requirements for the project; and

(iii) Forwarding the signed copy of the security guidelines received from the contractor and each contractor's employee to the managing official;

(b) And the contractor's employees are aware that they are required to comply with direction provided by the managing official, or a designee, related to security during the project; and

(c) Is aware of the consequences for breaching security measures established for the project.

C. The following are minimum considerations for security and control during a project at a correctional facility:

(1) To the extent possible, the inmate population shall be isolated from the project work area to minimize security staffing requirements related to the project;

(2) The use of overtime for a Department employee shall be minimized and if overtime becomes necessary, overtime shall be authorized according to established overtime procedures;

(3) Identification for a contractor's employee entering, working at, and leaving the correctional facility;

(4) Searching a contractor's employee and equipment;

(5) Security for tools and equipment at the project location;

(6) Searching and parking contractor's employee's vehicles at the correctional facility;

(7) Ensuring that the capital construction project work area is "smoke free" according to the State's no smoking policy;

(8) Hours of work;

(9) Approving alternative hours of work;

(10) Conducting a criminal history records check for each contractor's employee required to enter the secure perimeter at a correctional facility that includes, at a minimum, a records check through:

(a) The National Crime Information Computer (NCIC); and

(b) The Criminal Justice Information System – Central Repository (CJIS – CR).

D. Contractor.

(1) A contractor is required to agree to comply with security requirements established for the project at the correctional facility before work begins on the project.

(2) A contractor is required to agree to have each contractor's employee working on a project at the correctional facility acknowledge, in writing, receipt of the security requirements for the project.

.06 Attachment(s).

There are no attachments to this directive.

.07 History.

A. This directive rescinds DPSCS.110.0002 - Custody and Security of Major Construction Projects (formerly SDD 03-1995), dated 03/21/95 by updating style and format and changes based on re-organization.

B. This directive supersedes provisions of any other prior existing Department communication with which it may be in conflict.

.08 Operations Distribution.

A
S — Security Chief

Department of Public Safety and Correctional Services Secretary's Department Directive	**Secretary's Department Directive Number: 04-2007**
	Title: Contraband — Criminal Violations
	Effective Date: October 17, 2007
	Authorized By: Gary D. Maynard **Number of Pages: 6**

.01 Purpose.

This directive establishes policy and responsibilities for the Department of Public Safety and Correctional Services (Department) to address amendments to the criminal law that make possessing or delivering contraband at a place of confinement a criminal act.

.02 Scope.

This directive applies to all agencies and units of the Department.

.03 Policy.

A. The Department shall ensure that employees, visitors, and inmates are informed that possessing or delivering contraband at a place of confinement is a criminal violation.

B. The Department shall enforce the criminal act of possessing or delivering contraband at a place of confinement to the same extent and according to the same procedures as other criminal violations occurring under the jurisdiction of the Department.

.04 Authority/Reference.

A. Correctional Services Article, §2-103, Annotated Code of Maryland.

B. Criminal Law Article, §§9-410 — 9-417, Annotated Code of Maryland (Effective October 1, 2007).

.05 Definitions.

A. In this directive, the following terms have the meanings indicated.

B. Terms Defined.

(1) "Alcoholic beverage" means beer, wine, or other distilled spirits.

(2) Contraband.

(a) "Contraband" means any item, material, substance, or other item that:

(i) Is not authorized for inmate possession by a managing official; or

(ii) Is brought into a correctional facility in a manner prohibited by the managing official.

(b) "Contraband" does not include:

(i) The amount of an item, material, substance, or other thing that exceeds the quantity of the item, material, substance, or other thing that the managing official has authorized an inmate to possess; or

(ii) A Department owned and issued telecommunication device necessary for a Department employee to conduct Department business while at a place of confinement.

(c) "Contraband" includes (effective October 1, 2007), but may not be limited to:

(i) An alcoholic beverage;

(ii) A controlled dangerous substance;

(iii) Except under §.05B(2)(b)(ii) of this directive, a telecommunication device; and

(iv) A weapon.

(3) "Controlled dangerous substance" has the meaning stated in Criminal Law Article, §5-101, Annotated Code of Maryland.

(4) Employee.

(a) "Employee" means an individual assigned to or employed by the Department in a full-time, part-time, temporary, or contractual position.

(b) "Employee" includes:

(i) A volunteer;

(ii) An intern; and

(iii) Another individual providing goods or services to the Department.

(5) Managing Official.

(a) "Managing official" means the individual responsible for a place of confinement.

(b) "Managing official includes:

(i) An administrator;

(ii) A director;

(iii) A warden;

(iv) A superintendent;

(v) A sheriff; or

(vi) Other individual with the same responsibility.

(6) Place of Confinement.

(a) "Place of confinement" means:

(i) A correctional facility as defined under Correctional Services Article, § 1-101, Annotated Code of Maryland;

(ii) A detention center for juveniles;

(iii) A facility for juveniles listed in Article 83C, §2-117(a)(2), Annotated Code of Maryland;

(iv) A place identified in a juvenile community detention order; or

(v) Any other facility in which a person is confined under color of law.

(b) "Place of confinement' does not include a place identified in a home detention order or agreement.

(c) "Place of confinement" includes:

(i) Buildings and property used for the purpose, or in support, of detaining or confining an individual in the custody or under the supervision of the Department; and

(ii) Appurtenances to a place of confinement.

(7) Telecommunication Device.

(a) "Telecommunication device" means:

(i) A device that is used to transmit telephonic, electrical, digital, cellular, or radio communications; or

(ii) A part of a device that is used to transmit telephonic, electrical, digital, cellular, or radio communications, regardless of whether the part itself is able to transmit.

(b) "Telecommunication device" includes a:

(i) Cellular telephone;

(ii) Digital telephone;

(iii) Picture telephone; and

(iv) Modem equipped device.

(8) "Weapon" means a gun, knife, club, explosive, or other article that can be used to kill or inflict bodily harm.

.06 Responsibility/Procedure.

A. Criminal Violation.

(1) Except under §§.06A(2) and (3) of this directive, it is a misdemeanor punishable by 3 years imprisonment or $1,000 fine, or both for an individual to:

(a) Deliver contraband to an individual detained or confined in a place of confinement;

(b) Possess with the intent to deliver contraband to an individual detained or confined in a place of confinement; or

(c) Knowingly possess contraband in a place of confmement.

(2) It is a felony punishable by 10 years imprisonment or $5,000 fine, or both for an individual to:

(a) Deliver contraband to an individual detained or confined in a place of confinement with the intent to effect an escape;

(b) Possess contraband with the intent to deliver contraband to an individual detained or confined in a place of confmement to effect an escape;

(c) Deposit or conceal contraband in or about a place of confinement to effect an escape; or

(d) If detained or confined in a place of confmement, knowingly possess or receive contraband to effect an escape.

(3) If the contraband is a weapon, it is a felony punishable by 10 years imprisonment or $5,000 fine, or both for an individual to:

(a) Deliver a weapon to an individual detained or confined in a place of confinement;

(b) Possess a weapon with the intent to deliver contraband to an individual detained or confined in a place of confinement;

(c) Deposit or conceal a weapon in or about a place of confmement to effect an escape; or

(d) If detained or confined in a place of confinement, knowingly possess or receive a weapon.

B. Uniform Procedures.

The Commissioner of Correction, Commissioner of Pretrial Detention and Services, and the Director of Patuxent, or designees, shall ensure that procedures, forms, and signs developed under this directive are, to the degree possible, uniform for all places of confinement.

C. Notification.

(1) A managing official is responsible for ensuring employees working in, visitors to, and individuals detained or confined in a place of confinement are informed of the prohibitions concerning contraband.

(2) A managing official shall establish local procedures for informing employees, visitors and individuals detained or confined in a place of confinement of the prohibitions concerning contraband that, at a minimum, include:

(a) Universal signage that is consistent throughout the Department depicting the prohibitions for contraband that is displayed:

(i) At each point of entry onto place of confinement property;

(ii) At each point of entry into the secure area of a place of confinement;

(iii) At each point of entry used by an employee at a place of confinement;

(iv) At each point of entry used by a visitor to a place of confinement;

(v) In any waiting area where a visitor is waiting to see an individual detained or confined in a place of confinement;

(vi) At a point of entry used by an individual detained or confined to a place of confinement; and

(vii) At a point of entry to an area used by an individual detained or confined in a place of confinement to meet with a visitor;

(b) Provisions for a visitor to temporarily secure personal property legally possessed by the visitor, but otherwise not permitted in a place of confinement by law or Department or facility policy;

(c) Written notification of prohibitions for contraband for:

(i) An individual detained or confined in a place of confinement;

(ii) An individual on an individual detained or confined in a place of confinement visitor list;

(iii) Other visitors to a place of confinement; and

(iv) Employees;

(d) Written notification of and acknowledgement by an individual detained or confined in a place of confinement that the individual is responsible for notifying a visitor named on the individual's visitor list of prohibitions for contraband; and

(e) Retention of documents used to notify inmates and employees of prohibitions for contraband under this directive.

D. Reporting, Investigating, and Documenting Violations of Contraband Prohibitions.

(1) Reporting, investigating, and documenting alleged criminal and administrative violations of contraband prohibitions shall be accomplished according to existing Department policy and procedure for reporting, investigating, and documenting criminal and administrative violations.

(2) The managing official, or a designee, shall report alleged criminal and appropriate employee administrative violations of contraband prohibitions to the IIU.

(3) The Director of the IIU shall ensure that a report of an alleged criminal or appropriate employee administrative violation of contraband prohibitions is recorded and resolved according to existing IIU and Department procedures.

E. Disciplinary Action.

(1) An action taken in response to an alleged criminal violation of contraband prohibitions does not preclude Department disciplinary action against an employee found guilty of the criminal violation with sanctions up to and including termination of employment with the Department.

(2) An action taken in response to an alleged criminal violation of contraband prohibitions does not preclude administrative action against an individual detained by or in the custody of a place of confinement for violation of inmate rules.

.07 Attachments.

There are no attachments to this directive.

.08 History.

A. There is no Secretary's Department Directive that this directive replaces or rescinds.

B. This directive supersedes provisions of any other prior existing Department communication with which it may be in conflict.

Department of Public Safety and Correctional Services

Criminal History Security Background Check

Attachment C

Facility: _____

Date: _____ **Project Title:** _____

A security background check will be conducted on all persons entering an institution to provide services. This background check consists of a criminal history check using usual and customary automated criminal history data systems including but not necessarily limited to MDCJIS, NCIC, MVA, FBI, etc.

This requirement pertains to persons providing services on a daily basis for an extended period of time such as medical contractors, volunteers, and long-term construction employees. It does not apply to persons entering and leaving on a one-day basis such as copier repair technicians. This security-check will be completed prior to the issuance of a picture I.D. and a security orientation.

Baltimore, Maryland 21215

Board of Public Works
Lawrence J. Hogan, Jr., *Governor*
Peter Franchot, *Comptroller*
Nancy K. Kopp, *Treasurer*

February 2015

STATE OF MARYLAND
DEPARTMENT OF PUBLIC SAFETY AND CORRECTIONAL SERVICES
INSTRUCTIONS TO BIDDERS FOR CONSTRUCTION CONTRACTS

TABLE OF CONTENTS

Note:

The terms "**Bid**" and "**Bidder**" are used throughout this document. Their meanings are to be considered synonymous with the terms "**Proposal**" and "**Proposer**".

SECTION 00 20 00 – INSTRUCTIONS TO BIDDERS

STATE OF MARYLAND
DEPARTMENT OF PUBLIC SAFETY AND CORRECTIONAL SERVICES (DPSCS)
INSTRUCTIONS TO BIDDERS FOR CONSTRUCTION CONTRACTS

1. NOTICE TO BIDDERS

A. GENERAL

The Notice to Bidders, which may be published as an advertisement, contains a description of the proposed work, together with information to the bidder regarding availability of the Invitation for Bids or Request for Proposals (the "solicitation"), including the project classification, construction bid forms, plans and specifications, the nature of any proposal guarantee, and the reservation of the right of the State to reject any or all bids. Provisions of State statutes and regulations are incorporated into the contract documents, as defined in the General Conditions, pursuant to COMAR (Code of Maryland Regulations) 21.03.01.05B.

B. PROJECT CLASSIFICATION

The Department will estimate the cost of the contract and classify it as falling within one of the following cost groups:

Estimate	Class
Up to $100,000	A
$100,000 to $500,000	B
$500,000 to $1,000,000	C
$1,000,000 to $2,500,000	D
$2,500,000 to $5,000,000	E
$5,000,000 to $10,000,000	F
$10,000,000 to $15,000,000	G
Over $15,000,000	H

The letter designation will be published as part of the solicitation.

2. CONSTRUCTION BID FORM (PRICE PROPOSAL FORM)

A. **The Construction Bid From** (or the Price Proposal Form) is that from which is included in the contract documents and which sets forth the cost of the Work, the alternates (if any), and units prices (if any) solicited by the State.

B. **Unit Prices -** Should contractor be required to perform work over and above that required by contract documents, or should he be ordered to omit work required by contract documents, an equitable adjustment shall be made to the contract price, subject to Sections 3.06 and 3.07 of the General Conditions. In determining the amount of any such extra to the contractor, which is governed by unit prices, the amount of the extra will be the unit price bid by the contractor or a reasonable price, whichever is less. In determining the amount of any such credit due the State which is governed by unit prices, the amount of the credit will be the unit price bid by the contractor or a reasonable price, whichever is greater. Unit prices quoted shall be the same for extra work and for credit work and shall be the sum total compensation payable or creditable for such items of work, including all labor, materials, bailing, shoring, removal, overhead, profit, insurance, bond, etc. Changes shall be processed in accordance with the General Conditions Sections 3.06 and 3.07.

3. SITE INVESTIGATION

See Section 3.04 of the General Conditions.

4. BID SECURITY

A. When the total of the base bid and all add alternates is in excess of $100,000 each bidder must furnish a bid bond issued by a surety company approved by the State with his construction bid. The bond must be in an amount not less than five per cent (5%) of the amount of the base bid plus all add alternates. Bid bonds must conform to COMAR 21.06.07.02 and 21.06.07.03E(1). Submission of a bid bond on a form other than DPSCS's approved form may render the bid nonresponsive and result in rejection of the bid. If the proper bid bond form is not included in the bid package, it may be obtained from the Department of Public Safety and Correctional Services. The provisions of DPSCS's approved bid bond form are a part of these Instructions to Bidders.

B. Certified checks, cash, and other forms of security are acceptable as provided in COMAR 21.06.07.01 and .02.

C. Bid security, regardless of the form (bid bond, certified checks, cash, or other acceptable form of security), shall secure the State against payment of any cost of procuring the work which exceeds the amount of the principal's bid and shall be subject to the condition that the principal may grant to the State an extension of 120 additional days for acceptance of the bid without notice to or consent from the surety.

D. Bidder must submit bids and Contract Security/Bonds in accordance with applicable provisions of this solicitation; COMAR 21.06.07, and other applicable provisions of the law.

E. BONDING ASSISTANCE OFFERED BY THE MARYLAND SMALL BUSINESS DEVELOPMENT FINANCING AUTHORITY (MSBDFA) (Program for Maryland Businesses Only) as provided in BPW Advisory No., 1996-3 Revised, / Revised Date: December 15, 2006 and in BPW Advisory No.: 2006 -4, Dated December 7, 2006.

F. The Maryland Small Business Development Financing Authority (MSBDFA) was created by the Maryland General Assembly in 1978 to assist in the development of socially or economically disadvantaged entrepreneurs in the creation of Maryland businesses. MSBDFA's financing activity is supported through the repayment of loans, generation of interest income and the collection of fees. Please see below for a brief description of some of the programs administered by the MSBDFA:

(1) **CONTRACT FINANCING PROGRAM (CFP) -** This program provides financial assistance to eligible businesses in the form of a direct loan or the guaranty of loans made by a financial institution. These funds may be used for working capital and the acquisition of equipment needed to begin, continue or complete work on contracts where a majority of funds are provided by a federal, state or local governments or utilities regulated by the Public Service Commission. Financing in either form is limited to $1,000,000 and must be repaid during the term of the contract. Interest rates generally range from the prevailing prime rate up to prime plus two percent. Applicants may qualify for financing prior to contract award.

(2) **SURETY BOND PROGRAM (SBP) -** This program assists eligible small businesses in obtaining bid, performance or payment bonds necessary to perform on contracts where the majority of funds are also provided by a government agency or public utility. SBP directly issues bid, performance or payment bonds or guarantees a surety's losses incurred as a result of the contractors breach of a bid, performance or payment bond. Additionally, SBP guarantees a surety's losses incurred as a result of the

contractor's breach of a bid, performance or payment bond. Bonds that are directly issued are limited to $5,000,000. Guaranties are limited to the lesser of ninety percent (90%) of the amount of the bond or $1,350,000. Guaranties on the bonds remain in effect for the duration of the surety's exposure under the bond. Bonds issued directly by the SBP will remain in effect for a period consistent with that of a regular commercial surety contract. A surety bond line may be established to directly issue or guaranty multiple bonds to a principal within pre-approved terms, conditions and limitations.

(3) **GUARANTY FUND PROGRAM (GFP) -** This program provides financial assistance to eligible businesses in the form of loan guaranties and interest rate subsidies to financial institutions for long term loans and short term lines of credit. A loan guaranty cannot exceed the lesser of eighty percent (80%) of the loan or $1,000,000. The term of the loan cannot exceed ten (10) years with the maximum interest rate of prime plus two percent. Loan proceeds can be used, among other things, for working capital, the acquisition and installation of machinery or equipment and the purchase or improvements to real property owned or leased by the applicant. GFP can also subsidize up to four percentage points of the interest rate being charged by the financial institution making the loan. The subsidy is subject to an annual review. Terms of repayment of the subsidy are negotiated directly with the borrower.

(4) **Contractors and subcontractors requiring MSBDFA assistance should contact the:**

MERIDIAN MANAGEMENT GROUP, INC.
MARYLAND SMALL BUSINESS DEVELOPMENT FINANCING AUTHORITY (MSBDFA)
826 E. Baltimore Street
Baltimore, Maryland 21202

Fax Number: 410-333-2552
Email Address: contact@mmggroup.com
Website: http://www.mmggroup.com/contact.html

5. BID OPENING

A. Bids will be opened in public at the time and place stated in the Notice To Bidders or the solicitation.

B. In the event that DPSCS/DCCFM is not open to the public at least one (1) full hour immediately preceding the deadline established in the contract documents for receipt of bids or offers, the deadline for the receipt of bids or offers will be extended automatically, without further action or notice by the Procurement Officer being necessary, to the next regularly scheduled business day at the same time and location.

C. Any bid received after the due date and time set in the solicitation is late and cannot be considered.

6. RIGHT TO REJECT BIDS AND WAIVE IRREGULARITIES/INFORMALITIES

The State reserves the right to cancel a solicitation, to reject any and all bids, and to waive any minor irregularity in a bid in accordance with COMAR 21.06.02.

7. MODIFICATIONS AND WITHDRAWAL OF BIDS

A. Withdrawal or modification of bids will be allowed only as provided in COMAR 21.05.02.09 and .10.

B. Mistakes in bids may be corrected only as provided in COMAR 21.05.02.12.

8. PREPARATION OF CONSTRUCTION BID FORM (PRICE PROPOSAL FORM)

A. The bidder shall submit his bid on the blank form(s) furnished by the Department for this particular contract. The bidder shall state prices in dollars and cents, in both words and numerals. If there is any conflict between the written words and the numerals, the written words shall govern unless circumstances apparent on the face of the bid make it clear that the contractor intended the bid to be based in the amount stated by the numerals.

B. The bid form(s) shall be filled out in ink or typed. Any erasures and/or alterations shall be initialed in ink by the signer.

C. The bid form, if submitted by an individual, shall be signed by the individual; if submitted by a partnership, it shall be signed by such member or members of the partnership having authority to bind the partnership; if submitted by a corporation, it shall be signed by an officer, attested by the corporate secretary or an assistant corporate secretary. If not signed by an officer, as aforesaid, there must be an attached copy of that portion of the By-Laws or a copy of a Board resolution, duly certified by the corporate secretary, showing the authority of the person so signing on behalf of the corporation.

D. Any contractor calling itself a “joint venture” shall be, as between the contractor and the State, an ordinary partnership, whose partners are liable to the State as provided in Corporations and Associations Article §9-307 of the Annotated Code of Maryland.

E. A bidder or contractor, which is a partnership or joint venture, must furnish the Department with a copy of the partnership or joint venture agreement prior to award.

9. BID/PROPOSAL AFFIDAVIT AND CONTRACT AFFIDAVIT

Bidders must read, and truthfully execute the Bid/Proposal Affidavit included in the RFP package and should submit it with the proposal. The Contract Affidavit (if applicable) included in the construction bid package must be executed and submitted by the contractor prior to final award of the contract. If these affidavits are not included in the construction bid package, they can be obtained from the Department of Public Safety and Correctional Services (DPSCS).

10. PUBLIC INFORMATION ACT

Bidders must identify those portions of their bids which they deem to be confidential or proprietary information or trade secrets and must provide, upon demand by the Department, justification for why such materials should not be disclosed by the State upon request under the Maryland Public Information Act, §§10-611, et seq., of the State Government Article of the Annotated Code of Maryland.

11. AWARD AND EXECUTION OF CONTRACT

A. AWARD OF CONTRACT

(1) Unless otherwise stated in the contract documents, the award of the contract, if awarded, will be to the responsible bidder submitting the lowest responsive bid or evaluated bid. The successful bidder will be given a written notice of intent to award

stating that its bid (including applicable add or deduct alternates) has been accepted and that it has been selected for award of the contract. The basis for award of alternates is set forth in the subsection B below, "Award of Alternates."

(2) Award of this contract by DPSCS will not be final and complete until after (a) a proposed award is approved by the appropriate public authorities, (b) the contractor submits complete and satisfactory documentation required under the contract, such as insurance certificates, affidavits, MBE compliance documents, bonds, etc., and (c) DPSCS executes a contract and forwards it to contractor.

(3) The State reserves the right to apply, before or after award of the contract, any reciprocal preference for Resident Bidders as set forth in §14-401 of the State Finance and Procurement Article of the Annotated Code of Maryland, at no additional cost to the State. As required by §14-401(c), a nonresident bidder or offeror submitting a bid or proposal shall attach to its bid or proposal a copy of the current statute, resolution, policy, procedure, or executive order of the resident state of the nonresident bidder or offeror that pertains to that state's treatment of nonresident bidders or offerors. The Reciprocal Preference is a percentage of bid price applied to a non-resident business bidder over a resident business bidder. The State of Maryland does not have an in-state preference but imposes a reciprocal preference in-kind, at the option of the State, against bidders from those states that give in-state bidders a preference against Maryland bidders. COMAR 21.05.01.04 explains the treatment of this preference.

B. AWARD OF ALTERNATES

If alternates are solicited by the Construction Bid Form, one or more alternates may be awarded in the discretion of the Department in the order in which the alternates are listed in the Construction Bid Form; provided that in the event the State lacks funds for award of the base bid and any succeeding alternates, the State in its discretion may forego the award of the alternate for which funds are not available but may award one or more succeeding alternates for which funds are available.

C. EXECUTION OF CONTRACT

(1) After a notice of proposed award has been issued, the Department will forward the formal contract form, and the forms for the Payment and Performance Bonds to the successful bidder for execution. The bidder must execute the contract form and return it with fully executed Payment and Performance Bonds (if required) to the Department within 10 days after mailing by DPSCS.

(2) As a prerequisite to signing the contract and prior to the expiration of the aforesaid 10 day period, the bidder shall have furnished the following in the form and content required by these General Conditions: (a) Performance and Payment Bonds; (b) Certificates of Insurance; (c) Affirmative Action Plan; (d) Contract Affidavit; and (e) all other documents required by the contract documents to be furnished by the contractor as a condition of award.

(3) After receipt of these properly executed documents, the Department will execute the contract within 120 days following receipt and approval by DPSCS of all documents and receipt of all approvals of the proposed award required by law, and the Department will then forward the contractor a signed copy of the contract. In the event the State fails to execute the contract and forward it to contractor within the 120 day period, the contractor will have, as its only remedy, the option (a) to declare the contract void without any liability or obligation by the State to the contractor, or (b) to accept an extended period for execution by the State at no additional cost to the State.

12. PERFORMANCE AND PAYMENT SECURITY

A. Performance and Payment Bonds are required when the amount of the initial contract award, including base bid and any alternates awarded, is in excess of $100,000.

B. Prior to the award of the contract, the State will provide to the contractor for execution copies of the Performance Bond and Payment Bond. The bonds must be executed and returned to the Department. The premium for the bonds shall be paid by the contractor. Bonds must be submitted on the approved DPSCS forms. (See COMAR 21.07.02.10) Other forms are not acceptable.

C. The performance Bond and the Payment Bond shall be in the full amount of the contract price. Both bonds are subject to the applicable provisions of COMAR 21.06.07.

D. At the direction of the Department, the contractor may be required to increase the amount of the bonds; for such additions, the contractor will be reimbursed by the State in the amount of the actual increased bond cost incurred by the contractor. Whenever the amount of the contractor's bonds is increased at the State's request, the State must receive proof of the increase in satisfactory form from the surety. The State will not be liable to the contractor for any increase in bonds not requested by the State.

E. Performance Bonds secure, for the benefit of the State, proper performance of all obligations of the contractor to the State under the contract; provided that Performance Bonds do not secure subcontractors or suppliers at any tier against nonpayment by the contractor or others.

F. The Department may reject a bidder as being not responsible if the bidder fails to furnish performance and payment bonds from a surety, which the Department determines has in the past responded diligently, and in good faith to bond claims of the State or of subcontractors and suppliers.

G. The State may declare the contractor to be in default, so as to obligate the surety to perform as required by the Performance Bond, with or without terminating the contract for default.

H. If the State declares the contractor to be in default, the surety has no right to require the State to contract with a contractor of the surety's choosing. The surety must either (1) complete the project or cure the default or (2) allow the State to complete the project or cure or remedy the default, with the surety to remain liable to the State for excess completion costs and other damages.

I. Types of payment security and performance security:

(1) A bond executed by a surety company authorized to do business in this state.

(2) Cash in an amount equivalent to a bond; or

(3) Other security, including a pledge of real property located in the State which shall become a lien, provided that the security is satisfactory to the Department of Public Safety and Correctional Services.

13. MINORITY BUSINESS ENTERPRISE REQUIREMENTS

To satisfy the requirement of COMAR 21.11.03, Minority Business Enterprise Policies; Bidders are responsible for complying with the requirements of Section 10 of the General Conditions.

The regulations require MBE participation submittals with the bid using Form DPSCS OS 01A MBE (Certified MBE Utilization and Fair Solicitation Affidavit). Failure to complete and submit this form with the bid shall result in the bid being non-responsive. Only the information for MBE participation on Form DPSCS OS 01A MBE submitted with the bid will be considered in determination of contract award.

If, the bidder is unable to achieve either the contract goal or any of the sub goals for each specified MBE classification the bidder shall request, in writing, a waiver on form DPSCS OS 01B MBE to be submitted with the bid, as specified in the State's General Conditions of the Contract between Owner and Contractor.

14. VETERAN-OWNED SMALL BUSINESS ENTERPRISE UTILIZATION (VSBE)

To satisfy the requirement of COMAR 21.11.13, Veteran-Owned Small Business Enterprise Policies; Bidders are responsible for complying with the requirements of Section 11 of the General Conditions.

The regulations require VSBE participation submittals with the bid using Form DPSCS OS 11A MBE (Veteran-Owned Small Business Enterprise Utilization and Fair Solicitation Affidavit and VSBE Participation Schedule). Failure to complete and submit this form with the bid shall result in the bid being non-responsive. Only the information for VSBE participation on Form DPSCS OS 11A MBE submitted with the bid will be considered in determination of contract award.

If, the bidder is unable to achieve the contract goal for VSBE the bidder shall request, in writing, a waiver on form DPSCS OS 11A MBE to be submitted with the bid, as specified in the State's General Conditions of the Contract between Owner and Contractor.

15. PAYMENT TO CONTRACTORS

Payments to the Contractor pursuant to this Contract shall be made no later than 30 days after the State's receipt of a proper invoice from the Contractor. Charges for late payment of invoices, other than as prescribed by Title 15, Subtitle 1, of the State Finance and Procurement Article, Annotated Code of Maryland, or by the Public Service Commission of Maryland with respect to regulated public utilities, as applicable, are prohibited.

16. ARREARAGES TO STATE

By submitting a response to this solicitation, a bidder represents that it is not in arrears in the payment of any obligation due and owing the State of Maryland, including the payment of taxes and employee benefits, and that it shall not become so in arrears during the term of the contract, if selected for award. Bidders are on notice of §7-222 of the State Finance and Procurement Article of the Annotated Code of Maryland prohibiting the issuance of a warrant for payment to any person indebted to the State for $50 or more.

17. PAYMENT TO CONTRACTORS BY ELECTRONIC FUND TRANSFER (EFT) FOR AWARDS OVER $200,000

EFT applies to contracts over $200,000 for which payments are made through the State Comptroller. For awards over $200,000, EFT will be used by the State to pay the contractor unless the State Comptroller's Office grants Contractor an exemption. By submitting a response to this solicitation, the Bidder agrees to accept payments by EFT unless the State Comptroller's Office grants an exemption. After award of a contract, the selected bidder shall register with the Comptroller of Maryland using the forms required by the Comptroller. For further information go to:

http://compnet.comp.state.md.us/General_Accounting_Division/Vendors/Electronic_Funds_Transfer/

Note: Any request for exemption must be submitted to the State Comptroller's Office for approval at the address specified on the COT/GAD X-10 form.

18. TIME FOR BID ACCEPTANCE

Unless otherwise provided in the solicitation, bid prices are irrevocable for a period of ninety (90) days following bid opening. After opening bids, the Procurement Officer may request bidders to extend the time during which the State may accept their bids, provided that, with regard to bids, no other change is permitted.

19. ALL NON-RESIDENT BIDDERS

As set forth in §14-401 of the State Finance and Procurement Article of the Annotated Code of Maryland, a non-resident bidder submitting a bid shall attach to its bid a copy of the current statute, resolution, policy, procedure, or executive order of the resident State of the non-resident bidder that pertains to that state's treatment of non-resident bidders.

20. DISCREPANCIES

A. Should a bidder find discrepancies in the contract documents or should he be in doubt as to the meaning or intent of any part thereof, he must, prior to the bid opening: (1) request and receive clarification from the Procurement Officer (who will issue a written addendum if necessary), or (2) file a protest. Failure of the bidder to do so will constitute a waiver of any claim by the bidder for expenses or costs of complying after contract award with the Procurement Officer's interpretation of the contract documents.

B. Only written addenda issued by the Procurement Officer are binding on the State. If a bidder is not satisfied with oral clarification or with written clarification issued other than in written addenda by the Procurement Officer, the bidder must demand and receive a written addendum from the Procurement Officer; and, if one is not issued, the bidder must timely file a protest or be bound to the State's interpretation of contract requirements. Failure of the bidder to act as required by this section will bind the bidder to the Procurement Officer's interpretation of the contract documents. Any addenda resulting from these requests will be mailed to all listed holders of the Bid Documents within a reasonable time prior to the bid opening. The bidder must acknowledge the receipt of all addenda in the space provided on the Construction Bid Form or Price Proposal Form.

21. MODIFICATIONS AND WITHDRAWAL OF BIDS

A. Withdrawal or modification of bids will be allowed only as provided in COMAR 21.05.02.09 and .10.

B. Mistakes in bids may be corrected only as provided in COMAR 21.05.02.12.

22. CONTRACTOR'S FAILURE TO EXECUTE CONTRACT

Failure of the contractor to execute the contract and submit all documents required within the time provided shall be just cause for the payment of the penal sum of the bid bond or other security to the Department. In the event that the damages sustained by the State exceed the amount of the bid security, the State reserves the right to proceed against the contractor for the balance of its damages, which shall include any and all costs of obtaining the work from another source, including additional administrative costs, architects fees, and other costs and expenses. In the alternative, if

the contractor executes the contract but fails to furnish other required documents, the State may treat the contractor's failure to furnish the required documents as a default of the contract and may terminate the contract for default under the General Conditions and avail itself of any other remedy provided by the contract.

23. CONTRACTOR'S ADDRESS

The bid must state a street address (physical location as opposed to a post office box) of the contractor to which the State may send mail and deliver notices to contractor. A post office box without a street address is not acceptable. Contractor must inform the State in writing of any changes in the contractor's mailing address and street address during the term of the contract and all warranty periods under the contract.

24. COMPONENTS OF THE BID

A. **Base Bid**: The Base Bid is the price submitted on the Bid Form and must include the total cost to complete all of the work specified in the solicitation documents. Base bid **does not include** prices for alternates.

B. **Total Bid:** Base Bid plus all alternates.

C. **Unit Price**: A Unit Price is a bid price per unit of measure specified for materials and/or labor. The amount for estimated quantity shall be **included** in the Base Bid amount.

D. **Allowance**: An allowance is a specified dollar amount to be **included** in the Base Bid. Allowances are established in lieu of specific requirements and defer selection of materials and equipment to a later date when additional design and/or specifications can be developed.

E. **Alternate**: An Alternate is for a specific scope of work or material **not included** in the Base Bid. Alternates may be Add or Deduct. The bid price for the Alternate should only represent the amount for the Alternate over and above the Base Bid work.

Words not defined in these Instructions to Bidders but defined in the General Conditions shall have the meanings stated in the General Conditions.

25. PROCUREMENT PRACTICES

A. **Information Disclosure during Procurement**. After a solicitation is issued and before the Procurement Officer makes a determination recommending the award of the contract, the only information that a Procurement Officer may disclose to a person outside the executive department is whether (or not) a decision has been made regarding a solicitation.

B. **Ethics Prohibitions.**

(1) The prohibition against a vendor offering employment, discussing employment, or offering any other thing of value during a procurement extends to procurement extends to procurement officers and to individuals who participate in the drafting of specifications.

(2) The Ethics Law currently prohibits employees from participating in matters in which they have a "financial interest". A financial interest is defined as owning more than 3% of a business. This amendment expands the definition of "financial interest" to include businesses in which an employee's spouse owns more than 3%.

(3) An employee may not be employed by or have a financial interest in a procurement subcontractor as well as the prime contractor.

(4) In addition, an employee will not be able to participate in a matter involving a business entity to which the employee or certain relatives have applied for a job.

26. eMARYLAND MARKETPLACE Vendor ID Number:

In order to receive a contract award, a vendor must be registered on eMaryland Marketplace. Registration information can be found on the eMaryland Marketplace website at https://emaryland.buyspeed.com/bso/

Bidders must provide their eMaryland Marketplace Vendor ID number on the Construction Bid or Price Proposal Form.

27. SMALL BUSINESS RESERVE PROCUREMENT

The following language is applicable only for Small Business Reserve Procurements:

This is a Small Business Reserve Procurement for which award is limited to certified small business vendors. Only businesses that meet the requirements set forth in State Finance and Procurement Article, §§ 14-501 – 14-505, Annotated Code of Maryland, and who are registered with the Department of General Services Small Business Reserve Program are eligible for award.

For the purposes of a Small Business Reserve procurement, a small business is a for-profit business, other than a broker, that meets the following criteria:

- It is independently owned and operated;
- It is not a subsidiary of another business;
- It is not dominant in its field of operation;
- Its **wholesale** operations did not employ more than 50 persons, and its gross sales did not exceed an average of $4,000,000 in its most recently completed 3 fiscal years;*
- Its **retail** operations did not employ more than 25 persons, and its gross sales did not exceed an average of $3,000,000 in its most recently completed 3 fiscal years;*
- Its **manufacturing o**perations did not employ more than 100 persons, and its gross sales did not exceed an average of $2,000,000 in its most recently completed 3 fiscal years;*
- Its **service** operations did not employ more than 100 persons, and its gross sales did not exceed an average of $2,000,000 in its most recently completed 3 fiscal years;* and
- Its **construction** operations did not employ more than 50 persons, and its gross sales did not exceed, an average of $7,000,000 in its most recently completed 3 fiscal years.*

If a business has not existed for three years, the employment and gross sales average(s) is the average for each year or part of a year during which the business has been in existence.

Further information on the certification process is available at **www.dgs.maryland.gov** and click on the Small Business Reserve hyperlink.

28. SMALL BUSINESS PREFERENCE PROCUREMENT

The following language is applicable only for Small Business Preference Procurements:

The preference percentages for this procurement are as follows:

- State-certified, small business (not a veteran-owned or disabled-veteran-owned small business) **5%**

- State-certified, veteran-owned small business **7%**

- State-certified, disabled-veteran-owned small business **8%**

The procurement agency will accept the most favorable responsive bid from a responsible, certified small business if the bid does not exceed the most favorable responsive bid received from a bidder who is not a certified small business by more than the percentage(s) listed above.

ELIGIBILITY: To be eligible for the preference, your company must have a current small business certification from the Maryland Department of General Services (DGS).

Small business size standards in Maryland are different than federal standards. You CANNOT substitute an SBA 8(a) certification or VetBiz verification for Maryland small business certification.

If your small business is eligible but not certified by the State, apply for certification on the DGS website at www.smallbusinessreserve.maryland.gov and obtain a small business certification number.

State Law requires that the veteran business owner be domiciled in Maryland. There is no Maryland residency requirement for owners of small business participating in the Preference as small businesses without the veteran-owned or disabled-veteran-owned designation.

REQUIRED INFORMATION: The bidder must provide the following to the procurement officer to prove eligibility for the preference:

- **Certified small business that is not veteran-owned or disabled-veteran-owned:** Provide the DGS Small Business Certification number on the "**Construction Bid Form" or "Price Proposal Form**".

- **Veteran-owned certified small business:** Provide the DGS Small Business Certification number **AND** a copy of the business owner's DD Form 214 attesting to discharge or release under conditions other than dishonorable.

- **Disabled-veteran-owned small business that is currently verified and registered on www.VetBiz.gov:** Provide the DGS Small Business Certification number **AND** a copy of the letter from the U.S. Department of Veterans Affairs Verification Program showing your verification is current.

- **Disabled-veteran-owned small business that is NOT currently verified and registered on www.VetBiz.gov:** Provide the DGS Small Business Certification number **AND** a copy of the business owner's DD Form 214 showing discharge or release under conditions other than dishonorable **AND** a copy of your Adjudication Letter from the U.S. Veterans Administration.

  For more information about the Small Business Preference Program, log onto the Department of General Services Internet Site at **www.dgs.maryland.gov**.

29. CONTRACTOR QUESTIONNAIRE

The Contractor Questionnaire, which is included with this solicitation package, provides certain information to permit the Procurement Officer to evaluate the Responsibility of the bidder. In order to be eligible to receive a contract a bidder must be considered a Responsible Bidder. A Responsible

Bidder is defined as a person or firm who has the capability in all respects to perform fully the contract requirements and the integrity and reliability that shall assure good faith performance. This document must be fully executed and returned with the bid. The Procurement Officer may also investigate past performance on other projects in evaluating responsibility as well as any and all other sources of information.

30. AVAILABLE DOCUMENTS

A. Contract Documents will be made available to the Bidders as herein described in the Instructions to Bidders. The documents will also be posted on **eMarylandMarketplace (eMM)**:

https://emaryland.buyspeed.com/bso/

B. The following documents form a part of the Contract Documents but are only made available for reference through their posting on **eMarylandMarketplace (eMM)**:

https://emaryland.buyspeed.com/bso/

1) **Limited Hazardous Materials Survey Report:** Dated December 24, 2014; as prepared by EBA Engineering, Inc. on behalf of PSA-Dewberry Inc. / Penza Bailey Architects, JV for the Department of Public Safety and Correctional Services, Project KT-000-150-C01.
2) **Geotechnical Report:** Dated August 2014; as prepared by EBA Engineering, Inc. on behalf of PSA-Dewberry Inc. / Penza Bailey Architects, JV for the Department of Public Safety and Correctional Services, Project KT-000-150-C01.

C. Additional Reference Documents: The following documents **do not** form a part of the Contract Documents but are only made available for reference through their posting on **eMarylandMarketplace (eMM)**:

https://emaryland.buyspeed.com/bso/

1) **Record Drawings for the Existing Buildings:** The following record drawings are provided to the Contractor for reference only. The record drawings may not represent the actual built conditions. All information included within the record drawings must be verified by the Contractor. Neither the Department of Public Safety and Correctional Services, nor PSA-Dewberry Inc. / Penza Bailey Architects, JV and its consultants take responsibility for the accuracy of these documents. **To view these documents, the Contractor must download the files. Any printing of these documents by the Contractor or its Subcontractors, shall be at the Contractor's expense:**

   a. SUI (State Use Industries) Building: 1964 drawings (John A. Ahlers); file name 26 sheets "Central Office and Storage Building for the State Use Industries";
   b. BPRU (Baltimore Pre-Release Unit) Building: 1969 drawings (Wrenn Lewis & Jencks); 28 sheets "Dormitory Building";
   c. BPRU & SUI Renovation drawings: 1977 drawings (Lapicki-Smith); 35 sheets "Conversion of Central Office to Work-Release Housing";
   d. Construction of OSTC - Bid Documents 1991: 1991 drawings (Gaudreau); 77 sheets "Occupational Skills Training Center";
   e. Fire Range Renovation in Occupational Skills Training Center: 03/08/93 drawings; 4 sheets.
   f. Construction of OSTC – As-Built Drawings, 12/01/1992: Johnson Controls Flow Diagrams; 8 sheets; MAU & EF Flow Diagrams, and AHU & RAF Flow Diagrams for the Occupational Skills Training Center.
   g. Existing YDC Photos Full Package; 11 pages.

h. 400-Bed Dormitory 1993; 8 sheets.

SECTION 002750

WAGE RATES AND INSTRUCTIONS

SECTION 00 27 50 – WAGE RATES AND INSTRUCTIONS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. State of Maryland Prevailing Wage Rates and Instructions.

1.2 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions.

1.3 RELATED SECTIONS

A. Division 1 Specification Sections.

PART 2 PRODUCTS (Not Used)

PART 3 EXECUTION

3.1 State of Maryland Prevailing Wage Rates and Instructions appended to and made part of this Section.

3.2 **If additional Prevailing Wage Rates are needed for this project beyond those listed below, contact the Prevailing Wage Unit. Phone: (410) 767-2342, email:** prevailingwage@dllr.state.md.

END OF SECTION 00 27 50

STATE OF MARYLAND

DEPARTMENT OF LABOR, LICENSING AND REGULATION
DIVISION OF LABOR AND INDUSTRY
PREVAILING WAGE SECTION
1100 N. Eutaw Street, Room 607
Baltimore, MD 21201
(410) 767-2342

The wage rates to be paid laborers and mechanics for the locality described below is announced by order of Commissioner of Labor and Industry.

It is mandatory upon the successful bidder and any subcontractor under him, to pay not less than the specific rates to all workers employed by them in executing contracts in this locality. Reference: Annotated Code of Maryland State Finance and Procurement, Section 17-201 thru 17-226.

These wage rates were taken from the locality survey of 2014 for Baltimore City, issued pursuant to the Commissioner's authority under State Finance and Procurement Article Section 17-209, Annotated Code of Maryland or subsequent modification.

**Note: If additional Prevailing Wage Rates are needed for this project beyond those listed below, contact the Prevailing Wage Unit. Phone: (410) 767-2342, email: prevailingwage@dllr.state.md.

Name and Title of Requesting Officer: Andreana Aytch - Procurement Officer

Department, Agency or Bureau: Dept. of Public Safety and Correctional Services
6776 Reisterstown Rd Baltimore , MD 21215

Project Number
KT-000-150-C01

Location and Description of work:
Baltimore City: Construction

Determination Number
23218

Date of Issue: Dec 09, 2014

BUILDING CONSTRUCTION

CLASSIFICATION	MODIFICATION REASON	BASIC HOURLY RATE	BORROWED FROM	FRINGE BENEFIT PAYMENT
BALANCING TECHNICIAN	AD	$38.02		$1.37
BOILERMAKER	AD	$26.66		$7.82

LABORER - LUTEMAN	AD	$17.89		$2.81
LABORER - MORTAR MIXER	AD	$17.89		$2.81
LABORER - PLASTERER - HANDLER	AD	$17.89		$2.81
LABORER - TAMPER	AD	$17.89		$2.81
LABORERS GROUP I				
LABORER - AIR TOOL OPERATOR	AD	$16.43		$4.30
LABORER - ASPHALT PAVER	AD	$16.43		$4.30
LABORER - BLASTER - DYNAMITE	AD	$16.43		$4.30
LABORER - BURNER	AD	$16.43		$4.30
LABORER - CONCRETE SURFACER	AD	$16.43		$4.30
LABORER - HAZARDOUS MATERIAL HANDLER	AD	$16.43		$4.30
LABORER - MASON TENDER	AD	$16.43		$4.30
LABORER - PIPELAYER	AD	$16.43		$4.30
LABORER - SCAFFOLD BUILDER	AD	$16.43		$4.30

FRINGE REFERENCES AS NOTED:

a. PAID HOLIDAYS: New Year Day, Memorial Day, July 4th, Labor Day, Thanksgiving Day & Christmas Day.

b. PAID VACATIONS: Employees with 1 year service - 1 week paid vacation;
2 years service - 2 weeks paid vacation;
10 years service - 3 weeks paid vacation.

Incidental Craft Data: Caulker, Man Lift Operator, Rigger, Scaffold Builder, and Welder receive the wage and fringe rates prescribed for the craft performing the operation to which welding, scaffold building, rigging, operating a Man Lift, or caulking is incidental.

These **Informational Prevailing Wage Rates** may not be substituted for the requirements of pre-advertisement or onsite job posting for a public work contract that exceeds $500,000 in value and either of the following criteria are met: (1) the contracting body is a unit of State government or an instrumentality of the State and there is any State funding for the project; or (2) the contracting body is a political subdivision, agency, person or entity (such as a county) and the State funds 50% or more of the project.

Modification Codes:

(AD) 17-209 Annual Determination from Survey Wage Data Received
(CH) 17-211 Commissioners' Hearing
(CR) 17-208 Commissioners' Review
(SR) 17-208 Survey Review by Staff

Each "Borrowed From" county is identified with the FIPS 3-digit county code unique for the specific jurisdiction in Maryland.

For additional information on the FIPS (Federal Information Processing Standard) code, see http://www.census.gov/datamap/fipslist/AllSt.txt

The Prevailing Wage rates appearing on this form were originally derived from Maryland's annual Wage Survey. The Commissioner of Labor & Industry encourages all contractors and interested groups to participate in the voluntary Wage Survey, detailing wage rates paid to workers on various types of construction throughout Maryland.

A mail list of both street and email addresses is maintained by the Prevailing Wage Unit to enable up-to-date prevailing wage information, including Wage Survey notices to be sent to contractors and other interested parties. If you would like to be included in the mailing list, please forward (1) your Name, (2) the name of your company (if applicable), (3) your complete postal mailing address, (4) your email address and (5) your telephone number to PWMAILINGLIST@dllr.state.md.us. Requests for inclusion can also be mailed to: Prevailing Wage, 1100 N. Eutaw Street - Room 607, Baltimore MD 21201-2201.

ii. Change Order

STATE OF MARYLAND
DEPARTMENT OF PUBLIC SAFETY AND CORRECTIONAL SERVICES (DPSCS)
GENERAL CONDITIONS OF THE CONTRACT BETWEEN OWNER AND CONTRACTOR

SECTION 1 - DEFINITIONS AND RESPONSIBILITIES:

1.01 DEFINITIONS AND CONDITIONS:

A. The words and terms stated in subsection B have the meanings indicated. The words "he" or "his" may also mean "she" or "her" and applies to any gender or firm as the case may be.

B. (1) **Approved Equal -** Those materials, supplies or services, or compatible items of construction whose quality, design or performance characteristics are functionally equal or superior to an item specified and which meet all salient characteristics and other requirements of the contract as determined by the Procurement Officer.

(2) **The Architect -** The person or the firm commissioned by the State to design the project and/or provide construction-phase architectural or engineering services. If the design was performed by an engineer rather than an architect, "architect" shall refer to the engineer. If the design was performed by the State, "architect" shall refer to the State. The Procurement Officer may exercise any power or authority of the architect under the contract. Architect, Engineer or Architect/Engineer (A/E) mean the same.

(3) **Breach –** Means material breach of the contract. Synonymous with "default."

(4) **Change Order -** A written order or directive signed by the Procurement Officer, directing a contractor to act as directed, which the Changes clause of the contract authorizes the Procurement Officer to issue with or without the consent of the contractor. An order of the Procurement Officer, by virtue of being called a "change order," does not necessarily constitute and shall not be construed to be a change in the scope of the contract or in the work required under the contract or to entitle the contractor to additional compensation for performing the work which is the subject of the order.

(5) **Claim -** Means a complaint by the contractor or by the State relating to the contract. Also called a "dispute."

(6) **Contract and Contract Documents -** The written agreement executed between the State and the contractor by which the contractor is bound to perform the work and furnish the labor, services, equipment and materials, and by which the State is obligated to compensate him therefore at the mutually established and accepted rate or price. The contract includes the construction bid form, contract forms and bonds, Instructions to Bidders, the executed Bid/Proposal Affidavit and Contract Affidavit, General Conditions, specifications, addenda, supplemental conditions and specifications, all special conditions and provisions, all technical provisions, all plans, the notice to proceed, any written change orders and supplemental agreements that are required to complete the construction of the work in an acceptable manner, including authorized extensions thereof, all approved shop drawings (subject to Sections 2.02 I and J and all other provisions of the contract) which are in accordance with the requirements of the other contract documents, and all other documents as provided in the contract. These documents which comprise the contract are sometimes referred to collectively as the "contract documents."

(7) **The contractor -** The person or organization having a direct contractual relationship with the State for the execution of the work. May be stated as Prime or General Contractor, but the meaning remains the same.

(8) **Contract Completion Date -** The date upon which the Work of the Contract is to be completed. The Contract Completion Date is calculated by adding the Contract Time to the Start Date.

(9) **Contract Time -** The number of calendar days, including weekends and holidays, within which the Contractor shall complete the Work of the Contract. The Contract Time shall commence upon the Start Date.

(10) **Critical Path Method (CPM) -** Critical Path Method (CPM) - A scheduling/management tool recognizing a network of work elements or activities and a critical path for completion of a construction project.

(11) **Day -** Means calendar day unless otherwise designated.

(12) **For Design/build construction contracts –** Contractor means Design/Build (D/B) Contractor.

(13) **The Department or DPSCS -** Refers to the Department of Public Safety and Correctional Services, State of Maryland.

(14) **Dispute -** Means a complaint by the Contractor or the State relating to the contract - also called a "claim."

(15) **Including -** Means "including but not limited to."

(16) **Inspector -** A representative of the Department assigned to review on-site construction activities for the State in accordance with Section 4.06.

(17) **Joint Venture -** means a legal entity consisting of two or more members brought together temporarily to form a joint venture to function as a Prime or General contractor. A joint venture itself can never be certified as a minority business. The joint venture agreement must reveal the scope of the MBE's managerial and financial responsibilities

(18) **Notice to Proceed -** A written notice to the Contractor of the start date on which he shall begin the prosecution of the work.

(19) **Payment Bond -** The security in the form approved by the Department and executed by the Contractor and his surety, and paid for by the Contractor, as a guarantee that the Contractor will pay in full all his bills and accounts for materials and labor used in the construction of the work, as provided by law.

(20) **Performance Bond -** The security in the form approved by the Department and executed by the Contractor and his surety, and paid for by the Contractor, guaranteeing for the benefit of the State complete performance of the contract in accordance with its terms.

(21) **Plans -** The official design drawings issued or accepted by the State as part of the contract documents, including those incorporated into the contract documents by reference.

(22) **Procurement Officer -** (a) Any person (i) authorized by the Department to formulate, enter into, or administer the contract or to make written determinations with respect to the contract and (ii) an authorized representative acting within the limits of the representative's authority; and (b) the Secretary or Deputy Secretary of the Department.

(23) **Project Manager –** The individual designated by the Department to manage the project on behalf of the State.

(24) **Repair -** To restore after injury, deterioration, or wear; to mend; to renovate by such means as appropriate and to supply such materials and labor as necessary to render the item to be repaired sound, solid, true, plumb, square, even, smooth and fully serviceable; or to bring into conformity with contract requirements. Upon completion of such repair it must be, unless otherwise stated, rendered to such condition as to present a first-class finished work, or in instances where the repaired item serves as a base for additional finish, the repaired work must be such as to permit a first-class finish, to be applied without extra cost to the State. When the word "repair" is used in connection with machinery or mechanical equipment it shall mean, in addition to the above, rendering the equipment completely serviceable and efficient and ready for the normal use for which it was intended.

(25) **The Owner or State-** The State of Maryland and/or the Department of Public Safety and Correctional Services.

(26) **The Secretary -** The Secretary or Deputy Secretary of the Department of Public Safety and Correctional Services, or his designee.

(27) **SF&P -** The State Finance and Procurement Article of the Annotated Code of Maryland.

(28) **Solicitation Documents -** The State's Invitation to Bid or Request for Proposals and any amendment(s) thereto.

(29) **Start Date -** The date provided in the Notice to Proceed upon which the Work is authorized to commence.

(30) **Subcontractor -** Except as is otherwise provided herein, "Subcontractor" means an entity having a direct contract with the Contractor to furnish a part of the work. It includes one who furnishes material worked to a special design according to the plans and specifications for the Work.

(31) **Superintendent –** The field representative of the contractor who in the absence of a Resident Project Manager is authorized to receive and execute instructions from the Department, and who shall supervise and direct the construction.

(32) **Supervisory Personnel -** The individual(s) designated by the Contractor to direct or oversee the on-site work of the Contract.

(33) **Surety -** The corporate body bound as required by law for the full and complete performance of the contract by the Contractor or for the payment by the Contractor to Subcontractors and suppliers.

(34) **Work -** The furnishing of any and all labor, materials, equipment, services, utilities and other incidentals and the manufacture or fabrication of materials or equipment necessary to the successful completion of the project and the carrying out of all the duties and obligations imposed upon the Contractor by the contract.

(35) **Written Notice** - Written notice shall be deemed to have been duly served on the Contractor if delivered in person to the individual or to the member of the firm or to an office of the corporation to whom it is directed, or if delivered or sent by regular or certified mail or by facsimile transmission to the last business address known to the State. Written notice shall be deemed to have been given to the Department upon actual receipt of written notice.

1.02 CONTRACTOR'S RESPONSIBILITIES:

A. The contractor shall supervise and direct the work, using his best skill and attention. He shall be solely responsible (1) for all construction means, methods, techniques, sequences and procedures, (2) for coordinating all portions of the work under the contract, and (3) to the extent he or his Subcontractors or suppliers at any tier design or are required to design any portion of the work, for design. contractor must aggressively and diligently pursue completion of the contract within the contract time.

B. The contractor shall be responsible to the State for the Acts and omissions of his employees, Subcontractors and suppliers at any tier, and their agents and employees performing any of the work for the Project.

C. The contractor shall not be relieved from its obligations to perform the work in accordance with the contract documents either by the activities or duties of the architect in its administration of the contract, or by the performance or nonperformance of inspections, tests or approvals by the State or persons hired by the State.

D. The contractor shall confine operations at the site to areas permitted by law, ordinances, permits and the contract documents and shall not unreasonably encumber the site with any materials or equipment.

E. Cutting And Patching of Work:

(1) The contractor shall be responsible for all cutting, fitting or patching that may be required to complete the work or to make its several parts fit together properly.

(2) The contractor shall not damage or endanger any portion of the work or the work of the owner or any separate contractors by cutting, patching or otherwise altering any work, or by excavation. The contractor shall not cut or otherwise alter the work of the owner or any separate contractor except with the written consent of the owner and of such separate contractor. The contractor shall not unreasonably withhold from the owner or any separate contractor his consent to cutting or otherwise altering the work.

F. The contractor shall perform all work in accordance with the terms, provisions, conditions, lines, grades, typical cross-sections, dimensions, and other data in or required by the contract documents, including the furnishing of all materials, services, implements, machinery, equipment, tools, supplies, transportation, labor, and all other items necessary for the satisfactory prosecution and completion of the project in full compliance with the requirements of the contract documents.

G. Indemnification.

(1) To the fullest extent permitted by law, the contractor shall indemnify and hold harmless the State and the architect and their agents and employees from and against all claims, damages, losses and expenses, including but not limited to attorney's fees, arising out of or resulting from the performance of the work, provided that any such claim, damage, loss or expense (1) is attributable to actual or threatened bodily injury, sickness, disease or death, or to actual or threatened injury to or destruction of tangible property including the loss of use resulting there from, and including but not limited to purely economic loss, and (2) is caused in whole or in part by any failure by the contractor or its Subcontractors or suppliers at any tier to perform any requirement of the contract or by any negligent act or omission on the part of the contractor or its Subcontractors or suppliers at any tier, or anyone directly or indirectly employed by any of them or anyone for whose acts any of them may be liable, regardless of whether or not it is caused in part by a party indemnified hereunder. Such obligation shall not be construed to negate, abridge, or otherwise reduce any other right or obligation of indemnity which would otherwise exist as to any party or person described in this subsection.

(2) In any and all claims against the State or any of their agents or employees by any employee of the contractor, any Subcontractor or supplier at any tier, anyone directly or indirectly employed by any of them, or anyone for whose acts any of them may be liable, the indemnification obligation under this paragraph shall not be limited in any way by any limitation on the amount or type of damages, compensation or benefits payable by or for the contractor or any Subcontractor or supplier under workers' or workmen's compensation acts, disability benefit acts or other employee benefit acts.

(3) Except to the extent that the contractor is also the architect, as provided in Section 1.01B, the obligations of the contractor under this subsection shall not extend to the liability of the architect, his agents or employees, arising out of (1) the preparation or approval of maps, drawings, opinions, reports, surveys, change orders, designs or specifications, or (2) the giving of or the failure to give directions or instructions by the architect, his agents or employees providing such giving or failure to give is the primary cause of the injury or damage.

H. **Performance Evaluations**

(1) The Department will perform for the benefit of itself and other State agencies evaluations (interim and/or final) of the performance of the contractor and Subcontractors and suppliers.

(2) Performance evaluations may be used or reviewed by a procurement officer in the course of making a determination of responsibility under other procurements.

(3) Unsatisfactory performance of this contract (or any part of it), whether or not the contract is terminated for default and whether or not an unsatisfactory report (interim or final) is issued, may result in a determination that the contractor is not a responsible bidder under **COMAR 21.06.01.01.**

(4) Nothing in this contract shall be construed to limit or qualify the authority of a procurement officer under the SF & P or **COMAR Title 21**.

SECTION 2 - CONTRACT DOCUMENTS - SHOP DRAWINGS:

2.01 CONTRACT DOCUMENTS:

A. The contract documents are complementary. That which is called for by any one shall be as binding as if called for by all.

(1) The intent of the contract documents is to include in the scope of the contract, at no additional cost to the State, all work necessary for proper completion of the project ready for continual efficient operation and not to include any work not properly inferable.

(2) **Clarification**: Prior to bidding, the contractor should obtain clarification of all questions which may have arisen as to intent of the contract documents, or any actual conflict between two or more items in the contract documents. Should the contractor have failed to obtain such clarification, then the Procurement Officer may direct that the work proceed by any method indicated, specified or required, in the judgment of the Procurement Officer, by the contract documents. Such direction by the Procurement Officer shall not constitute the basis for a claim for extra costs by the contractor. The contractor acknowledges that he had the opportunity to request clarification prior to submitting his bid to the State and that he is not entitled to claim extra costs as a result of failure to receive such clarification.

(3) **Jargon**: Work described in words that have a well-known technical or trade meaning shall be held to refer to such recognized standard use.

(4) **Precedence:** In case of conflict between the specifications and the drawings, the specifications will control. Typewritten or printed text shall govern over handwritten or drafted notes.

B. **Drawings:** The contractor shall do no work without proper drawings and/or instructions. Drawings may or may not be drawn to scale, and symbols may be used to indicate materials and structural and mechanical requirements. When symbols are used, those parts of the drawings are of necessity diagrammatic or schematic and it is not possible to indicate all connections, fittings, fastenings, etc., which are required to be furnished for the proper execution of the work. Diagrammatic or schematic indications of piping, duct work and conduit and similar items in the work are subject to field adjustment in order to obtain proper grading, fitting passage over, under or past obstructions, to avoid exposure in finished rooms and unsightly and obstructing conditions. The contractor shall make these adjustments at no increased cost to the State.

(1) **Copies Furnished:** The Contractor shall print on their own stationary the required documents for their own use and for their subcontractors during the bid and construction periods. The State will no longer furnish to the Contractor (successful bidder), printed Contract/Bid Documents (Project Manual and Drawings), for the construction contract accomplishment.

(2) **Copies At the Site/As-built Drawings:** The contractor shall keep in the job site office a complete set of all drawings, specifications, shop drawings, schedules, etc., in good order and available to the architect and the State. Additionally, one set of all contract drawings must be maintained as “as-built” drawings. These as-built drawings shall be marked up by the contractor in the field on a regular basis (at least monthly) to record all changes in the work as they occur, and the exact location of all work and equipment, including exposed and concealed pipe runs, cables, valves, plugged outlets, cleanouts and other control points including electrical conduits and ducts, in such manner as will provide a complete, accurate “as-built” record. The location of pipes or control points concealed underground, under concrete, in chases or above hung ceiling shall be dimensioned. contractor will not be entitled to receive progress payments unless the on-site as-built drawings are kept up to date as required by the

Contract. "As-Built/Project Record Documents" Utilizing AutoCAD 2015 software prepared by Contractor and drawings shall be delivered to the architect, in a condition satisfactory to him, as a condition precedent to final acceptance of work. Release of final retain age will be subject to receipt of the as-built drawings.

(3) **Ownership:** All drawings including as-built remain the property of the State. They must not be used by the contractor on other projects and they shall be returned to the State, if requested, upon completion of the work.

C. **Large Scale Detail Drawings**: The architect shall furnish, when the State directs, additional instructions, in the form of large scale developments of the drawings used for bidding, or to amplify the specifications for the proper execution of the work. These shall be true developments of the bidding documents and reasonably inferable there from. The work shall be executed in conformity therewith.

D. **Dimensions:** The contractor shall carefully check all dimensions prior to execution of the particular work. Whenever inaccuracies or discrepancies are found, the contractor shall consult the Architect and the Department prior to any construction or demolition. Should any dimensions be missing, the Department must be consulted and it will supply them prior to execution of the work. Dimensions for items to be fitted into constructed conditions at the job will be taken at the job and will be the responsibility of the contractor. The obvious intent of the documents or obvious requirement dictated by conditions existing or being constructed supersedes dimensions or notes which may conflict therewith. Whenever a stock size manufactured item or piece of equipment is specified or is proposed by the contractor to be furnished, it is the responsibility of the contractor to determine the actual space requirements for setting or entrance to the setting space. No extra will be allowed by reason of work requiring adjustments in order to accommodate the particular item of equipment furnished by the contractor.

2.02 SHOP DRAWINGS AND SUBMITTALS:

A. After checking and verifying all field measurements and after complying with applicable procedures specified in the contract documents, contractor shall submit to the architect for review and approval, in accordance with the contractor's schedule, shop drawings and other submittals which will bear a stamp or specific written indication that the contractor has satisfied its responsibility under the contract documents with respect to the review of such submissions. The data on the shop drawing or submittal must be complete with respect to quantities, dimensions, specified performance and/or design criteria, materials and similar data to enable the architect to review the information as required. These documents shall be prepared in conformity with the best practice and standards for the trade concerned. Due regard shall be given to speed and economy of fabrication and erection.

B. All shop drawings, product literature, and samples shall be submitted to DPSCS for review. Each submittal shall be reviewed by the Design/Build contractor and the Architect of Record prior to submittal to DPSCS. DPSCS will notify the contractor within 14 calendar days of receipt of any items found to be unacceptable. When DPSCS requests corrections, or rejects a submittal, the contractor shall resubmit the item with proper corrective changes in a timely manner. DPSCS will not be responsible for any delays caused by DPSCS review or required re-submittal. DPSCS review and approval shall be for the benefit of the State only to confirm compliance with the contract requirements only and does not release or alter responsibilities of the contractor and the architect of record in the review process.

C. All shop drawings and submittals must show the name of the project and the Department's contract number.

D. **Size of Drawings**: All shop drawings and details submitted to the architect for approval shall be printed on sheets of the same size as the contract drawings prepared by the architect. When a standard of a fabricator is of such size to print more than one drawing on a sheet of the size of the architect's drawings, this is acceptable. Sheets larger than the architect's drawings will not be accepted except when specifically permitted by the Department. Shop detail supplied on a sheet of letter size 8-1/2" x 11" is acceptable for schedules and small details.

E. **Items for which shop drawings will be required**: Shop drawings shall be required for all items which are specifically fabricated for the work or when the assembly of several items is required for a

working unit. Shop drawings are required for all concrete reinforcing and structural steel, specially made or cut masonry units, miscellaneous metal work, specially made millwork, plaster molds, moldings, marble and slate, special rough hardware and all heating, ventilating, plumbing and electrical items requiring special fabrication or detailed connections including refrigeration, elevators, dumb waiters, laboratory equipment, ducts, fuel storage tanks, fire sprinkler systems, etc., or as indicated in the submittal register, if provided in the specifications.

F. **Copies Required:** contractor shall supply copies of shop drawings and submittals for the architect's file and review, and the copies for the Department as directed by the Department, in addition to such copies as the contractor may desire to be returned for his own use.

G. **Examination and Approval:** The architect will examine and return shop drawings, submittals, and requests for information with reasonable promptness noting desired corrections, or approving them with or without conditions, or rejecting them. The contractor must allow the architect and DPSCS at least 14 calendar days following receipt of each submittal or re-submittal of shop drawings, submittals, and requests for information to review the documents and respond to the contractor. Items requiring longer than 14 calendar days of review time will be identified in the specifications. The minimum allowed time for architect and DPSCS review shall be increased to the extent that additional time for review is needed due to the fault or responsibility of the contractor or his Subcontractors and suppliers. The contractor will be notified of the cause of the delay and advised of how long it will take to complete the review; provided however that mere failure to give the contractor such notice shall not entitle the contractor to compensation or a time extension.

H. **Field Dimensions and Conditions:** The contractor is responsible for checking dimensions and existing conditions in the field. See also Section 3.04.

I. **Resubmission:** When the architect and/or the state notes desired corrections, or rejects the drawings, the contractor shall resubmit the drawings with proper corrective changes in a timely manner.

J. **Contractor's Responsibility**: Unless the contractor has, in writing, expressly notified the architect and the Procurement Officer to the contrary at the time of the submission, the State and the architect may assume that shop drawings and other submittals from the contractor are in conformity with the contract documents and do not involve any change in the contract price, or any change which will alter the space within the structure, or alter the nature of the building or work from that contemplated by the contract documents, or constitute a substitution of materials or equipment or a change in the contract or the scope of work. If the contractor fails to give notice strictly in accordance with this subsection, approval of any shop drawing or submittal shall not be binding on the State. See also Sections 5.01C and 5.03.

K. **Notations by State or Architect:** Should the Contractor consider any rejection or notation by the State or architect on the shop drawings or other material submittals, or any other action or inaction of the State or the architect, to cause an increase or decrease in the scope of the work from that required by the contract documents, the Contractor shall:

(a) Desist from further action relative to the item he questions;

(b) Immediately notify in writing the architect and the Department; and

(c) Furnish both, within fourteen days, with a written statement of the increased or decreased cost involved.

No work shall be executed until the entire matter is clarified and the Contractor is ordered by the State to proceed. Failure of the Contractor to serve written notice as above required shall constitute a waiver of any claim in relation thereto.

2.03 COST AND PRICE CERTIFICATION (COMAR 21.07.01.23)

A. Contractor by submitting cost or price information certifies that, to the best of its knowledge, the information submitted is accurate, complete, and current as of a mutually determined specified date prior to the conclusion of any price discussions or negotiations for:

(1) A negotiated contract, if the total contract price is expected to exceed $100,000, or a smaller amount set by the procurement officer, or

(2) A change order or contract modification, expected to exceed $100,000, or smaller amount set by the procurement officer.

B. The price under this Contract and any change order or modification hereunder, including profit or fee, shall be adjusted to exclude any significant price increases occurring because the contractor furnished cost or price information which, as of the date agreed upon between the parties, was inaccurate, incomplete, or not current.

SECTION 3 - SCOPE OF THE WORK:

3.01 INTENT OF THE CONTRACT DOCUMENTS:

It is the intent of the contract documents to show all of the work necessary to complete the project.

3.02 GENERAL CONDITIONS CONTROLLING:

In the event of a conflict between these General Conditions and any other provision of the contract documents, these General Conditions shall prevail unless such other provision expressly provides to the contrary. Nothing in the bid, proposal, or other submissions from the Contractor shall prevail over any contract documents unless expressly agreed to by the Procurement Officer in writing by a properly approved change order or contract modification.

3.03 DIFFERING SITE CONDITIONS (COMAR 21.07.02.05)

A. The contractor shall promptly, and before such conditions are disturbed, notify the Procurement Officer in writing of (1) subsurface or latent physical conditions at the site differing materially from those indicated in this contract, or (2) unknown physical conditions at the site of an unusual nature, differing materially from those ordinarily encountered and generally recognized as inherent in work of the character provided for in this contract. The Procurement Officer shall promptly investigate the conditions, and if he finds that such conditions do materially so differ and cause an increase or decrease in the contractor's cost of, or the time required for performance of any part of the work under this contract, whether or not changed as a result of such conditions, an equitable adjustment shall be made and the contract modified in writing accordingly.

B. No claim of the contractor under this clause shall be allowed unless the contractor has given the notice required in A above; provided, however, the time prescribed therefore may be extended by the Procurement Officer in writing.

C. No claim by the contractor for an equitable adjustment hereunder shall be allowed if asserted after final payment under this contract.

3.04 SITE INVESTIGATION (COMAR 21.07.02.06)

The contractor acknowledges that he has prior to submitting the bid, investigated and satisfied himself as to the conditions affecting the work; including but not restricted to those bearing upon transportation, disposal, handling and storage of materials, availability of labor, water, electric power, roads and uncertainties of weather, river stages, tides or similar physical conditions at the site, the conformation and conditions of the ground, the character of equipment and facilities needed preliminary to and during prosecution of the work. The contractor further acknowledges that he has satisfied himself as to the character, quality and quantity of surface and subsurface materials or obstacles such as existing structural systems, piping, ductwork, utilities, etc. to be encountered insofar as this information is reasonably ascertainable from the inspections of the site and the work areas of the project including all exploratory work done by the State, as well as from information presented by the drawings and specifications made a part of this contract. Any failure by the contractor to acquaint himself with the available information will not relieve him of responsibility for estimating properly the difficulty or cost of successfully performing the work. The State assumes no responsibility for

any conclusions or interpretations made by the contractor on the basis of the information made available by the State.

3.05 CONDITIONS AFFECTING THE WORK:

The contractor shall be responsible for having taken steps reasonably necessary to ascertain the nature and location of the work and the general and local conditions which can affect the work or the cost thereof. Any failure by the contractor to do so will not relieve him from responsibility for successfully performing the work without additional expense to the State. The State is not responsible for any representation or purported agreement concerning conditions or contract requirements made by any State employee or representative prior to the execution of this contract, unless such understanding or representation is expressly stated in the contract.

3.06 CHANGES -- MISCELLANEOUS:

A. Changes **(COMAR 21.07.02.02)**

(1) The Procurement Officer unilaterally may, at any time, without notice to the sureties, if any, by written order designated or indicated to be an order, make any change in the work within the general scope of the contract, including but not limited to changes:

(a) In the specifications (including drawings and designs);
(b) In the method or manner of performance of the work;
(c) In the State-furnished facilities, equipment, materials, services, or site; or
(d) Directing acceleration in the performance of the work.

(2) Any other written order or an oral order, including a direction, instruction, interpretation, or determination from the Procurement Officer that causes or constitutes any such change shall be treated as a change order under this clause provided that the contractor gives the Procurement Officer written notice stating the date, circumstances, and source of the order and that the contractor regards the order as a change order.

(3) Except as herein provided, no order, statement, or conduct of the Procurement Officer shall be treated as a change under this clause or entitle the contractor to an equitable adjustment hereunder.

(4) Subject to paragraph (6) of this subsection, if any change under this clause causes an increase or decrease in the contractor's cost of, or the time required for, the performance of any part of the work under the contract, whether or not changed by an order, an equitable adjustment shall be made and the contract modified in writing accordingly; provided, however, except for claims based on defective specifications, that no claim for any order under (2) above shall be allowed for any costs incurred more than twenty (20) days before the contractor gives written notice as therein required; and provided further, that in the case of defective specifications for which the State is responsible, the equitable adjustment shall include any increased cost reasonably incurred by the contractor in attempting to comply with such defective specifications.

(5) If the contractor intends to assert a claim for an equitable adjustment under this Section 3.06, he shall, within 30 days after receipt of a written order under (1) above or the furnishing of written notice under (2) above, submit to the Procurement Officer a written statement setting forth the general nature and monetary extent and/or time extension of such claim, unless this period is expressly extended by the Procurement Officer in writing. The statement of claim hereunder may be included in the notice under (2) above.

(6) Each contract modification or change order that affects contract price shall be subject to the prior written approval of the Procurement Officer and other appropriate authorities (such as Board of Public Works) and to prior certification of the appropriate fiscal authority of fund availability and the effect of the modification or change order on the project budget or the total construction cost. If, according to the certification of the fiscal authority, the contract modification or change order will cause an increase in cost that will exceed budgeted and available funds, the modification or change order may not be made

unless sufficient additional funds are made available or the scope of the project is adjusted to permit its completion within the project budget.

(7) No claim by the contractor for an equitable adjustment hereunder shall be allowed if asserted after final payment is made under this contract.

B. Miscellaneous

(1) In the event of a dispute between the Department and the contractor as to whether any work is included in the scope of the contract such that the contractor would be obligated to provide that work at no additional cost to the State, the Procurement Officer may order the contractor under this Section 3.06 to perform the work (a "Work Order"). If the contractor considers such an order to be a change in the scope of the contract entitling the contractor to additional compensation, a time extension, or other relief, the contractor must provide the notice required by this section and initiate a claim therefor in accordance with contract requirements. An order of the Procurement Officer, by virtue of being called or referred to as a "change order," does not necessarily constitute a change in the scope of the contract or in the work required under the contract. The contractor shall not be entitled to additional compensation, a time extension, or other relief for complying with an order of the Procurement Officer if the contract otherwise requires the contractor to perform as stated in the order.

(2) A request by the contractor for additional time or additional costs caused by the impact of an order of the Procurement Officer on the as-built critical path for completion must be accompanied by (a) a reasonably detailed description of the effect of the order on the adjusted as-planned/as-built critical path and (b) supporting documentation. The mere existence of a change order does not entitle contractor to an extension of time, compensation for delay, or damages or costs associated with delay. contractor's entitlement thereto shall depend upon the effect of the change order on the adjusted as-planned/as-built critical path for completion, even if a schedule other than a CPM schedule is used on the project, and shall be subject to the requirements of Section 7.06. A change order granting a time extension may provide (a) that the contract completion date will be extended only for specific critical activities, (b) that the remaining contract completion date(s) for all other portions of the work will not be altered, and (c) for an equitable adjustment of liquidated damages under the new required completion dates.

(3) Upon receipt of a signed written order of the Procurement Officer under this Section 3.06, the contractor shall comply with the order promptly, within the requirements of the completion schedule, whether or not the contractor signs or accepts the change order. Failure to comply with the order in a timely manner shall constitute a breach of the contract and grounds for termination for default or any other remedy available to the State.

(4) The State may issue a unilateral order on the State's terms (including a promise to pay the contractor a "not to exceed" ("NTE") amount) which the contractor may then dispute in accordance with Sections 3.06A and 6.13. Pending resolution of such a dispute, contractor must proceed diligently with performance of the contract as ordered by the Procurement Officer.

(5) The terms "not to exceed" and "NTE" when used in a change order mean that the amount of the change order (whether an increase or a decrease in the contract amount) will be a reasonable amount not to exceed the amount stated.

(6) The Change Order/Work Order form attached hereto is the form which will be used by the State for all orders under this Section 3.06.

(7) Contractor shall use the attached PCO Cover Sheet when submitting all requests for change orders and contract modifications.

3.07 MODIFICATION OF CONTRACT PRICE:

When changes in the work require modification of the contract price, such modification shall be accomplished in accordance with the requirements of Section 3.06 and the following requirements:

A. The contractor shall promptly submit to the State and to the architect a fully itemized breakdown of the quantities and prices used in computing the value of the requested change along with a detailed explanation and justification for the proposed change regardless of the nature of the change.

B. For all changes in the work to be performed by a Subcontractor, the contractor shall furnish the Subcontractor's fully itemized breakdown of quantities and prices which shall bear the original signature of a representative of the Subcontractor authorized to act for the Subcontractor. If requested by the State or the architect, proposals from suppliers or other supporting data required to substantiate costs shall be furnished.

C. Modification of the contract price, when required, shall be determined as follows:

(1) Variations in Estimated Quantities (**COMAR 21.07.02.03**) - Where the quantity of a pay item in this contract is an estimated quantity and where the actual quantity of such pay item varies more than twenty-five percent (25%) above or below the estimated quantity stated in this contract, an equitable adjustment in the contract price shall be made upon demand of either party. The equitable adjustment shall be based upon any increase or decrease in costs due solely to the variation above one hundred twenty-five percent (125%) or below seventy-five percent (75%) of the estimated quantity. If the quantity variation is such as to cause an increase in the time necessary for completion, the procurement officer shall, upon receipt of a written request for an extension of time within ten (10) days from the beginning of the delay, or within a further period of time which may be granted by the procurement officer before the date of final settlement of the contract, ascertain the facts and make the adjustment for extending the completion date as in his judgment the findings justify.

(2) A lump sum price agreed upon by both the State and contractor.

(3) If job conditions or circumstances, or the extent or nature of the change, or failure of the State and the contractor to agree upon a lump sum price or the application of unit prices, prevent the determination of the cost of any proposed change, the work shall be done on the basis of a Force Account, as hereinafter stated under Section 8.02 FORCE ACCOUNT WORK, if so ordered by the State.

(4) If the change involves a credit to the State, unless the amount must be determined by the application of unit prices, then the amount of the credit shall be the greater of (a) the alternate or other itemized price for such work stated in contractor's bid, or (b) a reasonable price, including overhead and profit.

(5) If the change involves both a credit and a debit, both sums shall be shown and the two sums balanced to determine the adjusted total cost or credit.

(6) The mark-up allowable to the Contractor for combined overhead and profit for work performed solely by the Contractor with his own forces shall be a reasonable amount not to exceed fifteen percent (15%) of the Contractor's costs, excluding those items which may be included in overhead.

(7) (a) The mark-up allowable to a Subcontractor for overhead and profit for work performed solely with his own forces shall be a reasonable amount not to exceed ten percent (10%) for the Subcontractor's overhead and five percent (5%) for the Subcontractor's profit, based upon the Subcontractor's costs of labor, materials, and equipment.

(b) For work performed by a Subcontractor solely with his own forces, the contractor is entitled to a reasonable mark-up for combined overhead and profit, not to exceed five percent (5%) of the cost of the Subcontractor's materials, equipment, and labor.

(8) The cost of supervisory personnel may be added only when the modification makes necessary the hiring of additional supervisory personnel or makes necessary their employment for time additional to that required by the contract.

(9) The contractor shall be allowed the actual, reasonable additional cost for rental of machine power tools or special equipment, including fuel and lubricants which are necessary to execute the work required on the change, but no percentages shall be added to this cost.

(10) If the contractor and the State cannot agree as to the extent the contract time shall be increased for extra work or the extent the contract time shall be reduced for work omitted by the State, the increase or decrease, as the case may be, shall be determined by the Procurement Officer based on the impact of the change, if any, on the as-built critical path for completion of the work, whether or not a CPM schedule is used.

(11) The architect, with the written approval of the State, shall have authority to make minor changes in the work not involving extra cost, and not inconsistent with the purposes of the work. Otherwise, no extra work or changes to the work shall be done unless authorized by the Procurement Officer prior to any such work or changes to the work being done.

D. The allowable percentages of cost for overhead and profit as provided in 3.07C(6) and (7), 7.06P(3), and 8.02A(9), and all other applicable provisions of the contract, are deemed to include but not be limited to all costs and expenses of the following kinds: project management, supervision and coordination; job supervision and field office expenses required by the contract; expenses for supervisors, superintendents, managers, timekeepers, clerks and watchmen; cost of correspondence of any kind; insurance not specifically mentioned herein; all expenses in connection with the maintenance and operation of the field office, use of small tools, costs of vehicles generally used for transporting either workmen, materials, tools or equipment to job location, and incidental job burdens, including testing and clean-up, etc. required to produce the intended results; and all expenses of maintenance or operation of contractor's regularly established principal office, branch office, and similar facilities, and all other costs and expenses customarily classified as overhead.

E. Contractor's entitlement to compensation or additional time for delays for which the State is responsible or for which an extension is due the contractor is also subject to Sections 3.06 and 7.06.

F. No allowance shall be made to the contractor for loss of anticipated profits on account of changes in the work.

G. Execution of a written change order by contractor, or failure of the contractor to dispute the terms of a written order of the Procurement Officer strictly in accordance with contract requirements, shall be binding and conclusive and shall operate as an accord and satisfaction as to (a) all compensation payable to contractor for the work associated with the change order, and (b) contractor's right to an extension of the contract completion time. contractor may not execute or accept a change order subject to any conditions or reservation of rights or claims which have not been agreed to in writing by the Procurement Officer. Any attempt by the contractor to impose such conditions or reservations shall not be binding on the State. contractor's sole remedy for disputing the terms of an order by the Procurement Officer or for making a claim therefor is to follow strictly the procedures stated in this Section 3.07 and Sections 3.06 and 6.13.

H. Whenever the contractor is entitled to an increase in the contract price, the amount of the increase shall not include any amount for increased costs or premiums of bonds unless: (1) DPSCS requires an increase in the amount of the penal sum of the bond or bonds, (2) the contractor actually incurs such cost, (3) the surety actually increases the penal sum of the bonds, and (4) DPSCS receives proof in satisfactory form that the surety has increased the penal sum of the bonds.

I. The contract is subject to all applicable provisions of **COMAR 21.05.03.04** (Negotiated Overhead Rates) and 21.05.03.05 (Price Negotiation Policies and Techniques).

3.08 UNAUTHORIZED WORK:

The contractor shall not be paid for any work outside the scope of the contract not authorized in writing by the Procurement Officer.

SECTION 4 - CONTROL OF THE WORK:

4.01 INTERPRETATION OF THE CONTRACT DOCUMENTS - AUTHORITY OF THE ARCHITECT:

A. The Procurement Officer shall be the final interpreter of the contract documents. He will furnish with reasonable promptness, through DPSCS or the architect, such clarifications as he may deem necessary for the proper execution of the work. Clarifications issued by the architect shall be consistent with the intent of the contract documents and, when in special instances the architect is authorized by the State so to act, the architect has authority to stop work whenever such stoppage may be necessary to ensure the proper execution of the contract.

B. Except as otherwise expressly provided in the contract documents, all decisions of the architect are subject to approval by the Department. The architect has no authority to waive or change the requirements of the contract documents except as provided in Section 3.07C(11) above.

4.02 CONFORMITY WITH CONTRACT REQUIREMENTS

A. All work performed and all materials furnished shall be in conformity with the contract requirements.

B. In the event the Procurement Officer finds the materials, or the finished product in which the materials are used or the work performed are not in complete conformity with the contract requirements and have resulted in an inferior or unsatisfactory product, the work or materials shall be removed and replaced or otherwise corrected by and at the expense of the contractor.

C. In the event the Procurement Officer finds the materials or the finished product in which the materials are used are not in complete conformity with the contract requirements, but have resulted in a satisfactory product, he shall then make a determination if the work shall be accepted. In this event, the Procurement Officer will document the basis of acceptance by a Change Order which will provide for an appropriate adjustment, if any, in the contract price.

4.03 ADJACENT WORK

The State shall have the right, at any time, to contract for and/or perform other work on, near, over or under the work covered by this contract. In addition, other work may be performed under the jurisdiction of another State agency. The contractor shall cooperate fully with such other contractors and carefully fit his own work to such other work as may be directed by the procurement officer.

4.04 CONTROL BY THE CONTRACTOR:

The contractor shall constantly maintain efficient supervision of the work, using his best skill and coordinating ability. He shall carefully study and compare all drawings, specifications and other instructions and check them against conditions existing or being constructed on the project. He shall at once report to the Department any error, inconsistency or omission which he may discover.

4.05 COOPERATION WITH UTILITIES:

A. It is understood and agreed that the contractor has considered in his bid all of the permanent and temporary utility appurtenances in their present or relocated positions and that no additional compensation will be allowed for normal delays, inconvenience, or damage sustained by him due to any interference from the said utility appurtenances, the operation of moving them, the making of new connections thereto if required by the contract documents, or by other requirements of the utility company.

B. The contractor shall have responsibility for notifying all affected utility companies prior to performing any work on their utilities and shall cooperate with them in achieving the desired results. All damage to utility facilities caused by the contractor's operations shall be the responsibility of the contractor.

C. At points where the contractor's operations are adjacent to properties of railway, telegraph, telephone, water and power companies, or are adjacent to other property, damage to which might result in expense, loss or inconvenience, work shall not be commenced until all arrangements necessary for the protection thereof have been made by the contractor.

D. The contractor shall cooperate with the owners of any underground or overhead utility lines in their removal and rearrangement operations in order that these operations may progress in a reasonable manner, that duplication or rearrangement work may be reduced to a minimum and that services rendered by those parties will not be unnecessarily interrupted.

E. In the event of interruption to utility services as a result of accidental breakage or as a result of being exposed or unsupported, the contractor shall promptly notify the proper authority and shall cooperate with the said authority in the restoration of service. No work shall be undertaken around fire hydrants until provisions for continued service have been approved by the local fire authority.

F. Prior to performance of the work under the contract, the contractor shall determine the existence of any underground utilities using Miss Utility and any other means. The costs associated with such investigation including costs to be paid to Miss Utility, utility companies, and/or inspection/testing firms shall be borne by the contractor. This provision shall apply to any project site, including those on State property.

4.06 INSPECTIONS, TESTS, STATE INSPECTORS:

A. As used in this section and elsewhere wherever the context calls for it, “inspection” includes testing and/or approval of work.

B. The Contractor shall, at his expense, maintain an adequate inspection system and perform, or cause to be performed, such inspections as are required by the contract (such as an electrical inspection from an independent (non-governmental) electrical inspection agency approved or licensed as required by law when required under the contract. The Contractor must make application for the inspection, coordinate same, and pay the required inspection fees. The independent electrical inspection agencies are not considered local authorities - see General Condition Section 8.01E.(2)(b) or as otherwise will ensure that the work conforms to contract requirements. The Contractor shall maintain complete records of inspections and shall give the Department copies of these records as they are made. All work shall be conducted under the general direction of the Department and is subject to State inspection at all places and at all reasonable times to ensure strict compliance with the contract.

C. If the contract, or any applicable laws, ordinances, regulations, or order of any public authority or agency having jurisdiction require any work to be specially inspected, tested or approved, the contractor shall give the State, the architect, and any other public authority or agency which must be present or which otherwise should be notified, timely notice (at least 14 calendar days) of readiness for inspection and, if the inspection is by an authority or agency other than the Department, the date of the inspection. All costs associated with such inspections, testing and approvals; including the regulating Agency’s fees shall borne by the Contractor.

D. The State may charge the contractor any additional cost of inspection when work is not ready at the time specified by the contractor, or when prior rejection makes re-inspection necessary.

E. All work, including fabrication and source of supply, is subject to inspection by the architect, the State, and the State inspector. Inspectors for the State are not authorized to revoke, alter, or waive any requirements of the contract. Inspectors are authorized to call the attention of the contractor to any failure of the work to conform to the contract, including but not limited to the existence of unsafe conditions, inadequate safeguards and exits, and nuisances. Inspectors are authorized to suspend the work or any portion of the work, at no additional charge to the State, until resolution of issues concerning compliance with contract requirements.

F. Inspections by the State or the architect are for the sole benefit of the State. Inspections by the State or the architect, or the presence or absence of a State inspector or the architect at any inspection, or the failure of the State inspector or the architect to report any deviation by the contractor from contract requirements shall not: (1) relieve the contractor of responsibility for adequate quality control measures, compliance with contract requirements, or damage to or loss of material; (2) constitute or imply acceptance of any work; or (3) affect the continuing rights of the State to hold contractor responsible for failure to meet contract requirements.

G. If the State determines that any work requires special inspection not required by the contract, the State at its discretion may direct the contractor to obtain such inspection and the contractor shall do so. If the inspection reveals a failure of the work to comply with contract requirements, contractor shall bear all costs of the inspection, including any additional compensation paid or payable to the architect and any other costs incurred by the State. In all other cases, the State shall bear such costs and an equitable adjustment shall be made to the contract price.

H. Required certificates or other documentation of inspection shall be obtained by the contractor and promptly delivered by him to the architect, DPSCS, and any other public authority or agency entitled thereto.

I. When electrical high voltage work (over 600 volts) is required in construction of a project, the contractor shall utilize and pay for the services of an independent high voltage electrical testing agency to test and inspect all electrical high voltage components of the system prior to its being energized. The tests and inspections shall follow the procedures as established by NETA in their specifications for acceptance testing. The contractor shall submit a copy of the test results and an evaluation of these results prepared by a registered Professional Engineer, retained by the contractor to the Department within ten (10) days of the testing. All costs associated with testing, inspection and engineering shall be borne by the contractor.

4.07 REMOVAL OF DEFECTIVE WORK:

A. All work and materials which do not conform to the requirements of the contract will be considered unacceptable.

B. Any unacceptable or defective work, whether the result of poor workmanship, use of defective materials, damage through carelessness, design error or omission by the contractor or his Subcontractors and suppliers at any tier, or any other cause attributable to the contractor or his Subcontractors or suppliers at any tier, shall be promptly removed and replaced by work and materials which shall conform to the contract requirements or shall be remedied otherwise in an acceptable manner authorized by the Procurement Officer.

C. Upon failure of the contractor to comply promptly with the provisions of this section, the State shall have authority to cause defective or unacceptable work to be remedied or removed and replaced and unauthorized work to be removed at the contractor's expense.

D. Any time lost by the contractor for correction of work not in accordance with the contract shall be made up by the contractor at his expense.

4.08 MAINTENANCE OF WORK DURING CONSTRUCTION:

A. The contractor shall maintain the work during construction and until acceptance. This maintenance shall be continuous and effective, prosecuted with adequate equipment and forces to the end that all parts of the work be kept in satisfactory condition at all times and protected from damage of any kind from external sources.

B. Particular attention shall be given to drainage, both permanent and temporary. The contractor shall use all reasonable precautionary measures to avoid damage or loss that might result from accumulations and concentrations of drainage water, and material carried by such waters and such drainage shall be diverted or dispensed when necessary to prevent damage to excavation, embankments, surfaces, structures or property. Suitable measures shall be taken by the contractor to prevent the erosion of soil in all construction areas where the existing ground cover has been removed. Such measures shall be in compliance with the requirements of any governmental entity having jurisdiction.

C. All cost of maintenance work during construction and before final acceptance shall be included in the base bid and the contractor will not be paid any additional amount for such work.

D. In the event that the contractor's work is halted by the State under the provisions of the contract, the contractor shall maintain the entire project as provided herein and provide such ingress and egress for local residents or tenants adjacent to the project site, for tenants of the project site, and for the general public as may be necessary during the period of suspended work or until the contractor has been declared in default.

E. On projects where traffic flow is maintained, the contractor shall be responsible for repair and restoration of all traffic damage to the work, either partially or totally completed, until such time as the work is accepted by the State.

4.09 FAILURE TO MAINTAIN ENTIRE PROJECT:

Failure on the part of the contractor, at any time, to comply with the provisions of Section 4.08 may result in the State notifying the contractor to comply with the required maintenance provisions. In the event that the contractor fails to remedy unsatisfactory maintenance promptly after receipt of such notice, the State may immediately proceed to maintain the project and the entire cost of this maintenance will be charged against the contractor.

4.10 STATE'S RIGHT TO DO WORK:

If the contractor fails to prosecute the work properly or diligently or fails to perform any provision of the contract, the State may make good such deficiencies at the contractor's expense or terminate the contract for default under Sections 7.07 and/or 7.08, or both.

4.11 PROGRESS MEETINGS--SCHEDULING MEETINGS:

A. General.

The contractor and his major Subcontractors shall hold and attend progress meetings with the State and the architect (unless the architect's absence is excused by the State) at the site at least monthly. The State may require progress meetings to be held more frequently at no additional cost to the State. Minutes of progress meetings shall be prepared and circulated by the architect.

B. Subcontractor Progress Meetings.

The State and the architect must receive timely prior written notice of all progress meetings between the contractor and its Subcontractors or suppliers at any tier. The State and the architect may attend any or all such meetings. contractor must keep minutes of all such meetings and must promptly provide DPSCS and the architect with copies of the minutes.

C. Scheduling Meetings.

See Section 7.06T.

SECTION 5 - MATERIALS

5.01 GENERAL:

A. All materials shall meet all quality requirements of the contract. In order to expedite the inspection and testing of materials, the contractor shall notify the architect and the state in writing, as soon as possible after receipt of notification award of the contract, of the sources from which he proposes to obtain all materials requiring approval, testing, inspection, or certification prior to incorporation into the work.

B. Materials include all: equipment; parts; products; methods of construction or of performing the work which may be the subject of a patent, copyright or other right or restriction governing its use; and processed and unprocessed natural substances required for completion of the contract. The contractor, in accepting the contract, is assumed to be thoroughly familiar with the materials required and their limitation as to use and requirements for connection, setting, maintenance and operation. Whenever an article or material or equipment is specified and a fastening, furring, connection (including utility connections), access hole, flashing closure piece, bed or accessory is normally considered essential to its installation in good quality construction, such shall be included as if fully specified. Nothing in these

specifications shall be interpreted as authorizing any work in any manner contrary to applicable laws, codes or regulations.

C. Approval. All materials are subject to the architect's and the state's approval as to conformity with the specifications, quality, design, color, etc. No work for which approval is necessary shall be used until written approval is given by the architect and the state. Approval of a Subcontractor or supplier as such does not constitute approval of a material which is other than that included in the specifications. See also Sections 2.02I and 5.03.

D. New Materials. Unless otherwise specified, all materials shall be new. Old or used materials must not be used as substitutes for new, regardless of condition or repair, unless approved in writing by the Procurement Officer.

E. Quality. Unless otherwise specified, all materials shall be of the best quality of the respective kinds.

F. Samples. The contractor shall furnish for approval all samples as directed. The materials used shall be the same as the approved samples.

G. Proof of Quality. The contractor shall, if requested, furnish satisfactory evidence as to the kind and quality of materials either before or after installation. He shall pay for any tests or inspections called for in the specifications and such tests as may be deemed necessary for "substitutions," as set forth in Section 5.03 of these General Conditions.

H. Standard Specifications. When no specification or code is cited or otherwise applicable and the quality, processing, composition or method of installation of an item is only generally referred to, then:

(1) For items not otherwise specified below, the applicable specification shall be the latest edition of the applicable American Society for Testing Materials specification.

(2) For items generally considered as plumbing and those items requiring plumbing connections, the applicable specification shall be the applicable portions of the latest edition of the State plumbing code.

(3) For items generally considered as heating, refrigerating, air-conditioning or ventilation, the applicable specifications shall be the applicable portions of the latest edition of the A.S.H.R.A.E. Handbook published by the American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc.

(4) For items generally considered as electrical, the applicable specifications shall be the applicable provisions of the latest State adopted edition of the BOCA Code and the National Electric Code.

(5) For items generally considered as fire protection, the applicable specifications shall be the applicable sections of the latest edition of the State Fire Prevention Code and the National Fire Protection Association Code.

5.02 STORAGE AND HANDLING OF MATERIALS:

A. Materials shall be stored so as to assure the preservation of their quality and acceptability for the work. Stored materials, even though approved before storage, may again be inspected prior to their use in the work. Stored materials shall be located so as to facilitate their prompt inspection. Approved portions of the project site may be used for storage purposes and for the placing of the contractor's plant and equipment. At completion of the project such storage areas must be restored to their original condition by the contractor at his expense.

B. All mechanical and/or electrical equipment delivered to the job site shall be stored on pedestals, above ground and under roof or other approved covering. All enclosures for equipment shall be weatherproof. Any motors, which are not totally enclosed, and dry type transformers that are involved in

the work, shall be stored in a heated area with a minimum temperature of fifty degrees Fahrenheit (50°F). All valves shall be stored under roof on wood pedestals, above ground. All insulation shall be stored under roof or in trailers, adequately protected from the weather. The contractor shall follow all written instructions and recommendations of the manufacturer and all requirements of the architect on oiling, protection and maintenance of equipment during storage. It shall be solely the contractor's responsibility to safely store and care for all equipment and materials. Materials not properly stored prior to installation shall not be considered for payment.

C. Materials shall be handled in such a manner as to preserve their quality and acceptability for the work.

D. Contractor shall confine his tools and equipment and the storage of materials to the area delineated in the contract documents as the "Limit of Contract."

E. Contractor shall not load or permit any part of a structure to be loaded with a weight that will endanger the safety of the structure or any part thereof.

F. Explosives.

(1) Explosives shall not be stored upon any property belonging to the State.

(2) Should the contractor desire to use explosives on any project he shall first receive written approval of DPSCS and obtain all permits required by law, at the contractor's expense. The approval will stipulate the time, place and quantity to be used and manner of use.

(3) The contractor assumes all responsibility for injury to persons or property which may result from the use or transportation of explosives, as well as complying with any and all applicable statutes, ordinances, regulations and restrictions in relation to the use of explosives.

G. Paints.

(1) Oil base paints and flammable liquids shall not be stored in large quantities on the project. Containers shall be limited to five gallon size. Any liquid with a flash point of less than one hundred (100) degrees Fahrenheit shall be contained in safety cans, UL approved. Liquid with a higher flash point shall be stored in rigid cans.

(2) Oily rags, waste, etc., must be removed from the work site at the close of each working day.

5.03 SUBSTITUTIONS:

A. Should the contractor desire to substitute another material for one or more specified by name, he shall prior to performance of work apply in writing for such permission and state the credit or extra involved with the use of such material.

B. The contractor shall not submit for approval materials other than those specified without a clear, express, written statement that such a substitution is proposed. Approval in any form or by any means of a substitute material by the architect or anyone else, when the contractor has not so designated such material as a "substitute," shall not be binding on the State nor release the contractor from any obligations of his contract, unless the Procurement Officer, in writing, expressly acknowledges the proposed substitution and approves it. See also Sections 2.02I and 5.01C.

5.04 APPROVED EQUALS:

A. The terms "or equal," "equal," and "approved equal" are used as synonyms throughout the specifications. They are implied in reference to all manufacturers or products named in the specifications unless otherwise stated. The Department is the final judge as to equality. The Department does not represent or warrant under any circumstances that there exists an equal to any item specified or that an equal is readily available, even if the words "or equal" are used in the specifications.

B. When several products or manufacturers are named in the specifications as acceptable for the same purpose or use, the contractor may select any of those so named. However, all of the units of a given type required for and used in the project must be the same in material and manufacture.

5.05 BUY AMERICAN STEEL:

The contractor must comply with the requirements of the Maryland Buy American Steel Act, Title 17, Subtitle 3 of the SF & P and **COMAR 21.11.02**, which are incorporated into and made a part of the contract.

SECTION 6 - LEGAL RELATIONS AND RESPONSIBILITIES:

6.01 LAWS TO BE OBSERVED:

A. The contractor shall keep fully informed of all Federal, State, and local laws, ordinances, rules and regulations and all orders and decrees of bodies or tribunals having any jurisdiction or authority, which in any manner affect those engaged or employed on the work, or which in any way affect the conduct of the work. He shall at all times observe and comply with all such laws, rules, ordinances, regulations, orders and decrees; he shall protect and indemnify the State and its representatives against any such claim or liability arising from or based on the violation of any law, ordinance, regulation, order, or decree, whether by himself or his employees, Subcontractors or suppliers at any tier. Whenever the contract documents require the contractor to comply with provisions of Federal, State, or local laws, regulations, ordinances or codes, contractor must comply whether such laws, regulations, ordinances or codes are expressly incorporated into the contract or not.

B. The contractor must comply with the provisions of the Workers' Compensation Act and Federal, State and local laws relating to hours of labor.

C. The provisions of this contract shall be governed by the laws of the State of Maryland.

D. If the contractor observes that the contract documents are at variance with any applicable law, ordinance or regulation, he shall promptly notify the Procurement Officer and the architect, and, except as provided in subsection F, any necessary changes shall be adjusted as provided in the contract for changes in the work. If the contractor performs any work knowing it to be contrary to such laws, ordinances, rules and regulations, and without such notice, he shall bear all costs arising there from.

E. The State is not responsible for the actions, orders or interpretations of Federal, county, municipal, or other local officials or representatives respecting the application to the work of Federal, State, or local laws, ordinances, regulations or codes. contractor shall not be entitled to additional compensation for unanticipated costs of complying with any such actions, orders or interpretations.

F. Compliance with Laws. – (**COMAR 21.07.01.22**) The Contractor hereby represents and warrants that:

(1). It is qualified to do business in the State of Maryland and that it will take such action as, from time to time hereafter, may be necessary to remain so qualified;

(2). It is not in arrears with respect to the payment of any monies due and owing the State of Maryland, or any department or unit thereof, including but not limited to the payment of taxes and employee benefits, and that it shall not become so in arrears during the term of this Contract;

(3). It shall comply with all federal, State, and local laws, regulations, and ordinances applicable to its activities and obligations under this Contract; and

(4). It shall obtain, at its expense, all licenses, permits, insurance, and governmental approvals, if any, necessary to the performance of its obligations under this Contract.

6.02 PERMITS AND LICENSES:

A. When required by law or the contract, the State or its authorized representative will file with the appropriate local authority, drawings and specifications and any pertinent data reasonably proper for their information. The contractor will be required to pay all necessary fees to local authorities for review, approval, inspection or for the privilege or right to execute the work as called for in the contract documents and he shall include the cost of said fees in his bid. The State shall not be responsible for the actions or interpretations of county, municipal, or other local agencies or officials respecting the application of Federal, State or local laws, rules, ordinances, regulations, codes, or policies to the work.

B. The contractor must be licensed as required by Title 17, Subtitle 6 or Title 8 of the Business Regulation Article, Annotated Code of Maryland, and must be qualified by submission and approval of a Qualification Questionnaire (DPSCS Form 340-8-CQ3) to the Department.

6.03 PATENTS, COPYRIGHTS, TRADE SECRETS, AND PROTECTED MATTER:

A. The contractor assumes the risk that any materials, equipment, processes, or other items required under the contract or furnished by the contractor (including the CPM software furnished to the State under Section 7.06J.(2)(i)) are subject to any patent, copyright, trademark, trade secret or other property right of another. The contractor shall pay for all royalties and license fees and shall obtain all necessary licenses or permits to permit use of any such item by the State. contractor shall defend all suits or claims of infringement of any patent, copyright, trademark, trade secret or other property right of another and shall save the State harmless from loss or expense on account thereof.

B. When an item specified by the State or furnished by the contractor infringes or is alleged to infringe any patent, copyright, trademark, trade secret or other property right of another, the contractor will, at his option, and at no additional cost to the State, (1) procure for the State the right to use the item; (2) replace the item with an approved, non-infringing equal; or (3) modify the item so it becomes non-infringing and performs substantially the same as the original item.

6.04 LAND, AIR AND WATER POLLUTION, AND EROSION CONTROL:

A. The contractor shall incorporate all permanent erosion control features into the work at the earliest practicable time and shall maintain them in proper condition during the course of the contract. Temporary pollution control measures will be used to correct conditions that develop during construction that were not foreseen during design, that are needed prior to installation of permanent pollution control features, or that are needed temporarily to control erosion that develops during normal construction practices, but are not associated with permanent control features on the project.

B. Temporary pollution control may include measures outside the project site where such work is necessary as a direct result of project construction. The Department shall be kept advised of all such off-site control measures taken by the contractor. This shall not relieve the contractor of responsibility for such work.

C. The contractor must submit evidence to the Department that the governing Federal, State and local air pollution criteria will be and were met. This evidence and related documents will be retained by the Department for on-site examination.

D. If the performance of all or any part of the work is suspended, delayed, or interrupted due to an order of a court of competent jurisdiction as a result of environmental litigation, as defined below, or by the order of any State or Federal agency or official enforcing applicable laws, such suspension, delay, or interruption shall be considered as if ordered by the Procurement Officer under Section 7.09, Suspension of the Work. If it is determined that the suspension, delay, or interruption is due wholly or in part to acts or omissions of the contractor in breach or violation of the terms of this contract or acts of the contractor not required by this contract, contractor shall be responsible for all additional costs and delays resulting from such acts or omissions.

E. The term "environmental litigation," as used herein, means a lawsuit alleging that the work will have an adverse effect on the environment or that the State has not duly considered, either substantively or procedurally, the effect of the work on the environment.

6.05 INSURANCE REQUIREMENTS:

A. The Contractor shall maintain in full force and effect liability insurance necessary to cover claims arising from the Contractor's operations under this Contract. The following types of insurance coverage shall be provided:

Primary General Liability
Umbrella Liability or Excess Liability
Automobile Liability
Workers' Compensation
Builder's Risk
Professional Design Errors & Omissions, if design services are provided by Contractor

Note: The Contract may require the Contractor to maintain other types of insurance.

B. The insurance shall be kept in full force and effect until all work has been satisfactorily completed and accepted. Evidence of insurance shall be provided to the Department prior to the execution of the Contract by means of a Certificate of Insurance with copies of all endorsements attached or by certified copy of the complete policy with all endorsements. Failure to obtain or to maintain the required insurance or to submit the required proof of insurance shall be grounds for termination of the contract for default. Exclusion endorsement copies shall be attached to the Certificate of Insurance. The Certificate of Insurance shall be accompanied by a document (a copy of State License or letter from insurer) which indicates that the agent signing the certificate is an authorized agent of the insurer.

C. The Contractor shall not commence work under this Contract until all the insurance required under this Subsection has been obtained and approved by the Department, nor shall the Contractor allow any Subcontractor to commence work on its subcontract until the insurance required of the Subcontractor has been obtained by the Subcontractor and approved by the Contractor. All Subcontractors shall be required in the subcontract documents to carry insurance for the line items described in the subcontract. The Contractor shall be responsible to determining appropriate limits for Subcontractors, and for enforcing insurance coverage requirements for its Subcontractors.

D. All insurance policies required by this Subsection or elsewhere in the Contract Documents shall be written on forms (including the actual wording of the policies and all endorsements) acceptable to the Department and with insurance companies that hold a current A.M. Best rating of A and that are duly licensed to transact the prescribed coverage's in the jurisdiction in which the work of the Contract is to be performed.

E. All insurance policies required by this Subsection or elsewhere in the Contract Documents shall be endorsed to state that the insurance carrier shall provide at least sixty (60) days notice to the Department in the event of cancellation, non-renewal, or material change in the coverage, either by the insurance company or the Contractor.

F. The General Liability and Umbrella Liability/Excess Liability insurance policies required by this Subsection or elsewhere in the contract Documents shall include endorsements stating that the State and the Department and any other entities designated by the Department are additional insured's with respect to liability arising out of or resulting from the operations and completed operations of the named insured under the Contract.

G. All insurance policies required by this Subsection or elsewhere in the Contract Documents shall contain endorsements stating that such coverage as is provided by the policies for the benefit of the additional insured is primary and other coverage maintained by additional insured (if any) shall be non-contributing with the coverage provided under the policies.

H. All insurance policies required by this Subsection or elsewhere in the Contract Documents shall contain waivers of subrogation in favor of the State and the Department and any other entity

designated by the Department and shall provide that the bankruptcy or insolvency of the insured does not relieve the insurance company of its obligations under the policies.

I. In the event any party maintains insurance with limits exceeding the limits required hereunder, the Certificates of Insurance provided to the Department shall state the full extent of the coverage available to the parties. Such excess liability coverage will inure to the benefit of the parties in the event of loss in excess of the minimum insurance required herein.

J. If, during the term of the Contract, the Contractor fails to secure and maintain the required insurance, the Department shall have the right (without the obligation to do so) to secure the insurance in the amounts specified in the name of the Contractor, in which case, the Contractor shall pay all premiums, deductibles, self-insured retentions or other amounts associated with the insurance and shall furnish all information that may be required in connection with the Department purchasing such insurance.

K. It is understood and agreed that the coverage's and limits contained herein are the minimum requirements only. The Contractor is responsible for providing insurance coverage that meets the needs of the Contractor itself, its Subcontractors, sub-consultants, employees, and others as obligated in the Contract Documents. All insurance policies shall contain at a minimum the following provisions:

(1) Primary General Liability Insurance

Coverage – The policy shall include provisions that offer protection against all risks and exposures, including without limitation:

- Premises and Operations Coverage
- Products and Completed Operations Coverage
- Blanket Contractual Liability Coverage, including any indemnity provisions
- Broad Named Insured Endorsement
- Notice, Knowledge, and Unintentional Errors and Omissions Coverage
- Incidental Malpractice Coverage
- Independent Contractors Coverage
- Personal Injury Coverage
- Broad Form Coverage for damage to property of the State, as well as other third parties resulting from the Contractor's Work
- Any aggregate limits apply on a "per project" basis

Limits of Liability – Minimum Limits of Liability dedicated to the Project of $1,000,000 each occurrence and $2,000,000 aggregate shall be provided.

Deductibles/Self-Insured Retentions – The Contractor is responsible for payment of all deductibles or self-insured retentions and shall include and specifically identify in its bid any amounts that it expects to pay for deductibles and/or self-insured retentions.

Status of the State as Additional Insured – The Policy shall name the State and the Department and any other entities required by the Department as additional insured.

Term of Coverage – The term of coverage shall be the full contract period. Contractor shall continue to name all additional insured for the entire Period.

Other Coverage/Features – The Primary General Liability Insurance Policy and all Umbrella Liability/Excess Liability Policies are also subject to the following requirements:

All policies shall include a provision that no act or omission of the Contractor or any party acting under its direction will affect or limit the obligations of the insurance company in respect of any additional insured.

All policies shall delete any warranty stating that coverage is null and void (or words to that effect) if the Contractor does not comply with the most stringent regulations governing the work under the Contract.

All policies must provide that the insurance company has the duty to adjust a claim and provide a defense.

(2) Umbrella Liability Insurance

Coverage – Coverage shall be at least as broad as the underlying primary commercial general liability policy.

Limits of Liability – Unless expressly modified by the Procurement Officer, Limits of Liability dedicated to the project in the amounts of $5 million per occurrence and $5 million aggregate shall be provided.

Deductibles/Self-Insured Retentions – The Contractor is responsible for payment of all deductibles or self-insured retentions and shall include and specifically identify in its bid any amounts that it expects to pay for deductibles and/or self-insured retentions.

Status of the State as Additional Insured – The Policy shall name the State and the Department and any other entities required by the Department as additional insured.

(3) Automobile Liability Insurance

Coverage – All vehicles used in conjunction with the Contract shall be insured.

Limits of Liability – Minimum Limits of Liability, primary to Umbrella Liability coverage described above, in the amounts of $1 million per occurrence and $1 million aggregate shall be provided.

Deductibles/Self-Insured Retentions – The Contractor is responsible for payment of all deductibles or self-insured retentions and shall include and specifically identify in its bid any amounts that it expects to pay for deductibles and/or self-insured retentions.

(4) Workers' Compensation

Coverage – Statutory Workers' Compensation as required by the State of Maryland.

Limits of Liability – Statutory.

(5) Builder's Risk Insurance (and Installation Floater, if not included in Builder's Risk Coverage)

Named Insured – At a minimum the policy shall insure the Contractor, the State, the Department, and any other party with an insurable interest in the Project.

Coverage – All risks of direct physical loss of or damage to the property (including without limitation perils of flood). Coverage shall be as broad as possible with respect to both covered property interests and covered locations. All covered locations shall be named, and shall include the contract number and project description. Coverage applies to all materials, supplies, and equipment that are consumed on or intended for specific installation in the Project while such materials, supplies and equipment are located at the Project site. If the Builder's Risk Policy does not cover materials onsite that have not yet been installed, Contractor shall also provide an Installation Floater. Contractor shall comply with any requirements in the Policy for project reports by the Contractor to the insurance company. The Builder's Risk Policy shall be endorsed: (i) waiving the insurance company's rights of recovery under subrogation against all insured's and additional insured's on the policy; (ii) to make the Department a Loss Payee for all claims; and (iii) to delete any provisions that void coverage with respect to the Department for acts or omissions of the Contractor or any other party.

Limits of Liability – Full replacement cost of the structure under construction, plus debris removal coverage and ordinance coverage for all risk perils, and cost of materials onsite that have not yet been installed. Any sub-limits must be clearly identified, and are subject to prior approval by the Department.

Deductibles/Self-Insured Retentions – The Contractor is responsible for payment of all deductibles or self-insured retentions and shall include and specifically identify in its bid any amounts that it expects to pay for deductibles and/or self-insured retentions.

(6) Design Errors & Omissions (applicable only to projects where Contractor is also providing Design Services).

Coverage – Work done or to be done by or on behalf of the Contractor and covering errors and omissions.

Limits of Liability – Limits of Liability dedicated to the project in the amounts of $1 million per occurrence and $2 million aggregate shall be provided.

Deductibles/Self-Insured Retentions – The Contractor is responsible for payment of all deductibles or self-insured retentions and shall include and specifically identify in its bid any amounts that it expects to pay for deductibles and/or self-insured retentions.

Status of the State as Additional Insured – The Policy shall name the State and the Department and any other entities required by the Department as additional insured.

6.06 ASSIGNMENT, NOVATION, CHANGE OF NAME:

The provisions of **COMAR 21.05.02.24** respecting assignment, novation and change of name are incorporated into and made a part of the contract.

6.07 SEPARATE CONTRACTS:

A. The State reserves the right to let other contracts in connection with or adjacent to this work. (See also Section 4.03.) The contractor shall afford other contractors reasonable opportunity for the introduction and storage of their materials and the execution of their work, and shall properly connect and coordinate his work with theirs. The contractor is entitled to no overhead, profit, or other compensation for work done for the State by other contractors.

B. If any part of the contractor's work depends on proper execution or results of the work of any other contractor, the contractor shall inspect and promptly report to the Department and the Architect any defects in such work that render it unsuitable for such proper execution and results. His failure to so inspect and report shall constitute an acceptance of the other contractor's work as fit and proper for the reception of his work, except as to the defects which may develop in the other contractor's work after the execution of his work.

C. To ensure the proper execution of his subsequent work, the contractor shall measure work already in place and shall at once report to the architect and the Procurement Officer any discrepancy between the executed work and the drawings.

6.08 RELATIONSHIP OF CONTRACTOR TO PUBLIC OFFICIALS AND EMPLOYEES:

A. In carrying out any of the provisions of the contract, or in exercising any power or authority granted to them by or within the scope of the contract, there shall be no liability upon the Procurement Officer or other authorized representatives of the State, it being understood that in all such matters they act solely as agents and representatives of the State.

B. The State may terminate the contract for default or hold the contractor liable for damages for breach of the contract as provided in subsection C if it is found by the Procurement Officer that gratuities (in the form of entertainment, gifts, or otherwise) were offered or given by the contractor, or any agent or representative of the contractor, to any officer or employee of the State with a view toward securing a contract or securing favorable treatment with respect to the awarding or amending of the contract, or the making of any determinations with respect to the performance of the contract.

C. In the event this contract is terminated for default or the contractor is held liable for damages as provided in subsection B hereof, the State shall be entitled (1) to pursue the same remedies against the contractor as it could pursue in the event of a termination for default or a breach of the contract by the contractor, and (2) in addition to any other damages to which it may be entitled, to exemplary damages in an amount (as determined by the Procurement Officer) which shall be not less than three nor more than ten times the costs incurred by the contractor in providing any such gratuities to any such officer or employee.

D. Non-hiring of officials and employees (**COMAR 21.07.01.05**) - No official or employee of the State of Maryland, as defined under State Government Article, §15-102, Annotated Code of Maryland, whose duties as such official or employee include matters relating to or affecting the subject matter of this contract, shall during the pendency and term of this contact and while serving as an official or employee of the State become or be an employee of the Contractor or any entity that is a Subcontractor on this contract.

6.09 NO WAIVER OF RIGHTS -- STATE'S REMEDIES CUMULATIVE -- STATE'S DAMAGES:

A. The State shall not be precluded or estopped by any measurement, estimate, change order, contract modification, certificate of payment, or payment from showing the true amount and character of the work furnished by the contractor, or from showing that any measurement, estimate, change order, contract modification, certificate of payment, or payment is untrue or was incorrectly made, or from showing that the work does not in fact conform to the contract. The State may recover from the contractor or his sureties, or both, such damages, loss, or additional expense incurred as a result of any such error in measurement, estimate, change order, contract modification, certificate of payment, or payment as a result of such failure to conform to the contract. The State's rights in this respect shall not be waived or barred by any inspection, acceptance or approval of the work, or by payment therefore, or by granting an extension of time, or by taking possession, or by execution of a change order based on the erroneous measurement, estimate, or change order, contract modification, certificate of payment, or payment.

B. The activities of the State personnel respecting this contract, including inspection of the work, review of submittals, monitoring of progress, and so forth are for the benefit of the State only and are not for the benefit of the contractor. The State's failure to bring to the attention of the contractor deficiencies in the work or the contractor's performance will not constitute waiver or excuse of the contractor's failure to comply strictly with contract requirements.

C. The waiver by the Procurement Officer of any breach of contract by the contractor shall not operate as a waiver of any other or subsequent breach.

D. The rights and remedies of the State and the obligations of the contractor under various provisions of the contract documents and under provisions of applicable law are cumulative and not exclusive.

E. For any claim or cause of action accruing to the State as a result of or arising out of this contract, the State may collect damages of any kind, including consequential damages and damages for purely economic loss.

6.10 SOLICITATION WARRANTY -- CONTINGENT FEE PROHIBITION (COMAR 21.07.01.09):

The Contractor, architect, or engineer (as applicable) warrants that it has not employed or retained any person, partnership, corporation, or other entity, other than a bona fide employee or agent working for the Contractor, architect, or engineer, to solicit or secure this agreement, and that it has not paid or agreed to pay any person, partnership, corporation, or other entity, other than a bona fide employee or agent, any fee or any other consideration contingent on the making of this agreement. Contractor must comply with the provisions of 13-223 of SF&P.

6.11 ASSIGNMENT OF ANTITRUST CLAIMS:

The contractor sells, transfers and assigns to the State of Maryland all rights, title and interest of, in and to any causes of action arising at any time before the date of this assignment or during the performance of this contract under the antitrust laws of the United States, including Section 1 of the Sherman Act, and the antitrust laws of Maryland relating to the purchase by contractor or the State of Maryland of any products from any supplier or source whatever that is incorporated in the structure built under the terms of this contract. The contractor hereby certifies that the above causes of action are lawfully owned and that no previous assignment of same has been made nor has the same heretofore been attached or pledged in any manner whatsoever.

6.12 FEDERAL PARTICIPATION:

When the United States government pays all or any portion of the cost of a project, the work may be subject to inspection by Federal agencies. Such inspection shall in no sense make the Federal government a party to this contract.

6.13 DISPUTES AND CONTRACT CLAIMS (COMAR 21.07.02.05-1):

A. This contract is subject to the provisions of State Finance and Procurement Article, Title 15, Subtitle 2, Annotated Code of Maryland and **COMAR 21.10**

B. Except as otherwise provided in this contract or by law, all disputes arising under or as a result of a breach of this contract that are not disposed of by mutual agreement shall be resolved in accordance with this clause.

C. As used herein, “claim” means a written demand or assertion by one of the parties seeking, as a legal right, the payment of money, adjustment or interpretation of contract terms, or other relief, arising under or relating to this contract. A voucher, invoice, or request for payment that is not in dispute when submitted is not a claim under this clause. However, if the submission subsequently is not acted upon in a reasonable time, or is disputed as a liability or amount, it may be converted to a claim for the purpose of this clause.

D. Within 30 days after contractor knows or should have known of the basis for a claim relating to this contract, contractor shall file a written notice of a claim with the procurement officer.

E. Contemporaneously with, or within 90 days after, the filing of a notice of claim, contractor shall submit the written claim to the procurement officer. If contractor so requests, the procurement officer may extend the time in which contractor must submit the claim.

F. The claim shall set forth all the facts surrounding the controversy. contractor, at the discretion of the procurement officer, may be afforded an opportunity to be heard and to offer evidence in support of the claim.

G. The procurement officer shall mail or deliver written notification of the final decision within:

(1) 90 days after the procurement officer receives the claim if the claim is an amount for which the Appeals Board accelerated procedure, set forth in **COMAR 21.10.06.12**, may by used;
(2) 180 days after the procurement officer receives the claim for a claim not covered under § G(1) of this regulation; or
(3) A longer period that the procurement officer and contractor agree to in writing.

H. The final decision may award a contract claim only for those expenses incurred not more than 30 days before Contractor was initially required to have filed the notice of claim.

I. The procurement officer’s decision is the final action of the State. If the procurement officer fails to render a final decision within the time required, contractor may deem the failure to be a final decision not to pay the claim.

J. If the final decision grants the claim in part and denies the claim in part, the agency shall pay contractor the undisputed amount. Payment of the partial claim is not an admission of liability by agency and does not preclude agency from recovering the amount paid if a subsequent determination modifies the final decision.

K. Contractor may file a written appeal with the Maryland State Board of Contract Appeals within 30 days of receipt of notice of the decision.

L. Pending resolution of a claim, contractor shall proceed diligently with the performance of the contract in accordance with the procurement officer’s decision.

M. No claim for extra costs is allowable for delays resulting from the causes stated in Section 7.07D(1). Only non-compensable time extensions will be granted for such delays.

N. As provided in Section 15-219(b) of SF&P and **COMAR 21.10.04.02B**, a claim shall include the amount of the claim, the facts on which the claim is based, and all relevant data and correspondence that may substantiate the claim, and the claim must be certified by a senior official, officer, or general partner of the Contractor or the Subcontractor, as applicable, that, to the best of the person's knowledge and belief, the claim is made in good faith, supporting data accurate and complete, and the amount requested accurately reflects the contract adjustment for which the person believes the State is liable. The Procurement Officer may consider a claim as not being filed until Contractor complies with this provision. The Procurement Officer is not required to notify the Contractor of its failure to comply with this provision; the burden is on the Contractor to comply with the Contractor's obligations under the law and the contract.

O. Contractor shall take all reasonable action to mitigate or to avoid costs or damages for which the State may be liable.

P. A final decision of the Procurement Officer shall be prima facie evidence of the correctness of the decision. On any appeal from a decision of the Procurement Officer, the Contractor will have the burden of proof and the burden of going forward with the evidence on all issues, including the propriety of a termination for default.

Q. (1) As used in this paragraph, "Subcontractor" includes Subcontractors and suppliers of the Contractor at any tier.

(2) The State shall have no liability to the Contractor for any claim of a Subcontractor against the Contractor if the Contractor has no liability therefor to the Subcontractor or if the Contractor has a valid defense against the claim of the Subcontractor. Any agreement between the Contractor and the Subcontractor making liability on the part of the Contractor to the Subcontractor contingent upon a determination of liability on the part of the State to the Contractor shall not make the State liable to the Contractor for the claim of the Subcontractor if the Contractor would not otherwise be liable therefore. The purpose of this provision is to adopt the Severin doctrine, without exception, as a matter of contract between the State and the Contractor.

R. If Contractor contends that any change order or proposal for a change order or other order issued under Section 3.06 will or may cause an increase in the time required for performance, or damages or additional overhead or costs to the Contractor or his Subcontractor and suppliers at any tier, Contractor must include the additional time and compensation claimed to be due in Contractor's change order proposal if one was requested by the State, or if no change order proposal was requested by the State, then in the claim submitted by the Contractor. Contractor is entitled to no extensions of the completion time for which he has failed to file a timely notice of claim or the claim itself, in the proper form and supported by complete and proper documentation, as required by this Section and Sections 3.06, 3.07 and 7.06. Contractor may not unilaterally "reserve his rights" to file any claims or any requests for extensions of time. Contractor's rights to additional compensation or time extensions are contingent upon Contractor strictly following the notice and filing requirements of the contract. All proposals or requests for additional time and time-related compensation are subject to this Section, Sections 3.06, 3.07 and 7.06, and all other applicable provisions of the contract documents.

6.14 MULTI-YEAR CONTRACTS CONTINGENT UPON APPROPRIATION (COMAR 21.07.01.10):

If the General Assembly fails to appropriate funds or if funds are not otherwise made available for continued performance for any fiscal period of this Contract succeeding the first fiscal period, this Contract shall be cancelled automatically as of the beginning of the fiscal year for which funds were not appropriated or otherwise made available; provided, however, that this will not affect either the State's rights or the Contractor's rights under any termination clause in this Contract. The effect of termination of the Contract hereunder will be to discharge both the Contractor and the State from future performance of the Contract, but not from their rights and obligations existing at the time of termination. The Contractor shall be reimbursed for the reasonable value of any non-recurring costs incurred but not amortized in the

price of the Contract. The State shall notify the Contractor as soon as it has knowledge that funds may not be available for the continuation of this Contract for each succeeding fiscal period beyond the first.

6.15 PRE-EXISTING REGULATIONS (COMAR 21.07.01.17):

In accordance with the provisions of Section 11-206 of the State Finance and Procurement Article, Annotated Code of Maryland, the regulations set forth in Title 21 of the Code of Maryland Regulations (**COMAR Title 21**) in effect on the date of execution of this Contract are applicable to this Contract.

6.16 STATE PROPERTY NOT SUBJECT TO LIEN:

Neither the contractor nor any Subcontractor or supplier at any tier may have or acquire any lien against State property.

6.17 STATE NOT SUBJECT TO LIMITATIONS:

The State is not bound by laches or any statute of limitations or repose, and contractor may not assert laches, limitations, or a statute of repose as a defense against any claim or action brought by the State.

6.18 CONFLICT OF INTEREST:

The contract is subject to the provisions of Section 13-212 of SF&P and **COMAR 21.05.08.08**, Conflict of Interest.

6.19 CENTURY COMPLIANT SOFTWARE, ETC.:

“Century compliant” means that a product or item: Is able to process date data accurately including date data century recognition, calculations that accommodate same century and multi-century formulas and date values (including leap year factors), and date data interface values that reflect century when used either in a stand-alone configuration or in combination with other century compliant products used by the State; and will not abnormally terminate its function or provide or cause invalid or incorrect results due to incompatibility with the calendar year.

The contractor warrants that the electronic products and components, including computers, software, and other devises and materials, provide or developed under this contract are century compliant. Contractor agrees to promptly repair or replace any product furnished under this contract that is not century compliant, provided the State give contractor notice or breach of the warranty within a reasonable time after discovery.

The warranty provided by this section is in addition to any other warranties provided by law or this contract.

6.20 COMMERCIAL NONDISCRIMINATION POLICY (COMAR 21.07.01.26):

A. As a condition of entering into this Agreement, Contractor represents and warrants that it will comply with the State’s Commercial Nondiscrimination Policy, as described under Title 19 of the State Finance and Procurement Article of the Annotated Code of Maryland. As part of such compliance, Contractor may not discriminate on the basis of race, color, religion, ancestry or national origin, sex, age, marital status, sexual orientation, or on the basis of disability or other unlawful forms of discrimination in the solicitation, selection, hiring, or commercial treatment of Subcontractors, vendors, suppliers, or commercial customers, nor shall Contractor retaliate against any person for reporting instances of such discrimination. Contractor shall provide equal opportunity for Subcontractors, vendors, and suppliers to participate in all of its public sector and private sector subcontracting and supply opportunities, provided that this clause does not prohibit or limit lawful efforts to remedy the effects of marketplace discrimination that have occurred or are occurring in the marketplace. Contractor understands that a material violation of this clause shall be considered a material breach of this Agreement and may result in termination of this Agreement, disqualification of Contractor from participating in State contracts, or other sanctions. This clause is not enforceable by or for the benefit of, and creates no obligation to, any third party.

Note: Paragraph 6.20A must be incorporated into every subcontract entered into under this contract

B. As a condition of entering into this Agreement, upon the Maryland Human Relations Commission's request, and only after the filing of a complaint against Contractor under Title 19 of the State Finance and Procurement Article, as amended from time to time, Contractor agrees to provide within 60 days after the request a complete list of the names of all Subcontractors, vendors, and suppliers that Contractor has used in the past 4 years on any of its contracts that were undertaken within the State of Maryland, including the total dollar amount paid by Contractor on each subcontract or supply contract. Contractor further agrees to cooperate in any investigation conducted by the State pursuant to the State's Commercial Nondiscrimination Policy as set forth under Title 19 of the State Finance and Procurement Article of the Annotated Code of Maryland, and to provide any documents relevant to any investigation that is requested by the State. Contractor understands that violation of this clause is a material breach of this Agreement and may result in contract termination, disqualification by the State from participating in State contracts, and other sanctions.

SECTION 7 - PROSECUTION, PROGRESS, AND QUALITY OF THE WORK:

7.01 NOTICE TO PROCEED:

After the contract has been executed, the Department will issue to the Contractor a "Notice to Proceed" and this notice will stipulate the start date on which the Contractor is expected to begin work. The specified contract time shall begin on the start date stated in the "Notice to Proceed." Except as provided in Section 7.06Q(1), any work started or materials ordered before the start date stated in the "Notice to Proceed" shall be at the risk of the Contractor. The Contractor is prohibited from doing any work on the site without the insurance required by this contract.

7.02 PROJECT SIGNS AND INSPECTOR'S FIELD OFFICE:

A. Project Sign:

(1) The State will provide one project sign for each major entrance to the project. The contractor shall be responsible for transportation of the sign from its place of origin, placement and maintenance of the sign. The location of signs will be directed by the State Inspector.

(2) Posts for sign(s) shall be supplied by the contractor and made of 4 x 4 inch construction-grade lumber, pressure preservative treated, 10 feet long. The sign(s) shall be bolted to the posts using at least two 1/2 inch bolts per post. Washers shall be used between the bolts and the sign faces and the posts and nuts. The posts shall be set into the ground to a depth of three feet, six inches with the bottom of the signs two feet six inches above the ground.

(3) The contractor shall be responsible for removing the sign(s) and correction or repair of the site after final acceptance of the work and shall dispose of the sign(s) as directed by the State's authorized representative.

B. Inspector's Field Office:

If so specified, the contractor shall furnish and maintain, at his cost and for the State's exclusive use, an inspector's field office. Specific requirements will be described in the specifications.

7.03 PUBLIC CONVENIENCE AND SAFETY:

The contractor at all times shall conduct the work in such a manner as to create the least practicable obstruction to all forms of traffic. The convenience of the general public, tenants, and of the residents along and/or adjacent to the improvement shall be respected. Material stored upon the project site shall be placed so as to cause a minimum of obstruction to the public. Sprinkling to inhibit dust shall be performed at the direction of the Procurement Officer at no additional cost to the State. The contractor shall, unless otherwise specified, provide and maintain in passable condition such temporary access, roads and bridges as may be necessary to accommodate traffic diverted from the project under construction, or using the project under construction and shall provide and maintain in a safe condition temporary approaches to, and crossings of, the project. Existing facilities planned to be removed, but

which might be of service to the public during construction, are not to be disturbed until other and adequate provisions are made. Fire hydrants on or adjacent to the project shall be kept accessible to fire apparatus at all times, and no material or obstruction shall be placed within 15 feet of any such hydrant. Work closed down for the winter or at any other times shall be left entirely accessible at all points to fire apparatus. All footways, gutters, sewer inlets and portions of the project under construction shall not be obstructed more than is absolutely necessary.

7.04 BARRICADES AND WARNING SIGNS:

A. The contractor shall provide, erect and maintain all necessary barricades, suitable and sufficient lights, danger signals, signs and other control devices, and shall take all necessary precautions for the protection of the work and safety of the public. All highways and other facilities closed to traffic shall be protected by effective barricades, and obstructions shall be illuminated during hours of darkness with electric lights.

B. The contractor shall erect warning signs prior to any place on the project where operations may interfere with the use of the facility by vehicular or pedestrian traffic, and at all other points where the new work crosses or coincides with an existing roadway or traffic lane(s). Such warning signs shall be constructed and erected in accordance with the FHWA Manual on Uniform Traffic Control Devices, or as directed.

C. In cases where the contractor's sequence of operations results in grade differentials which would be hazardous to vehicular or pedestrian traffic, the contractor will, at the direction of the Procurement Officer and at no additional cost to the State, provide suitable substantial guardrails to the extent determined by the Procurement Officer.

7.05 PRESERVATION, PROTECTION AND RESTORATION OF PROPERTY:

A. The contractor shall continuously maintain adequate protection of all his work from damage and shall protect the State property from injury or loss arising in connection with this contract. He shall repair and indemnify the State against any such damage, injury or loss, except such as may be directly and solely due to errors in the contract documents or caused by agents or employees of the State. He shall adequately protect adjacent property as provided by law and the contract documents.

B. The contractor shall box all trees which are liable to be injured by the moving, storing and working up of materials. He shall use no tree for any attachment or anchorage.

C. The contractor shall erect and properly maintain at all times, as required by the conditions and progress of the work, all necessary safeguards for the protection of workmen and the public and shall post danger signs warning against the hazards created by such features of construction as protruding nails, hod hoists, well holes, elevator hatchways, scaffolding, window openings, stairways and falling materials.

D. To the extent permitted by law, in any emergency affecting the safety of life, or of the work, or of the adjoining property, the contractor, without special instruction or authorization, is hereby permitted to act, at his discretion, to prevent such threatened loss or injury.

7.06 PROGRESS SCHEDULE - DELAYS:

A. (1) All time limits in the contract documents are of the essence of the contract.

(2) Contractor and the State agree that the time stated in the contract for the completion of the work is a reasonable time, considering the climatic range and the usual business conditions prevailing in the locality of the project. The contract time shall be the full time allowed or required for completion of every task involved in completion of the work, including lead-time for ordering and fabrication of equipment and materials.

(3) This project is subject to limited funding and tight budgeting. The State's budgeting; including budgeting for expenses of operation after completion and for payment to the architect and others working

on the project, is based on the contract extending for the full time allowed by the contract for completion. The State is not obligated (a) to accept an early completion schedule from the contractor, or (b) to accept the project prior to the completion date stated in the contract. The State will not be liable for any claims based on the contractor's assertion of an intention to finish early.

B. Preliminary Network Diagram.

(1) Unless the contract documents expressly state otherwise, the contractor is to furnish a preliminary network diagram.

(2) Within 14 days of the contract execution, contractor must submit a preliminary critical path network (CPM) diagram outlining activities for the first 90 days of construction. Include a skeleton diagram for the remainder of the work with the preliminary diagram. This preliminary diagram must be approved prior to the first requisition being processed. Include each significant construction activity. Coordinate each activity in the network with other activities. Schedule each construction activity in proper sequence.

(3) The diagram must be cost-loaded consistent with the schedule of values as required by Section 8.01 C. and will be used as the basis for approval of requisitions. Requisitions submitted must be accompanied by an updated, cost-loaded schedule. The requisition amount must agree with the amount shown by the cost-loaded CPM.

(4) With submission of the preliminary network diagram, include tabulation by date of submission of submittals required during the first 90 days of construction. List those required to maintain orderly progress of the work, and those required early because of long lead time for manufacture or fabrication.

(5) Distribute the preliminary network diagram to all parties that need to know about construction activities that are scheduled early, including the Architect, DPSCS and the using agency.

C. Completion Schedule.

(1) Within 30 days after Notice to Proceed, and at such other times as required by subsections E and H of this section, the contractor shall submit a schedule indicating the time allocated by the contractor for the performance of each portion of the work, the submittal information required by subsection D, the dollar value of each work item (dollar loading) properly and reasonably sequenced, and the contractor's labor requirements (labor loading) for achieving each task shown on the schedule. The schedule shall show completion of the work within the contract time. The State may decline to issue a Notice to Proceed until contractor has submitted the required schedule in accordance with subsection B.(2) and it is approved by DPSCS. Nothing in this section shall be construed to require the State to issue Notice to Proceed when the required schedule has been submitted and approved.

(2) (a) Contractor shall also submit, with the schedule required under (1) above,

(i) a written narrative explaining the bases of contractor's determinations of durations and prices for major work activities and describing contractor's approach for meeting the interim and final completion dates for major work activities and contract completion;
(ii) a listing of the major items of construction equipment planned for use on the project (including type, number of units, unit capacities, and a schedule showing the proposed time each piece of equipment will be on the job, keyed to the activities on which the equipment will be used);
(iii) identification of activities which may be expedited by use of overtime or additional shifts;
(iv) identification of sequencing and other restraints such as manpower, material, and equipment;
(v) a listing of the proposed work days, holidays and any special non-work days being used for the computer reports (schedules and updates).

(b) If required by DPSCS, such explanation shall include (at no additional cost to the State) estimated quantities and production rates, hours per shift which are proposed, unit prices of materials, and prices of installed equipment.

D. The contractor's schedule shall include as separate work activities, all necessary activities relating to submittals, including but not limited to the work or materials covered by the submittal, the Subcontractor involved, the submittal required, the activity or event number as shown in the CPM schedule (if required), and all necessary dates for submittal, review and response, resubmittal (if necessary), and final approval by the architect and/or DPSCS.

E. Subject to the requirements of subsection J, contractor shall submit with each application for payment a revised schedule accurately updated to reflect all:

(1) revisions to the schedule;
(2) changes made or planned in the construction sequence;
(3) actual construction activities to date including
(i) commencement and completion dates for activities started or completed during the reporting period,
(ii) current progress of activities started in prior reporting periods including completion dates for activities completed during the reporting period;

(4) delays and their effects on the critical path (whether or not a CPM schedule is required);
(5) extensions of time granted by the State;
(6) the contractor's planned schedule for completing remaining activities; and
(7) adjustments to the dollar loading and labor loading associated with items (1) through (5) above. This required schedule update shall be furnished monthly whether or not contractor submits an application for payment in that month.

F. All of contractor's schedules, including monthly schedule updates and recovery schedules under subsection H, shall be reviewed by the architect and DPSCS and shall be approved or disapproved by DPSCS. Approval by DPSCS of any schedule submitted under this Section 7.06 shall constitute approval of the schedule only for general conformity with contract requirements and shall not constitute approval, acceptance, or admission of the reasonableness, accuracy, achievability, or feasibility of the schedule or of the contractor's ability to meet the schedule, or waiver or excuse of default or delay by the contractor, extension of the time for completion, waiver or modification of contract requirements, admission of fault or responsibility for delay on the part of the State or the architect, or acceptance or admission on the part of the State of any liability or responsibility for the schedule or for acceleration or other costs or delay damages of the contractor which are inferable from the contractor's schedule or update.

G. Contractor agrees that accurate schedules and updates are critical to the State's ability to complete the project efficiently and economically; to judge the impact of alleged delays, differing site conditions, change orders and other events; and to deal fairly with the contractor. If the contractor fails to submit reasonable and accurate preliminary network diagrams, schedules, or revisions, including recovery schedules under subsection H, as required by the contract: (1) the State is not obligated to pay the contractor for work completed until proper, accurate diagrams, schedules, and updates are furnished as required; and (2) the State is not liable for and contractor is not entitled to damages, compensation, or time extensions for delays starting, occurring or continuing during the period when an accurate and reasonable schedule or update was due but not furnished by the contractor.

H. Whenever the project shall be behind schedule or alleged by either party to be behind schedule, the Procurement Officer may require the contractor to furnish, at no additional cost to the State, a revised schedule (hereinafter called a recovery schedule) showing how the contractor will finish the project by the contract completion date. This revised schedule shall include all of the information required under subsection E above, subject to the requirements of subsection J.

I. The contractor's construction schedule shall begin with the date of issuance of Notice to Proceed and conclude with the required date of final completion of the project as stated in the contract documents. Except as provided in Section 7.06B(2), float or slack time available in the schedule at any time shall not be for the exclusive use or benefit of either the contractor or the State, but is jointly owned. Delay for which the State is responsible in any portion of the work shall not automatically mean that the extension

of the completion date is warranted or due the contractor. contractor agrees that a delay in any given activity at any given time may not necessarily affect critical activities and may not necessarily cause non-critical activities to become critical. The effect of any given delay may be only to absorb float and may not necessarily delay critical activities. Subject to Section 7.06B(2), extensions of time for delays for which the State is responsible will be granted only to the extent that affected activities exceed the total float along their paths on the current approved CPM schedule.

J. CPM Scheduling.

(1) Unless the contract documents expressly permit the contractor to use a schedule other than a CPM schedule, the schedules to be furnished by the contractor under this Section 7.06 shall be CPM schedules. Contractor's CPM schedule must be submitted within 30 days after the contract is executed, or after the Notice to Proceed is given. Following rejection by DPSCS or conditional approval subject to correction, contractor shall make the necessary corrections, and resubmit proper schedules within 14 calendar days. contractor may use only CPM schedule software approved by the State.

(2) (a) Scheduling of construction is the responsibility of the Contractor. CPM scheduling is required to assure adequate planning and execution of the work and to assist DPSCS, the architect and the contractor in evaluating the progress of the work and the impact on the schedule of events which could affect the completion date.

(b) Logic or network diagrams shall show the order and interdependence of activities and the sequence in which the work is to be accomplished as planned by the contractor. These diagrams must show how the start of a given activity is dependent on preceding activities and how its completion restricts the start of following activities.

(c) Detailed logic or network activities shall include, in addition to construction activities, the submittal and approval of samples of materials and shop drawings, the procurement of critical materials and equipment and their installation and testing. All activities of DPSCS and the architect that affect progress, and contract required dates for completion of all or part of the work will be shown.

(d) The selection and number of activities shall be subject to DPSCS approval. Logic or network diagrams need not be time scaled but shall be drafted to show continuous flow from left to right with no arrows from right to left. The following information shall be shown on the diagrams for each activity: preceding and following event number, description of the activity, cost loading, labor loading, and activity duration in calendar days. Schedules shall be plotted so they can be displayed on a wall eight feet high. A summary schedule, plotted on a single sheet, shall be provided also.

(e) The mathematical analysis of the network shall include a tabulation of each activity. The following information will be furnished, at a minimum, for each activity:

(i) I, J numbers if Arrow Diagramming Method (ADM) is used.
(ii) Activity and (ii) Precedence relationships if Precedence Diagramming Method (PDM) is used.
(iii) Activity Description.
(iv) Estimated duration of activity (in calendar days).
(v) Percent of activity completed.
(vi) Earliest start date (by calendar date).
(vii) Earliest finish date (by calendar date).
(viii) Actual start date (by calendar date).
(ix) Actual finish date (by calendar date).
(x) Latest start date (by calendar date).
(xi) Latest finish date (by calendar date).
(xii) Float or slack (in calendar days).
(xiii) A monetary value of each activity.
(xiv) Subcontractor responsible for each activity.
(xv) Labor requirements for each activity.

(f) Work elements should be broken down into activities of durations of from 1 to 21 calendar days. No activity should ever represent more work than can be accomplished in 21 calendar days.

(g) The analysis shall list the activities in sorts or groups as follows:

(i) By the preceding event number from lowest to highest and then in order of the following event number;
(ii) By the amount of float, then in order of preceding event number;
(iii) In order of latest allowable start dates, then in order of preceding event numbers; and
(iv) In order of latest allowable finish dates, then in order of preceding event numbers.

(h) In addition to the requirements of subsection E, updates shall show the activities or portions of activities completed during the reporting period and their total value as basis for the contractor's periodic request for payment. Payments made to the contractor will be based on the total value of such activities completed or partially completed after verification by DPSCS and the architect, and this updated schedule analysis shall be used as a basis for partial payment. The update will state the percentage of the work actually completed and scheduled as of the report date and the progress along the critical path in terms of days ahead or behind the allowable dates. If the project is behind schedule, progress along other paths with negative float shall also be reported. The contractor also shall submit a narrative report with the updated analysis which shall include but not be limited to a description of the problem areas, current and anticipated, delaying factors and their impact, and an explanation of corrective actions taken or proposed.

(i) Sheet size of diagrams shall be 30 by 42 inches. Each updated copy shall show a date of the latest revision, and the date of the latest updating.

(j) All schedules, including the initial schedule, recovery schedules, and monthly updates, shall be submitted in three (3) paper copies and one (1) copy on CD/DVD.

(k) The contractor shall be prepared to effect schedule revisions in the network in response to changes to the contract under the terms thereof, at the direction of DPSCS. In the event that change orders are experienced, they shall be reflected as new activities in the network, or as changes in logic and/or time framing of existing activities. They shall be introduced at the next updating after receipt of a change order, and shall be subject to the approval of DPSCS. Change order logic shall affect only those intermediate activities and performance dates directly concerned. Adjustments required in completion dates for those intermediate dates, or for the contract as a whole, will be considered only to the extent that there is not sufficient remaining float to absorb the additional time which may be authorized for completion of individual activities.

(l) When the first schedule is furnished, contractor shall also furnish to DPSCS, for the State's permanent use and retention, the CPM scheduling software used by the contractor for scheduling the project and one copy of an operating or user's manual for using the software.

(3) (a) CPM schedules and updates, including recovery schedules, shall include the following: (a) lists of activities showing early and late start and finish dates; (b) a brief time-impact comparison in graph form (preferably on one page) comparing the critical path as-built to date and as-planned for the remainder of the work (as shown on contractor's last schedule or update) with the critical path as-built and as-planned as of the time of the schedule or update currently being submitted; and (c) all other information normally provided in a reasonable CPM schedule or update.

(b) Logic or network diagrams must be furnished (1) with the first schedule submitted under this subsection J, (2) with recovery schedules submitted under subsection H, (3) if requested by DPSCS with each monthly update submitted under subsection E, and (4) whenever the contractor changes the sequence of work, whether diagrams are requested by DPSCS or not.

K. Delays set forth in Section 7.07D(1) shall be non-compensable even if an extension of time is granted.

L. Except as may be expressly agreed otherwise by the Procurement Officer in writing, no action or inaction by the State or its representatives shall constitute a grant of an extension of the completion date or the waiver of a delay or other default by the contractor or agreement of the State to pay for alleged delays or acceleration of construction, including:

(1) a request for a revised schedule, a recovery schedule, or an anticipated completion date from contractor;
(2) allowance, approval or acceptance of any schedule;
(3) failure to terminate for default at an earlier date; or
(4) demand that the contractor finish the project by the required completion date or by any subsequent date promised by the contractor.

M. Contractor must take all reasonable action to avoid or to mitigate the effects of delays, including but not limited to:

(1) rescheduling or re-sequencing the work,
(2) accepting other work and
(3) reassigning personnel.

When the contractor is responsible for any delay, the State may order the contractor to accelerate construction, work overtime, add additional shifts or manpower, work on weekends, or to do anything else reasonably necessary in order to finish on time, at no additional cost to the State. The contractor does not have the unilateral right to complete the work late and pay liquidated or other damages.

N. Failure of the contractor to request, as required by Section 3.06B and this Section 7.06, a time extension to which he might otherwise be entitled, shall constitute a waiver of contractor's right to an extension of the required completion date.

O. Liquidated Damages

(1) (**COMAR 21.07.02.08**) - Time is an essential element of the contract and it is important that the work be vigorously prosecuted until completion. For each day that any work shall remain uncompleted beyond the time(s) specified elsewhere in the contract, the Contractor shall be liable for liquidated damages in the amount(s) provided for in the solicitation, provided, however, that due account shall be taken of any adjustment of specified completion time(s) for completion of work as granted by approved change orders.

(2) Prior to and after the contract completion date, the State may withhold an amount equal to liquidated damages whenever the progress of construction is such that, due to the fault or responsibility of the Contractor, the Contractor, in the judgment of the State, is behind schedule so as not reasonably to be able to complete the contract on time. Due account may be taken of excusable delays and for delays for which the State is responsible, provided that the Contractor has properly requested time extensions therefor. After submission of a bid, the Contractor may not contest the reasonableness of the amount of liquidated damages stated in the contract.

P. (1) The term "delay" shall mean any act, omission, occurrence, event, or other factor which necessarily extends the time reasonably required for completion of the contract. This Section 7.06 covers every such act, omission, occurrence, event, or other factor, whether called delay, disruption, interference, impedance, hindrance, suspension, constructive suspension, extension or otherwise.

(2) Whenever the State shall be liable to the contractor for an equitable adjustment for delay, the amount of the equitable adjustment shall be determined in accordance with this subsection P and other applicable provisions of this Section 7.06.

(3) Only the following items may be recoverable by the contractor as compensation or damages for delay:

(a) direct costs, consisting of
(i) actual additional salaried and non-salaried on-site labor expenses;

(ii) actual additional costs of materials;
(iii) actual additional equipment costs, based solely on actual ownership costs of owned equipment or actual reasonable costs of rented or leased equipment;
(iv) actual additional extended field office expenses, excluding those which are to be included in overhead;
(v) actual additional reasonable costs of Subcontractors and suppliers at any tier for which the contractor is liable, subject to §3.07C(7)(a);

(b) actual additional costs, proven by clear and convincing evidence, resulting from labor or other inefficiencies proven by clear and convincing evidence; and
(c) an additional percentage, determined in accordance with Section 3.07C(6) and (7)(b), of the total of items (a)(i) through (v) above, for overhead and profit.

(4) No other compensation or damages are recoverable by Contractor for compensable delays or extensions of the completion time except as expressly stated in this subsection P. In particular, the State will not be liable for the following (by way of example and not of limitation) whether claimed by the Contractor or by a Subcontractor or supplier at any tier:
(a) profit in excess of that provided herein;
(b) loss of profit;
(c) home office or other overhead in excess of that provided herein;
(d) overhead calculated by use of the Eichleay formula or similar formulae;
(e) consequential damages of any kind, including loss of additional bonding capacity, loss of bidding opportunities, and insolvency;
(f) indirect costs or expenses of any nature except those expressly provided for herein; and
(g) attorneys fees, costs of claims preparation and presentation, and costs of litigation.

(5) There shall be deducted from the compensation payable to the contractor under this section for delay any and all costs, expenses, and overhead recovered or recoverable by the contractor under change orders issued to the contractor or otherwise recovered or recoverable by the contractor.

(6) Contractor shall be entitled to no compensation or damages for delay unless, within ten (10) calendar days of the act, omission, occurrence, event or other factor alleged to have caused the delay, the contractor notifies the Procurement Officer in writing of
(a) the alleged delay and its anticipated duration, and
(b) the act, omission, occurrence, event or other factor allegedly causing the delay.

Knowledge on the part of the State of the act, omission, occurrence, event, or other factor, or of the delay allegedly resulting there from, shall not excuse contractor's failure to give the State the notice required by this subsection P(6).

Q. (1) Except as provided in paragraph 2 below, if the Department fails to issue a Notice to Proceed within 90 days following execution of the contract by the Department, or by such date later than 90 days as may be contemplated by the solicitation documents, the Contractor will have as its sole remedy the option of:
(a) declaring the contract void without any liability or obligation on the part of the State except that if the Department fails to issue a Notice to Proceed for reasons unrelated to submission, review, and acceptance of the submittals required by Section 7.06(B)&(C), the Department shall reimburse the Contractor its actual costs of developing same; or
(b) accepting an extended period, at no additional cost to the State, for issuance of a Notice to Proceed.

(2) If the failure of the Department to issue a Notice to Proceed within 90 days following execution of the contract by the Department, or by such date later than 90 days as may be contemplated by the solicitation documents, is caused, wholly or in part, by breach or default of the Contractor or other fault of the Contractor or his Subcontractors or suppliers at any tier, the Contractor shall be entitled to no relief under paragraph (1) above based on delay in issuance of the Notice to Proceed. In such a case, the Contractor shall be bound to perform the contract within the time allowed following actual issuance of the Notice to Proceed, at no additional cost to the State.

R. Requests for time extensions must be filed and supported as provided in Section 3.06 and other applicable provisions of the contract.

S. Weather

(1) Department has determined that the following table will be used to determine allowable non-compensable time extensions to the contract for "unusually severe weather" at the construction site.

Month	No. of work day delays that may be expected to occur under normal weather conditions
January	3
February	3
March	2
April	2
May	2
June	2
July	2
August	2
September	1
October	1
November	1
December	2
Annual Total	**23**

(2) Non-compensable time extensions for working day delays during the months as listed above will only be allowed for working day delays in excess of those numbers listed above and only when those excess days of delay affect the critical path of the work required to meet the specified contract times or dates. It is understood and agreed that the table above is not for the exclusive use of either the Contractor or the State. Modifications of the time for performance under any and all of the provisions of the contract will be granted only to the extent that equitable time adjustments are made for the activities on the critical path. Any request from the contractor for a weather caused time extension shall include a credit to the State for the previous time allowed in the table and not used because the anticipated weather conditions did not occur. The calendar days or dates adjustments will be developed by multiplying the allowable day's extension by one of the following factors, as applicable.

(a) Factor of 1.4 for those activities scheduled for five day work week.
(b) Factor of 1.2 for those activities for six day work week.
(c) Factor of 1.0 for those activities scheduled for a seven day work week.

T. Scheduling Meetings

The contractor shall meet with the State and the architect (unless the architect's absence is excused by the State) at least monthly to discuss in detail the contractor's updating of the schedule, the necessity for revisions or corrections in the schedule or updates, and all other issues or matters relating to the scheduling of the project and the contractor's obligations under the project respecting scheduling. This meeting shall be in addition to the progress meetings required by §4.11.

7.07 TERMINATION FOR DEFAULT, DAMAGES FOR DELAY, TIME EXTENSIONS (COMAR 21.07.02.07):

A. If the contractor refuses or fails to prosecute the work, or any separable part thereof, with such diligence as shall ensure its completion within the time specified in this contract, or any extension thereof, or fails to complete said work within this time, the State may, by written notice to the contractor, terminate his right to proceed with the work or the part of the work as to which there has been delay. In this event the State may take over the work and prosecute the same to completion, by contract or otherwise, and may take possession of and utilize in completing the work the materials, appliances, and plant as may be on the site of the work and necessary therefor. Whether or not the contractor's right to proceed with the

work is terminated, he and his sureties shall be liable for any damage to the State resulting from his refusal or failure to complete the work within the specified time.

B. If fixed and agreed liquidated damages are provided in the contract and if the State so terminates the contractor's right to proceed, the resulting damage shall consist of such liquidated damages until a reasonable time as may be required for final completion of the work together with any increased costs occasioned the State in completing the work.

C. If fixed and agreed liquidated damages are provided in the contract and if the State does not so terminate the contractor's right to proceed, the resulting damage shall consist of these liquidated damages until the work is completed or accepted.

D. The contractor's right to proceed may not be so terminated nor the contractor charged with resulting damages if:

(1) The delay in the completion of the work arises from unforeseeable causes beyond the control and without the fault or negligence of the contractor, including but not restricted to, acts of God, acts of the public enemy, acts of the State in either its sovereign or contractual capacity, acts of another contractor in the performance of a contract with the State, fires, floods, epidemics, quarantine restrictions, strikes, freight embargoes, unusually severe weather, or delays of Subcontractors or suppliers arising from unforeseeable causes beyond the control and without the fault or negligence of both the contractor and the Subcontractors or suppliers, and

(2) The contractor, within ten (10) days from the beginning of any such delay (unless the Procurement Officer grants a further period of time before the date of final payment under the contract), notifies the Procurement Officer in writing of the causes of delay. The Procurement Officer shall ascertain the facts and the extent of the delay and extend the time for completing the work when, in his judgment, the findings of fact justify such an extension, and his findings of fact shall be final and conclusive on the parties, subject only to appeal as provided in the "Disputes" clause of this contract.

E. If, after notice of termination of the Contractor's right to proceed under the provisions of this clause, it is determined for any reason that the Contractor was not in default under the provisions of this clause, or that the delay was excusable under the provisions of this clause, the rights and obligations of the parties shall, if the contract contains a clause providing for termination for convenience of the State, be the same as if the notice of termination had been issued pursuant to the clause. If, in the foregoing circumstances, this contract does not contain a clause providing for termination for convenience of the State, the contract shall be equitably adjusted to compensate for the termination and the contract modified accordingly; failure to agree to any such adjustment shall be a dispute concerning a question of fact within the meaning of the clause of this contract entitled "Disputes".

F. The rights and remedies of the State provided in this clause are in addition to any other rights and remedies provided by law or under this contract.

G. As used in paragraph (D)(1) of this clause, the term Subcontractors or suppliers means Subcontractors or suppliers at any tier.

H. The State may terminate for default under this Section 7.07 at any time when the contractor is in default or breach of any material obligation of the contract, including after substantial completion, such as for failure in a timely manner to complete a punch list, to perform warranty work, or to perform any other substantial requirement of the contract.

Time extension requests due to inclement weather impact on the critical path activities must be determined and issued on a monthly basis. The State is not obligated to grant the requests on a monthly basis but will review the requests and determine whether the contractor's justifications for the requests are appropriate for the circumstances.

7.08 TERMINATION FOR DEFAULT -- GROUNDS OTHER THAN FOR LACK OF DILIGENCE:

A. If the contractor fails to perform any provisions of the contract not governed by Section 7.07 of these General Conditions, the State may terminate the whole or any part of the contract for default by written notice of default to the contractor. Termination for default in such a case shall be governed by subsections (2) through (7) of **COMAR 21.07.01.11B**, which are incorporated into and made a part of the contract.

B. Except as may be expressly agreed otherwise by the Procurement Officer in writing, no action or inaction by the State or its representatives or the architect shall constitute waiver of any default by the contractor.

C. The State may terminate for default under this Section 7.08 at any time when the contractor is in default or breach of any material obligation of the contract, including after substantial completion.

7.09 SUSPENSION OF THE WORK (COMAR 21.07.02.04):

A. The Procurement Officer unilaterally may order the contractor in writing to suspend, delay, or interrupt all or any part of the work for a period of time as he may determine to be appropriate for the convenience of the State.

B. If the performance of all or any part of the work is for an unreasonable period of time suspended, delayed, or interrupted by an act of the Procurement Officer in the administration of the contract, or by his failure to act within the time specified in this contract (or if no time is specified, within a reasonable time), an adjustment shall be made for any increase in the cost of performance of this contract (excluding profit) necessarily caused by an unreasonable suspension, delay, or interruption and the contract modified in writing accordingly. However, no adjustment shall be made under this clause for any suspension, delay, or interruption to the extent (1) that performance would have been so suspended, delayed, or interrupted by any other cause, including the fault or negligence of the contractor; or (2) for which an equitable adjustment is provided for or excluded under any other provision of this contract.

C. No claim under this clause shall be allowed (1) for any costs incurred more than twenty (20) days before the contractor shall have notified the Procurement Officer in writing of the act or failure to act involved (but this requirement shall not apply as to a claim, resulting from a suspension order), and (2) unless the claim, in an amount stated, is asserted in writing as soon as practicable after the termination of a suspension, delay, or interruption, but not later than the date of final payment under the contract.

7.10 STATE'S RIGHT TO TERMINATE FOR CONVENIENCE:

The provisions of **COMAR 21.07.02.09** respecting the State's right to terminate the contract for convenience are incorporated into and made a part of this contract.

7.11 PARTIAL ACCEPTANCE:

A. If, in its sole discretion, the Department desires to accept any portion of the project, then the Department shall have the right to accept and use those portions of the project which in the opinion of the Department can be used for their intended purpose. The conditions of occupancy, use, and the responsibilities of the Contractor and the State for maintenance, heat, light, utilities, and insurance shall be established. The State has no obligation to accept the project in portions.

B. Partial occupancy or acceptance shall in no way relieve the contractor of his responsibilities under the contract.

C. Partial occupancy may require contractor to perform work in the secure occupied area. contractor shall perform all work at no additional compensation to the contractor.

D. If the State accepts the work in portions then warranties on the accepted portions do not being to run until substantial completion of the whole project is deemed to be achieved.

7.12 SUBSTANTIAL COMPLETION AND FINAL INSPECTION:

A. When the Contractor reasonably believes the work satisfies the requirements of 7.12B, the Contractor shall notify the Procurement Officer and the architect in writing that the work will be ready for Substantial Completion Inspection and testing on a definite date. Reasonable notice shall be given by the Contractor to permit the Department to schedule the Substantial Completion Inspection. The Contractor shall not request Substantial Completion Inspection until the work is in fact substantially complete. The Contractor shall deliver to the Procurement Officer, on the scheduled Substantial Completion Inspection date, a complete, comprehensive set of field mark-up drawings accurately documenting the As-Built Project and all of the Operation and Maintenance (O&M) Manuals required under the contract and shall have completed all required training and demonstration of equipment as required by the contract documents.

B. The Department shall establish the date of substantial completion and shall fix the time(s) at which the warranties will begin if, on the basis of the Substantial Completion Inspection, the Department determines that, at a minimum and in accordance with the contract documents:

(1) all electrical, mechanical, and life safety systems have been completed and successfully tested and successfully inspected for conformity to all requirements of the contract documents and all applicable codes and standards;
(2) complete, comprehensive field mark-up drawings of the As-Built Project, and all of the Operation and Maintenance (O&M) Manuals required under the contract, have been delivered to the Department;
(3) all other requirements for substantial completion, including the completion of required training and demonstration of equipment, have been met; and
(4) the project appears able to be occupied and usable for its intended purpose.

C. The work shall not be deemed substantially complete if, in the absolute discretion of DPSCS, completion of unfinished work, whether called punch list work or otherwise, would cause inconvenience to or interfere with the use of the premises by using agency personnel or others using the premises.

D. If the Department determines that substantial completion has been achieved, the Department shall fix the time within which the Contractor shall complete any remaining items of work which will be indicated on a list (the “punch list”). All punch list work shall be completed within thirty (30) days after the date of substantial completion determined by DPSCS, unless DPSCS establishes a different period for completion of the punch list work. If the Contractor fails to complete the remaining items so listed in the time stipulated the State shall have the undisputed right to complete the work at the Contractor’s expense. The Contractor may be required to complete multiple punch lists, which may be prepared by DPSCS, by the architect, or by the using agency, until the contract is performed in its entirety. Failure to complete punch list work in a timely manner shall constitute grounds for termination of the contract for default.

E. Prior to the granting of substantial completion by DPSCS, the architect, DPSCS, and/or the using agency may prepare lists of work requiring completion or requiring completion as a prerequisite to the granting of substantial completion. These “work lists” shall not constitute punch lists and shall not be construed as indicating that the work has been completed to the extent that it is substantially complete.

F. Final payment shall not be made until all contract work including all punch list work is complete to the satisfaction of the Department.

G. Acceptance of the work as substantially complete shall not excuse or waive any failure of the Contractor to complete the contract as required by the contract documents.

7.13 CLEANING UP:

The contractor shall at all times keep the construction area, including storage areas used by him, free from accumulations of waste material or rubbish and prior to completion of the work shall remove any rubbish from the premises and all tools, scaffolding, equipment, and materials not the property of the

State. Upon completion of the construction, the contractor shall leave the work and premises in a clean, neat and workmanlike condition satisfactory to the State.

7.14 WARRANTY:

A. Except to the extent that the contract documents impose greater warranty obligations on the contractor for all or any part of the work, the contractor warrants for a two year period (unless another period is specified) commencing on the date of substantial completion of the project as a whole or on such other date agreed between the parties:

(1) that the work contains no faulty or imperfect material or equipment or any imperfect, careless, or unskilled workmanship;

(2) that all mechanical and electrical equipment, machines, devices, etc., shall be adequate for the use to which they are intended, and shall operate with ordinary care and attention in a satisfactory and efficient manner;

(3) that he will promptly re-execute, correct, repair, or remove and replace with proper work, without cost to the State, any work found not to be as guaranteed by this section or otherwise not in conformity with the contract and that he will make good all damages caused to other work or materials in the process of complying with this section;

(4) that the entire work shall be water-tight and leak-proof in every particular.

B. This Section 7.14 provides for a period during which the contractor is bound to replace work in addition to being liable for failure to perform the contract in accordance with its terms. Nothing herein releases or limits the contractor's liability for latent defects or for any substantial failure to perform the work in accordance with the contract, even if such defects or failure are discovered after the expiration of the warranty period provided by this section.

7.15 NOTICE TO STATE OF LABOR DISPUTES:

A. Whenever the contractor has knowledge that any actual or potential labor dispute is delaying or threatens to delay the timely performance of this contract, the contractor shall immediately give notice thereof, including all relevant information with respect thereto, to the Procurement Officer.

B. The contractor must insert the substance of this clause, including this subsection B, in any subcontract hereunder as to which a labor dispute may delay the timely performance of this contract; except that each such subcontract shall provide that in the event its timely performance is delayed or threatened by delay by any actual or potential labor dispute, the Subcontractor shall immediately notify his next higher tier Subcontractor, or the prime contractor, as the case may be, of all relevant information with respect to such dispute.

SECTION 8 - PAYMENTS:

8.01 SCOPE OF PAYMENT:

A. Payments are made on the valuation of work accomplished and on account of materials delivered to the site for incorporation in the work which are suitably stored and protected.

B. Payments shall also be made on account of materials or equipment for incorporation in the work but stored at some off-site location agreed upon by the State, such payment to be conditioned upon submission by the contractor of bills of sale or such other documentation satisfactory to the Department to establish the State's title to such materials or equipment or otherwise to protect the State's interest, including proof of applicable insurance, transportation to site, and freedom from liens and security interests.

C. Prior to the application for first payment, the contractor shall submit to the State and the architect a schedule of values of the various parts of the work, including quantities, aggregating the total sum of the

contract, and based upon the dollar loadings of the approved schedule. This schedule shall be so divided as to facilitate payments to Subcontractors. This submission shall be in a form acceptable to the State and shall be supported by such evidence as to its correctness as the State may direct. This schedule shall be used as a basis for certificates of payments unless at a later date the schedule is found to be in error, in which case the schedule will be corrected.

Prior to the application for the first payment, the contractor shall also submit the subcontracting (MBE and non-MBE) information to consist of the names and addresses of the Subcontractors, trades and subcontract amounts. The information shall be updated and, at the end of the project, shall be provided for the final contract amount as actually awarded. The State may not make the final payment until this subcontracting information is received.

D. Application for progress payments shall be submitted on or about the 25th day of each month except that the first payment shall not be submitted prior to ten days into the project.

E. In applying for payments the contractor shall submit a requisition, based upon the dollar loadings of the approved schedule, itemized in such form and supported by such evidence as the State may require, showing the contractor's right to the payment claimed. Each requisition shall prominently display the contractor's Federal Employers Tax Identification Number or Social Security number.

(1) In applying for all payments, or final payment, the contractor shall submit in addition to the above a certificate that he has paid:

(a) All labor to date,

(b) All vendors and material suppliers in full for all items received, and

(c) All Subcontractors in full, less the retained amount.

(2) In applying for the final payment, the contractor shall also submit the following:

(a) Such evidence as the State may demand to establish the State's title to materials and to give reasonable assurance that liens and security interests of others do not exist. Nothing in this subsection shall be construed to allow anyone to obtain a lien on State property.

(b) An electrical certificate from an independent (non-governmental) electrical inspection agency approved or licensed required by law. The contractor must make application for the inspection, coordinate same, and pay the required inspection fees. The independent electrical inspection agencies are not considered local authorities. (See also General Conditions section 4.06B.)

(c) All other guarantees as called for by the contract.

(d) All required equipment, operation, training, maintenance, and other manuals and parts lists.

(e) A complete set of all drawings indicating as-built conditions, submitted to the architect.

8.02 FORCE ACCOUNT WORK:

A. When the contractor is required to perform work as a result of or alleged by the contractor to be an addition or change to the contract for which there are no applicable unit prices in the contract, the Department and contractor shall attempt to agree upon a price for the performance of such work. If an agreement cannot be reached, the Department may require the contractor to do such work on a force account basis to be compensated as follows:

(1) Labor. The Contractor shall be paid as follows:

(a) The actual wages for each and every hour work is performed.
(b) The actual costs paid to or on behalf of workmen by reason of subsistence and travel allowances, health and welfare benefits, pension fund benefits or other benefits, when such amounts are required by collective bargaining agreement or other employment contract generally applicable to the classes of labor employed on the work; and
(c) An equitable percentage, to be determined by the Contractor and Procurement Officer, applied against the labor cost (premium pay and fringes excluded) for liability and worker's compensation insurance premiums, unemployment insurance contributions and FICA taxes on such labor cost.

(2) Materials. For materials in accordance with the contract, accepted by the State and used, the contractor shall receive the actual cost of such materials delivered to the work, including transportation paid by him (exclusive of machinery rentals as hereinafter set forth).

(3) Equipment. For any machinery or special equipment (other than small tools, whether rented or owned), the contractor shall receive the rates agreed upon in writing before such work is begun, or those rates which may be specified elsewhere in the contract, or reasonable rates,
whichever are less. For purpose of definition, equipment with a new cost of $500 or less will be considered small tools.

(4) Materials and Supplies Not Incorporated in the Work. For materials and supplies expended in the performance of the work (excluding those required for rented equipment), the contractor shall receive the actual cost of such materials and supplies used.

(5) Bond - Whenever the Contractor is entitled to an increase in the contract price, the amount of the increase shall not include any amount for increased costs or premiums of bonds unless: (1) DPSCS requires an increase in the amount of the penal sum of the bond or bonds, (2) the Contractor actually incurs such cost, (3) the surety actually increases the penal sum of the bonds, and (4) DPSCS receives proof in satisfactory form that the surety has increased the penal sum of the bonds.

(6) Superintendence. No additional allowance shall be made for general superintendence, the use of small tools, or other costs for which no specific allowance is herein provided. The cost of foremen may be added only when the modification makes necessary the hiring of additional supervisory personnel or makes necessary their employment for time additional to that required by the contract.

(7) The mark-up allowable to the contractor for combined overhead and profit for work performed solely by the contractor with his own forces shall be a reasonable amount not to exceed fifteen percent (15%) of the contractor's costs (excluding items includable in overhead).

(8) Subcontractors. For work done solely by a Subcontractor, the Subcontractor's costs shall be determined as stated in subsections A(1) through (6) above.

(9) (a) The mark-up allowable to a Subcontractor for overhead and profit for work performed solely with his own forces shall be a reasonable amount not to exceed ten percent (10%) for the Subcontractor's overhead and five percent (5%) for the Subcontractor's profit, based upon the Subcontractor's costs of labor, materials, and equipment.

(b) For work performed by a Subcontractor solely with his own forces, the contractor is entitled to a reasonable mark-up for combined overhead and profit, not to exceed five percent (5%) of the cost of the Subcontractor's materials, equipment, and labor.

B. Compensation. The compensation as set forth above shall be received by the contractor as payment in full for the work done on a force account basis. At the end of each day, the contractor's representative and the State shall compare records of the cost of work as ordered on a force account basis.

C. Statements. No payment will be made for work performed on a force account basis until the contractor furnishes the State duplicate itemized statements of the cost of such force account work detailed as to the following:

(1) Name, classification, date, daily hours, total hours, rate, and extension for such laborer, foreman.

(2) Designation, dates, daily hours, total hours, rental rate, and extension for each unit of machinery and equipment.

(3) Quantities of materials, prices, and extensions.

(4) Transportation of materials.

(5) Cost of property damage, liability and worker's compensation insurance premiums, unemployment insurance contributions, and social security tax.

(6) Payments of items under (3) and (4) above shall be accompanied by original receipted invoices for materials used and transportation charges. If, however, the materials used in the force account work are not specifically purchased for such work but are taken from the contractor's stock, then in lieu of the original invoices, the statements shall contain or be accompanied by an affidavit of the contractor which shall certify that such materials were taken from his stock, that the quantity claimed was actually used, and that the price and transportation of the material as claimed represent actual cost. The State may require additional proof as to costs, ownership, title, non-existence of liens, etc., to the same extent as provided in Section 8.01E(2)(a).

D. Any other claims of the contractor arising from work done on a force account basis that are not expressly addressed in this Section 8.02, including (but not limited to) requests for time extensions, are subject to other applicable provisions of the contract.

8.03 CASH ALLOWANCES:

Whenever an allowance is mentioned in the specifications, then the contractor shall include in his contract sum the entire amount of such specified allowances. The expenditure of these allowances is to be at the Procurement Officer's direction. However, the allowance expenditure is limited to items properly inferable from the title and description of the allowance. Unexpended balances are to be credited to the State. Compensation payable to the contractor for expenditure of allowances directed by the Procurement Officer shall be based on the cost to the contractor as shown by actual invoices or receipts, and no additional overhead or profit shall be payable to the contractor for such allowances.

8.04 CERTIFICATES OF PAYMENT; RETAINAGE:

A. If the contractor has made application as above, the State shall, not later than the date when such payment falls due, issue to the contractor a certificate for such amount as it decides to be properly due. In approving such partial payments, there shall be retained five percent (5%) of the estimated amount due until completion and acceptance of all work covered by the contract. Payment may be withheld in accordance with **COMAR 21.06.06.01**.

B. This contract is subject to the provisions of **COMAR 21.06.06.02**, Escrow of Retainage. If retainage is to be placed in an interest bearing account, the contractor shall be required to complete the Internal Revenue Service's Form W-9, Payer's Request for Taxpayer Identification Number.

C. No certificate issued nor payment made to the contractor, nor partial or entire use or occupancy of the work by the State, shall be an acceptance of any work or materials not in accordance with this contract.

8.05 DEDUCTIONS FOR UNCORRECTED WORK:

If the State deems it inexpedient to correct work not in accordance with the contract, an equitable deduction from the contract price shall be made therefor.

8.06 PAYMENTS WITHHELD:

A. The State may withhold payment or, on account of subsequently discovered evidence, nullify or reduce the whole or part of any certificate or payment on account of:

(1) the cost (measured by the contract value or fair market value, whichever is greater) of completing unfinished or defective work not remedied or deductions or amounts due the State under the contract;

(2) failure of the contractor to perform any material contract requirement;

(3) claims filed or likely to be filed against the State for which the contractor may be liable to the State;

(4) failure of the contractor to make payments properly to Subcontractors or suppliers for material or labor (see, however, Section 9.03C) or amounts claimed by the contractor's surety or insurer under any right of subrogation;

(5) a reasonable doubt that the contract can be completed for the balance then unpaid;

(6) damage to another contractor;

(7) liquidated damages or other damages or compensation due the State for claims of the State against the contractor;

(8) any claim of the State or debt owed to the State arising from any other cause;

(9) retainage as provided in Section 8.04A;

(10) failure to maintain as-built drawings as required by Section 2.01(B)(2);

(11) failure to update schedules properly as required by Section 7.06; and

(12) the cost of completing unfinished warranty work.

B. The failure of contractor to complete the construction by the required completion date shall be prima facie evidence of the State's right to withhold liquidated damages after the expiration of the contract time for completion. Nothing in this subsection shall be construed to limit the State's right to withhold liquidated damages prior to the expiration of the completion time as provided in subsection 7.06 O.

8.07 CORRECTION OF WORK BEFORE FINAL PAYMENT:

A. The contractor shall promptly remove from the premises all work failing to conform to the contract, whether or not incorporated in the structure or premises. The contractor shall promptly replace and re-execute such work in accordance with the contract and without expense to the State and shall bear the expense of making good all work of other contractors destroyed or damaged by such removal or replacement.

B. If the contractor does not remove such condemned work within a reasonable time, the State may remove it and may store materials at the expense of the contractor. If the contractor does not pay the expense of such removal or storage within ten days time thereafter, the State may sell such materials and shall account for the net proceeds thereof, after deducting all the costs and expenses incurred by the State.

8.08 FINAL PAYMENT:

A. (1) Upon completion of the Work, the Contractor shall prepare final payment forms and submit them. (2) The State will promptly proceed to make any necessary final surveys, to complete any necessary computations of quantities, and to complete other activities necessary to determine the Contractor's right to final payment. The Department will then reply to the Contractor's request for final payment, informing the Contractor of the amount of final payment considered to be due the Contractor. Such reply shall inform the Contractor of all deductions, damages, costs, back charges, and other charges assessed against the Contractor by the State and the reasons therefore.

B. Notwithstanding subsection A(1) above, prior to or in the absence of a request from contractor for final payment, the State may determine under subsection A(2) the amount of the final payment it considers to be due the contractor.

C. If the contractor disputes the amount determined by the State to be due him, he shall initiate a claim under the disputes procedures.

D. Acceptance by the contractor of any payment identified by the State as being final payment shall operate as an accord and satisfaction and a general release of all claims of the contractor against the State arising out of or connected with the contract, except as may be expressly agreed otherwise in writing between the contractor and the Procurement Officer.

E. No claims by the contractor may be asserted for the first time after application is made by the contractor for final payment or after final payment is made by the State.

8.09 PAYMENT AND INTEREST:

A. Payment of State Obligations (**COMAR 21.07.01.18**) – Payments to the Contractor pursuant to this Contract shall be made no later than 30 days after the State's receipt of a proper invoice from the Contractor. Charges for late payment of invoices, other than as prescribed by Title 15, Subtitle 1, of the State Finance and Procurement Article, Annotated Code of Maryland, or by the Public Service Commission of Maryland with respect to regulate public utilities, as applicable, are prohibited

B. A proper invoice or requisition shall include a description of items or services provided; the date the goods were received by the ordering agency/department; or the inclusive dates the services were rendered; the price agreed upon pursuant to the contract; the basis for the billing; the purchase order or contract identification number; the contractor's Federal Employers Identification Number or Social Security Number; and the name and address of the proper invoice recipient for the state agency, as specified in the contract.

C. For purposes of this contract, an amount will not be deemed due and payable and interest payments will not be authorized for late payments unless the following conditions have been met:

(1) The amount invoiced is consistent with the amount agreed upon by the parties to the contract pursuant to the contractual agreement.

(2) The goods and/or services have been received by the State and the quantity received agrees with the quantity ordered.

(3) The goods and/or services meet the qualitative requirements of the contract and have been accepted by the State, subject to Section 6.09 hereof.

(4) The proper invoice has been received by the party or unit of government specified in the agreement.

(5) The invoice is not in dispute.

(6) If the contract provides for progress payments, the proper invoice for the progress payment has been submitted pursuant to the approved schedule of values.

(7) All conditions for release of retainage have been met.

8.10 RETENTION OF RECORDS -- AUDITS BY THE STATE:

A. In accordance with **COMAR 21.07.01.21**, the Contractor and his Subcontractors and suppliers at any tier shall retain and maintain all records and documents relating to this contract for three years after final payment by the State hereunder or any applicable statute of limitations whichever is longer, and shall make them available for inspection and audit by authorized representatives of the State, including the Procurement Officer or designee, at all reasonable times.

B. If contractor or his Subcontractors or suppliers at any tier fail to retain for the period of time required by this section original documents used, made, or relating to the preparation or calculation of contractor's bid to the State or of bids, quotes or estimates of Subcontractors or suppliers at any tier, contractor shall be entitled to no damages, compensation, or equitable adjustments (including time extensions) for any claims based on calculations, assumptions, understandings, or beliefs allegedly made at the time of preparation of such bids, quotes, or estimates.

C. In the event a claim is initiated by either party under Section 6.13, contractor and his Subcontractors or suppliers at any tier shall retain such books, papers, records and other documents until expiration of the aforesaid three-year period or until final, unappealable resolution of the claim, whichever is later.

8.11 CONTRACT COST PRINCIPLES AND PROCEDURES:

The contract is subject to the applicable contract cost principles and procedures set forth in **COMAR 21.09.**

8.12 FINANCIAL DISCLOSURE (COMAR 21.07.01.19):

The Contractor shall comply with the provisions of Section 13-221 of the State Finance and Procurement Article of the Annotated Code of Maryland, which requires that every business that enters into contracts, leases, or other agreements with the State of Maryland or its agencies during a calendar year under which the business is to receive in the aggregate $100,000 or more, shall, within 30 days of the time when the aggregate value of these contracts, leases or other agreements reaches $100,000, file with the Secretary of State of Maryland certain specified information to include disclosure of beneficial ownership of the business.

8.13 POLITICAL CONTRIBUTION DISCLOSURE (COMAR 21.07.01.20):

The Contractor shall comply with Election Law Article, §§14-101—14-108, Annotated Code of Maryland, which requires that every person that enters into contracts, leases, or other agreements with the State, a county, or an incorporated municipality, or their agencies, during a calendar year in which the person receives in the aggregate $100,000 or more, shall file with the State Board of Elections a statement disclosing contributions in excess of $500 made during the reporting period to a candidate for elective office in any primary or general election. The statement shall be filed with the State Board of Elections:

(1) before a purchase or execution of a lease or contract by the State, a county, an incorporated municipality, or their agencies, and shall cover the preceding two calendar years; an

(2) if the contribution is made after the execution of a lease or contract, then twice a year, throughout the contract term, on:

(a) February 5, to cover the 6-month period ending January 31; and
(b) August 5, to cover the 6-month period ending July 31.

SECTION 9 - EMPLOYEES, SUBCONTRACTORS AND WORK CONDITIONS:

9.01 EMPLOYEES AND WORKMANSHIP:

A. Qualification of Employees. Only personnel thoroughly trained and skilled in the tasks assigned them may be employed on any portion of the work. Any employee found to be unskilled or untrained in his work shall be removed from the work.

B. Licensed Employees. When municipal, county, State or federal laws require that certain personnel (electricians, plumbers, etc.) be licensed, then all such personnel employed on the work shall be so licensed.

C. Quantity of Labor. The contractor shall employ on the work, at all times, sufficient personnel to complete the work within the time stated in the contract.

D. Work Areas. The contractor shall confine the operations of his employees to the limits as provided by law, ordinance, permits or directions of the Department. Generally, the work area will be the same as the Limit of Contract line indicated in the construction documents.

E. Methods and Quality.

(1) Whenever the method of the work or manner of procedure is not specifically stated in the contract documents, the best practice shall be followed. Unless the contract documents expressly require stricter standards for application, installation, connection, erection, use, cleaning or conditioning, recommendations of the manufacturers of approved materials shall be considered as a part of these specifications and all materials shall be applied, installed, connected, erected, used, cleaned and conditioned as so called for thereby. If any such manufacturer's recommendations are defective, faulty, inaccurate, or negligently made, contractor shall be responsible for all loss resulting there from, including liability for loss incurred by the State.

(2) All materials shall be accurately assembled, set, etc., and when so required in good construction, shall be true to line, even, square, plumb, level and regularly spaced, coursed, etc. Under no circumstances, either in new or old work shall any material be applied over another which has not been thoroughly cleaned, sanded, or otherwise treated so as not to impair the finish, adhesion, or efficiency of the next applied item.

(3) All methods, procedure and results are subject to the approval of the architect and the Procurement Officer as to the quality of the finished result to be obtained; provided that this is not to be interpreted as placing upon the architect or the Procurement Officer any responsibility for management of the contractor or his work.

F. Scheduling and Coordination.

(1) The contractor shall so schedule and coordinate the work as to ensure efficient and uninterrupted progress and to hold to an absolute minimum the cutting and patching of new work. All cutting, patching and digging necessary to the execution of the work is included.

(2) The contractor shall so schedule the construction performed by each group or trade that each installation or portion of the construction shall member with and join with every other new or old work as required for a complete installation, all according to accepted good construction practice.

G. Field Management

(1) Resident Project Manager – For construction projects in excess of $10 million contract value and for projects under $10 million if required by the project specifications for the construction contract, the contractor shall provide a competent full-time on-site Resident Project Manager fluent in English, during the entire duration of the contract, approved by the Department prior to commencement of work. The contractor shall submit in writing to the Department the name of the person it intends to employ as Resident Project Manager for the execution of the contract work with a statement of the proposed Resident Project Manager's qualifications. The information will be reviewed by the Department and approval or rejection given in writing. A person designated for this position shall have at least 7 years experience as full-time construction project manager on similar comparable projects. Project Manager's past performance and workload/commitments including whether or not the Project Manager can handle

two state projects located nearby shall be considered by the Department in review and approval of the Project Manager. The Department reserves the right to reject the Resident Project Manager at any time during the duration of the contract based on his performance including but not limited to inexperience, incompetence, failure to cooperate reasonably with the State and/or failure to follow contract requirements. In the event of such rejection, the contractor shall replace immediately the Resident Project Manager with another competent one acceptable to the State at no additional cost to the State following the same procedure of approval mentioned above.

(2) Superintendent: The contractor shall have on the work site, at all times during its progress, a competent, Superintendent fluent in English and other assistants, all approved by the Department prior to commencement of the work. The contractor shall submit in writing to the Department the name of the person it intends to employ as superintendent for the execution of this contract with a statement of the proposed superintendent's qualifications. This data will be reviewed by the Department and an approval or rejection given in writing. A person designated for this position should have at least eight (8) years experience as Construction Superintendent performed in this capacity at least on two similar projects. Persons who have previously proved unsatisfactory on work executed for the State of Maryland, or who are without proper qualifications, will not be approved. Should it be necessary to change the superintendent, this procedure will be repeated. A separate superintendent will be required for each DPSCS project unless otherwise approved by the Department in writing. The Superintendent shall represent the contractor when there is no on-site Resident Project Manager assigned to the project. All directions to the Superintendent shall be as binding as if given to the Contractor. All directions to the contractor shall be confirmed in writing by the Contractor. Should the Superintendent be complained of by the Department for cause (including but not limited to inexperience; incompetence; failure to properly perform his duties, manage, or coordinate the work; threats to State personnel or to others; failure to follow contract requirements, and failure to cooperate reasonably with the State) he shall be removed from the work and a new Superintendent obtained and approved as described above, at no cost to the State.

H. Discipline. The contractor shall at all times enforce strict discipline and good order among his employees and shall not employ or permit to remain on the work any unfit person. He shall enforce all instructions relative to use of water, heat, power, no smoking, and control and use of fires as required by law and the State. Employees must not be allowed to loiter on the premises before or after working hours.

I. Employee Safety. The contractor shall designate a responsible member of his organization on the work site whose duty it shall be, in addition to his other duties, to prevent accidents and to enforce the standards of Section 9.06. The name and position of the person so designated shall be reported to the Department, with a copy to the architect, by the contractor prior to commencement of the work.

J. The contractor, Subcontractors, and agents of both insofar as possible, shall secure labor through the Maryland Job Service of the Maryland Department of Business and Economic Development, except where the contractor has entered into a collective bargaining agreement under which labor is to be provided by the union. In that case, the contractor is not required to conform to these provisions unless the contractor and the union arrange with the Maryland Job Service for referral of such labor as they may mutually agree shall be referred. The contractor shall be the sole judge of the competency or fitness and for satisfactory service of any laborer referred to him by the Maryland Job Service.

K. This contract may be identified, in other parts of the solicitation documents, for inclusion in the hiring agreement program of the Department of Human Resources under Section 13-224 of the State Finance and Procurement Article of the Annotated Code of Maryland. If this contract is so identified, contractor shall comply with the hiring agreement requirements provide in the solicitation documents.

9.02 NON-DISCRIMINATION IN EMPLOYMENT (COMAR 21.07.01.08 and AFFIRMATIVE ACTION):

A. Contractor agrees:

(1) not to discriminate in any manner against an employee or applicant for employment because of race, color, religion, creed, age, sex, marital status, national origin, ancestry or disability of a qualified individual with a disability.

(2) to include a provision similar to that contained in subsection (1) above, in any subcontract except a subcontract for standard commercial supplies or raw materials; and

(3) to post and to cause Subcontractors to post in conspicuous places available to employees and applicants for employment, notices setting forth the substance of this clause.

A. Contractor shall be subject to and shall comply with all other requirements of §13-219 of the SF & P, which are incorporated into and made a part of the contract.

B. Contractor shall comply with all other applicable Federal, State, and local laws, regulations and ordinances respecting illegal discrimination and civil rights.

9.03 SUBCONTRACTS:

A. The contractor shall, as soon as practicable and before the execution of the contract, notify the architect and the Department in writing, of the names of Subcontractors proposed for the principal parts of the work and for such others as the Construction Division or the architect may direct. contractor shall not employ any Subcontractor that the architect or Department may object to as incompetent, unfit, or unsatisfactory.

B. The contractor is fully responsible to the State for the acts and omissions of its Subcontractors and suppliers at any tier and persons either directly or indirectly employed by them, as well as for the acts and omissions of itself and persons directly employed by it.

C. Nothing contained in the contract documents shall create any contractual relation between any Subcontractor or supplier at any tier and the State, and nothing in the contract documents is intended to make any such entity a beneficiary of the contract between the State and the contractor. No Subcontractor or supplier at any tier shall have or make any claim or cause of action directly against the State.

D. The contractor shall not subcontract the contract as a whole or by trades or other portions in an amount of more than 85% of the monetary value of the contract. The remaining 15% shall be executed by the contractor with labor and materials directly purchased and paid for by the contractor. Costs of bonds, insurance, overhead, supervision, mobilization, etc., shall not be claimed as a portion of the 15% mentioned above. **Only when the project is a deconstruction project** the contractor shall not subcontract the contract as a whole or by trades or other portions in an amount of more than 90% of the monetary value of the contract and therefore the remaining 10% shall be executed by the contractor with labor and materials directly purchased and paid for by the contractor.

The execution of the work by a subsidiary of the contractor will not be considered direct employment unless the Procurement Officer agrees otherwise.

9.04 RELATION OF CONTRACTOR TO SUBCONTRACTORS AND SUPPLIERS:

A. The contractor must bind every Subcontractor and supplier and will see that every Subcontractor agrees to be bound by the terms of the contract, as far as applicability to his work, unless specifically noted to the contrary in a subcontract approved in writing by the Procurement Officer.

B. The contractor must include the following provisions in all subcontracts and supply contracts applicable to the work:

(1) Subcontractor or supplier agrees to be bound to the contractor by the terms of the contract between the contractor and the State, and to assume toward him all obligations and responsibilities that the contractor, by those documents, assumes toward the State.

(2) The Subcontractor or supplier agrees to submit to the contractor applications for payment in such reasonable time as to enable the contractor to apply for payment under Section 8 of these General Conditions.

(3) The Subcontractor or supplier agrees to make all claims for extras, for extensions of time, and for damages for delays or otherwise, to the contractor in the manner provided in the General Conditions for like claims by the contractor upon the State, except that the time for making claims by the Subcontractor or supplier to the contractor for extra cost shall be five days.

(4) The Subcontractor or supplier agrees, upon completion of his work, to promptly pay all labor, material suppliers, vendors, Subcontractors and others, to permit simultaneous final payment by the contractor.

(5) The provisions required by §9.06A through D.

C. (1) Except as provided in (2) below, contractor shall not be relieved of any obligation to the State under the contract by any action, inaction, delay, default, breach, omission, or neglect, on the part of contractor's Subcontractors and suppliers at any tier or by any defect in their materials, whether the Subcontractors, suppliers, or materials were selected or specified by the State or by the contractor.

(2) If the contract or the Procurement Officer requires the contractor to furnish a certain product or material and no other, then and only then will the State be responsible for damages and delays caused by a design defect or other defect in the product; provided, however, that in such event the State shall be subrogated to all rights and claims of the contractor and his Subcontractors and suppliers at any tier against the seller, the manufacturer, the designer of the product, and any other entity which may be liable for the defect.

D. The contractor also agrees:

(1) To pay the Subcontractor or supplier promptly upon the payment of certificates, if issued under the schedule of values described in Section 8 of these General Conditions, the amount allowed to the contractor on account of the Subcontractor's or supplier's work to the extent of the Subcontractor's or supplier's interest therein.

(2) To pay the Subcontractor or supplier, upon the payment by the State, so that at all times the Subcontractor's or supplier's total payments shall be as large in proportion to the value of the work done by him as the total amount certified to the contractor is to the value of the work done by him.

(3) To pay the Subcontractor or supplier promptly to such extent as may be provided by the contract documents or the contract between the contractor and the Subcontractor or supplier, if either of these provides for earlier or larger payments than the above.

(4) To pay the Subcontractor or supplier on demand for his work or materials as far as executed and fixed in place, less the retained percentage, at the time payment is due from the State, whether or not payment is made wholly or in part by the State, unless the State's failure to issue payment wholly or in part is due to the fault or unsatisfactory work or materials of the Subcontractor or supplier.

(5) To pay the Subcontractor or supplier an equitable share of any insurance money received by the contractor on account of damage to the work.

(6) To make no demand for liquidated damages or penalty for delay in any sum in excess of such amount as may be specifically named in the contract between the contractor and the Subcontractor or supplier.

(7) To give the Subcontractor or supplier an opportunity to be present and to submit evidence in any matter involving his rights.

(8) To fulfill contractor's obligations under §§9-201 et seq., and 9-301 et seq. of the Real Property Article of the Annotated Code of Maryland.

E. Every Subcontractor, supplier, or other entity at any tier furnishing any work, labor, services, materials or supplies to or for use in the project, by virtue of furnishing same shall be bound to and does accept and agree to all terms and provisions of the contract between contractor and the State.

F. The State will not be liable to the contractor for any loss or additional cost suffered as a result of the inability of any Subcontractor or supplier at any tier to continue work on the contract as a result of debarment of the Subcontractor or supplier under Title 16 or Title 17, Subtitle 2 of the SF & P, or regulations adopted thereunder.

G. Contractor may not withhold from any Subcontractor or supplier, wholly or in part, any payment otherwise due and owing to the Subcontractor or supplier for labor or material furnished for this contract, on account of:

(1) any claim of the contractor against the Subcontractor or supplier or

(2) any debt owed or claimed to be owed by the Subcontractor or supplier to the contractor to the extent the claim or debt arose out of contracts, disputes, or other transactions between the contractor and the Subcontractor or supplier which did not arise out of this contract between the State and the contractor.

H. When the State withholds money from the contractor under Section 8.06 for delays or other causes, the Contractor may withhold payment from a Subcontractor or supplier, on account of the amount withheld by the State from the contractor, only to the extent that the Subcontractor or supplier contributed to the delay or other cause for which the State withheld payment from the contractor. For example, of the State withholds from the contractor liquidated damages for delay, the contractor may withhold payment only from those Subcontractors and suppliers who caused or contributed to the delays; all other Subcontractors and suppliers shall be paid promptly by the contractor notwithstanding the State's withholding from the contractor.

I. This contract is subject to the provisions of **COMAR 21.07.02.05-3**, Retainage.

9.05 PREVAILING WAGE RATES:

A. All contracts in the amount of $500,000 or more shall be subject to the provisions of §§17-201, et seq., of SF & P and **COMAR 21.11.11**, respecting prevailing wages. Where an original contract is in an amount less than $500,000, this section shall not apply, even where subsequent change orders increase the total contract to be in excess of $500,000. Wage rates applicable to projects of $500,000 or more are attached to the specifications. Federal wage rates shall be in effect where applicable.

B. When prevailing wage rates apply, the contractor shall submit a copy of his payroll records and the payroll records of each of his Subcontractors to the Department of Labor, Licensing and Regulation, Division of Labor and Industry, 1100 North Eutaw Street, Baltimore, Maryland 21202, where they will be available for inspection during regular business hours. In addition, the contractor shall submit a copy of his payroll records and the payroll records of each of his Subcontractors to the DPSCS Program Manager or Building Construction Engineer for the contract. These payroll records must be submitted within two weeks after each payroll period, and shall contain the following employee information: name, address and social security number, work classifications, hours straight time and overtime worked each day, total hours worked, rate of pay and gross amount earned. The contractor shall be responsible for the submission of all Subcontractors' payroll records covering work performed directly at the work site. Each copy of the payroll records shall be accompanied by a statement signed by the contractor or the Subcontractor indicating that the payroll records are correct, that the wage rates contained therein are not less than those established by the Commissioner as set forth in the contract, that the classification set forth for each workman or apprentice conforms with the work he performed and that the contractor or the Subcontractor has complied with the provisions of this section. In the event of any conflict between this Section and Title 17, Subtitle 2 of the State Finance and Procurement Article of the Annotated Code of Maryland, or regulations adopted there under, the provisions of Title 17, Subtitle 2 of the regulations will prevail.

9.06 CONSTRUCTION SAFETY AND HEALTH STANDARDS:

A. The contractor shall provide and maintain work environments and procedures which will:

(1) Safeguard the public, workers on the site, and State personnel, property, materials, supplies, and equipment exposed to contractor operations and activities;

(2) Avoid interruptions of State operations and delays in project completion dates; and

(3) Control costs in the performance of this contract.

B. For these purposes, the contractor shall:

(1) Provide appropriate safety barricades, signs, and signal lights;

(2) Comply with the provisions of the Maryland Occupational Safety and Health Act;

(3) Comply with the standards issued by the Secretary of Labor at 29 CFR Part 1926 and 29 CFR Part 1910; and

(4) Comply with all requirements of the contract and any additional safety measures the Procurement Officer determines to be reasonably necessary.

C. Whenever the Procurement Officer becomes aware of any noncompliance with these requirements or any condition which poses a serious or imminent danger to the health or safety of the public, workers on the site, or State personnel, the Procurement Officer shall notify the contractor orally, with written confirmation, and demand immediate initiation of corrective action. This notice, when delivered to the contractor or the contractor's representatives at the work site, shall be deemed sufficient notice of the noncompliance and that corrective action is required. After receiving the notice, the contractor shall immediately take corrective action. If the contractor fails or refuses to promptly take corrective action, the Procurement Officer may issue an order stopping all or part of the work until satisfactory corrective action has been taken. The contractor shall not be entitled to any equitable adjustment of the contract price or extension of the performance schedule on any stop work order issued under this clause.

D. Contractor shall include in all subcontracts a provision imposing on all Subcontractors the same obligations to the contractor as the contractor has to the State under subsections A through D of this Section 9.06.

E. (1) This subsection E applies to all contracts in the amount of $500,000 or greater and to all other contracts determined by the Procurement Officer to pose higher than normal safety or health risks.

(2) Before commencing the work, the contractor shall:

(a) Submit to the Procurement Officer a written Employer Safety and Health Program for implementing this clause, following the MOSH "Suggested Employee Safety and Health Program" format and including an analysis of the significant hazards to life, limb, and property inherent in contract work performance and a plan for controlling these hazards; and

(b) Meet with the Procurement Officer to discuss and develop a mutual understanding of the overall safety and health program for the project.

9.07 PROMPT PAYMENT OF SUBCONTRACTORS(COMAR 21.07.02.05-2):

A. This contract and all subcontracts issued under this contract are subject to the provisions of State Finance and Procurement Article, §15-226, Annotated Code of Maryland, and **COMAR 21.10.08**. In §§A—D, the terms "undisputed amount", "prime contractor", "contractor", and "Subcontractor" have the meanings stated in **COMAR 21.10.08.01**.

B. A contractor shall promptly pay its Subcontractors an undisputed amount to which a Subcontractor is entitled for work performed under this contract within 10 days after the contractor receives a progress payment or final payment for work under this contract.

C. If a contractor fails to make payment within the period prescribed in §B, a Subcontractor may request a remedy in accordance with **COMAR 21.10.08**.

D. A contractor shall include in its subcontracts for work under this contract, wording that incorporates the provisions, duties, and obligations of §§A—D, State Finance and Procurement Article, §15-226, Annotated Code of Maryland, and **COMAR 21.10.08.**

10.00 MINORITY BUSINESS ENTERPRISE UTILIZATION (MBE)

This contract includes a Minority Business Enterprise ("MBE") participation goal for subcontracting, and/or procurement of materials, and/or services. Bidder/offerors must make a good faith effort to meet the MBE participation goal before bids or proposals are due.

10.01 ESTABLISHMENT OF GOAL AND SUBGOALS:

An overall MBE subcontractor participation goal of **30%** of the total contract dollar amount has been established for this procurement.

In addition, the following subgoals have been established for this procurement:

- **7%** for African-American MBEs,
- **4%** for Asian-American MBEs,

Notwithstanding any subgoals established above, the Contractor is encouraged to use a diverse group of subcontractors and suppliers from any/all of the various MBE classifications to meet the remainder of the overall MBE participation goal.

10.02 MBE Forms– The following Minority Business Enterprise participation instructions, and forms are provided to assist Bidders/Offerors:

DPSCS OS 01A MBE	MBE Utilization and Fair Solicitation Affidavit and Participation Schedule
DPSCS OS 01B MBE	MBE Participation Waiver Guidance
DPSCS OS 01C MBE	Good Faith Efforts Documentation to Support Waiver Request
DPSCS OS 03A MBE	MBE Subcontractor Project Participation Certification
DPSCS OS 03B MBE	MBE Prime Project Participation Certification
DPSCS OS 04 MBE	Outreach Efforts Compliance Statement
DPSCS OS 06A MBE	Prime Contractor Paid/Unpaid MBE Invoice Report
DPSCS OS 06B MBE	MBE Prime Contractor Report for Self Performance
DPSCS OS 06C MBE	Prime Contractor Paid Unpaid MBE VSBE Invoice Report for Multiple MBEs/VSBEs
DPSCS OS 07 MBE	VSBE Subcontractor Monthly Invoice Report
DPSCS OS 08 MBE	MBE Subcontractor/Contractor Unpaid MBE Invoice Report
DPSCS OS 11A MBE	VSBE Utilization Fair Solicitation Affidavit Participation Schedule with Instructions
DPSCS OS 11B MBE	VSBE Waiver Guidance
DPSCS OS 11C MBE	VSBE Good Faith Effort Documentation to Support Waiver Request

DPSCS OS 13A MBE VSBE Subcontractor Participation Certification
DPSCS OS 14 MBE VSBE Outreach Efforts Compliance Statement

10.03 CONTRACTOR'S BID RESPONSIBILITIES

A Bidder/Offeror shall include with its Bid/Proposal a completed MBE Utilization and Fair Solicitation Affidavit (form DPSCS OS 01A MBE) whereby:

(a) The Bidder/Offeror acknowledges the certified MBE participation goal and commits to make a good faith effort to achieve the goal and any applicable subgoals, or requests a waiver, and affirms that MBE subcontractors were treated fairly in the solicitation process; and

(b) The Bidder/Offeror responds to the expected degree of MBE participation, as stated in the solicitation, by identifying the specific commitment of certified MBEs at the time of Bid/Proposal submission. The Bidder/Offeror shall specify the percentage of total contract value associated with each MBE subcontractor identified on the MBE participation schedule, including any work performed by the MBE prime (including a prime participating as a joint venture) to be counted towards meeting the MBE participation goals.

A Bidder/Offeror requesting a waiver should review Form DPSCS OS 01B MBE (Waiver Guidance) and DPSCS OS 01C MBE (Good Faith Efforts Documentation to Support Waiver Request) prior to submitting its request.

If a Bidder/Offeror fails to submit a completed* DPSCS OS 01A MBE *or* DPSCS OS 01B MBE and DPSCS OS 01C MBE *forms with the Bid/Proposal as required, the Procurement Officer shall determine that the Bid is non-responsive or the Proposal is not reasonably susceptible of being selected for award.

Bidders/Offerors are responsible for verifying that each of the MBE(s) (including any MBE primes and/or MBE primes participating in a joint venture), selected to meet the goal and any subgoals and subsequently identified in form DPSCS OS 01A MBE is appropriately certified and has the correct NAICS codes allowing it to perform the committed work.

Within ten (10) Working Days from notification that it is the recommended awardee or from the date of the actual award, whichever is earlier, the Bidder/Offeror must provide the following documentation to the Procurement Officer**.**

(a) Outreach Efforts Compliance Statement (**form DPSCS OS 04 MBE**).
(b) MBE Prime/Subcontractor Project Participation Certification (**form DPSCS OS 03B MBE**) and MBE Subcontractor Participation Certification (**form DPSCS OS 03A MBE**).(c) If the recommended awardee believes a waiver (in whole or in part) of the overall MBE goal or of any applicable subgoal is necessary, the recommended awardee must submit a fully-documented waiver request that complies with **COMAR 21.11.03.11.**
(d) Any other documentation required by the Procurement Officer to ascertain Bidder/Offeror responsibility in connection with the certified MBE subcontractor participation goal or any applicable subgoals.

If the recommended awardee fails to return each completed document within the required time, the Procurement Officer may determine that the recommended awardee is not responsible and, therefore, not eligible for Contract award. If the Contract has already been awarded, the award is voidable.

A current directory of certified MBEs is available through the Maryland State Department of Transportation (MDOT), Office of Minority Business Enterprise, 7201 Corporate Center Drive, Hanover, Maryland 21076. The phone numbers are (410) 865-1269, 1-800-544-6056, or TTY (410) 865-1342. The directory is also available on the MDOT website at:

http://mbe.mdot.state.md.us/directory/. The most current and up-to-date information on MBEs is available via this website. **Only MDOT-certified MBEs may be used to meet the MBE subcontracting goals.**The Contractor, once awarded a Contract, will be responsible for submitting or requiring its subcontractor(s) to submit the following forms to provide the State with ongoing monitoring of MBE Participation:

(a) **Form DPSCS OS 06A MBE** (Prime Contractor Paid/Unpaid MBE Invoice Report).

(b) **Form DPSCS OS 06B MBE** (MBE Prime Contractor Report for Self Performance).

(c) **Form DPSCS OS 06C MBE** (Prime Contractor Paid/Unpaid MBE/VSBE Invoice Report for Multiple MBEs/VSBEs).

(d) **Form DPSCS OS 08 MBE** (MBE Subcontractor/Contractor Unpaid MBE Invoice Report).

A Bidder/Offeror that requested a waiver of the goal or any of the applicable subgoals will be responsible for submitting the Good Faith Efforts Documentation to Support Waiver Request (form DPSCS OS 01C MBE) and all documentation within ten (10) Working Days from notification that it is the recommended awardee or from the date of the actual award, whichever is earlier, as required in **COMAR 21.11.03.11.**

All documents, including the MBE Utilization and Fair Solicitation Affidavit & MBE Participation Schedule (Form DPSCS OS 01A MBE**)**, completed and submitted by the Bidder/Offeror in connection with its certified MBE participation commitment shall be considered a part of the resulting Contract and are hereby expressly incorporated into the Contract by reference thereto. All of the referenced documents will be considered a part of the Bid/Proposal.

The Bidder/Offeror is advised that liquidated damages will apply in the event the Contractor fails to comply in good faith with the requirements of the MBE program and pertinent Contract provisions.

As set forth in **COMAR 21.11.03.12-1(D)** when a certified MBE firm participates on a contract as a prime contractor (including a joint-venture where the MBE firm is a partner), a procurement agency may count the distinct, clearly defined portion of the work of the contract that the certified MBE firm performs with its own work force towards fulfilling up to fifty-percent (50%) of the MBE participation goal (overall) and up to one hundred percent (100%) of not more than one of the MBE participation sub-goals, if any, established for the contract.

In order to receive credit for self-performance, an MBE prime must list its firm in Section 4A of the MBE Participation Schedule (Form DPSCS OS 01A MBE) and include information regarding the work it will self-perform. For the remaining portion of the overall goal and the sub-goals, the MBE prime must also identify other certified MBE subcontractors (see Section 4B of the MBE Participation Schedule (Form DPSCS OS 01A MBE)) used to meet those goals. If dually-certified, the MBE prime can be designated as only one of the MBE classifications but can self-perform up to 100% of the stated sub-goal.

As set forth in **COMAR 21.11.03.12-1**, once the Contract work begins, the work performed by a certified MBE firm, including an MBE prime, can only be counted towards the MBE participation goal(s) if the MBE firm is performing a commercially useful function on the Contract.

If at any time after submission of a bid or proposal and before execution of a contract, the apparent successful bidder/offeror determines that a certified MBE listed on the Certified MBE Utilization and Fair Solicitation Affidavit (Form DPSCS OS 01A MBE), has become or will become unavailable, the apparent successful bidder/offeror shall immediately notify the Procurement Officer and the MBE Director. Any desired change in the MBE participation must be approved in advance by the Procurement Officer after consultation with the MBE Director. The request for a change to the MBE participation schedule shall indicate the contractor's efforts to substitute another certified MBE subcontractor to perform the work. Desired changes occurring after the

date of contract execution may occur only upon written approval by the agency head and subsequently by contract amendment (**COMAR 21.11.03.12**).

10.04 MBE COMPLIANCE MEETING:

A mandatory MBE Compliance Meeting will be conducted to review the responsibilities of the Department, the general contractor and the MBE's personnel relative to MBE compliance and documentation. If at all possible, the meeting will be held in conjunction with the pre-work meeting, or not more than three (3) weeks after starting work on the contract.

The Contract Monitor will schedule the meeting with concurrence from the MBE Office. The Contract Monitor will notify the following of the date, time and location. At least one (1) week advanced notice will be required.

(a) Department Representation.

(1) Director, MBE Office or Designee
(2) Procurement Officer or Designee
(3) Contract Monitor

(b) Contract Representatives.

(1) Superintendent - Prime Contractor
(2) MBE Officer - Prime Contractor
(3) Owner/Superintendent/Foreman representing each MBE firm listed on the DPSCS OS MBE 01A form at the time of bid.

The Contract Monitor and DPSCS MBE Representative will jointly conduct the meeting. The general contractor is to ensure the attendance of the MBE Representatives and relay to them that the meeting is mandatory and failure to appear is considered non-compliance with the contract requirements.

10.05 RECORDS AND REPORTS:

If awarded the contract, the general contractor shall submit an MBE Monthly Payment Report showing each MBE firm that was listed on the MBE Participation Packet (DPSCS OS 01A MBE) at the time of bid.

All records concerning MBE participation must be retained by the general contractor and all subcontractors and shall be available for inspection by the Department for a period of three (3) years after final payment has been received by the general contractor.

With respect to Contract administration, the Contractor shall:

(a) Submit by the 10th of each month to the Department's designated representative:
i. A Prime Contractor Paid/Unpaid MBE Invoice Report (Form DPSCS OS 06A MBE or DPSCS OS 06C MBE) listing any unpaid invoices, over 45 days old, received from any certified MBE subcontractor, the amount of each invoice and the reason payment has not been made; and

ii. (If Applicable) MBE Prime Contractor Report for Self Performance (Form DPSCS OS 06B MBE) identifying an MBE prime's self-performing work to be counted towards the MBE participation goals.

(b) Include in its agreements with its certified MBE subcontractors a requirement that those subcontractors submit by the 10th of each month to the Department's designated representative an MBE Subcontractor Paid/Unpaid Invoice Report (Form DPSCS OS 08 MBE) that identifies the Contract and lists all payments to the MBE subcontractor received from the Contractor in the preceding 30 days, as well as any outstanding invoices, and the amounts of those invoices.

(c) Maintain such records as are necessary to confirm compliance with its MBE participation obligations. These records must indicate the identity of certified minority and non-minority

subcontractors employed on the Contract, the type of work performed by each, and the actual dollar value of work performed. Subcontract agreements documenting the work performed by all MBE participants must be retained by the Contractor and furnished to the Procurement Officer on request.

(d) Consent to provide such documentation as reasonably requested and to provide right-of-entry at reasonable times for purposes of the State's representatives verifying compliance with the MBE participation obligations. Contractor must retain all records concerning MBE participation and make them available for State inspection for three years after final completion of the Contract.

(e) Upon completion of the Contract and before final payment and/or release of retainage, submit a final report in affidavit form and under penalty of perjury, of all payments made to, or withheld from MBE subcontractors.

10.06 DPSCS MBE Liquidated Damages Contract Provisions:

(a) This contract requires the contractor to make good faith efforts to comply with the Minority Business Enterprise ("MBE") Program and contract provisions.

(b) The State and the Contractor acknowledge and agree that the State will incur damages, including but not limited to loss of goodwill, detrimental impact on economic development, and diversion of internal staff resources, if the Contractor does not make good faith efforts to comply with the requirements of the MBE Program and MBE contract provisions.

(c) The parties further acknowledge and agree that the damages the State might reasonably be anticipated to accrue as a result of such lack of compliance are difficult to ascertain with precision.

(d) Therefore, upon a determination by the State that the Contractor failed to make good faith efforts to comply with one (1) or more of the specified MBE Program requirements or contract provisions, the Contractor agrees to pay liquidated damages to the State at the rates set forth below. The Contractor expressly agrees that the State may withhold payment on any invoices as a set-off against liquidated damages owed. The Contractor further agrees that for each specified violation, the agreed upon liquidated damages are reasonably proximate to the loss the State is anticipated to incur as a result of such violation.

i. Failure to submit each monthly payment report in full compliance with COMAR 21.11.03.13B (3): **$ 33.30** per day until the monthly report is submitted as required.

ii. Failure to include in its agreements with MBE subcontractors a provision requiring submission of payment reports in full compliance with COMAR 21.11.03.13B (4): **$ 116.54** per MBE subcontractor.

iii. Failure to comply with COMAR 21.11.03.12 in terminating, canceling, or changing the scope of work/value of a contract with an MBE subcontractor and/or amendment of the MBE participation schedule: the difference between the dollar value of the MBE participation commitment on the MBE participation schedule for that specific MBE firm and the dollar value of the work performed by that MBE firm for the contract.

iv. Failure to meet the Contractor's total MBE participation goal and subgoal commitments: the difference between the dollar value of the total MBE participation commitment on the MBE participation schedule and the MBE participation actually achieved.

v. Failure to promptly pay all undisputed amounts to an MBE subcontractor in full compliance with the prompt payment provisions of this contract: **$ 124.86** per day until the undisputed amount due to the MBE subcontractor is paid.

Notwithstanding the use of liquidated damages, the State reserves the right to terminate the contract and exercise all other rights and remedies provided in the contract or by law.

10.07 ENFORCEMENT:

The Department is responsible for ensuring compliance with the terms of the MBE Program. All of the above referenced MBE documents will be made a part of the contract file and will be subject to compliance reviews, formal and informal, by the Department. The Department has the authority to conduct informal on-site project compliance reviews at any time without prior notification.

When conducting a formal compliance review, either at the general contractor or MBE's office, the Department will provide written notification to the general contractor and/or MBE of a pending compliance review at least ten (10) calendar days prior to the formal compliance review. This notification will inform the general contractor and/or MBE of the date, time and location of the review. The general contractor and/or MBE will have the following available for inspection:

(1) Copies of purchase orders, invoices and subcontracts between the general contractor and MBE containing Equal Opportunity clauses;

(2) Records to indicate the number, names, dollar value of the MBE subcontracts, and the scheduled times for each certified MBE to be on the job site;

(3) Any other appropriate documents required to determine compliance.

If the Department determines that the general contractor or MBE is not in compliance with this section:

(1) Except as provided in (2) below, the Department will notify the general contractor of measures which must be taken to restore the general contractor and/or MBE to a state of compliance and the time within which these measures must be taken. If the general contractor or MBE fails to take corrective action, within the time required, the Department's representative will make a final report of noncompliance to the general contractor and direct the imposition of one (1) or more of the sanctions listed below, where appropriate:

(a) Suspension of work on the project, pending correction;

(b) Withholding payment or a percentage thereof, pending correction;

(c) Initiation of suspension in accordance with COMAR regulations;

(d) Referral to the Office of the Attorney General for review/initiation of debarment or for review and possible referral for criminal prosecution;

(e) Referral to the Governor's Office of Minority Affairs Fraud Hotline;

(f) Termination of the contract;

(g) Any other action as appropriate, within the discretion of the Secretary.

(2) When circumstances warrant such action, in the judgment of the Department, it may take action to enforce the contractual obligations regarding MBE participation without notice to the general contractor and without giving the general contractor any opportunity to cure.

If the documentary material submitted by the general contractor and/or MBE to determine compliance status contains false, misleading information or other misrepresentations, the matter will be referred to the Office of the Attorney General for appropriate legal action and to the Governor's Office of Minority Affairs for investigation of potential fraud. The Department may request any and all other documents and information and may take any and all other actions permitted or required by Title 14, Subtitle 3 of the State Finance and Procurement Article and by **COMAR 21.11.03** to enforce and ensure compliance with the law and the contract.

10.08 MBE MODIFICATIONS:

During the life of the contract, all plans to modify the approved MBE Participation Packet will require the approval of the Procurement Officer, with concurrence from the MBE Director and written approval of agency head. This will include any decreases to items of work to be sublet or materials and services to be obtained which differs from those in the original MBE Participation Packet (DPSCS OS 01A MBE). All requests for revisions shall be directed to the appropriate Procurement Officer, with a copy to the MBE Director, for disposition.

Once the MBE office approves a contractor's request for modification, the MBE modification forms (DPSCS OS 02 MBE) should be forwarded to the procurement officer so that he or she can draft a formal contract modification that references the MBE forms and includes them as attachments. The procurement officer will follow the same process as any other contract modification to obtain AG review and the Secretary's approval (including the MBE Modification memo), and in some instances, BPW approval could be required as well. The procurement officer will then forward the final modification back to the MBE office for record and file and submission to GOMA.

In addition, when directed by the Department, the general contractor shall terminate, without liability to the Department, its contract with a firm, which for any reason, or no longer eligible to do business in the State. The general contractor is required to submit promptly a plan to the MBE office for maintaining the required participation on the project or appropriate request for revision of all or part of the contract goal with appropriate documentation to support good faith efforts as stated above.

10.09 CONTRACTOR ASSISTANCE:

Contractors requiring assistance in obtaining MBE Program information should contact the Governor's Office of Minority Affairs (GOMA), 6 St. Paul Street, Suite 1502, Baltimore, Maryland 21202 or phone (410) 767-8232, Toll Free: (877) 558-0998. GOMA's website address is http://www.mdminoritybusiness.com/index.html.

Contractors requiring assistance in locating certified MBEs are encouraged to search the MBE Directory on the Maryland Department of Transportation's (MDOT) website. Contractors can contact the MDOT, Minority Business Enterprise Office at 7201 Corporate Center Drive, P.O. Box 548, Hanover, MD 21076, or phone In State (410) 865-1142 or toll free 1-888-713-1414. MDOT's website is http://www.mdot.state.md.us/.

Contractors requiring assistance in completing the Department's MBE Forms should contact the MBE Office. The contact information is 6776 Reisterstown Road, Suite 208, Baltimore, Maryland 21215, phone (410) 585-3743or by email at mbe@dpscs.state.md.us.

11.0 VETERAN-OWNED SMALL BUSINESS ENTERPRISE UTILIZATION (VSBE)

Contractor shall exercise all good faith efforts structured in an attempt to attain **Veteran-Owned Small Business Enterprise** (VSBE) participation.

A VSBE subcontract participation goal of 1% has been established for this procurement. However if the bidder/offeror is successful in obtaining VSBE participation a completed Veteran-Owned Small Business Enterprise (VSBE) Utilization Fair Solicitation Affidavit and Participation Schedule (**DPSCS OS 11A MBE**) shall be included with the bid/proposal:

(1) the bidder or offeror responds to the expected degree of VSBE participation as stated in the solicitation, by identifying the specific commitment of VSBEs at the time of submission. The bidder or offeror shall specify the percentage of contract value associated with each VSBE subcontractor identified on the VSBE Participation Schedule (form **DPSCS OS 11A MBE**).

(2) A Bidder/Offeror requesting a waiver should review Form DPSCS OS 11B MBE (Waiver Guidance) and DPSCS OS 11C MBE (Good Faith Efforts Documentation to Support Waiver Request) prior to submitting its request.

(3) ***If a Bidder/Offeror fails to submit a completed DPSCS OS 11A MBE or DPSCS OS 11B MBE and DPSCS OS 11C MBE forms with the Bid/Proposal as required, the Procurement Officer shall determine that the Bid is non-responsive or the Proposal is not reasonably susceptible of being selected for award***

Within 10 working days from notification that it is the apparent awardee, the awardee must provide the following additional documentation to the Procurement Officer (if applicable):

(1) VSBE Subcontractor Project Participation Statement (DPSCS OS 13A MBE)
(2) VSBE Outreach Efforts Compliance Statement (DPSCS OS 14 MBE)
(3) Any other documentation required by the Procurement Officer to ascertain bidder or offeror responsibility in connection with the VSBE participation.

Contractor shall:

(1) Submit monthly to the Department a report listing any unpaid invoices, over 45 days old, received from any VSBE subcontractor, the amount of each invoice and the reason payment has not been made using form DPSCS OS 06C (Prime Contractor Paid/Unpaid MBE/VSBE Invoice Report for Multiple MBEs/VSBEs).
(2) Include in its agreements with its VSBE subcontractors a requirement that those subcontractors submit monthly to the Department a report that identifies the prime contract and lists all payments received from Contractor in the preceding 30 days, as well as any outstanding invoices over 45 days, and the amount of those invoices, using form DPSCS OS 07 MBE VSBE Subcontractor Monthly Invoice Report.
(3) Maintain such records as are necessary to confirm compliance with its VSBE participation obligations. These records must indicate the identity of VSBE and non-VSBE subcontractors employed on the contract, the type of work performed by each, and the actual dollar value of work performed. Subcontract agreements documenting the work performed by all VSBE participants must be retained by the Contractor and furnished to the Procurement Officer on request.
(4) Consent to provide such documentation as reasonably requested and to provide right-of-entry at reasonable times for purposes of the State's representatives verifying compliance with the VSBE participation obligations. Contractor must retain all records concerning VSBE participation and make them available for State inspection for three years after final completion of the contract.
(5) At the option of the procurement agency, upon completion of the contract and before final payment and/or release of retainage, submit a final report in affidavit form and under penalty of perjury, of all payments made to, or withheld from VSBE subcontractors.

DEPARTMENT OF PUBLIC SAFETY & CORRECTIONAL SERVICES
MBE UTILIZATION AND FAIR SOLICITATION AFFIDAVIT
& MBE PARTICIPATION SCHEDULE

INSTRUCTIONS
PLEASE READ BEFORE COMPLETING THIS DOCUMENT

This form includes Instructions and the MBE Utilization and Fair Solicitation Affidavit & MBE Participation Schedule which must be submitted with the bid/proposal. If the bidder/offeror fails to accurately complete and submit this Affidavit and Schedule with the bid or proposal as required, the Procurement Officer shall deem the bid non-responsive or shall determine that the proposal is not reasonably susceptible of being selected for award.

1. Contractor shall structure its procedures for the performance of the work required in this Contract to attempt to achieve the minority business enterprise (MBE) subcontractor participation goal stated in the Invitation for Bids or Request for Proposals. Contractor agrees to exercise good faith efforts to carry out the requirements set forth in these Instructions, as authorized by the Code of Maryland Regulations (COMAR) 21.11.03.

2. MBE Goals and Subgoals: Please review the solicitation for information regarding the Contract's MBE overall participation goals and subgoals. After satisfying the requirements for any established subgoals, the Contractor is encouraged to use a diverse group of subcontractors and suppliers from any/all of the various MBE classifications to meet the remainder of the overall MBE participation goal.

3. MBE means a minority business enterprise that is certified by the Maryland Department of Transportation ("MDOT"). Only entities certified by MDOT may be counted for purposes of achieving the MBE participation goals. In order to be counted for purposes of achieving the MBE participation goals, the MBE firm, including a MBE prime, must be MDOT-certified for the services, materials or supplies that it is committed to perform on the MBE Participation Schedule.

4. Please refer to the MDOT MBE Directory at www.mdot.state.md.us to determine if a firm is certified with the appropriate North American Industry Classification System ("NAICS") Code **and** the product/services description (specific product that a firm is certified to provide or specific areas of work that a firm is certified to perform). For more general information about NAICS, please visit www.naics.com. Only those specific products and/or services for which a firm is certified in the MDOT Directory can be used for purposes of achieving the MBE participation goals. **NOTICE:** If the firm's NAICS Code is in **graduated status**, such services/products **may not be counted** for purposes of achieving the MBE participation goals. A NAICS Code is in the graduated status if the term "Graduated" follows the Code in the MDOT MBE Directory.

5. **NOTE: New Guidelines Regarding MBE Prime Self-Performance.** Please note that when a certified MBE firm participates as a prime contractor on a contract, a procurement agency may count the distinct, clearly defined portion of the work of the contract that the certified MBE firm performs with its own forces toward fulfilling up to fifty-percent (50%) of the MBE participation goal (overall) and up to one hundred percent (100%) of not more than one of the MBE participation subgoals, if any, established for the contract. In order to receive credit for self-performance, an MBE prime must list its firm in Section 4A of the MBE Participation Schedule, including the certification category under which the MBE prime is self-performing and include information regarding the work it will self-perform. For the remaining portion of the overall goal and the subgoals, the MBE prime must also identify other certified MBE subcontractors (see Section 4B of the MBE Participation Schedule) used to meet those goals or request a waiver.

For example, for a construction contract that has a 27% MBE overall participation goal and subgoals of 7% for African American firms and 4% for Asian American firms, subject to Section 4 above and this Section 5, a certified African American MBE prime can self-perform (a) up to 13.5 % of the overall goal and (b) up to 7% of the African American subgoal. The remainder of the overall goal and subgoals would have to be met with other certified MBE firms or a waiver request.

For example, a services contract with a 30% percent MBE participation goal (overall) and subgoals of 7% for African-American firms, 4% for Asian American firms and 12% for women-owned firms, subject to Sections 4 above and this Section 5, a dually-certified Asian American/Woman MBE prime can self-perform (a) up to 15% of the overall goal and (b) up to four percent (4%) of the Asian American subgoal OR up to twelve percent (12%) of the women subgoal. Because it is dually-certified, the company can be designated as only ONE of the MBE classifications (Asian American or women) but can self-perform up to one hundred percent (100%) of the stated subgoal for the single classification it selects.

6. Subject to the restrictions stated in Section 5 above, when a certified MBE that performs as a participant in a joint venture, a procurement agency may count a portion of the total dollar value of the contract equal to the distinct, clearly-defined portion of the work of the contract that the certified MBE performs with its own forces toward fulfilling the contract goal, and not more than one of the contract subgoals, if any.

   For example, if a MBE firm is a joint venture partner and the State determines that it is performing with its own forces 35 percent of the work in the contract, it can use this portion of the work towards fulfilling up to fifty percent (50%) of the overall goal and up to one hundred percent (100%) of one of the stated subgoals, if applicable.

7. As set forth in COMAR 21.11.03.12-1, once the Contract work begins, the work performed by a certified MBE firm, including an MBE prime, can only be counted towards the MBE participation goal(s) if the MBE firm is performing a commercially useful function on the Contract. Please refer to COMAR 21.11.03.12-1 for more information regarding these requirements.

8. If you have any questions as to whether a firm is certified to perform the specific services or provide specific products, please contact MDOT's Office of Minority Business Enterprise at 1-800-544-6056 or via email to mbe@mdot.state.md.us sufficiently prior to the submission due date.

9. Worksheet: The percentage of MBE participation, calculated using the percentage amounts for all of the MBE firms listed on the Participation Schedule **MUST** at least equal the MBE participation goal **and** subgoals (if applicable) set forth in the solicitation. If a bidder/offeror is unable to achieve the MBE participation goal and/or any subgoals (if applicable), the bidder/offeror must request a waiver in Item 1 of the MBE Utilization and Fair Solicitation Affidavit (Attachment D-1A) or the bid will be deemed not responsive, or the proposal determined to be not susceptible of being selected for award. You may wish to use the Subgoal summary below to assist in calculating the percentages and confirm that you have met the applicable MBE participation goal and subgoals, if any.

Subgoals (if applicable)

Total African American MBE Participation:	_____%
Total Asian American MBE Participation:	_____%
Total Hispanic American MBE Participation:	_____%
Total Women-Owned MBE Participation:	_____%

Overall Goal

Total MBE Participation (include all categories): _____%

MBE UTILIZATION AND FAIR SOLICITATION AFFIDAVIT & MBE PARTICIPATION SCHEDULE

This MBE Utilization and Fair Solicitation Affidavit & MBE Participation Schedule must be included with the bid/proposal. If the bidder/offeror fails to accurately complete and submit this Affidavit and Schedule with the bid or proposal as required, the Procurement Officer shall deem the bid non-responsive or shall determine that the proposal is not reasonably susceptible of being selected for award.

In connection with the bid/proposal submitted in response to Solicitation No. MDQ0031018235, I affirm the following:

1. MBE Participation (PLEASE CHECK ONLY ONE)

☐ I acknowledge and intend to meet the overall certified Minority Business Enterprise (MBE) participation goal of _____ percent and, if specified in the solicitation, the following subgoals (complete for only those subgoals that apply):

_____ percent for African American-owned MBE firms

_____ percent for Asian American-owned MBE firms

Therefore, I am not seeking a waiver pursuant to COMAR 21.11.03.11.

OR

☐ I conclude that I am unable to achieve the MBE participation goal and/or subgoals. I hereby request a waiver, in whole or in part, of the overall goal and/or subgoals. Within 10 Working days of receiving notice that our firm is the apparent awardee or as requested by the Procurement Officer, I will submit the completed Good Faith Efforts Documentation to Support Waiver Request (Attachment D-1C) and all required waiver documentation in accordance with COMAR 21.11.03.

2. Additional MBE Documentation

I understand that if I am notified that I am the apparent awardee or as requested by the Procurement Officer, I must submit the following documentation within 10 business days of receiving notice of the potential award or from the date of conditional award (per COMAR 21.11.03.10), whichever is earlier:

(a) Outreach Efforts Compliance Statement (Attachment D-2);

(b) MBE Subcontractor/MBE Prime Project Participation Statement (Attachments D-3A and 3B);

(c) Any other documentation, including waiver documentation if applicable, required by the Procurement Officer to ascertain bidder or offeror responsibility in connection with the certified MBE participation goal and subgoals, if any.

I understand that if I fail to return each completed document within the required time, the Procurement Officer may determine that I am not responsible and therefore not eligible for contract award. If the contract has already been awarded, the award is voidable.

3. Information Provided to MBE firms

In the solicitation of subcontract quotations or offers, MBE firms were provided not less than the same information and amount of time to respond as were non-MBE firms.

MBE PARTICIPATION SCHEDULE
CONTINUED ON NEXT PAGE

4. MBE Participation Schedule

Set forth below are the (i) certified MBEs I intend to use, (ii) the percentage of the total Contract amount allocated to each MBE for this project and, (iii) the items of work each MBE will provide under the Contract. I have confirmed with the MDOT database that the MBE firms identified will be performing work activities for which they are MDOT certified.

Prime Contractor	Project Description	Project/Contract Number
	Youth Detention Center at Baltimore City Detention Center (BCDC), Baltimore, Maryland	KT-000-150-C01

List information for each certified MBE firm you agree to use to achieve the MBE participation goal and Subgoals, if any. MBE primes: Please complete both sections A and B below.

SECTION A: For MBE Prime Contractors ONLY (including MBE Primes in a Joint Venture)

MBE Prime Firm Name:_____ MBE Certification Number: _____ (If dually certified, check only one box.) ☐ African American-Owned ☐ Hispanic American- Owned ☐ Asian American-Owned ☐ Women-Owned ☐ Other MBE Classification	Percentage of total Contract Value to be performed with own forces and counted towards the MBE overall participation goal (up to 50% of the overall goal): _____% Percentage of total Contract Value to be performed with own forces and counted towards the subgoal, if any, for my MBE classification (up to 100% of not more than one subgoal): _____% Description of the Work to be performed with MBE prime's own forces: _____ _____

SECTION B: For all Contractors (including MBE Primes and MBE Primes in a Joint Venture)

MBE Firm Name:_____ MBE Certification Number: _____ (If dually certified, check only one box.) ☐ African American-Owned ☐ Hispanic American- Owned ☐ Asian American-Owned ☐ Women-Owned ☐ Other MBE Classification	Percentage of Total Contract to be performed by this MBE: _____% Description of the Work to be Performed to include NAICS codes: _____ _____ _____ _____

DEPARTMENT OF PUBLIC SAFETY & CORRECTIONAL SERVICES
MBE WAIVER GUIDANCE

GUIDANCE FOR DOCUMENTING GOOD FAITH EFFORTS TO MEET MBE PARTICIPATION GOALS

In order to show that it has made good faith efforts to meet the Minority Business Enterprise (MBE) participation goal (including any MBE subgoals) on a contract, the bidder/offeror must either (1) meet the MBE Goal(s) and document its commitments for participation of MBE Firms, or (2) when it does not meet the MBE Goal(s), document its Good Faith Efforts to meet the goal(s).

I. Definitions

Good Faith Efforts – The "Good Faith Efforts" requirement means that when requesting a waiver, the bidder/offeror must demonstrate that it took all necessary and reasonable steps to achieve the MBE Goal(s), which, by their scope, intensity, and appropriateness to the objective, could reasonably be expected to obtain sufficient MBE participation, even if those steps were not fully successful. Whether a bidder/offeror that requests a waiver made adequate good faith efforts will be determined by considering the quality, quantity, and intensity of the different kinds of efforts that the bidder/offeror has made. The efforts employed by the bidder/offeror should be those that one could reasonably expect a bidder/offeror to take if the bidder/offeror were actively and aggressively trying to obtain MBE participation sufficient to meet the MBE contract goal and subgoals. Mere *pro forma* efforts are not good faith efforts to meet the MBE contract requirements. The determination concerning the sufficiency of the bidder's/offeror's good faith efforts is a judgment call; meeting quantitative formulas is not required.

Identified Firms – "Identified Firms" means a list of the MBEs identified by the procuring agency during the goal setting process and listed in the procurement as available to perform the Identified Items of Work. It also may include additional MBEs identified by the bidder/offeror as available to perform the Identified Items of Work, such as MBEs certified or granted an expansion of services after the procurement was issued. If the procurement does not include a list of Identified Firms, this term refers to all of the MBE Firms (if State-funded) the bidder/offeror identified as available to perform the Identified Items of Work and should include all appropriately certified firms that are reasonably identifiable.

Identified Items of Work – "Identified Items of Work" means the bid items identified by the procuring agency during the goal setting process and listed in the procurement as possible items of work for performance by MBE Firms. It also may include additional portions of items of work the bidder/offeror identified for performance by MBE Firms to increase the likelihood that the MBE Goal(s) will be achieved. If the procurement does not include a list of Identified Items of Work, this

term refers to all of the items of work the bidder/offeror identified as possible items of work for performance by MBE Firms and should include all reasonably identifiable work opportunities.

MBE Firms – "MBE Firms" refers to a firm certified by the Maryland Department of Transportation ("MDOT") under COMAR 21.11.03. Only MDOT-certified MBE Firms can participate in the State's MBE Program.

MBE Goal(s) – "MBE Goal(s)" refers to the MBE participation goal and MBE participation subgoal(s).

II. Types of Actions Agency will Consider

The bidder/offeror is responsible for making relevant portions of the work available to MBE subcontractors and suppliers and to select those portions of the work or material needs consistent with the available MBE subcontractors and suppliers, so as to facilitate MBE participation. The following is a list of types of actions the procuring agency will consider as part of the bidder's/offeror's Good Faith Efforts when the bidder/offeror fails to meet the MBE Goal(s). This list is not intended to be a mandatory checklist, nor is it intended to be exclusive or exhaustive. Other factors or types of efforts may be relevant in appropriate cases.

A. Identify Bid Items as Work for MBE Firms

1. Identified Items of Work in Procurements

   (a) Certain procurements will include a list of bid items identified during the goal setting process as possible work for performance by MBE Firms. If the procurement provides a list of Identified Items of Work, the bidder/offeror shall make all reasonable efforts to solicit quotes from MBE Firms to perform that work.

   (b) Bidders/Offerors may, and are encouraged to, select additional items of work to be performed by MBE Firms to increase the likelihood that the MBE Goal(s) will be achieved.

2. Identified Items of Work by Bidders/Offerors

   (a) When the procurement does not include a list of Identified Items of Work or for additional Identified Items of Work, bidders/offerors should reasonably identify sufficient items of work to be performed by the MBE Firms

   (b) Where appropriate, bidders/offerors should break out contract work items into economically feasible units to facilitate MBE participation, rather than perform these work items with their own forces. The ability or desire of a prime contractor to perform the work of a contract with its own organization does not relieve the bidder/offeror of the responsibility to make Good Faith Efforts.

B. Identify MBE Firms to Solicit

1. MBE Firms Identified in Procurements

   (a) Certain procurements will include a list of the MBE Firms identified during the goal setting process as available to perform the items of work. If the procurement provides a list of Identified MBE Firms, the bidder/offeror shall make all reasonable efforts to solicit those MBE firms.

   (b) Bidders/offerors may, and are encouraged to; search the MBE Directory to identify additional MBEs who may be available to perform the items of work, such as MBEs certified or granted an expansion of services after the solicitation was issued.

2. MBE Firms Identified by Bidders/Offerors

   (a) When the procurement does not include a list of Identified MBE Firms, bidders/offerors should reasonably identify the MBE Firms that are available to perform the Identified Items of Work.

   (b) Any MBE Firms identified as available by the bidder/offeror should be certified to perform the Identified Items of Work.

C. Solicit MBEs

1. Solicit <u>all</u> Identified Firms for all Identified Items of Work by providing written notice. The bidder/offeror should:

   (a) provide the written solicitation at least 10 days prior to bid opening to allow sufficient time for the MBE Firms to respond;

   (b) send the written solicitation by first-class mail, facsimile, or email using contact information in the MBE Directory, unless the bidder/offeror has a valid basis for using different contact information; and

   (c) provide adequate information about the plans, specifications, anticipated time schedule for portions of the work to be performed by the MBE, and other requirements of the contract to assist MBE Firms in responding. (This information may be provided by including hard copies in the written solicitation or by <u>electronic means</u> as described in C.3 below.)

2. "<u>All</u>" Identified Firms includes the MBEs listed in the procurement and any MBE Firms you identify as potentially available to perform the Identified Items of Work, but it does not include MBE Firms who are no longer certified to perform the work as of the date the bidder/offeror provides written solicitations.

3. "Electronic Means" includes, for example, information provided *via* a website or file transfer protocol (FTP) site containing the plans, specifications, and other requirements of the contract. If an interested MBE cannot access the information provided by electronic means, the bidder/offeror must make the information available in a manner that is accessible to the interested MBE.

4. Follow up on initial written solicitations by contacting MBEs to determine if they are interested. The follow up contact may be made:

   (a) by telephone using the contact information in the MBE Directory, unless the bidder/offeror has a valid basis for using different contact information; or

   (b) in writing *via* a method that differs from the method used for the initial written solicitation.

5. In addition to the written solicitation set forth in C.1 and the follow up required in C.4, use all other reasonable and available means to solicit the interest of MBE Firms certified to perform the work of the contract. Examples of other means include:

   (a) attending any pre-bid meetings at which MBE Firms could be informed of contracting and subcontracting opportunities; and

   (b) if recommended by the procurement, advertising with or effectively using the services of at least two (2) minority focused entities or media, including trade associations, minority/women community organizations, minority/women contractors' groups, and local, state, and federal minority/women business assistance offices listed on the MDOT Office of Minority Business Enterprise website.

D. Negotiate With Interested MBE Firms

Bidders/Offerors must negotiate in good faith with interested MBE Firms.

1. Evidence of negotiation includes, without limitation, the following:

   (a) the names, addresses, and telephone numbers of MBE Firms that were considered;

   (b) a description of the information provided regarding the plans and specifications for the work selected for subcontracting and the means used to provide that information; and

   (c) evidence as to why additional agreements could not be reached for MBE Firms to perform the work.

2. A bidder/offeror using good business judgment would consider a number of factors in negotiating with subcontractors, including MBE subcontractors, and would take a firm's price and capabilities as well as contract goals into consideration.

3. The fact that there may be some additional costs involved in finding and using MBE Firms is not in itself sufficient reason for a bidder's/offeror's failure to meet the contract MBE goal(s), as long as such costs are reasonable. Factors to take into consideration when determining whether a MBE Firm's quote is excessive or unreasonable include, without limitation, the following:

   (a) the dollar difference between the MBE subcontractor's quote and the average of the other subcontractors' quotes received by the bidder/offeror; (The "average of the other subcontractors' quotes received" by the bidder/offeror refers to the average of the quotes received from all subcontractors. Bidder/offeror should attempt to receive quotes from at least three (3) subcontractors, including one (1) quote from a MBE and one (1) quote from a Non-MBE.)

   (b) the percentage difference between the MBE subcontractor's quote and the average of the other subcontractors' quotes received by the bidder/offeror;

   (c) the percentage that the MBE subcontractor's quote represents of the overall contract amount;

   (d) the number of MBE firms that the bidder/offeror solicited for that portion of the work;

   (e) whether the work described in the MBE and Non-MBE subcontractor quotes (or portions thereof) submitted for review is the same or comparable; and

   (f) the number of quotes received by the bidder/offeror for that portion of the work.

4. The above factors are not intended to be mandatory, exclusive, or exhaustive, and other evidence of an excessive or unreasonable price may be relevant.

5. The bidder/offeror may not use its price for self-performing work as a basis for rejecting a MBE Firm's quote as excessive or unreasonable.

6. A bidder/offeror shall not reject a MBE Firm as unqualified without sound reasons based on a thorough investigation of the firm's capabilities. For each certified MBE that is rejected as unqualified or that placed a subcontract quotation or offer that the bidder/offeror concludes is not acceptable, the bidder/offeror must provide a written detailed statement listing the reasons for this conclusion. The bidder/offeror also must document the steps taken to verify the capabilities of the MBE and Non-MBE Firms quoting similar work.

(a) The factors to take into consideration when assessing the capabilities of a MBE Firm, include, but are not limited to the following: financial capability, physical capacity to perform, available personnel and equipment, existing workload, experience performing the type of work, conduct and performance in previous contracts, and ability to meet reasonable contract requirements.

(b) The MBE Firm's standing within its industry, membership in specific groups, organizations, or associations and political or social affiliations (for example union vs. non-union employee status) are not legitimate causes for the rejection or non-solicitation of bids in the efforts to meet the project goal.

E. Assisting Interested MBE Firms

When appropriate under the circumstances, the decision-maker will consider whether the bidder/offeror:

1. made reasonable efforts to assist interested MBE Firms in obtaining the bonding, lines of credit, or insurance required by the procuring agency or the bidder/offeror; and

2. made reasonable efforts to assist interested MBE Firms in obtaining necessary equipment, supplies, materials, or related assistance or services.

III. Other Considerations

A. In making a determination of Good Faith Efforts the decision-maker may consider engineering estimates, catalogue prices, general market availability and availability of certified MBE Firms in the area in which the work is to be performed, other bids or offers and subcontract bids or offers substantiating significant variances between certified MBE and Non-MBE costs of participation, and their impact on the overall cost of the contract to the State and any other relevant factors.

B. The decision-maker may take into account whether a bidder/offeror decided to self-perform subcontract work with its own forces, especially where the self-performed work is Identified Items of Work in the procurement.

The decision-maker also may take into account the performance of other bidders/offerors in meeting the contract.

For example, when the apparent successful bidder/offeror fails to meet the contract goal, but others meet it, this reasonably raises the question of whether, with additional reasonable efforts, the apparent successful bidder/offeror could have met the goal. If the apparent successful bidder/offeror fails to meet the

goal, but meets or exceeds the average MBE participation obtained by other bidders/offerors, this, when viewed in conjunction with other factors, could be evidence of the apparent successful bidder/offeror having made Good Faith Efforts.

IV. Documenting Good Faith Efforts

At a minimum, a bidder/offeror seeking a waiver of the MBE Goal(s), Subgoal, or a portion thereof must provide written documentation of its Good Faith Efforts, in accordance with COMAR 21.11.03.11, within ten (10) business days after receiving notice that it is the apparent awardee. The written documentation shall include the following:

A. Items of Work (Complete Good Faith Efforts Documentation Attachment D-1C, Part 1)

A detailed statement of the efforts made to select portions of the work proposed to be performed by certified MBE Firms in order to increase the likelihood of achieving the stated MBE Goal(s).

B. Outreach/Solicitation/Negotiation

1. The record of the bidder's/offeror's compliance with the outreach efforts prescribed by COMAR 21.11.03.09C(2)(a). **(Complete Outreach Efforts Compliance Statement – Attachment D-2).**

2. A detailed statement of the efforts made to contact and negotiate with MBE Firms including:

   (a) the names, addresses, and telephone numbers of the MBE Firms who were contacted, with the dates and manner of contacts (letter, fax, email, telephone, etc.) **(Complete Good Faith Efforts Attachment D-1C, Part 2,** and submit letters, fax cover sheets, emails, etc. documenting solicitations**)**; and

   (b) a description of the information provided to MBE Firms regarding the plans, specifications, and anticipated time schedule for portions of the work to be performed and the means used to provide that information.

C. Rejected MBE Firms (Complete Good Faith Efforts Attachment D-1C, Part 3)

1. For each MBE Firm that the bidder/offeror concludes is not acceptable or qualified, a detailed statement of the reasons for the bidder's/offeror's conclusion, including the steps taken to verify the capabilities of the MBE and Non-MBE Firms quoting similar work.

2. For each certified MBE Firm that the bidder/offeror concludes has provided an excessive or unreasonable price, a detailed statement of the reasons for the bidder's/offeror's conclusion, including the quotes received from all MBE and

Non-MBE firms bidding on the same or comparable work. **(Include copies of all quotes received.)**

3. A list of MBE Firms contacted but found to be unavailable. This list should be accompanied by a MBE Unavailability Certificate **(see Exhibit A to this Part 1)** signed by the MBE Firm or a statement from the bidder/offeror that the MBE Firm refused to sign the MBE Unavailability Certificate.

D. Other Documentation

1. Submit any other documentation requested by the Procurement Officer to ascertain the bidder's/offeror's Good Faith Efforts.

2. Submit any other documentation the bidder/offeror believes will help the Procurement Officer ascertain its Good Faith Efforts.

Exhibit A

DPSCS MBE Subcontractor Unavailability Certificate

1. It is hereby certified that the firm of _____
(Name of MBE firm)

located at _____
(Number) (Street) (City) (State) (Zip)

was offered an opportunity to bid on Solicitation No. MDQ0031018235 by

_____
(Name of Prime Contractor's Firm)

****

2. _____ (MBE Firm) is either unavailable for the work/service or unable to prepare a bid for this project for the following reason(s):

_____

_____

_____

Printed Name of MBE's Representative **Title**

Signature of MBE's Representative **Date**

MDOT Certification # **Telephone Phone**

3. To be completed by the prime contractor if Section 2 of this form is not completed by the minority firm.

To the best of my knowledge and belief, said Certified MBE is either unavailable for the work/service for this project, is unable to prepare a bid, or did not respond to a request for a price proposal and has not completed the above portion of this submittal.

PART 1 – IDENTIFIED ITEMS OF WORK BIDDER/OFFEROR MADE AVAILABLE TO MBE FIRMS

PAGE __ OF ___

Prime Contractor	Project Description	Solicitation Number
	Youth Detention Center at Baltimore City Detention Center (BCDC), Baltimore, Maryland	MDQ0031018235

Identify those items of work that the bidder/offeror made available to MBE Firms. This includes, where appropriate, those items the bidder/offeror identified and determined to subdivide into economically feasible units to facilitate the MBE participation. For each item listed, show the anticipated percentage of the total contract amount. It is the bidder's/offeror's responsibility to demonstrate that sufficient work to meet the goal was made available to MBE Firms, and the total percentage of the items of work identified for MBE participation equals or exceeds the percentage MBE goal set for the procurement. Note: If the procurement includes a list of bid items identified during the goal setting process as possible items of work for performance by MBE Firms, the bidder/offeror should make all of those items of work available to MBE Firms or explain why that item was not made available. If the bidder/offeror selects additional items of work to make available to MBE Firms, those additional items should also be included below.

Identified Items of Work	Was this work listed in the procurement?	Does bidder/offeror normally self-perform this work?	Was this work made available to MBE Firms? If no, explain why?
	□ Yes □ No	□ Yes □ No	□ Yes □ No
	□ Yes □ No	□ Yes □ No	□ Yes □ No
	□ Yes □ No	□ Yes □ No	□ Yes □ No

PART 2 – IDENTIFIED MBE FIRMS AND RECORD OF SOLICITATIONS

PAGE __ OF ___

Prime Contractor	Project Description	Solicitation Number
	Youth Detention Center at Baltimore City Detention Center (BCDC), Baltimore, Maryland	MDQ0031018235

Identify the MBE Firms solicited to provide quotes for the Identified Items of Work made available for MBE participation. Include the name of the MBE Firm solicited, items of work for which bids/quotes were solicited, date and manner of initial and follow-up solicitations, whether the MBE provided a quote, and whether the MBE is being used to meet the MBE participation goal. MBE Firms used to meet the participation goal must be included on the MBE Participation Schedule. Note: If the procurement includes a list of the MBE Firms identified during the goal setting process as potentially available to perform the items of work, the bidder/offeror should solicit all of those MBE Firms or explain why a specific MBE was not solicited. If the bidder/offeror identifies additional MBE Firms who may be available to perform Identified Items of Work, those additional MBE Firms should also be included below. Copies of all written solicitations and documentation of follow-up calls to MBE Firms must be attached to this form. This list should be accompanied by a Minority Contractor Unavailability Certificate signed by the MBE contractor or a statement from the bidder/offeror that the MBE contractor refused to sign the Minority Contractor Unavailability Certificate (see Exhibit A to MBE Attachment 1-B). If the bidder/offeror used a Non-MBE or is self-performing the identified items of work, Part 4 must be completed.

Name of Identified MBE Firm & MBE Classification	Describe Item of Work Solicited	Initial Solicitation Date & Method	Follow-up Solicitation Date & Method	Details for Follow-up Calls	Quote Rec'd	Quote Used	Reason Quote Rejected
Firm Name: _____ **MBE Classification (Check only if requesting waiver of MBE subgoal.)** ☐ African American-Owned ☐ Hispanic American-Owned ☐ Asian American-Owned ☐ Women-Owned ☐ Other MBE Classification _____		Date: □ Mail □ Facsimile □ Email	Date: □ Phone □ Mail □ Facsimile □ Email	Time of Call: Spoke With: □ Left Message	□ Yes □ No	□ Yes □ No	□ Used Other MBE □ Used Non-MBE □ Self-performing

PART 3 – ADDITIONAL INFORMATION REGARDING REJECTED MBE QUOTES

PAGE __ OF ___

Prime Contractor	Project Description	Solicitation Number
	Youth Detention Center at Baltimore City Detention Center (BCDC), Baltimore, Maryland	MDQ0031018235

This form must be completed if Part 1 indicates that a MBE quote was rejected because the bidder/offeror is using a Non-MBE or is self-performing the Identified Items of Work. Provide the Identified Items Work, indicate whether the work will be self-performed or performed by a Non-MBE, and if applicable, state the name of the Non-MBE. Also include the names of all MBE and Non-MBE Firms that provided a quote and the amount of each quote.

Describe Identified Items of Work Not Being Performed by MBE (Include spec/section number from bid)	Self-performing or Using Non-MBE (Provide name)	Amount of Non-MBE Quote	Name of Other Firms who Provided Quotes & Whether MBE or Non-MBE	Amount Quoted	Indicate Reason Why MBE Quote Rejected & Briefly Explain
	□ Self-performing □ Using Non-MBE _____	$_____	_____ □ MBE □ Non-MBE	$_____	□ Price □ Capabilities □ Other
	□ Self-performing □ Using Non-MBE _____	$_____	_____ □ MBE □ Non- MBE	$_____	□ Price □ Capabilities □ Other
	□ Self-performing □ Using Non-MBE _____	$_____	_____ □ MBE □ Non- MBE	$_____	□ Price □ Capabilities □ Other

MBE SUBCONTRACTOR PROJECT PARTICIPATION CERTIFICATION

PLEASE COMPLETE AND SUBMIT ONE FORM FOR EACH CERTIFIED MBE FIRM LISTED ON THE MBE PARTICIPATION SCHEDULE (ATTACHMENT D-1A) WITHIN 10 WORKING DAYS OF NOTIFICATION OF APPARENT AWARD. IF THE BIDDER/OFFEROR FAILS TO RETURN THIS AFFIDAVIT WITHIN THE REQUIRED TIME, THE PROCUREMENT OFFICER MAY DETERMINE THAT THE BIDDER/OFFEROR IS NOT RESPONSIBLE AND THEREFORE NOT ELIGIBLE FOR CONTRACT AWARD.

Provided that _____ (Prime Contractor's Name) is awarded the State contract in conjunction with Solicitation No. _____MDQ0031018235_____, such Prime Contractor intends to enter into a subcontract with _____(Subcontractor's Name) committing to participation by the MBE firm _____ (MBE Name) with MDOT Certification Number _____ which will receive at least $_____ which equals to___% of the Total Contract Amount for performing the following products/services for the Contract:_____.

NAICS CODE	WORK ITEM, SPECIFICATION NUMBER, LINE ITEMS OR WORK CATEGORIES (IF APPLICABLE)	DESCRIPTION OF SPECIFIC PRODUCTS AND/OR SERVICES

Each of the Contractor and Subcontractor acknowledges that, for purposes of determining the accuracy of the information provided herein, the Procurement Officer may request additional information, including, without limitation, copies of the subcontract agreements and quotes. Each of the Contractor and Subcontractor solemnly affirms under the penalties of perjury that: (i) the information provided in this MBE Subcontractor Project Participation Affidavit is true to the best of its knowledge, information and belief, and (ii) has fully complied with the State Minority Business Enterprise law, State Finance and Procurement Article §14-308(a)(2), Annotated Code of Maryland which provides that, except as otherwise provided by law, a contractor may not identify a certified minority business enterprise in a Bid/Proposal and:

(1) fail to request, receive, or otherwise obtain authorization from the certified minority business enterprise to identify the certified Minority Business Enterprise in its Bid/Proposal;

(2) fail to notify the certified Minority Business Enterprise before execution of the Contract of its inclusion of the Bid/Proposal;

(3) fail to use the certified Minority Business Enterprise in the performance of the Contract; or

(4) pay the certified Minority Business Enterprise solely for the use of its name in the Bid/Proposal.

OUTREACH EFFORTS COMPLIANCE STATEMENT

Complete and submit this form within ten (10) working days of notification of apparent award or actual award, whichever is earlier.

In conjunction with the bid/proposal submitted in response to Solicitation No. MDQ0031018235, I state the following:

1. Bidder/Offeror identified subcontracting opportunities in these specific work categories:
_____
_____
_____

2. Attached to this form are copies of written solicitations (with bidding/proposal instructions) used to solicit certified MBE firms for these subcontract opportunities.

3. Bidder/Offeror made the following attempts to personally contact the solicited MDOT-certified MBE firms: _____

_____

4. **Please Check One:**

☐ This project does not involve bonding requirements.

☐ Bidder/Offeror assisted MDOT-certified MBE firms to fulfill or seek waiver of bonding requirements. (DESCRIBE EFFORTS): _____
_____
_____

5. **Please Check One:**

☐ Bidder/Offeror did attend the pre-bid/pre-proposal conference.

☐ No pre-bid/pre-proposal meeting/conference was held.

☐ Bidder/Offeror did not attend the pre-bid/pre-proposal conference.

DEPARTMENT OF PUBLIC SAFETY & CORRECTIONAL SERVICES
Veteran-Owned Small Business Enterprise (VSBE)
UTILIZATION AND FAIR SOLICITATION AFFIDAVIT
& VSBE PARTICIPATION SCHEDULE

INSTRUCTIONS
PLEASE READ BEFORE COMPLETING THIS DOCUMENT

This form includes Instructions and the VSBE Utilization and Fair Solicitation Affidavit & VSBE Participation Schedule which must be submitted with the bid/proposal. If the bidder/offeror fails to accurately complete and submit this Affidavit and Schedule with the bid or proposal as required, the Procurement Officer shall deem the bid non-responsive or shall determine that the proposal is not reasonably susceptible of being selected for award.

1. Contractor shall structure its procedures for the performance of the work required in this Contract to attempt to achieve the Veteran-Owned Small Business Enterprise (VSBE) subcontractor participation goal stated in the Invitation for Bids or Request for Proposals. Contractor agrees to exercise good faith efforts to carry out the requirements set forth in these Instructions, as authorized by the Code of Maryland Regulations (COMAR) 21.11.03.

2. VSBE Goals: Please review the solicitation for information regarding the Contract's VSBE overall participation goals. After satisfying the requirements for any established MBE goals, the Contractor is encouraged to use subcontractors and suppliers from the VSBE list on the Vetbiz website (https://www.vip.vetbiz.gov/) to meet the overall VSBE participation goal.

3. VSBE means a Veteran Owned Small Business Enterprise that is certified by the US Department of Veterans Affairs. Only entities certified by US Dept. of Veteran Affairs may be counted for purposes of achieving the VSBE participation goals. In order to be counted for purposes of achieving the VSBE participation goals, the VSBE firm, must be VA-certified for the services, materials or supplies that it is committed to perform on the VSBE Participation Schedule and the VSBE firm must have an active DUNS Number.

4. Please refer to the VSBE Directory at (https://www.vip.vetbiz.gov/) to determine if a firm is certified with the appropriate North American Industry Classification System ("NAICS") Code **and** the product/services description (specific product that a firm is certified to provide or specific areas of work that a firm is certified to perform). For more general information about NAICS, please visit www.naics.com. Only those specific products and/or services for which a firm is certified in the VSBE Directory can be used for purposes of achieving the VSBE participation goals.

5. Worksheet: The percentage of VSBE participation, calculated using the percentage amounts for all of the VSBE firms listed on the Participation Schedule **MUST** at least equal the VSBE participation goal set forth in the solicitation. If a bidder/offeror is unable to achieve the VSBE participation goal and, the bidder/offeror must request a waiver in Item 1 of the VSBE Utilization and Fair Solicitation Affidavit (Attachment M-1) or the bid will be deemed not responsive, or the proposal determined to be not susceptible of being selected for award.

Veteran-Owned Small Business Enterprise Overall Goal

Total VSBE Participation: _____%

VSBE UTILIZATION AND FAIR SOLICITATION AFFIDAVIT & VSBE PARTICIPATION SCHEDULE

This VSBE Utilization and Fair Solicitation Affidavit & VSBE Participation Schedule must be included with the bid/proposal. If the bidder/offeror fails to accurately complete and submit this Affidavit and Schedule with the bid or proposal as required, the Procurement Officer shall deem the bid non-responsive or shall determine that the proposal is not reasonably susceptible of being selected for award.

In connection with the bid/proposal submitted in response to Solicitation No. MDQ0031018235, I affirm the following:

1. VSBE Participation (PLEASE CHECK ONLY ONE)

☐ I acknowledge and intend to meet the overall certified Veteran-Owned Small Business Enterprise (VSBE) participation goal of _____ percent):

Therefore, I am not seeking a waiver pursuant to COMAR 21.11.03.11.

OR

☐ I conclude that I am unable to achieve the VSBE participation goal. I hereby request a waiver, in whole or in part, of the overall goal. Within 10 Working days of receiving notice that our firm is the apparent awardee or as requested by the Procurement Officer, I will submit the completed Good Faith Efforts Documentation to Support Waiver Request (Attachment M-1C) and all required waiver documentation in accordance with COMAR 21.11.03.

2. Additional VSBE Documentation

I understand that if I am notified that I am the apparent awardee or as requested by the Procurement Officer, I must submit the following documentation within 10 business days of receiving notice of the potential award or from the date of conditional award (per COMAR 21.11.03.10), whichever is earlier:

(a) Outreach Efforts Compliance Statement (Attachment D-2);

(b) VSBE Subcontractor/VSBE Prime Project Participation Statement (Attachments D-3A and 3B);

(c) Any other documentation, including waiver documentation if applicable, required by the Procurement Officer to ascertain bidder or offeror responsibility in connection with the certified VSBE participation goal.

I understand that if I fail to return each completed document within the required time, the Procurement Officer may determine that I am not responsible and therefore not eligible for contract award. If the contract has already been awarded, the award is voidable.

3. Information Provided to VSBE firms

In the solicitation of subcontract quotations or offers, VSBE firms were provided not less than the same information and amount of time to respond as were non-VSBE firms.

VSBE PARTICIPATION SCHEDULE ON NEXT PAGE

4. VSBE Participation Schedule

Set forth below are the (i) certified VSBEs I intend to use, (ii) the percentage of the total Contract amount allocated to each VSBE for this project and, (iii) the items of work each VSBE will provide under the Contract. I have confirmed with the MDOT database that the VSBE firms identified will be performing work activities for which they are MDOT certified.

DEPARTMENT OF PUBLIC SAFETY & CORRECTIONAL SERVICES
VETERAN OWNED SMALL BUSINESS ENTERPRISE (VSBE)
WAIVER GUIDANCE

GUIDANCE FOR DOCUMENTING GOOD FAITH EFFORTS TO MEET VSBE PARTICIPATION GOALS

In order to show that it has made good faith efforts to meet the Veteran-Owned Small Business Enterprise (VSBE) participation goal on a contract, the bidder/offeror must either (1) meet the VSBE Goal(s) and document its commitments for participation of VSBE Firms, or (2) when it does not meet the VSBE Goal(s), document its Good Faith Efforts to meet the goal(s).

I. Definitions

Good Faith Efforts – The "Good Faith Efforts" requirement means that when requesting a waiver, the bidder/offeror must demonstrate that it took all necessary and reasonable steps to achieve the VSBE Goal(s), which, by their scope, intensity, and appropriateness to the objective, could reasonably be expected to obtain sufficient VSBE participation, even if those steps were not fully successful. Whether a bidder/offeror that requests a waiver made adequate good faith efforts will be determined by considering the quality, quantity, and intensity of the different kinds of efforts that the bidder/offeror has made. The efforts employed by the bidder/offeror should be those that one could reasonably expect a bidder/offeror to take if the bidder/offeror were actively and aggressively trying to obtain VSBE participation sufficient to meet the VSBE contract goal. Mere *pro forma* efforts are not good faith efforts to meet the VSBE contract requirements. The determination concerning the sufficiency of the bidder's/offeror's good faith efforts is a judgment call; meeting quantitative formulas is not required.

Identified Firms – "Identified Firms" means a list of the VSBEs identified by the procuring agency during the goal setting process and listed in the procurement as available to perform the Identified Items of Work. It also may include additional VSBEs identified by the bidder/offeror as available to perform the Identified Items of Work. If the procurement does not include a list of Identified Firms, this term refers to all of the VSBE Firms the bidder/offeror identified as available to perform the Identified Items of Work and should include all appropriately certified firms that are reasonably identifiable.

Identified Items of Work – "Identified Items of Work" means the bid items identified by the procuring agency during the goal setting process and listed in the procurement as possible items of work for performance by VSBE Firms. It also may include additional portions of items of work the bidder/offeror identified for performance by VSBE Firms to increase the likelihood that the VSBE Goal will be achieved. If the procurement does not include a list of Identified Items of Work, this

term refers to all of the items of work the bidder/offeror identified as possible items of work for performance by VSBE Firms and should include all reasonably identifiable work opportunities.

VSBE Firms – "Veteran Owned Small Business Enterprise Firms" refers to a firm certified by the US Department of Veteran Affairs with an active DUNS number.

VSBE Goal(s) – "VSBE Goal(s)" refers to the VSBE participation goal.

II. Types of Actions Agency will Consider

The bidder/offeror is responsible for making relevant portions of the work available to VSBE subcontractors and suppliers and to select those portions of the work or material needs consistent with the available VSBE subcontractors and suppliers, so as to facilitate VSBE participation. The following is a list of types of actions the procuring agency will consider as part of the bidder's/offeror's Good Faith Efforts when the bidder/offeror fails to meet the VSBE Goal. This list is not intended to be a mandatory checklist, nor is it intended to be exclusive or exhaustive. Other factors or types of efforts may be relevant in appropriate cases.

A. Identify Bid Items as Work for VSBE Firms

1. Identified Items of Work in Procurements

   (a) Certain procurements will include a list of bid items identified during the goal setting process as possible work for performance by VSBE Firms. If the procurement provides a list of Identified Items of Work, the bidder/offeror shall make all reasonable efforts to solicit quotes from VSBE Firms to perform that work.

   (b) Bidders/Offerors may, and are encouraged to, select additional items of work to be performed by VSBE Firms to increase the likelihood that the VSBE Goal will be achieved.

2. Identified Items of Work by Bidders/Offerors

   (a) When the procurement does not include a list of Identified Items of Work or for additional Identified Items of Work, bidders/offerors should reasonably identify sufficient items of work to be performed by VSBE Firms.

   (b) (b) Where appropriate, bidders/offerors should break out contract work items into economically feasible units to facilitate VSBE participation, rather than perform these work items with their own forces. The ability or desire of a prime contractor to perform the work of a contract with its own organization does not relieve the bidder/offeror of the responsibility to make Good Faith Efforts.

B. Identify VSBE Firms to Solicit

1. VSBE Firms Identified in Procurements

   (a) Certain procurements will include a list of the VSBE Firms identified during the goal setting process as available to perform the items of work. If the procurement provides a list of Identified VSBE Firms, the bidder/offeror shall make all reasonable efforts to solicit those VSBE firms.

   (b) Bidders/offerors may, and are encouraged to; search the VSBE Directory (https://www.vip.vetbiz.gov/) to identify additional VSBEs who may be available to perform the items of work.

2. VSBE Firms Identified by Bidders/Offerors

   (a) When the procurement does not include a list of Identified VSBE Firms, bidders/offerors should reasonably identify the VSBE Firms that are available to perform the Identified Items of Work.

   (b) Any VSBE Firms identified as available by the bidder/offeror should be certified to perform the Identified Items of Work.

C. Solicit VSBEs

1. Solicit all Identified Firms for all Identified Items of Work by providing written notice. The bidder/offeror should:

   (a) provide the written solicitation at least 10 days prior to bid opening to allow sufficient time for the VSBE Firms to respond;

   (b) send the written solicitation by first-class mail, facsimile, or email using contact information in the VSBE Directory(https://www.vip.vetbiz.gov/), unless the bidder/offeror has a valid basis for using different contact information; and

   (c) provide adequate information about the plans, specifications, anticipated time schedule for portions of the work to be performed by the VSBE, and other requirements of the contract to assist VSBE Firms in responding. (This information may be provided by including hard copies in the written solicitation or by electronic means as described in C.3 below.)

2. "All" Identified Firms includes the VSBEs listed in the procurement and any VSBE Firms you identify as potentially available to perform the Identified Items of Work, but it does not include VSBE Firms who are no longer certified to perform the work as of the date the bidder/offeror provides written solicitations.

3. "Electronic Means" includes, for example, information provided *via* a website or file transfer protocol (FTP) site containing the plans, specifications, and other requirements of the contract. If an interested VSBE cannot access the information provided by electronic means, the bidder/offeror must make the information available in a manner that is accessible to the interested VSBE.

4. Follow up on initial written solicitations by contacting VSBEs to determine if they are interested. The follow up contact may be made:

   (a) by telephone using the contact information in the VSBE Directory, unless the bidder/offeror has a valid basis for using different contact information; or

   (b) in writing *via* a method that differs from the method used for the initial written solicitation.

5. In addition to the written solicitation set forth in C.1 and the follow up required in C.4, use all other reasonable and available means to solicit the interest of VSBE Firms certified to perform the work of the contract. Examples of other means include:

   (a) attending any pre-bid meetings at which VSBE Firms could be informed of contracting and subcontracting opportunities; and

   (b) if recommended by the procurement, advertising with or effectively using the services of at least two (2) minority focused entities or media, including trade associations, veteran community organizations, federal veteran business assistance offices listed on the US Dept of Veteran Affairs Veteran Owned Small Business Enterprise website.

D. Negotiate With Interested VSBE Firms

Bidders/Offerors must negotiate in good faith with interested VSBE Firms.

1. Evidence of negotiation includes, without limitation, the following:

   (a) the names, addresses, and telephone numbers of VSBE Firms that were considered;

   (b) a description of the information provided regarding the plans and specifications for the work selected for subcontracting and the means used to provide that information; and

   (c) evidence as to why additional agreements could not be reached for VSBE Firms to perform the work.

2. A bidder/offeror using good business judgment would consider a number of factors in negotiating with subcontractors, including VSBE subcontractors,

and would take a firm's price and capabilities as well as contract goals into consideration.

3. The fact that there may be some additional costs involved in finding and using VSBE Firms is not in itself sufficient reason for a bidder's/offeror's failure to meet the contract VSBE goal, as long as such costs are reasonable. Factors to take into consideration when determining whether a VSBE Firm's quote is excessive or unreasonable include, without limitation, the following:

   (a) the dollar difference between the VSBE subcontractor's quote and the average of the other subcontractors' quotes received by the bidder/offeror; (The "average of the other subcontractors' quotes received" by the bidder/offeror refers to the average of the quotes received from all subcontractors. Bidder/offeror should attempt to receive quotes from at least three (3) subcontractors, including one (1) quote from a VSBE and one (1) quote from a Non-VSBE.)

   (b) the percentage difference between the VSBE subcontractor's quote and the average of the other subcontractors' quotes received by the bidder/offeror;

   (c) the percentage that the VSBE subcontractor's quote represents of the overall contract amount;

   (d) the number of VSBE firms that the bidder/offeror solicited for that portion of the work;

   (e) whether the work described in the VSBE and Non-VSBE subcontractor quotes (or portions thereof) submitted for review is the same or comparable; and

   (f) the number of quotes received by the bidder/offeror for that portion of the work.

4. The above factors are not intended to be mandatory, exclusive, or exhaustive, and other evidence of an excessive or unreasonable price may be relevant.

5. The bidder/offeror may not use its price for self-performing work as a basis for rejecting a VSBE Firm's quote as excessive or unreasonable.

6. A bidder/offeror shall not reject a VSBE Firm as unqualified without sound reasons based on a thorough investigation of the firm's capabilities. For each certified VSBE that is rejected as unqualified or that placed a subcontract quotation or offer that the bidder/offeror concludes is not acceptable, the bidder/offeror must provide a written detailed statement listing the reasons for this conclusion. The bidder/offeror also must document the steps taken to verify the capabilities of the VSBE and Non-VSBE Firms quoting similar work.

(a) The factors to take into consideration when assessing the capabilities of a VSBE Firm, include, but are not limited to the following: financial capability, physical capacity to perform, available personnel and equipment, existing workload, experience performing the type of work, conduct and performance in previous contracts, and ability to meet reasonable contract requirements.

(b) The VSBE Firm's standing within its industry, membership in specific groups, organizations, or associations and political or social affiliations (for example union vs. non-union employee status) are not legitimate causes for the rejection or non-solicitation of bids in the efforts to meet the project goal.

E. Assisting Interested VSBE Firms

When appropriate under the circumstances, the decision-maker will consider whether the bidder/offeror:

1. made reasonable efforts to assist interested VSBE Firms in obtaining the bonding, lines of credit, or insurance required by the procuring agency or the bidder/offeror; and

2. made reasonable efforts to assist interested VSBE Firms in obtaining necessary equipment, supplies, materials, or related assistance or services.

III. Other Considerations

A. In making a determination of Good Faith Efforts the decision-maker may consider engineering estimates, catalogue prices, general market availability and availability of certified VSBE Firms in the area in which the work is to be performed, other bids or offers and subcontract bids or offers substantiating significant variances between certified VSBE and Non-VSBE costs of participation, and their impact on the overall cost of the contract to the State and any other relevant factors.

B. The decision-maker may take into account whether a bidder/offeror decided to self-perform subcontract work with its own forces, especially where the self-performed work is Identified Items of Work in the procurement.

The decision-maker also may take into account the performance of other bidders/offerors in meeting the contract.

For example, when the apparent successful bidder/offeror fails to meet the contract goal, but others meet it, this reasonably raises the question of whether, with additional reasonable efforts, the apparent successful bidder/offeror could have met the goal. If the apparent successful bidder/offeror fails to meet the

goal, but meets or exceeds the average VSBE participation obtained by other bidders/offerors, this, when viewed in conjunction with other factors, could be evidence of the apparent successful bidder/offeror having made Good Faith Efforts.

IV. Documenting Good Faith Efforts

At a minimum, a bidder/offeror seeking a waiver of the VSBE Goal, or a portion thereof must provide written documentation of its Good Faith Efforts, in accordance with COMAR 21.11.03.11, within ten (10) business days after receiving notice that it is the apparent awardee. The written documentation shall include the following:

A. Items of Work (Complete Good Faith Efforts Documentation Attachment M-1C, Part 1)

A detailed statement of the efforts made to select portions of the work proposed to be performed by certified VSBE Firms in order to increase the likelihood of achieving the stated VSBE Goal(s).

B. Outreach/Solicitation/Negotiation

1. The record of the bidder's/offeror's compliance with the outreach efforts prescribed by COMAR 21.11.03.09C(2)(a). **(Complete Outreach Efforts Compliance Statement – Attachment M-2).**

2. A detailed statement of the efforts made to contact and negotiate with VSBE Firms including:

   (a) the names, addresses, and telephone numbers of the VSBE Firms who were contacted, with the dates and manner of contacts (letter, fax, email, telephone, etc.) **(Complete Good Faith Efforts Attachment M-1C, Part 2,** and submit letters, fax cover sheets, emails, etc. documenting solicitations**)**; and

   (b) a description of the information provided to VSBE Firms regarding the plans, specifications, and anticipated time schedule for portions of the work to be performed and the means used to provide that information.

C. Rejected VSBE Firms (Complete Good Faith Efforts Attachment M-1C, Part 3)

1. For each VSBE Firm that the bidder/offeror concludes is not acceptable or qualified, a detailed statement of the reasons for the bidder's/offeror's conclusion, including the steps taken to verify the capabilities of the VSBE and Non-VSBE Firms quoting similar work.

2. For each certified VSBE Firm that the bidder/offeror concludes has provided an excessive or unreasonable price, a detailed statement of the reasons for the bidder's/offeror's conclusion, including the quotes received from all VSBE and Non-VSBE firms bidding on the same or comparable work. **(Include copies of all quotes received.)**

3. A list of VSBE Firms contacted but found to be unavailable. This list should be accompanied by a VSBE Unavailability Certificate **(see Exhibit A to this Part 1)** signed by the VSBE Firm or a statement from the bidder/offeror that the VSBE Firm refused to sign the VSBE Unavailability Certificate.

D. Other Documentation

1. Submit any other documentation requested by the Procurement Officer to ascertain the bidder's/offeror's Good Faith Efforts.

2. Submit any other documentation the bidder/offeror believes will help the Procurement Officer ascertain its Good Faith Efforts.

Exhibit A

DPSCS VSBE Subcontractor Unavailability Certificate

1. It is hereby certified that the firm of _____
(Name of VSBE firm)

located at _____
(Number) (Street) (City) (State) (Zip)

was offered an opportunity to bid on Solicitation No. _____ by

_____
(Name of Prime Contractor's Firm)

****

2. _____ (VSBE Firm) is either unavailable for the work/service or unable to prepare a bid for this project for the following reason(s):

_____

Identify those items of work that the bidder/offeror made available to VSBE Firms. This includes, where appropriate, those items the bidder/offeror identified and determined to subdivide into economically feasible units to facilitate the VSBE participation. For each item listed, show the anticipated percentage of the total contract amount. It is the bidder's/offeror's responsibility to demonstrate that sufficient work to meet the goal was made available to VSBE Firms, and the total percentage of the items of work identified for VSBE participation equals or exceeds the percentage VSBE goal set for the procurement. Note: If the procurement includes a list of bid items identified during the goal setting process as possible items of work for performance by VSBE Firms, the bidder/offeror should make all of those items of work available to VSBE Firms or explain why that item was not made available. If the bidder/offeror selects additional items of work to make available to VSBE Firms, those additional items should also be included below.

Identified Items of Work	Was this work listed in the procurement?	Does bidder/offeror normally self-perform this work?	Was this work made available to VSBE Firms? If no, explain why?

Identify the VSBE Firms solicited to provide quotes for the Identified Items of Work made available for VSBE participation. Include the name of the VSBE Firm solicited, items of work for which bids/quotes were solicited, date and manner of initial and follow-up solicitations, whether the VSBE provided a quote, and whether the VSBE is being used to meet the VSBE participation goal. VSBE Firms used to meet the participation goal must be included on the VSBE Participation Schedule. Note: If the procurement includes a list of the VSBE Firms identified during the goal setting process as potentially available to perform the items of work, the bidder/offeror should solicit all of those VSBE Firms or explain why a specific VSBE was not solicited. If the bidder/offeror identifies additional VSBE Firms who may be available to perform Identified Items of Work, those additional VSBE Firms should also be included below. Copies of all written solicitations and documentation of follow-up calls to VSBE Firms must be attached to this form. This list should be accompanied by a VSBE Contractor Unavailability Certificate signed by the VSBE contractor or a statement from the bidder/offeror that the VSBE contractor refused to sign the VSBE Contractor Unavailability Certificate (see Exhibit A to VSBE Attachment M-1B). If the bidder/offeror used a Non-VSBE or is self-performing the identified items of work, Part 4 must be completed.

DEPARTMENT OF PUBLIC SAFETY & CORRECTIONAL SERVICES
VSBE SUBCONTRACTOR PROJECT PARTICIPATION CERTIFICATION

PLEASE COMPLETE AND SUBMIT ONE FORM FOR EACH CERTIFIED VSBE FIRM LISTED ON THE VSBE PARTICIPATION SCHEDULE (ATTACHMENT M-1A) WITHIN 10 WORKING DAYS OF NOTIFICATION OF APPARENT AWARD. IF THE BIDDER/OFFEROR FAILS TO RETURN THIS AFFIDAVIT WITHIN THE REQUIRED TIME, THE PROCUREMENT OFFICER MAY DETERMINE THAT THE BIDDER/OFFEROR IS NOT RESPONSIBLE AND THEREFORE NOT ELIGIBLE FOR CONTRACT AWARD.

Provided that _____ (Prime Contractor's Name) is awarded the State contract in conjunction with Solicitation No. . _____MDQ0031018235_____, such Prime Contractor intends to enter into a subcontract with _____(Subcontractor's Name) committing to participation by the VSBE firm _____ (VSBE Name) with DUNS Number _____ which will receive at least $_____ which equals to___% of the Total Contract Amount for performing the following products/services for the Contract:_____.

NAICS CODE	WORK ITEM, SPECIFICATION NUMBER, LINE ITEMS OR WORK CATEGORIES (IF APPLICABLE)	DESCRIPTION OF SPECIFIC PRODUCTS AND/OR SERVICES

Each of the Contractor and Subcontractor acknowledges that, for purposes of determining the accuracy of the information provided herein, the Procurement Officer may request additional information, including, without limitation, copies of the subcontract agreements and quotes. Each of the Contractor and Subcontractor solemnly affirms under the penalties of perjury that: (i) the information provided in this VSBE Subcontractor Project Participation Affidavit is true to the best of its knowledge, information and belief, and (ii) has fully complied with the State Minority Business Enterprise law, State Finance and Procurement Article §14-308(a)(2), Annotated Code of Maryland which provides that, except as otherwise provided by law, a contractor may not identify a certified minority business enterprise in a Bid/Proposal and:

(1) fail to request, receive, or otherwise obtain authorization from the certified Veteran-Owned Small Business Enterprise to identify the Veteran-Owned Small Business Enterprise in its Bid/Proposal;

(2) fail to notify the Veteran-Owned Small Business Enterprise before execution of the Contract of its inclusion of the Bid/Proposal;

(3) fail to use the Veteran-Owned Small Business Enterprise in the performance of the Contract; or

(4) pay the Veteran-Owned Small Business Enterprise solely for the use of its name in the Bid/Proposal.

DEPARTMENT OF PUBLIC SAFETY & CORRECTIONAL SERVICES
VSBE OUTREACH EFFORTS COMPLIANCE STATEMENT

Complete and submit this form within ten (10) working days of notification of apparent award or actual award, whichever is earlier.

In conjunction with the bid/proposal submitted in response to Solicitation No. MDQ0031018235, I state the following:

1. Bidder/Offeror identified subcontracting opportunities in these specific work categories:
_____
_____
_____

2. Attached to this form are copies of written solicitations (with bidding/proposal instructions) used to solicit certified VSBE firms for these subcontract opportunities.

3. Bidder/Offeror made the following attempts to personally contact the solicited VA Certified VSBE firms: _____

_____

4. **Please Check One:**

☐ This project does not involve bonding requirements.

☐ Bidder/Offeror assisted MDOT-certified VSBE firms to fulfill or seek waiver of bonding requirements. (DESCRIBE EFFORTS):
_____
_____
_____

5. **Please Check One:**

☐ Bidder/Offeror did attend the pre-bid/pre-proposal conference.

☐ No pre-bid/pre-proposal meeting/conference was held.

☐ Bidder/Offeror did not attend the pre-bid/pre-proposal conference.

Submit this form within 10 working days of notification of apparent award.

PROPOSED CHANGE ORDER (PCO)
COVER SHEET

PCO No.: _____ Date: _____

From: _____(Contractor)

Project No.: _____

Project Title: _____

Facility: _____

1. PURPOSE OF PCO COVER SHEET; ISSUANCE OF ORDER BY PROCUREMENT OFFICER:

(a) The purpose of this Cover Sheet is to expedite payment to the contractor by making it necessary for DPSCS and the contractor to both sign a change order and send it through the mail after the contractor has submitted an acceptable Proposed Change Order ("PCO"). Contractor's submission of this PCO constitutes contractor's promise to perform the work or otherwise to adjust contract requirements in accordance with this PCO as it may be accepted by the Procurement Officer. As explained in (b) and (c) below, upon receipt of this PCO and all necessary approvals, the Procurement Officer may issue a change order to the Contractor in the form of a BPO Change Order (the "Change Order") to perform the work covered by this PCO subject to any modifications made by the Procurement Officer. No other signatures or documents will be required.

(b) If the Procurement Officer accepts the PCO without modification, the Procurement Officer may issue the Change Order accepting the PCO. The PCO signed by the contractor and the Change Order signed by the Procurement Officer then become the binding, bilateral change order between the parties under Section 3.06 of the General Conditions of the contract.

(c) If the PCO is not acceptable as submitted, the Procurement Officer may issue the Change Order modifying the PCO submitted by the contractor. Upon issuance of such a Change Order, it becomes a binding unilateral order or the Procurement Officer under Section 3.06 of the General Conditions of the Contract.

2. CERTIFICATION:

(a) Contractor certifies that, to the best of its knowledge, the information submitted in this PCO is accurate, complete, and current as of the date of this PCO. The price, including profit or fee, under any change order issued in response to this PCO shall be adjusted to exclude any significant cost or price information which, as of the date of this PCO, was inaccurate, incomplete, or not current.

(b) Contractor further certifies that all calculations of amounts requested under this PCO have been calculated in strict accordance with the terms and conditions of the contract (including the general Conditions) and applicable law.

CHANGE ORDER
STATE OF MARYLAND • DEPARTMENT OF PUBLIC SAFETY & CORRECTIONAL SERVICES
DIVISION OF CAPITAL CONSTRUCTION & FACILITIES MAINTENANCE

Change Order # _____ To Contract No: _____

Change Order Issue Date: _____ Purchase Order No: _____

Contract Date: _____

Between the State of Maryland ("State") and _____

_____ ("Contractor"),

for _____

_____

1. DESCRIPTION OF WORK: Contractor is ordered under Section 3.06 of the General Conditions to furnish or delete the following work, labor, materials, equipment, services, tools, etc. ("Work") or to modify the contract terms in accordance with the terms and conditions of this order and the contract between the parties which, except as expressly modified herein, remains in full force and effect:

MODIFICATION: **(Purchase Order Numbers must be submitted on your invoice along with your FEI number).**

This order is further subject to the conditions stated in paragraphs 3A, B, and C on the reverse side of this order.

2. COMPENSATIONS, TIME EXTENSIONS, ETC. [check one]

A. ☐ **[Work/contract terms already required by the contract]**
The state considers the Work or matters which are the subject of this order be required by the contract. The State will not pay the Contractor any additional compensation and the contract time will not be extended.

B. ☐ **[Additional Work or contract terms partly or wholly outside the contract]**
The State agrees to pay the Contractor the compensation shown below (see D) for the Work or change in contract terms which are the subject of this order.
The contract time _____ Will not be extended
_____ Will be extended _____ days.
for the work or change which is the subject of this order.

C. ☐ **[Credit change order]**
For the deleted Work or change in contract terms, the contract amount will be reduced by the amount shown in D the and contract time _____ Will not be reduced
_____ Will be reduced _____ days.

D.
AMOUNT OF THIS CHANGE ORDER: $ _____
ORIGINAL CONTRACT AMOUNT: $ _____

3. TERMS AND CONDITIONS.

A. Acceptance by the Contractor of the terms and conditions of this change order constitutes a full accord and satisfaction between the State and the Contractor for all costs, compensation, and time of performance related to or arising out of the Work which is the subject of this order, including but not limited to delay and impact cost. "NTE", if used in 2D on the front of this order, means the contract amount will be increased or reduced as indicated in 2B or 2C, by a reasonable amount of compensation not to exceed the amount stated in 2D.

B. If the contractor wishes to dispute the terms of this order ("dispute" includes filing a claim based on this order), Contractor must do so in strict accordance with the requirement of the contract. If Contractor wishes to dispute this order, Contractor may file notice of its claim (subject to C Below) by signing below and returning an original of this order to DPSCS. Contractor may file notice of a claim or otherwise dispute the terms of this order by any other means meeting contract requirements. Whether this order is accepted or disputed, the Contractor must proceed diligently with the performance of the contract, including the terms of this order.

C. The State reserves all rights, defenses and counterclaims to any claim or dispute initiated by the Contractor as a result of or arising out of this order or the Work which is the subject of this order. Nothing in this order constitutes release or waiver by DPSCS of any failure of the Contractor to act prior to the date of this order, or prior to the date of actual filing by contractor of a notice of claim or dispute over the terms of this order, in strict accordance with requirements of the contract, including but not limited to requirements respecting the form and timeliness of filing (1) notice of condition or events, (2) notice of a claim and (3) the claim itself.

END OF SECTION 00 60 00

SECTION 00 73 19 - HEALTH AND SAFETY REQUIREMENTS

PART 1 - GENERAL

1.1 SCOPE

A. Work Includes:

1. The work covered by this Section includes the requirements for a Health & Safety Plan (HASP) that covers hazards for all work to be performed on site. The Contractor shall be responsible for ensuring compliance with the provisions of the applicable occupational safety and health statutes and regulations of the State of Maryland and the U.S. Department of Labor, Occupational Safety and Health Administration (OSHA). Further, the Contractor shall ensure that all methods of performing the work do not involve danger to the personnel employed thereon, other contractors at the site, and the general public whether or not these methods are cited in the contract documents.

1.2 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General Conditions, apply to this Section.

B. Limited Hazardous Materials Survey, Youth Detention Center Project, DPSCS #KT-000-110-C01, 926 Greenmount Avenue, Baltimore, Maryland 21202, dated December 24, 2014, EBA Engineering, Inc.

1.3 REFERENCES AND APPLICABLE STANDARDS AND GUIDELINES

A. The most recent edition of a relevant regulation, standard, or code shall be in effect. Where a conflict exists between the regulations, standards, codes, or these specifications, the more stringent requirements shall be utilized.

B. It shall be the duty and responsibility of the General Contractor and all of its Subcontractors to adhere to all regulations (Federal, State, and local) impacting this work including but not limited to:

1. Federal:

a. U.S. Department of Labor, Occupational Safety and Health Administration (OSHA)

1) 29 CFR 1910 – Occupational Safety and Health Standards (General Industry)

2) 29 CFR 1926 – Safety and Health Regulations for Construction

2. State:

   a. Code of Maryland Regulations (COMAR)

      1) COMAR 09.12.20 – Occupational Safety and Health

      2) COMAR 09.12.33 – Maryland Occupational Safety and Health Regulations for Access to Information About Hazardous and Toxic Substances

      3) COMAR 09.12.35 – Maryland Occupational Safety and Health Standard for Confined Spaces

1.4 SUBMITTALS

A. Prior to commencement of work, submit to the Engineer the items listed as follows for review. Work shall not start until these submittals are returned with the Engineer's written approval indicating that the submittal is returned for unrestricted use.

   1. Qualifications of the Health Safety Officer (HSO) and the Site Health and Safety Coordinator (SHSC). Upon award of contract submit a resume and applicable certifications for the HSO and the SHSC. Refer to Item 3.3 for additional information regarding personnel qualifications.

   2. Health and Safety Plan (HASP) – Submit a HASP that has been reviewed, signed, and sealed by the HSO at least 30 days before commencement of field activities, for review and comment. Comments on the Contractor's HASP and any modifications thereto will be provided, but the HASP will not be approved until the Contractor has received and addressed comments on the HASP. The Contractor shall not mobilize to the site without an approved HASP unless otherwise indicated by the Engineer.

B. During work, the Contractor shall submit the following:

   1. Site specific safety training for each worker must be provided before the first day that the worker will be on site. A copy of training documentation shall be submitted to the Engineer whenever workers are trained. Refer to Item 3.5 for additional information regarding training.

   2. A weekly safety inspection, a record of any samples collected, and any laboratory results received shall be available on-site at all times and submitted weekly to the Engineer.

   3. An incident report shall be submitted to the Owner or Owner's Representative immediately upon completion (or partial completion) but at the latest within 24 hours after the incident for each incident resulting in injury requiring medical attention to workers or the public, or property damage greater than $500.

PART 2 - PRODUCTS

NOT USED

PART 3 - EXECUTION

3.1 HEALTH AND SAFETY PERSONNEL RESPONSIBILITIES

A. Health and Safety Officer (HSO): The HSO has ultimate responsibility for the development of the health and safety plan and evaluation of its implementation and effectiveness. The SHSC will immediately report to the HSO any changes in site conditions or required modifications to the HASP. The HSO will provide guidance and instruction to the SHSC and must approve any modifications to the health and safety plan. The HSO shall approve submittals, and be available to assist in resolving health and safety issues, investigate incidents, and attend project management meetings.

B. Site Health and Safety Coordinator (SHSC): The Contractor shall designate a SHSC. The SHSC shall be present during all activities, make safety observations daily, and shall perform and document a weekly safety inspection. The SHSC has the primary responsibility for:

1. Supervising environmental monitoring, evaluating on-site conditions and implementing modifications to the HASP with concurrence from the Contractor's HSO.

2. Assessing compliance with the HASP.

3. Ensuring that all personnel entering the site are aware of the potential hazards and the provisions of the Contractor's HASP and are familiar with all site-specific emergency procedures.

4. Ensure that personal protective equipment (PPE) is available and properly used by all personnel.

5. Determining that all Contractor personnel entering the site have received proper health and safety training for this project and are familiar with all personal protection equipment required by this Plan.

6. Halting work, if necessary, in consultation with the Contractor's HSO.

C. Field Personnel: Field personnel including a site superintendent(s) and site workers shall know and understand the requirements of the HASP. They shall comply with all requirements of the plan.

3.2 REGULATOR SITE VISIT

A. If a regulator for health, safety, or environment requests permission to inspect the site, the inspection shall be delayed until the Engineer or consultant to the Engineer can be present.

3.3 PERSONNEL QUALIFICATIONS

A. Health and Safety Officer: The HSO will be a Certified Industrial Hygienist (CIH) with experience in construction and in good standing with the American Board of Industrial

Hygiene, or a Certified Safety Professional (CSP) with experience in construction and in good standing with the Board of Certified Safety Professionals.

B. Site Health and Safety Coordinator(s) (SHSCs): The SHSCs shall have specialized training and experience in construction safety supervision and have a thorough knowledge of OSHA regulations. The SHSCs shall have performed these duties for a minimum of 3 similar projects. Minimum training shall include:

1. Hazard Communication

2. First Aid and CPR – current certification

3. Blood Borne Pathogens

4. 30 hour OSHA Construction Safety and Health course

5. Confined Space

6. Lockout / Tagout

7. When the project involves active work associated with the following hazards, the SHSC with training in the following hazards shall be on-site.

   a. Elevated Work – Scaffolding and Fall Protection

   b. Asbestos – Asbestos Supervisor

   c. Lead – Lead Competent Person

   d. Other hazards requiring specialized training based on planned construction methods

C. Field Personnel: Field personnel who enter the work area must meet the requirements for personnel training in the Site Specific HASP.

3.4 HEALTH AND SAFETY PLAN

A. A HASP shall be prepared that covers hazards for all work to be performed on site. The plan shall be reviewed, signed, and sealed by the HSO. An example HASP Outline recommended by OSHA is included in Attachment 1.

3.5 TRAINING

A. All training required by the HASP must be completed prior to starting work on the site with documentation that all workers have received required training being available on-site for review. This training may include general construction safety, specialized training to work with a specific hazard, and site specific training.

3.6 MEDICAL SURVEILLANCE

A. Site workers who are anticipated to be exposed (without respect to the respirator assigned protection factor) to airborne concentrations of hazardous materials above the lesser of the Threshold Limit Value as published by the ACGIH or the Permissible Exposure Limit as required by OSHA regulation shall have a physical examination that includes applicable biological monitoring prior to being exposed. A physical examination is also required for workers whose skin may be exposed to hazardous materials that can be absorbed through the skin.

3.7 FIT TESTING

A. Site workers who will wear respirators shall have been fit tested for said respirators within the previous 12 months.

3.8 RISK CONTROL HIERARCHY

A. For each hazard, an explanation shall be included in the HASP why a control strategy was selected and why a higher level control strategy was not employed. The hazard controls in the hierarchy of controls are listed as follows, in order of decreasing effectiveness.

1. Eliminate Hazard
2. Substitution
3. Engineering Controls
4. Administrative Controls
5. Personal Protective Equipment

3.9 EXPOSURE MONITORING

A. The HASP shall identify a strategy to determine the exposure to anticipated hazardous materials. This shall not only include hazardous materials on-site, but also hazardous materials brought onto the site by the Contractor or Subcontractors such as spray glue and solvents.

3.10 RECORD KEEPING

A. Medical surveillance and exposure monitoring records shall be maintained in a manner compliant with 29 CFR 1910.1020.

B. Asbestos exposure monitoring records shall be maintained in a manner compliant with 29 CFR 1926.1101.

C. Lead exposure monitoring records shall be maintained in a manner compliant with 29 CFR 1926.62.

3.11 SAFETY VIOLATIONS IDENTIFIED BY OTHERS

A. If the Owner or a consultant to the Owner observes a situation that represents an immediate danger to life or health of any worker or a violation of health, safety, and environmental regulations, they shall have the authority to stop work and contact the SHSC who will be responsible for further response. Such action on their part does not constitute an acceptance of responsibility for the General Contractor's (GC's) program and is valid for that instance only.

B. If the Owner or a consultant to the Owner observes a situation that represents a dangerous situation they shall immediately contact the SHSC and report the condition for prompt action by the GC safety staff. Such action does not constitute an acceptance of responsibility for the GC's program and is valid for that instance only.

END OF SECTION 00 73 19

ATTACHMENT 1

EXAMPLE HEALTH & SAFETY PLAN OUTLINE (1 PAGE)

Example Health & Safety Plan Outline

1.0 Title Page with Signature Block

2.0 Important Contacts including employer, contact name, title, cell phone number, and e-mail addresses

3.0 Organizational Structure (Identify title and responsibilities. Describe Subcontractor requirements and how Subcontractor safety will be assured.)

4.0 Job Hazard Analysis (Include a description of engineering controls, work practice controls, and PPE designed to reduce the risk for each hazard)

a. Chemical Hazards
b. Physical Hazards
c. Biological Hazards

5.0 Training Program

6.0 Medical Surveillance Program

7.0 Exposure Monitoring

8.0 Emergency and Accident Response (Must include a minimum of all information required by 29 CFR 1926.35)

Attachments - OSHA Required Written Programs

Attach a copy of each of the following required written programs, if the hazard analysis identifies the hazard as being present on the job site.

a. Hazard Communication
b. Emergency Action Plan
c. Bloodborne Pathogens
d. Hazardous Waste Operations
e. Respiratory Protection
f. Confined Space Entry
g. Lockout/Tagout
h. Fall Protection
i. Excavations
j. Lead
k. Any other OSHA standard requiring a written plan

DIVISION 1

GENERAL REQUIREMENTS

SECTION 01 10 00 – SUMMARY OF WORK

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

B. This section is subject to the State of Maryland Department of Public Safety and Correctional Services General Conditions of the Contract between owner and Contractor.

1.2 SUMMARY

A. Section Includes:

1. Project information.
2. Work covered by Contract Documents.
3. Work by Owner.
4. Work under separate contracts.
5. Owner-furnished products.
6. Access to site.
7. Owner Occupancy.
8. Coordination With Occupants
9. Work restrictions.
10. Specification and drawing conventions.
11. Construction period
12. Liquidated damages
13. Work sequence
14. Permits and Fees

B. Related Requirements:

1. Section 015000 "Temporary Facilities and Controls" for limitations and procedures governing temporary use of Owner's facilities.

C. Contract Precedence:

1. The following list describes the order of Contractual precedence:

   a. **First:** Executed Construction Agreement and MBE Forms;

2. The Construction Agreement between the State and the General Contractor will take precedent over all else.

   a. **Second:** Supplementary General Conditions of the Contract, if provided;
   b. **Third:** General Conditions of the Contract;
   c. **Fourth:** Contract Specifications;
   d. **Fifth:** Contract Drawings;

1.3 PROJECT INFORMATION

A. Project Identification: BCDC Youth Detention Center, DPSCS #KT-000-150-C01

1. Project Location: Project is bounded by Eager Street to North, Forrest Street to the West, Greenmount Avenue to the East, and Truxton Street to the South.

B. Owner: Maryland Department of Public Safety and Correctional Services.

1. Owner's Representative: Chrys Bandon-Bibum.

C. Architect: PSA Dewberry + Penza Bailey Architects, a Joint Venture, 401 Woodbourne Avenue, Baltimore, Maryland 21212: (410) 435-6677.

D. Architect's Consultants: The Architect has retained the following design professionals who have prepared designated portions of the Contract Documents:

1. Civil / Environmental / Geotechnical / Traffic Engineers: EBA Engineering, Inc., 4813 Seton Drive, Baltimore, Maryland 21215; 410-358-7171;
2. Structural Engineers: Hope Furrer Associates, Inc., 501 Fairmount Avenue, Towson, Maryland 21286; 410-583-4874;
3. Food Service / Laundry Consultant: R&R Designer, Inc., 5300 Holmes Run Parkway, Suite 1006, Alexandria, VA 22304; 703-548-0446;
4. Mechanical / Plumbing / Fire Protection Engineers: Sidhu Associates, 11350 McCormick Drive, #1000, Hunt Valley, Maryland 21031; 410-329-1115;
5. Electrical / IT / Telecom / MATV-CATV Engineers: Sidhu Associates, 11350 McCormick Drive, #1000, Hunt Valley, Maryland 21031; 410-329-1115;
6. Security Consultant: PSA-Dewberry, 401 SW Water Street, Suite 701, Peoria, Illinois 61602; 309-282-8000;
7. Cost Estimator: Lewicki Estimating Services, Inc, 13600 Old Chatwood Place, Chantilly, VA 20151; 703-628-2577
8. LEED Consultant: TerraLogos: eco architecture, pc, 2901 East Baltimore Street, Suite 300, Baltimore, Maryland 21224; 410-276-8519;
9. Landscape Architect: PELA Design, Inc., 7400 York Rd, Suite 403, Towson, Maryland 21204; 410-296-3990;: .

E. Other Owner Consultants: The Owner has retained the following design professionals who have prepared designated portions of the Contract Documents:

1. Commissioning Agent: MBP, 10440 Little Patuxent Parkway, Columbia, MD 21044: . has prepared the following portions of the Contract Documents:
   a. Commissioning criteria and specifications.

F. Project Web Site: A project Web site administered by Contractor will be used for purposes of managing communication and documents during the construction stage.

1. See Section 013100 "Project Management and Coordination." for requirements for establishing, administering and using the Project Web site.

1.4 WORK COVERED BY CONTRACT DOCUMENTS

A. The Work of Project, Contract No. DPSCS #KT-000-150-C01, is defined by the Contract Documents and consists of the following:

1. Project consists of providing all labor, materials, and equipment and performing all work for the site development and building construction for the BCDC Youth Detention Center in strict accordance with the Contract Documents subject to the terms and conditions of the contract.
2. Project Description: Department of Public Safety and Correctional Services (DPSCS), State of Maryland (herein referred to as "Owner"), is set to construct a 60-cell new Youth Detention Center (YDC) facility in Baltimore City (herein referred to as "Project") for housing juvenile detainees charged as adults.

    a. The Facility, to be used by the Division of Pre-trial Detention and Services (DPDS), will include functions of housing, administration, security, medical, mental health, education, food services, visiting, recreation, etc. for 50 male and 10 female juveniles.
    b. The 3-story building, totals approximately 61,604 gross sq. ft.: 37,929 gross sq. ft. of new construction; and 23,675 gross sq. ft. of renovation to SUI building.
    c. The scope also includes, but is not limited to, the following:

        1) The provision of construction security fencing and gates full perimeter of construction site;
        2) The demolition of the existing BPRU building in its entirety, including its additions, its below-grade deep foundation systems, and its mechanical, electrical and plumbing systems.
        3) The demolition of a portion of the SUI building, including interior wall, flooring and ceiling systems, and mechanical, electrical and plumbing systems.
        4) Upgrades to the fire alarm and detection system, and fire suppression system throughout the portion of the SUI Building currently occupied by the OSTC (roughly the south half of the SUI Building – 2 levels).
        5) Sitework:

            a) Security fencing;
            b) New perimeter security site masonry wall;
            c) New stormwater management and bio-retention facility;
            d) New parking lot;
            e) New vehicle sallyports;
            f) New truck delivery and pickup area;
            g) New site planting and hard landscaping;
            h) New site utilities;
            i) New electrical service across Forrest Street to the primary service location in the basement of "D" Block (Housing);
            j) New site lighting.
            k) Partial paving of Forrest Street to repair areas disturbed by the project work, in particular, the utility work; approximately, from Eager Street, at the north, to Truxton Street, at the south.

    d. SUI and BPRU Buildings:

        1) The SUI Building: steel structured, brick masonry bearing exterior walls; 2 story + basement; floor/roof assemblies vary (dox-plank system, metal deck/concrete system, gypsum deck system).
        2) BPRU: brick masonry bearing wall; steel floor and roof structure; 3 levels + partial basement.

3) For further understanding of both buildings, please refer to the reference documents made available through their posting on **eMarylandMarketplace (eMM)**:

   a) SUI (State Use Industries) Building: 1964 drawings (John A. Ahlers); file name 26 sheets "Central Office and Storage Building for the State Use Industries";
   b) BPRU (Baltimore Pre-Release Unit) Building: 1969 drawings (Wrenn Lewis & Jencks); 28 sheets "Dormitory Building";
   c) BPRU & SUI Renovation drawings: 1977 drawings (Lapicki-Smith); 35 sheets "Conversion of Central Office to Work-Release Housing";
   d) Construction of OSTC - Bid Documents 1991: 1991 drawings (Gaudreau); 77 sheets "Occupational Skills Training Center";

e. The Owner has registered this project with the United States Green Building Council for their LEED (Leadership in Energy and Environmental Design) certification program. The project is to be designed and constructed to achieve at a minimum, a LEED New Construction (NC) v2009 Silver rating.

f. Achieving a LEED-rated building or project requires effective communications and close coordination between the contractor, the design team, and the owner. Approximately two-thirds of the LEED credits are attributable to the design phase and the design team. The remaining one-third of the total credits become the responsibility of the General Contractor and are earned during the construction phase of the project. Refer to Section 01 35 10 Sustainable Project Requirements and the Project LEED Scorecard included in this section for additional information, specific credits, points, and tasks involved in achieving the LEED certification. All LEED pre-requisites (0 points and mandatory credit) must be met in order to submit the project for review and certification.

g. The Contractor shall demonstrate familiarity with all LEED pre-requisites, credits and innovation strategies applicable to the project prior to the start of construction. Any coordination issues, problems with meeting credit and pre-requisite criteria, coordination, material sourcing, or schedule impacts must be brought to the attention of the Architect and Owner in writing prior to the start of work.

h. The Contractor will be responsible for tracking and documenting those credits assigned to the contractor on the Project scorecard found in 013510 Sustainable Project Requirements

i. The Contractor will also be required to create, implement, and follow an Indoor Air Quality Plan during construction as noted in 015060 Indoor Air Quality Plan & Procedures During Construction and to create, implement, and follow a Construction Waste Management Plan as defined in 017419 Construction Waste Management and Disposal.

j. By submitting a bid and entering into a contract with the owner for construction, the Contractor recognizes and agrees to all special construction practices, monitoring, and other activities associated with the project having LEED requirements and certification. There shall be no additional compensation made to the Contractor, either additional time or money, for such coordination, additional work, or other activity required for LEED.

1.5 LIMITS OF WORK

A. No operations related to the construction of this project will be allowed beyond the 'Limit of Disturbance' line indicated on the Grading and Sediment Control Plans unless otherwise indicated without prior approval of the Architect / Owner. Such operations shall include, but not be limited to, parking, access, storage of materials or equipment, and locations of trailers or other temporary facilities.

B. Type of Contract:

1. Project will be constructed under a single prime contract.

1.6 WORK BY OWNER

A. General: Cooperate fully with Owner so work may be carried out smoothly, without interfering with or delaying work under this Contract or work by Owner. Coordinate the Work of this Contract with work performed by Owner.

B. Concurrent Work: Owner will perform the following additional work at site during Construction. Completion of that work will depend on successful completion of preparatory work under this Contract.

1. Owner installation of Owner-furnished furnishings, fixtures and equipment as indicated on Furniture, Fixtures, and Equipment (FF&E) Schedule and Detention (D-series) drawings, including, but not limited to: Medical and Dental furniture and equipment, other than those specified, herein; Education furniture and equipment, other than those specified, herein; General office furniture and equipment, and Detention furniture and equipment.

1.7 WORK UNDER SEPARATE CONTRACTS

A. General: Cooperate fully with separate contractors so work on those contracts may be carried out smoothly, without interfering with or delaying work under this Contract or other contracts. Coordinate the Work of this Contract with work performed under separate contracts.

B. Concurrent Work: Owner will award and will assign separate contract(s) for the following construction operations at Project site. Those operations will be conducted simultaneously with work under this Contract.

1. Provision of all IT and Telecommunication wiring, cabling, and equipment.

1.8 OWNER-FURNISHED PRODUCTS

A. Owner will furnish products indicated within the Contract Drawings FF&E and Detention Equipment schedules. The Contractor's Work includes receiving, unloading, handling, storing, protecting, and installing Owner-furnished/Contractor-installed products and making building services connections. The Contract Drawings indicate Owner-Furnished/Owner-installed requiring Contractor-installed utility connections.

B. Owner-Furnished Products:

1. See FF&E Schedule and Detention Equipment Schedule as part of Contract Drawings. Owner-furnished products indicated to be Owner-installed will be installed by Owner concurrent with Construction.

1.9 ACCESS TO SITE

A. General: Contractor shall have full use of Project site for construction operations during construction period. Contractor's use of Project site is limited only by Owner's right to perform work or to retain other contractors on portions of Project.

B. Work within OSTC portion of SUI building: Contractor shall have limited use of Project site for construction operations as indicated on Drawings by the Contract limits and as indicated by requirements of this Section.

C. Access: Contractor’s access to Forrest Street is limited to the north entrance at E. Eager Street. NO CONSTRUCTION ACCESS TO FORREST ST. FROM MADISON ST. WILL BE PERMITTED.

D. Use of Site: Limit use of Project site to work in areas or areas within the Contract limits indicated. Do not disturb portions of Project site beyond areas in which the Work is indicated.

1. Limits: Confine constructions operations to the Limits of Construction as indicated within the Contract Drawings. The indicated Limits of construction shall not be construed as preventing the Contractor from performing work outside those Limits if the work is specifically required by the Contract Documents. The Limits of Construction are only provided as general guidelines as to the extent of Work covered under this Contract. Examples of work that may extend beyond these described limits are, but not limited to: public space site and paving work or utilities.
2. Driveways, Walkways and Entrances: Keep driveways, loading areas, and entrances serving premises clear and available to Owner, Owner's employees, and emergency vehicles at all times. Do not use these areas for parking or storage of materials.

    a. Schedule deliveries to minimize use of driveways and entrances by construction operations.
    b. Schedule deliveries to minimize space and time requirements for storage of materials and equipment on-site.
    Before starting the work, the Contractor shall coordinate with the Owner and Baltimore City what entrances, routes or roadways shall be used for access to the work, and use only those designated for movement of personnel, materials and vehicles to and from the work. Close coordination will be required between the Contractor and the Owner, other Contractors, Baltimore City and others having an interest in the Project to assure that work on the site, access to and from the site and the general conduct of operations is maintained in a secure safe and efficient manner, and that disruption and inconvenience to existing streets and property is minimized. The Contractor shall be responsible to review the site and be familiar with all existing conditions within and around the Owner's property including local conditions and requirements.

3. Do not block or disrupt operations and deliveries to the driveways and entrances for the adjacent Correctional facilities.

a. The Contractor shall maintain free access to all buildings and areas of the site for designated vehicles, service vehicles and firefighting equipment and at no time shall block off or close roadways, alleys, sidewalks, entrance ways or fire lanes without providing auxiliary means of entrance acceptable to the Owner. Fire hydrants must remain accessible at all times. The Contractor must obtain Owner's approval and shall give the Owner and the local fire department at least forty-eight (48) hours notice of any such changes of routes.

1) This includes the south gate where Forrest Street intersects with East Madison Street. Large commercial trucks require entry and passage on Forrest Street, between East Madison Street to East Eager Street, in order to deliver goods and services to the Correctional Complex. The Contractor's operations shall not impede this function.
2) This includes the north gate where Forrest Street intersects with E. Eager Street. Visitors and personnel enter MCTC portion of the Corrections Complex at this location, and trucks and vehicles exit Forrest Street and the Corrections Complex at this location. The Contractor's operations shall not impede these functions, and the area must be kept clear and maintained.

4. Access to Site applies to, but is not limited to the primary Project Site bounded by East Eager Street, Forrest Street, and Greenmount Avenue; and to secondary sites, such as, but not limited to: "D" Block, other areas and buildings of the Baltimore Correctional Complex as required to perform the work, the Contractor's staging area, and Forrest Street.

a. Contractor may access SUI Building basement via existing exterior stair at Forrest St. Existing freight elevator may be accessed via the existing OSTC loading at Forrest St. Loading dock provides a wider path to the freight elevator. Comply with requirements for security control for access to occupied areas.

E. Condition of Existing SUI Building and associated building and site appurtenances: Maintain portions of existing building affected by construction operations in a weathertight condition throughout construction period. Repair damage caused by construction operations.

1. Contractor shall video tape and photograph all existing on-site and off-site conditions, and interior/exterior building conditions related to work area prior to start of work in order to maintain record of those conditions.

F. Coordinate and comply with Specification Section 015000 Temporary Facilities and Controls.

G. Contractor Use of Premises:

1. Coordinate use of premises under direction of Owner.
2. Other concurrent and contiguous contracts will be ongoing during the term of this Contract.
3. Contractor shall obtain and pay for use of off-site storage or work areas.
4. Except as described in Section 015000, Temporary Facilities and Controls, for the Staging Area, there shall be no on-site parking for the General Contractor, and its Subcontractor employees. Off-site parking for construction employees shall be arranged by the Contractor. The Contractor is responsible to provide

transportation to and from the site, if required. Any additional arrangement is the responsibility of the Contractor. There are no parking areas available or supplied by Owner.

a. Contractor's and Subcontractor's personnel shall not park on public streets within 3 blocks of Corrections Complex perimeter, unless approved by Owner. The adjacent public on-street parking is used by Corrections staff and officers and shall not be burdened by Contractor's work forces.

5. **CONTRACTOR'S STAGING AREA:** Staging Area shall be the vacant site (currently used by the Owner for employee parking) located south of the Baltimore Correctional Complex and bounded by Madison Street to the north, Monument Street to the south, Graves Street to the West, and Forrest Street to the east.

   a. As described in Section 015000, Temporary Facilities and Controls, limited parking will be available to the Owner, Contractor, and the Architect within the Greenmount Avenue Staging Area site.
   b. The monitoring wells throughout the staging site shall remain and must be protected at all times. Any damage to these wells shall be repaired at the Contractor's expense.
   c. The Staging Area site shall not be used for loose material laydown (soil, gravel, sand, etc.).
   d. All temporary utility systems or connections for the staging area site shall be provided and paid for by the Contractor (power, water, IT/Telecommunications, sanitary, etc.). Contractor shall pay all necessary filing or permit fees.
   e. Contractor shall provide a temporary construction fence full perimeter of the staging area with lockable vehicular and personnel gates. Owner's representative shall receive a set of keys and have access to site at all times.
   f. Contractor shall provide temporary security lighting of the staging area.
   g. At the completion of the project, site shall be restored to its original condition.
   h. NO USE OF THE SUI BUILDING FOR CONTRACTOR STAGING OR OFFICES SHALL BE PERMITTED, UNLESS APPROVED BY THE OWNER AT SUCH TIME DURING THE PROGRESS OF THE PROJECT THAT THE OWNER DEEMS APPROPRIATE.
   i. Contractor shall obtain any MDE approvals for Staging Area and pay all fees associated with MDE filing, review and approval of the Staging Area.

6. The Contractor will not be allowed to use any Owner tools or equipment during the course of this project.
7. The Contractor shall be responsible for all damage to the project including the adjacent buildings and grounds due to their operations under this contract. Repair or replacement of damaged items shall be to the satisfaction of the Owner.
8. The Contractor shall limit his use of the premises for work and for storage, to allow for:

   a. Work by other Contractors
   b. Owner occupancy
   c. Public use and safety
   d. Provide use of corridors in all completed areas at all times

H. Related Contract Documents:

1. If related and necessary for the Work of this contract, the Contractor may contact the Owner to review and/or obtain copies of documents prepared under separate contract for the State.
2. Duplication costs of other documents are the responsibility of the Contractor

1.10 OWNER OCCUPANCY

A. Owner reserves the right to occupy completed portions of the work.

1.11 COORDINATION WITH OCCUPANTS

A. Full Owner Occupancy: Owner will occupy site and existing building(s) during entire construction period. Cooperate with Owner during construction operations to minimize conflicts and facilitate Owner usage. Perform the Work so as not to interfere with Owner's day-to-day operations. Maintain existing exits unless otherwise indicated.

1. Maintain access to existing walkways, corridors, and other adjacent occupied or used facilities. Do not close or obstruct walkways, corridors, or other occupied or used facilities without written permission from Owner and approval of authorities having jurisdiction.
2. Notify Owner not less than 72 hours in advance of activities that will affect Owner's operations.

B. When Owner has occupied a portion of the project prior to Final Completion, Contractor's employees and subcontractors shall not use facilities within the Owner occupied areas of the building(s), unless the Contractor is instructed to do so as part of construction work by the Owner.

Owner Limited Occupancy of Completed Areas of Construction: Owner reserves the right to occupy and to place and install equipment in completed portions of the Work, prior to Substantial Completion of the Work, provided such occupancy does not interfere with completion of the Work. Such placement of equipment and limited occupancy shall not constitute acceptance of the total Work.

1. Architect will prepare a Certificate of Substantial Completion for each specific portion of the Work to be occupied prior to Owner acceptance of the completed Work.
2. Required inspections and tests shall have been successfully completed and verified.
3. Obtain a Certificate of Occupancy from authorities having jurisdiction before limited Owner occupancy.
4. Before limited Owner occupancy, mechanical and electrical systems shall be fully operational, and required tests and inspections shall be successfully completed. On occupancy, Owner will operate and maintain mechanical and electrical systems serving occupied portions of Work.
5. On occupancy, Owner will assume responsibility for maintenance and custodial service for occupied portions of Work.
6. During construction, should the Owner occupy areas of the building, all required exits and all required fire protection features are to be operable and continuously maintained for the parts occupied in accordance with NFPA 101, Article 1-3.11.1.

    a. The Contractor is wholly responsible for compliance.

1.12 WORK RESTRICTIONS

A. Work Restrictions, General: Comply with restrictions on construction operations.

1. Comply with limitations on use of public streets and with other requirements of authorities having jurisdiction. Any fines levied by the City as a result of violations shall be paid in full by the Contractor.
2. The General Contractor shall be subject to such rules and regulations for the conduct of the work as the Owner and may establish. Violators shall be promptly removed from the site.

    a. All employees shall be properly and completely clothed while working. Bare torsos, legs and feet will not be allowed.
    b. Possession or consumption of alcoholic beverages or drugs, or other noxious or illegal behavior on the site is strictly prohibited. Action will be taken and the proper authorities will be notified.
    c. Inappropriate language will not be tolerated.

3. Communication in any fashion with staff or inmates within adjacent facilities is strictly prohibited and will result in immediate action.

B. Contractor shall not elect means and methods which result in an easement condition imposing costs on the Owner.

C. On-Site Work Hours: Limit work in the existing building to normal business working hours of 7 a.m. to 5 p.m., Monday through Friday, unless otherwise indicated.

1. Weekend Hours: Approval must be obtained from Baltimore City and Owner, and coordinated with Owner..
2. Early Morning Hours: Approval must be obtained from Baltimore City and Owner, and coordinated with Owner. Construction operations must comply with Baltimore City noise ordinance and Building Code of Baltimore City..
3. Hours for Utility Shutdowns: Approval must be obtained from Baltimore City and/or applicable Utility Company, and Owner, and coordinated with Owner..
4. Hours for Insert noisy activity: Must comply with Baltimore City noise ordinances and Building Code of Baltimore City.
5. Any fines levied by the City as a result of violations shall be paid in full by the Contractor.
6. **WORK WITHIN OSTC PORTION OF SUI BUILDING:** Any work within the occupied OSTC portion of the SUI Building is restricted to the hours of 4 p.m. to 6 a.m., and all workers must be accompanied by an assigned Corrections Officer at all times.

D. Existing Utility Interruptions: Do not interrupt utilities serving facilities occupied by Owner or others unless permitted under the following conditions and then only after providing temporary utility services according to requirements indicated:

1. Notify Architect and Owner not less than two days in advance of proposed utility interruptions.
2. Obtain Owner's written permission before proceeding with utility interruptions.

E. Noise, Vibration, and Odors: Coordinate operations that may result in high levels of noise and vibration, odors, or other disruption to Owner occupancy with Owner.

1. Notify Architect and Owner not less than two days in advance of proposed disruptive operations.

2. Obtain Owner's written permission before proceeding with disruptive operations.
3. All Construction operations shall comply with applicable Baltimore City noise ordinances and Building Code of Baltimore City.
4. Any fines levied by the City as a result of violations shall be paid in full by the Contractor.

F. Nonsmoking Building: Smoking is not permitted anywhere with the project limits (building or site) or within 50 feet (16 m) of entrances, operable windows, or outdoor-air intakes.

G. Controlled Substances: Use of tobacco products and other controlled substances within the existing building or on Project site is not permitted.

H. Employee Identification: Contractor will provide photo identification tags for Contractor and Subcontractor personnel working on Project site. Contractor shall also provide photo identification tags for the Owner, and Architect/Engineer employees. Require personnel to use identification tags at all times.

I. Employee Screening: Comply with Owner's requirements for drug and background screening of Contractor personnel working on Project site when those workers are to interface with the adjacent secure facility.

1. Maintain list of approved screened personnel with Owner's representative.

J. Prison Rape Elimination Act (PREA): Contractor and sub-contractors, in coordination with the Owner must comply with all applicable provisions of PREA for the duration of the project while on the site, and especially while in close proximity to inmates or detainees.

K. NO VERBAL OR VISUAL COMMUNICATION, PHYSICAL CONTACT, OR DISTRIBUTION OF ANY MATERIAL OR CONTRABAND IS PERMITTED WITH INMATES OR DETAINEES.

1.13 SPECIFICATION AND DRAWING CONVENTIONS

A. Specification Content: The Specifications use certain conventions for the style of language and the intended meaning of certain terms, words, and phrases when used in particular situations. These conventions are as follows:

1. Imperative mood and streamlined language are generally used in the Specifications. The words "shall," "shall be," or "shall comply with," depending on the context, are implied where a colon (:) is used within a sentence or phrase.
2. Specification requirements are to be performed by Contractor unless specifically stated otherwise.

B. Division 01 General Requirements: Requirements of Sections in Division 01 apply to the Work of all Sections in the Specifications.

C. Drawing Coordination: Requirements for materials and products identified on Drawings are described in detail in the Specifications. One or more of the following are used on Drawings to identify materials and products:

1. Terminology: Materials and products are identified by the typical generic terms used in the individual Specifications Sections.

2. Abbreviations: Materials and products are identified by abbreviations published as part of the U.S. National CAD Standard and scheduled on Drawings.
3. Keynoting: Materials and products are identified by reference keynotes referencing Specification Section numbers found in this Project Manual.

1.14 CONSTRUCTION PERIOD

A. The Construction time from the Notice-to-Proceed (NTP) to Substantial Completion shall not exceed that designated in the Construction Bid Form. The time from Substantial Completion to Final Completion (including Commissioning and LEED Testing Completion) shall not exceed sixty (60) calendar days from date of Substantial Completion as set forth in the Construction Bid Form, the State of Maryland General Conditions and the Construction Agreement between the State and the Contractor.

1. Contractor shall note that Occupancy cannot occur until all Commissioning and LEED Testing has successfully been completed.
2. Contractor shall note that LEED Testing cannot occur while construction operations are still in effect.
3. Contractor shall note that though Final Completion has been obtained, final payment will not occur until all LEED processes and Record Documentation has been successfully completed.

B. Within thirty (30) calendar days from the Contract Award, the NTP date will be mutually agreed upon between the Owner and the Contractor.

1. The contract shall include the Work indicated in these contract documents.
2. The Contractor shall notify the Owner in writing a minimum of seven (7) calendar days in advance of the requested date construction is planned to start within the project limits whereas the State will issue to the Contractor the “Notice-To-Proceed” and this Notice will stipulate the date on or before the Contractor is expected to begin work. From this date the construction time shall begin.
3. Work within the project limits before the requested Notice-To-Proceed date shall be at the risk of the Contractor.

C. Contractor shall prepare and submit to the Owner and Architect the cost-loaded CPM schedule in accordance with the General Conditions, Section 7.06.

D. Contractor shall prepare and submit to the Owner and Architect the Shop Drawing Submittal Schedule in accordance with the General Conditions, Section 7.06.

E. Time Extensions: Comply with Section 7.06.R of State's General Conditions for severe weather conditions.

F. SCHEDULE: In accordance with Division 00, Section “Construction Bid Form.

1.15 LIQUIDATED DAMAGES

A. Refer to Division 00, Section “Construction Bid Form”, and the State of Maryland General Conditions for stipulated Liquidated Damages that will apply to this Project and its Construction Schedule.

1.16 WORK SEQUENCE

A. Sequence of work is subject to the review and approval of the Owner and may be dependent on the status of other ongoing construction contracts on and adjacent to the Work of this contract.

B. Coordinate construction schedule and operations with the Owner.

C. The General Contractor shall be responsible for coordinating all aspects of the schedule for construction with all trades and subcontracts.

D. The General Contractor is responsible to plan, coordinate and execute his work in such a manner that there will be no disruption of the Owner's operations. If an interruption of operations is unavoidable, then this work will be scheduled with the Owner prior to beginning such work.

E. Work which interrupts the Owner's adjacent property, services, and operations will be accomplished during the time periods when it is least inconvenient to the Owner and completed in the shortest possible time frame. At no expense to the Owner, the General Contractor will anticipate and coordinate the provision of work in split shifts, weekends, or off peak periods, etc., to accommodate Owner's security, utility, delivery times, and service requirements, such as, but not limited to electrical power, IT / Telecommunications, HVAC, storm and sanitary lines. Accept as noted previously to accommodate the Owner’s adjacent property, services, and operations, all work shall be bid on a straight time basis.

F. When work affects existing adjacent Corrections facilities, the General Contractor is responsible to provide any temporary alternate supply and/or return conditions to maintain services to the facility while work is being performed. Place safety stages or markers to indicate location of disconnected services.

1. No interruptions to Owner's power, lighting, signal, or alarm circuits will be permitted without the express written permission of the Owner. Arrangements for interruptions shall be made with the Owner forty-eight (48) hours prior to the interruption and shall be made at such time and duration as authorized by them. Temporary feeders, transformer jumpers, connections, circuits, etc., shall be used as required to accomplish the above at no additional cost to the Owner.

G. Construct the work to provide for public convenience. Do not close off roadways, public ways or public facilities without City or Utility approval. Provide alternative usage or other means when closures must occur to accommodate construction.

H. These provisions shall apply to all Contractors and are applicable whether a Contractor is either directly or indirectly affected.

1.17 PERMITS AND FEES

A. Obtain all permits, licenses, approvals and pay taxes, fees and other costs in connection with the construction of this project, including the installation and operation of all equipment. Permits shall include, but limited to, operation of boilers, emergency generators, sprinkler systems, elevators, and other State of Maryland licensed and regulated systems. Contractor is responsible for the preparation of all forms, applications, plans, preparation of documents, provide proper notices and obtain

necessary approvals. Deliver inspection, permits and approval certificates to the Owner prior to Final Completion of the Work.

1. Contractor responsible to pay the State Fire Marshal all review fees for each fire suppression systems, fire alarm and detection systems:
   a. $150.00 per each system
   b. $1.20 per sprinkler head

1.18 AVAILABLE BID DOCUMENTS AND REFERENCE DOCUMENTS

A. Contract Documents will be made available to the Bidders as herein described in the Instructions to Bidders. The documents will also be posted on **eMarylandMarketplace (eMM)**: https://emaryland.buyspeed.com/bso/
   1. Bid documents are available only online from eMaryland Marketplace (eMM). Those are the only official documents to be used by Bidders for this Invitation for Bid (IFB). The Bidders shall print on their own stationery the required documents for submitting their bid (as Construction BID Form, Bid Proposal Affidavit, BID Bond, etc.) and submit to the Owner (DPSCS, Division of Capital Construction and Facilities Maintenance) in a sealed envelope which clearly indicates that it contains a sealed bid for this project with the bid due date and the name and address of the Bidder.
   2. DPSCS/DCCFM ELECTRONIC DOCUMENTS AND FORMS OF THE "INVITATION FOR BID" PACKAGE ARE THE ONLY OFFICIAL DOCUMENTS AND THEREFORE, ONLY THESE MAY BE USED FOR BIDDING PURPOSES. CONTRACT AWARD SHALL ONLY BE BASED UPON OFFICIAL DOCUMENTS ISSUED BY THE ISSUING 0FFICE.

B. The following documents form a part of the Contract Documents but are only made available for reference through their posting on **eMarylandMarketplace (eMM)**: https://emaryland.buyspeed.com/bso/

   1. **Limited Hazardous Materials Survey Report:** Dated December 24, 2014; as prepared by EBA Engineering, Inc. on behalf of PSA-Dewberry Inc. / Penza Bailey Architects, JV for the Department of Public Safety and Correctional Services, Project KT-000-150-C01.
   2. **Geotechnical Report:** Dated August 2014; as prepared by EBA Engineering, Inc. on behalf of PSA-Dewberry Inc. / Penza Bailey Architects, JV for the Department of Public Safety and Correctional Services, Project KT-000-150-C01.

C. Additional Reference Documents: The following documents **do not** form a part of the Contract Documents but are only made available for reference through their posting on **eMarylandMarketplace (eMM)**: https://emaryland.buyspeed.com/bso/

   1. **Record Drawings for the Existing Buildings:** The following record drawings are provided to the Contractor for reference only. The record drawings may not represent the actual built conditions. All information included within the record drawings must be verified by the Contractor. Neither the Department of Public Safety and Correctional Services, nor PSA-Dewberry Inc. / Penza Bailey Architects, JV and its consultants take responsibility for the accuracy of these documents. **To view these documents, the Contractor must download the files. Any printing of these documents by the Contractor or its Subcontractors, shall be at the Contractors expense:**

1.19 SPECIAL REQUIREMENTS

A. **Testing of Power Service in “D” Block:** Contractor shall test the existing power service to confirm capacity. Notify Owner immediately upon results of test.

B. **BGE Signoffs:** Contractor shall coordinate with BGE to sign off on all work related to BGE’s power equipment and service that currently serve the SUI Building, including, but not limited to, related transformers, cabling, and switches.

C. **Utility Surveys:** Contractor shall perform an underground utility survey of Forrest Street where affected by project work to confirm utility locations, types, and inverts.

D. **Maintenance of Power to The Occupational Skills Training Center (OSTC) functions in SUI Building:** The OSTC must remain occupied and in operation during the construction period. The Contractor must provide temporary power to maintain operation and function of the OSTC at all times. Comply with Section 01 50 00, Temporary Facilities and Controls.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 01 10 00

SECTION 01 21 00 – SPECIALTY ALLOWANCES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General Conditions and other Division 00, Division 01, and Division 02 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements governing allowances.

1. Certain items are specified in the Contract Documents by allowances. Specialty Allowances have been established in lieu of additional requirements and to defer selection of actual materials and equipment to a later date when direction will be provided to Contractor. If necessary, additional requirements will be issued by Change Order.

B. Types of allowances include the following:
1. Unit-cost allowances per Section 012200, Unit Price Allowances.
2. Specialty allowances.

C. Related Requirements:

1. Division 01 Section 012200 "Unit Prices" for procedures for using unit prices.
2. Division 01 Section 012600 "Contract Modification Procedures" for procedures for submitting and handling Change Orders.
3. Division 01 Section 012900 “Payment Procedures” for Application for Payment.
4. Division 01 Section 014000 "Quality Requirements" for general testing and inspecting requirements.
5. Division 01 Section 016000 “Product Requirements” for Product Options and Substitutions.
6. Division 31 Section 312500 “Erosion and Sediment Control.
7. Divisions 02 through 33 Sections for items of Work covered by allowances.

1.3 DEFINITIONS

A. Rock: Any material which cannot be removed by methods other than special rock excavation machinery, drilling, wedging and/or blasting shall be termed rock excavation. All other excavations shall be termed earth excavation. Should boulders be encountered, those in size up to 1/2 cubic yard shall be termed earth excavation.

B. Unknown, as applied to below-grade structure and infrastructure described under Schedule of Specialty Allowances: Subsurface or latent conditions not shown in either the Contract Documents, including the Limited Hazardous Materials Survey, or in the referenced existing building drawings provided by the Owner.

1.4 SELECTION AND PURCHASE

A. At the earliest practical date after award of the Contract, advise Architect of the date when final selection and purchase of each product or system described by a Specialty Allowance must be completed to avoid delaying the Work.

B. At Owner's and Architect's request, obtain proposals for each Specialty Allowance for use in making final selections. Include recommendations that are relevant to performing the Work.

1.5 ACTION SUBMITTALS

A. Submit proposals for purchase of products or systems included in allowances, in the form specified for Change Orders, as specified in Section 01 26 00, Contract Modification Procedures.

1.6 INFORMATIONAL SUBMITTALS

A. Submit invoices or delivery slips to show actual quantities of materials delivered to the site for use in fulfillment of each Specialty Allowance.

B. Submit time sheets and other documentation to show labor time and cost for installation of allowance items that include installation as part of the Specialty Allowance.

C. Coordinate and process submittals for allowance items in same manner as for other portions of the Work.

1.7 COORDINATION

A. Coordinate allowance items with other portions of the Work. Furnish templates as required to coordinate installation.

1.8 SPECIALTY ALLOWANCES

A. Allowance shall include: Cost of material, product or services to General Contractor and/or Subcontractor, less applicable trade discounts; all applicable direct and indirect costs; delivery to site; applicable fees and taxes, permit costs, warranty costs, bond costs, unemployment compensation, and insurance costs; testing and cleanup; overhead and profit; labor and installation; finishing; unloading, uncrating, handling, and storage; protection from elements and damage; submittals, engineering, and shop drawing requirements; supplementary or miscellaneous items, appurtenances and devices, tools or

equipment incidental to or necessary for a sound, secure and complete installation.

B. Unless otherwise indicated, Contractor's costs for receiving and handling at Project site, labor, and similar General Condition costs shall be included as part of the Contract Sum and not part of the Specialty Allowance.

C. Unused Materials: Return unused materials purchased under an allowance to manufacturer or supplier for credit to Owner, after installation has been completed and accepted.

1. If requested by Architect, retain and prepare unused material for storage by Owner. Deliver unused material to Owner's storage space as directed.

D. Use the Specialty Allowance only as directed by Owner and reviewed by Architect, for Owner's purposes and only by a proposal that indicate amounts to be charged to the allowance.

E. Payment shall be made in accordance with Section 012900, “Payment Procedures”, and GENERAL CONDITIONS.

F. These Specialty Allowances are included in the Contract Sum. However, Contractor must submit a proposal and obtain authorization from the Owner for the use of the funds from the Specialty Allowance.

G. Owner reserves the right to establish the quantity of work-in-place by independent quantity survey, measure, or count. If the actual work requires more or fewer quantities than those quantities indicated in the proposal, provide the actual quantities to be applied against the Specialty Allowance.

H. At Project closeout, credit all unused amounts remaining in the specialty allowances back to the Owner.

I. General Contractor is advised that the proposed Specialty Allowance prices given to him shall be subject to negotiations and revisions resulting in final prices that shall be mutually agreed upon and approved by the Owner.

J. Submit substantiation of scope of work, if any, claimed in proposal related to Specialty Allowances.

K. Final payment for work governed by specialty allowance prices will be made on the basis for the actual measurements and quantities accepted by the Owner.
1. List of Specialty Allowances: A schedule of Specialty Allowances is included in Part 3.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine products covered by an allowance promptly on delivery for damage or defects. Return damaged or defective products to manufacturer for replacement.

3.2 PREPARATION

A. Coordinate materials and their installation for each allowance with related materials and installations to ensure that each allowance item is completely integrated and interfaced with related work.

3.3 SCHEDULE OF SPECIALTY ALLOWANCES

A. In accordance with the General Conditions and Division 1, "Specialty Allowance", or "Unit Prices", when Owner orders work to be performed beyond the work limits as set forth in the Contract Documents including materials, operations, and items of work, etc., related to the specialty allowance items listed in the following schedule, the allowance prices for these items shall prevail.

B. Accordingly, the Contractor is advised that the proposed Lump Sum Total Price given by him for the items listed below shall be subject to measurement negotiations and revisions resulting in Final prices which shall be mutually agreed upon.

C. The Owner and Architect shall determine that the work associated with the Specialty Allowance items are applicable to this allowance and beyond the limits and requirements set forth within the Contract Documents.

D. All costs associated with the Specialty Allowance prices noted in the Schedule below shall be provided within the proper Construction Bid Form as required by Section 00 12 50.

E. **Precedence of Allowances:** For all work beyond the limits and requirements as set forth within the Contract Documents, the use of the Unit Price Allowance Items shall take precedence over the use of **Specialty Allowances 1 through 7,** as described below.

F. **SA-1 Removal of Unknown Below-Grade Site Structures:** Include **$30,000** for the demolition, removal and disposal off-site of unforeseen below-grade existing infrastructure (utilities, foundation walls and footings, tanks, rubble, etc.) within the Project site, due to unknown and unforeseen conditions that require resolution to enable the proper and complete construction of the Project. Removal of unknown and unforeseen below-grade hazardous materials is included in this allowance, and shall be performed with applicable Division 02 Environmental Sections. Such work may require environmental testing and

laboratory services to determine the actual extent of contamination in accordance with Division 01 Section "Environmental Inspection, Testing and Laboratory Services." The Owner and Architect shall determine that the work is applicable to this allowance and beyond the requirements set forth within the Contract Documents.

G. **SA-2 Removal of Hazardous Roof Material:** Include **$25,000.00** for the abatement and removal of hazardous roof material within the roofing system of the SUI building to the extent of the roof replacement. The work may require environmental testing and laboratory services to determine the actual extent of contamination in accordance with Division 01 "Environmental Inspection, Testing & Laboratory Services. All Environmental work shall be performed in strict accordance with Division 02 Section "Asbestos Abatement". This unforeseen or unsatisfactory condition requires resolution to enable the proper and complete construction of the Project. The Owner and Architect shall determine that the work is applicable to this allowance and beyond the requirements set forth within the Contract Documents.

H. **SA-3 Removal of Hazardous Material from Existing Fire Suppression System and Fire Alarm/Detection System in the OSTC Portion of SUI Building:** Include **$15,000.00** for the abatement and removal of hazardous material associated with the existing fire suppression system upgrade within the OSTC portion of the SUI Building as defined in the Contract Documents. The work may require environmental testing and laboratory services to determine the actual extent of contamination in accordance with Division 01 "Environmental Inspection, Testing & Laboratory Services. All Environmental work shall be performed in strict accordance with Division 02 Section "Asbestos Abatement". This unforeseen or unsatisfactory condition requires resolution to enable the proper and complete construction of the Project. The Owner and Architect shall determine that the work is applicable to this allowance and beyond the requirements set forth within the Contract Documents.

I. **SA-4 Repair of the Existing Concrete Masonry Partition that Separates the Renovated YDC Portion of the SUI Building from the OSTC Portion of the SUI Building:** Include **$10,000.00** for the repair and infill of the existing concrete masonry wall between the new YDC portion of the SUI Building and the existing OSTC portion of the SUI Building on both the first and second existing floor levels. It is unknown whether the existing wall runs to the underside of the floor or roof deck and that all penetrations, and openings throughout the height and length of the wall are properly infilled, sealed, and made smoketight to ensure a sound smoke barrier as shown in the construction documents. Smaller opening may be firesafed or smoke sealed. Larger openings may be receive a more stable infill system. This unforeseen or unsatisfactory condition requires resolution to enable the proper and complete construction of the Project. The Owner and Architect shall determine that the work is applicable to this allowance and beyond the requirements set forth within the Contract Documents.

J. **SA-5 Upgrade to Existing Fire Suppression System in OSTC Occupied Portion of SUI Building:** Include **$45,000** for the upgrade or replacement of the existing fire suppression system in the OSTC occupied portion of the SUI Building. This may include, but not be limited to: replacement or relocation of sprinkler heads, provision of new sprinkler heads, replacement of existing piping, provision of new fire suppression piping, removal and reinstallation of existing suspended ceilings to obtain access to fire suppression systems, etc. This unforeseen or unsatisfactory condition requires resolution to enable the

proper and complete construction of the Project. The Owner and Architect shall determine that the work is applicable to this allowance and beyond the requirements set forth within the Contract Documents.

K. **SA-6 Resolution to Unknown Below Grade or Hidden Utility Conflicts:** Include **$25,000.00** for the resolution of below grade conflicts between new work and existing utilities or structures within Forrest St. This work may include, but not be limited to: relocation of new work to accommodate existing conditions to remain in place, alternate detailing to bridge over an existing utility, etc. These unknown or unforeseen conditions require resolution to enable the proper and complete construction of the Project. The Owner and Architect shall determine that the work is applicable to this allowance and beyond the requirements set forth within the Contract Documents.

L. **SA-7 Penetration Scan of First Floor "Dox Plank" Type Slab System in YDC Renovation Area of SUI Building to Locate Existing Reinforcing for New Openings:** Include **$10,000** to perform a penetration scan of the existing "Dox Plank" type slab system in the YDC renovation area of SUI Building in order to determine the configuration of the reinforcing in the existing system. This information will be used by the Architect, and its consultants, to properly locate and detail the new openings in the slab for the new work (ducts, piping, chases, conduits, etc.) relative to the reinforcing. The scan only needs to occur where penetrations occur or existing large openings are to be filled. This unforeseen or unsatisfactory condition requires resolution to enable the proper and complete construction of the Project. The Owner and Architect shall determine that the work is applicable to this allowance and beyond the requirements set forth within the Contract Documents.

M. **SA-8 Maintenance of Electrical Service to Occupied Areas of SUI Building:** Include **$30,000** for BGE costs associated with a temporary transformer and meter to main electrical service to the OSTC and other occupied areas of the SUI Building. Allowance does not apply to all other costs associated with maintaining this service, including cable, conduit, breakers and other equipment and labor, which shall be included in the bid price before the addition of the Allowance.

N. **SA-9 Repairs to Existing 15kV Switchgear in D-Block Basement:** Include **$7,500** for repairs to existing switchgear in D-Block Basement required to perform the Work of this contract. The Owner and Architect shall determine that the work is applicable to this allowance and beyond the requirements set forth within the Contract Documents.

END OF SECTION 01 21 00

SECTION 01 22 00 - UNIT PRICES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for unit prices:

1. The unit prices in the UNIT PRICE SCHEDULE shall be used to increase or decrease the contract price depending upon the quantities of the items actually measured in place and authorized by the Owner. Each unit price shall include all work, materials and incidentals necessary to complete the Work required by the item.
2. The unit costs will be used to adjust the Contract Sum and shall include all direct and indirect costs, as noted below. The unit price work is above and beyond the work shown in the Contract Documents and the project work limits, however, during the course of the Work, the Owner may direct their incorporation as necessary. Payment for unit price items will be made on the basis of the quantities actually measured in place.

B. Types of allowances include the following:

1. Specialty allowances per Section 012100, Specialty Allowances
2. Unit Price Allowances:
   a. For purposes of this Information for Bid (IFB), a Unit Price Allowance has been developed which includes quantity-unit assumptions. The Contractor shall apply a unit cost to determine a total allowance for each Unit Price noted in the Unit Price Schedule. The Lump Sum total of the Unit Price Schedule is to be included in the Bid, Paragraph B, Section 00 12 50, Construction Bid Form.
   b. As noted in Paragraph 1.2, A above, the Contractor’s unit costs and actual measured quantities, will be charged to the Unit Price Allowance. Any adjustment to the Contract Sum due to a difference between the Unit Price Allowance and the actual used will be resolved as noted above, and in Section 01 29 00, Payment Procedures.

C. Related Requirements:

1. Division 01 Section 012100 "Specialty Allowance" for procedures for using the specialty allowances.
2. Division 01 Section 012600 "Contract Modification Procedures" for procedures for submitting and handling Change Orders.
3. Division 01 Section 012900 “Payment Procedures” for Application for Payment.
4. Division 01 Section 014000 "Quality Requirements" for general testing and inspecting requirements.

5. Division 01 Section 016000 “Product Requirements” for Product Options and Substitutions.
6. Division 31 Section 312500 “Erosion and Sediment Control.
7. Divisions 02 through 33 Sections for items of Work covered by allowances.

1.3 DEFINITIONS

A. Unit price is an amount proposed by the Bidders and stated on the Bid Form as a price per unit of measurement for materials, equipment, or services, or a portion of the Work, added to or deducted from the Contract Sum by appropriate modification, if the scope of Work or estimated quantities of Work required by the Contract Documents are increased or decreased.

B. Rock: Any material which cannot be removed by methods other than special rock excavation machinery, drilling, wedging and/or blasting shall be termed rock excavation. All other excavations shall be termed earth excavation. Should boulders be encountered, those in size up to 1/2 cubic yard shall be termed earth excavation.

1.4 ACTION SUBMITTALS

A. Submit proposals for Owner’s approval for purchase of products or systems included in allowances, in the form specified for Change Orders, as specified in Section 01 26 00, Contract Modification Procedures.

1.5 INFORMATIONAL SUBMITTALS

A. Submit invoices or delivery slips to show actual quantities of materials delivered to the site for use in fulfillment of each unit price allowance.

B. Submit time sheets and other documentation to show labor time and cost for installation of unit price allowance items that include installation as part of the allowance.

C. Coordinate and process submittals for allowance items in same manner as for other portions of the Work.

1.6 COORDINATION

1.7 Coordinate allowance items with other portions of the Work. Furnish templates as required to coordinate installation.

1.8 PROCEDURES

A. Unit Price Costs include: Cost of material, product or services to General Contractor and/or Subcontractor, less applicable trade discounts; all applicable direct and indirect costs; delivery to site; applicable fees and taxes, permit costs, warranty costs, bond costs, unemployment compensation, and insurance costs; testing and cleanup; overhead and profit; labor and installation; finishing; unloading, uncrating, handling, and storage; protection from elements and damage; submittals, engineering, and shop drawing requirements; supplementary or miscellaneous items, appurtenances and

devices, tools or equipment incidental to or necessary for a sound, secure and complete installation.

B. Use the Unit Prices only as directed by Owner and reviewed by Architect, for Owner's purposes and only by a proposal that indicate amounts to be charged to the unit price allowance.

C. Measurement and Payment: See individual Specification Sections for work that requires establishment of unit prices. Methods of measurement and payment for unit prices are specified in those Sections.

1. Quantities Specified:

a. Quantities indicated in the Construction Bid Form are for bidding and contract purposes only. Quantities and measurements supplied or placed in the Work and verified by the owner determine payment.
b. If the actual work requires more or fewer quantities than those quantities indicated, provide the required quantities at the unit sum/prices contracted.

2. Measurement of Quantities:

a. The calculations for determining the number of units of work, unless otherwise noted, shall be of actual units of measurement for the class of work, complete in place and accepted or omitted. No allowance for waste, loss, bulking factor, or damage will be made.
b. Measurement by devices:

1) Weigh scales: Inspected, tested and certified by the applicable State Weights and Measures department within the past year.
2) Platform scales: Of sufficient size and capacity to accommodate the conveying vehicle.
3) Metering devices: Inspected, tested and certified by the applicable State department within the past year

c. Measurement by weight: Handbook or scale weight.
d. Measurement by volume: Measured by cubic dimension using mean length, width and height or thickness.
e. Measurement by area: Measured by square dimension using mean length and width or radius.
f. Linear Measurement: Measured by linear dimension, at the item centerline or mean chord.
g. Hours
h. Numbers by individual items

3. Take all measurements and compute quantities. The Owner in coordination with the Agency Construction Manager will verify measurements and quantities.

D. Owner reserves the right to reject Contractor's measurement of work-in-place that involves use of established unit prices and to have this work measured, at Owner's expense, by an independent surveyor acceptable to Contractor. If found that the Contractor's measurement was unreasonably determined, the expense will revert to the Contractor.

1. If the unit prices are stated in the Contract Documents or subsequently agreed upon, and if the quantities originally contemplated increase or decrease by more

than twenty percent (20%), or if application of the agreed unit prices to the quantities of work proposed will cause substantial inequity to the Owner or the Contractor, the applicable unit prices shall be equitably adjusted.

E. List of Unit Prices: A schedule of unit prices is included in Part 3. Specification Sections referenced in the schedule contain requirements for materials described under each unit price.

F. Payment shall be made in accordance with Section 012900, “Payment Procedures”, and GENERAL CONDITIONS.

G. **AT PROJECT CLOSEOUT, CREDIT ALL UNUSED UNIT PRICE ALLOWANCES REMAINING BACK TO THE OWNER.**

H. General Contractor is advised that the proposed unit allowance prices given by him shall be subject to negotiations and revisions resulting in final prices that shall be mutually agreed upon and approved by the Owner.

I. Submit substantiation of scope of work, if any, claimed in proposal related to Unit Price Allowances.

J. Final payment for work governed by unit allowance prices will be made on the basis for the actual measurements and quantities, accepted by the Owner and Agency Construction Manager, and multiplied by the unit sum/price for work, which is incorporated in or made necessary by the work.

K. List of Unit Price Allowances: A schedule of Unit Price Allowances is included in Part 3.

L. **All unit prices shall apply equally to both additions and/or deductions.**

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine products covered by an allowance promptly on delivery for damage or defects. Return damaged or defective products to manufacturer for replacement.

3.2 PREPARATION

A. Coordinate materials and their installation for each allowance with related materials and installations to ensure that each allowance item is completely integrated and interfaced with related work.

3.3 SCHEDULE OF UNIT PRICES ALLOWANCES

A. In accordance with the General Conditions and Division 1, “Specialty Allowance”, or “Unit Price Allowances”, when Owner orders work to be performed beyond the work limits, as set forth in the Contract Documents, including materials, operations, and items

of work, etc., related to the unit price allowance items listed in the following schedule, the unit price allowance prices for these items shall prevail.

B. Accordingly, the Contractor is advised that the proposed Lump Sum Total Price given by him for the items listed below shall be subject to measurement negotiations and revisions resulting in Final prices which shall be mutually agreed upon.

C. The Owner and Architect shall determine that the work associated with the Unit Price Allowance items are applicable to this allowance and beyond the limits and requirements set forth within the Contract Documents.

D. All costs associated with the Unit Price Allowance items noted in the Schedule below shall be provided within the Construction Bid Form as required by Section 00 12 50, CONSTRUCTION BID FORM.

E. **Precedence of Allowances:**

1. For all work beyond the limits and requirements as set forth within the Contract Documents, the use of the Unit Price Allowance Items shall take precedence over the use of **Specialty Allowances 1 through 4,** as described in Division 01, Section "Specialty Allowance Schedule".

F. **UPA-1, Filling of Existing Openings in Gypsum Deck System in YDC Renovation Area of SUI Building, in Place:**

1. Provision, per square feet, for filling/patching of existing gypsum roof deck openings up to 6 inches deep, in accordance with structural detail shown in Structural Construction Drawings. **Quantity = 500 SF;**

G. **UPA-2, Rock Excavation and replacement with satisfactory soil material:**

1. Provision, per cubic yard, for open rock excavation, including rock excavation in trenches, caissons, and including disposal off site, and replacement with satisfactory fill material or engineered fill form off site, according to Section 312000 "Earth Moving"; **Quantity = 250 CY;**

H. **UPA-3, Removal of Unsuitable Material (backfill with structural fill material):**

1. Provision, per cubic yard, for removal of unsuitable material and replacement with structural fill for backfill adjacent to foundations, below paved areas, at utility excavations, behind walls and within 5 feet of building foundations in accordance with Section 312000, "Earth Moving"; **Quantity = 1200 CY;**

I. **UPA-4, Removal of Unsuitable Material (Backfill with Aggregate Fill Material):**

1. Provision, per cubic yard, for removal of unsuitable material within the building footprint below sub-grade elevation indicated on the drawings and replacement with aggregate fill material in accordance with the Geotechnical Report prepared by EBA Engineering, August, 2014. Allowance does not apply to backfill of voids created by the demolition work that are located below the proposed building foundations and slabs-on-grade, which shall be included in the bid price before the addition of the prices for the Specialty and Unit Price Allowances. **Quantity = 1500 CY;**

J. **UPA-5, Provision of Exit Signs, in Place:**

1. Provision of additional exit lights as specified in Section 265100, "Interior Lighting", and in accordance with Contract Documents; Need and location shall be as determined by Owner, and Architect, or State Fire Marshall, and shall include attachments, installation, and applicable required wiring. **Quantity = 10 Exit Signs and 100 LF wiring per sign;**

K. **UPA-6, Provision of Security Cameras:**

1. Provision of security camera types noted below, including installation, conduits, and wiring/cabling in accordance with Division 28, "Electronic Safety and Security". Camera types:

   a. Interior IP Fixed 0.3 Mega Pixel Camera; **Quantity = 5 Cameras and 150 LF wiring per camera**;
   b. Exterior IP Fixed 0.3 Mega Pixel Camera; **Quantity = 5 Cameras and 150 LF wiring per camera**;
   c. Exterior IP Fixed 1.3 Mega Pixel Camera; **Quantity = 1 Cameras and 150 LF wiring per camera**;
   d. Interior IP Fixed 1.3 Mega Pixel Camera; **Quantity = 2 Cameras and 150 LF wiring per camera**;
   e. Wall Mount IP, V-Cell Fixed Camera; **Quantity = 1 Cameras and 150 LF wiring per camera**;
   f. Corner Mount IP, V-Cell Fixed Camera; **Quantity = 3 Cameras and 150 LF wiring per camera**;

L. **UPA-7,** Patching of Existing Concrete Roof Slab where Roofing Material is Removed on SUI Building:

1. Provision, per square feet, of concrete leveling repair system for spalled, chipped damaged or deteriorated gypsum roof deck in accordance, including equipment, materials, placing, complete; **Quantity = 1200 SF**

M. **UPA-8, Replacement of Conduit & Wiring for Existing OSTC Fire Alarm System:**

1. Provision, per linear feet, of replacement conduit and wiring for the existing fire alarm system conduit and wiring, including equipment, materials, placing, complete; **Quantity = 5000 LF**

N. **UPA-9, Replacement of Duct Detectors for Existing OSTC Fire Alarm System:**

1. Provision, per duct detector, including new duct detector, wiring, and conduit to nearest addressable loop, programming of fire alarm panel, removal of existing control wiring for AHU shut down, reconnection to new duct detector and fire alarm panel, complete; **Quantity = 10 EA and 100 LF of wiring and conduit.**

O. **UPA-10,** Filling of Existing Small Unreinforced Openings (< .5 SF) in First Floor "Dox Plank" Type Slab System in YDC Renovation Area of SUI Building**:**

1. Provision, per square feet, of concrete fill, in accordance with structural detail shown in Structural Construction Drawings, including equipment, materials, placing, complete; **Quantity = 250 SF**

P. **UPA-11,** Filling of Existing Large Reinforced Openings (> .5 SF) in First Floor "Dox Plank" Type Slab System in YDC Renovation Area of SUI Building**:**

1. Provision, per square feet, of reinforced concrete fill, steel support framing, and metal deck, in accordance with structural detail shown in Structural Construction Drawings, including equipment, materials, placing, complete; **Quantity = 250 SF**

Q. **UPA-12,** Filling of Existing Openings in Second Floor Metal Deck and Concrete Slab System in YDC Renovation Area of SUI Building**:**

1. Provision, per square feet, of reinforced concrete fill, steel support framing, and metal deck, in accordance with structural detail shown in Structural Construction Drawings, including equipment, materials, placing, complete; **Quantity = 250 SF**

END OF SECTION 01 22 00

SECTION 01 25 00 - SUBSTITUTION PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes:

1. Administrative and procedural requirements for substitutions.
2. Contractor's options in selection of products

B. Related Requirements:

1. Section 016000 "Product Requirements" for requirements for submitting comparable product submittals for products by listed manufacturers.
2. Divisions 02 through 33 Sections for specific requirements and limitations for substitutions.

1.3 DEFINITIONS

A. Substitutions: Changes in products, materials, equipment, and methods of construction from those required by the Contract Documents and proposed by Contractor.

1. Substitutions for Cause: Changes proposed by Contractor that are required due to changed Project conditions, such as unavailability of product, regulatory changes, or unavailability of required warranty terms.
2. Substitutions for Convenience: Changes proposed by Contractor or Owner that are not required in order to meet other Project requirements but may offer advantage to Contractor or Owner.

1.4 ACTION SUBMITTALS

A. Substitution Requests: Submit three copies of each request for consideration. Identify product or fabrication or installation method to be replaced. Include Specification Section number and title and Drawing numbers and titles.

1. Substitution Request Form: Use CSI Form 13.1A.
2. Documentation: Show compliance with requirements for substitutions and the following, as applicable:

a. Statement indicating why specified product or fabrication or installation cannot be provided, if applicable.
b. Coordination information, including a list of changes or revisions needed to other parts of the Work and to construction performed by Owner and

separate contractors, that will be necessary to accommodate proposed substitution.

c. Detailed comparison of significant qualities of proposed substitution with those of the Work specified. Include annotated copy of applicable Specification Section. Significant qualities may include attributes such as performance, weight, size, durability, visual effect, sustainable design characteristics, warranties, and specific features and requirements indicated. Indicate deviations, if any, from the Work specified.
d. Product Data, including drawings and descriptions of products and fabrication and installation procedures.
e. LEED Material Submittal Processing Sheet, if required.
f. Samples, where applicable or requested.
g. Certificates and qualification data, where applicable or requested.
h. List of similar installations for completed projects with project names and addresses and names and addresses of architects and owners.
i. Material test reports from a qualified testing agency indicating and interpreting test results for compliance with requirements indicated.
j. Research reports evidencing compliance with building code in effect for Project, from ICC-ES.
k. Detailed comparison of Contractor's construction schedule using proposed substitution with products specified for the Work, including effect on the overall Contract Time. If specified product or method of construction cannot be provided within the Contract Time, include letter from manufacturer, on manufacturer's letterhead, stating date of receipt of purchase order, lack of availability, or delays in delivery.
l. Cost information, including a proposal of change, if any, in the Contract Sum.
m. Contractor's certification that proposed substitution complies with requirements in the Contract Documents except as indicated in substitution request, is compatible with related materials, and is appropriate for applications indicated.
n. Contractor's waiver of rights to additional payment or time that may subsequently become necessary because of failure of proposed substitution to produce indicated results.

3. Architect's Action: If necessary, Architect will request additional information or documentation for evaluation within seven days of receipt of a request for substitution. Architect will notify Contractor of acceptance or rejection of proposed substitution within 15 days of receipt of request, or seven days of receipt of additional information or documentation, whichever is later.

a. Forms of Acceptance: Change Order, Construction Change Directive, or Architect's Supplemental Instructions for minor changes in the Work.
b. Use product specified if Architect does not issue a decision on use of a proposed substitution within time allocated.

1.5 QUALITY ASSURANCE

A. Compatibility of Substitutions: Investigate and document compatibility of proposed substitution with related products and materials. Engage a qualified testing agency to perform compatibility tests recommended by manufacturers.

B. Verify the substitution does not impact LEED Credit criteria. If any material, process or other qualification of the substitution will impact the LEED credit or pre-requisite criteria,

then the "**LEED Material Submittal Processing Sheet"** as found in Section 01 35 00 shall be submitted.

1.6 PROCEDURES

A. Coordination: Revise or adjust affected work as necessary to integrate work of the approved substitutions.

PART 2 - PRODUCTS

2.1 SUBSTITUTIONS

A. Substitutions for Cause: Submit requests for substitution immediately on discovery of need for change, but not later than 15 days prior to time required for preparation and review of related submittals.

1. Conditions: Architect will consider Contractor's request for substitution when the following conditions are satisfied. If the following conditions are not satisfied, Architect will return requests without action, except to record noncompliance with these requirements:

a. Requested substitution is consistent with the Contract Documents and will produce indicated results.
b. Requested substitution provides sustainable design characteristics that specified product provided for compliance with LEED requirements.
c. Substitution request is fully documented and properly submitted.
d. Requested substitution will not adversely affect Contractor's construction schedule.
e. Requested substitution has received necessary approvals of authorities having jurisdiction.
f. Requested substitution is compatible with other portions of the Work.
g. Requested substitution has been coordinated with other portions of the Work.
h. Requested substitution provides specified warranty.
i. If requested substitution involves more than one contractor, requested substitution has been coordinated with other portions of the Work, is uniform and consistent, is compatible with other products, and is acceptable to all contractors involved.

B. Substitutions for Convenience: Architect will consider requests for substitution if received within 30 days after the Notice to Proceed. Requests received after that time may be considered or rejected at discretion of Architect.

1. Conditions: Architect will consider Contractor's request for substitution when the following conditions are satisfied. If the following conditions are not satisfied, Architect will return requests without action, except to record noncompliance with these requirements:

a. Requested substitution offers Owner a substantial advantage in cost, time, energy conservation, or other considerations, after deducting additional responsibilities Owner must assume. Owner's additional responsibilities may include compensation to Architect for redesign and evaluation

services, increased cost of other construction by Owner, and similar considerations.

b. Requested substitution does not require extensive revisions to the Contract Documents.
c. Requested substitution is consistent with the Contract Documents and will produce indicated results.
d. Requested substitution provides sustainable design characteristics that specified product provided for compliance with LEED requirements.
e. Substitution request is fully documented and properly submitted.
f. Requested substitution will not adversely affect Contractor's construction schedule.
g. Requested substitution has received necessary approvals of authorities having jurisdiction.
h. Requested substitution is compatible with other portions of the Work.
i. Requested substitution has been coordinated with other portions of the Work.
j. Requested substitution provides specified warranty.
k. If requested substitution involves more than one contractor, requested substitution has been coordinated with other portions of the Work, is uniform and consistent, is compatible with other products, and is acceptable to all contractors involved.

PART 3 - EXECUTION (Not Used)

END OF SECTION 01 25 00

SECTION 01 26 00 - CONTRACT MODIFICATION PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for handling and processing Contract modifications.

B. Related Requirements:

1. Section 012500 "Substitution Procedures" for administrative procedures for handling requests for substitutions made after the Contract award.

1.3 MINOR CHANGES IN THE WORK

A. Architect will issue supplemental instructions authorizing minor changes in the Work, not involving adjustment to the Contract Sum or the Contract Time, on AIA Document G710, "Architect's Supplemental Instructions."

1.4 SUBMITTALS

A. Submit name and address of Contractor’s representative authorized to receive and accept changes and responsible for informing others in Contractor's employ of changes to the Work at contract signing.

B. Change Order Request form will be provided by the Department of Public Safety and Correctional Services.

C. Procedure for submitting Change Order Request (COR) shall comply with requirements of this Section and Owner’s written instructions.

1.5 PROPOSAL REQUESTS

A. Owner-Initiated Proposal Requests: Owner or Architect will issue a detailed description of proposed changes in the Work that may require adjustment to the Contract Sum or the Contract Time as a Request for Proposal (RFP). If necessary, the description will include supplemental or revised Drawings and Specifications.

1. Requests for Proposal are not instructions either to stop work in progress or to execute the proposed change.
2. Within time specified in Request for Proposal but not greater than 15 days after receipt of Request for Proposal, submit a quotation in the form of a Change

Order Request estimating cost adjustments to the Contract Sum and the Contract Time necessary to execute the change.

a. Include a list of quantities of products required or eliminated and unit costs, with total amount of purchases and credits to be made. If requested, furnish survey data to substantiate quantities.
b. Indicate applicable taxes, delivery charges, equipment rental, and amounts of trade discounts.
c. Include costs of labor and supervision directly attributable to the change.
d. Include an updated Contractor's construction schedule that indicates the effect of the change and Time Impact Analysis, including, but not limited to, changes in activity duration, start and finish times, and activity relationship. Use available total float before requesting an extension of the Contract Time.
e. Quotation Form: Use forms acceptable to the Owner and Architect.

B. Contractor-Initiated Proposals: If latent or changed conditions require modifications to the Contract, Contractor shall issue a Notification of Change / Reservation of Right within 10 calendar days of the first instance of the discovery of condition or circumstance that necessitates the change, Failure to promptly reserve the right and/or propose may be cause for denial of request. Within 10 calendar days of the Notification of Change / Reservation of Right, Contractor shall submit a Change Order Request to Architect and Owner.

1. Include a statement outlining reasons for the change and the effect of the change on the Work. Provide a complete description of the proposed change. Indicate the effect of the proposed change on the Contract Sum and the Contract Time.
2. Include a list of quantities of products required or eliminated and unit costs, with total amount of purchases and credits to be made. If requested, furnish survey data to substantiate quantities.
3. Indicate applicable taxes, delivery charges, equipment rental, and amounts of trade discounts.
4. Include costs of labor and supervision directly attributable to the change.
5. Include an updated Contractor's construction schedule that indicates the effect of the change, including, but not limited to, changes in activity duration, start and finish times, and activity relationship. Use available total float before requesting an extension of the Contract Time.
6. Comply with requirements in Section 012500 "Substitution Procedures" if the proposed change requires substitution of one product or system for product or system specified.
7. Proposal Request Form: Use CSI Form 13.6A, "Change Order Request (Proposal)," with attachments CSI Form 13.6D, "Proposal Worksheet Summary," and Form 13.6C, "Proposal Worksheet Detail."
8. Indicate if the change does or does not impact the LEED rating, selected credits or any pre-requisite credit. If yes, then include a statement as to the issues, costs, and full impact of the change for the LEED rating.

1.6 ADMINISTRATIVE CHANGE ORDERS

A. Allowance Adjustment: See Section 012100 "Allowances" for administrative procedures for preparation of Change Order Proposal for adjusting the Contract Sum to reflect actual costs of allowances.

B. Unit-Price Adjustment: See Section 012200 "Unit Prices" for administrative procedures for preparation of Change Order Proposal for adjusting the Contract Sum to reflect measured scope of unit-price work.

1.7 CHANGE ORDER PROCEDURES

A. On Owner's approval of Contactor's Change Order Request, Architect will issue a Proposed Change Order for signature by the Contractor, and the Architect. The Proposed Change Order will then be forwarded to the Owner for conversion individually or incorporation as a group into a Change Order for modification of the contract. The Owner and Contractor will sign the Change Order.

B. Documentation of Change in Contract Sum/Price and Contract Time:

1. Maintain detailed records of work done. Provide full information required for evaluation of proposed changes, and to substantiate costs of changes in the Work.
2. Document each quotation for a change in cost or time with sufficient data to allow evaluation of the quotation.
3. Provide additional data to support computations:

    a. Quantities of products, labor, and equipment.
    b. Taxes, insurance and bonds.
    c. Overhead and profit
    d. Justification for any change in Contract Time.
    e. Credit for deletions from Contract, similarly documented.

4. Support each claim for additional costs, and for work done with additional information:

    a. Origin and date of claim.
    b. Dates and times work was performed, and by whom.
    c. Time records and wage rate paid
    d. Invoices and receipts for products, equipment, and subcontracts, similarly documented.

1.8 CONSTRUCTION CHANGE DIRECTIVE

A. Construction Change Directive: Owner through the Architect may issue a Construction Change Directive on AIA Document G714 or a similar form. Construction Change Directive instructs Contractor to proceed with a change in the Work, for subsequent inclusion in a Change Order. A Construction Change Directive may be used when it is in the best interest of the Owner to have the Contractor proceed with the work before a formal proposal can be negotiated.

1. Construction Change Directive contains a complete description of change in the Work. It also designates method to be followed to determine change in the Contract Sum or the Contract Time.

B. Documentation: Maintain detailed records on a time and material basis of work required by the Construction Change Directive.

1. After completion of change, submit an itemized account and supporting data necessary to substantiate cost and time adjustments to the Contract.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 01 26 00

SECTION 01 29 00 - PAYMENT PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements necessary to prepare and process Applications for Payment.

B. References: State of Maryland Department of Public Safety and Correctional Services Standard Owner-Contractor Agreement:

1. Contract Sum, amounts of Progress Payments, Retainages and time for Submittals.

C. Format: State of Maryland, Department of Public Safety and Correctional Services Application and Certification for Payment.

D. Related Requirements:

1. Section 012100 "Allowances" for procedural requirements governing the handling and processing of allowances.
2. Section 012200 "Unit Prices" for administrative requirements governing the use of unit prices.
3. Section 012600 "Contract Modification Procedures" for administrative procedures for handling changes to the Contract.
4. Section 013200 "Construction Progress Documentation" for administrative requirements governing the preparation and submittal of the Contractor's construction schedule.
5. Section 013510 "Sustainable Project Requirements, Paragraph 1.9 for Contractor’s material tracking responsibilities.
6. Section 015000 “Temporary Facilities And Controls” for Contractor service payments.

1.3 DEFINITIONS

A. Schedule of Values: A statement furnished by Contractor allocating portions of the Contract Sum to various portions of the Work and used as the basis for reviewing Contractor's Applications for Payment.

1.4 SCHEDULE OF VALUES

A. Coordination: Coordinate preparation of the schedule of values with preparation of Contractor's construction schedule.

1. Coordinate line items in the schedule of values with other required administrative forms and schedules, including the following:

    a. Application for Payment forms with continuation sheets.
    b. Submittal schedule.
    c. Items required to be indicated as separate activities in Contractor's construction schedule.

2. Submit the schedule of values to Architect at earliest possible date, but no later than 15 days before Notice-to-Proceed..

B. Format and Content: Use Project Manual table of contents as a guide to establish line items for the schedule of values. Provide at least one line item for each Specification Section.

1. Identification: Include the following Project identification on the schedule of values:

    a. Project name and location.
    b. Name of Architect.
    c. Architect's project number.
    d. Contractor's name and address.
    e. Date of submittal.

2. Arrange schedule of values consistent with format of Department of Public Safety and Correctional Services form for Application and Certificate for Payment.
3. Arrange the schedule of values in tabular form with separate columns to indicate the following for each item listed:

    a. Related Specification Section or Division.
    b. Description of the Work.
    c. Name of subcontractor.
    d. Name of manufacturer or fabricator.
    e. Name of supplier.
    f. Change Orders (numbers) that affect value.
    g. Dollar value of the following, as a percentage of the Contract Sum to nearest one-hundredth percent, adjusted to total 100 percent.

        1) Labor.
        2) Materials.
        3) Equipment.

4. Provide a breakdown of the Contract Sum in enough detail to facilitate continued evaluation of Applications for Payment and progress reports. Coordinate with Project Manual table of contents. Provide multiple line items for principal subcontract amounts in excess of five percent of the Contract Sum.

    a. Bond costs, if applicable
    b. General conditions line item(s)
    c. Division 1 cost breakdown as required
    d. Major portions of the work shall be broken down into labor and material line items for specific areas of the facility
    e. Stored material projections
    f. Warranties and manuals

g. A listing of approved and executed change orders to the contract, if any, in sequential order
h. Include separate line items under Contractor and principal subcontracts for LEED documentation and other Project closeout requirements in an amount totaling five percent of the Contract Sum and subcontract amount.

5. Round amounts to nearest whole dollar; total shall equal the Contract Sum.
6. Provide a separate line item in the schedule of values for each part of the Work where Applications for Payment may include materials or equipment purchased or fabricated and stored, but not yet installed.

   a. Differentiate between items stored on-site and items stored off-site. If required, include evidence of insurance.
   b. List taxes for stored items separately.

7. Provide separate line items in the schedule of values for initial cost of materials, for each subsequent stage of completion, and for total installed value of that part of the Work.
8. Allowances: Provide a separate line item in the schedule of values for each allowance. Show line-item value of unit-cost allowances, as a product of the unit cost, multiplied by measured quantity. Use information indicated in the Contract Documents to determine quantities.
9. Purchase Contracts: Provide a separate line item in the schedule of values for each purchase contract. Show line-item value of purchase contract. Indicate owner payments or deposits, if any, and balance to be paid by Contractor.
10. Each item in the schedule of values and Applications for Payment shall be complete. Include total cost and proportionate share of general overhead and profit for each item.

    a. Temporary facilities and other major cost items that are not direct cost of actual work-in-place may be shown either as separate line items in the schedule of values or distributed as general overhead expense, at Contractor's option.

11. Correlate line items in the Schedule of Values with other required administrative schedules and forms, including:

    a. Construction Managers construction schedule
    b. Application for payment form
    c. List of subcontractors with special designation and totals for MBE firms
    d. List of MBE sub-contractors and their percentage of subcontract
    e. Alternates
    f. Allowances
    g. List of products
    h. List of principal suppliers and fabricators
    i. Submittal

12. Schedule Updating: Update and resubmit the schedule of values before the next Applications for Payment when Change Orders or Construction Change Directives result in a change in the Contract Sum.
13. Schedule of value items shall have a direct and understandable relation to the project master construction CPM schedule, so as to allow the Contractor and Owner, in collaboration with the ACM, to produce a cost loaded CPM schedule for cash flow projects. The Schedule of Values shall be the basis for the Contractor’s application for payments.

14. The Owner shall have the right to require the Contractor to alter the value or add / delete categories listed on the schedule of values at any time for the following reasons:

    a. The schedule of values appears to be incorrect or unbalanced;
    b. A revision of the segregation of values is required due to the Contractor's revising the sequence of construction or assembly of building components which in turn invalidates the schedule of values;

15. The Contractor is required to correlate the documentation for payment of stored materials requested in the application for payment against the agreed upon breakdown of the schedule of values. The Owner reserves the right to not process the application for payment if this correlation has not been submitted in conjunction with the application.

1.5 APPLICATIONS FOR PAYMENT

A. Each Application for Payment following the initial Application for Payment shall be consistent with previous applications and payments as certified by Owner and Architect. Application for Payment will be paid for by Owner.

1. Initial Application for Payment, Application for Payment at time of Substantial Completion, and final Application for Payment involve additional requirements.

2. If the required LEED documentation during that payment period is not completed, the application for payment, at the discretion of the Owner, may not be processed until such LEED documentation or processes is properly completed and submitted.

B. Payment Application Times: The date for each progress payment is indicated in the Agreement between Owner and Contractor. The period of construction work covered by each Application for Payment is the period indicated in the Agreement.

1. Submit draft copy of Application for Payment seven days prior to due date for review by Owner, and Architect.

C. Application for Payment Forms: Use "State of Maryland Department of Public Safety and Correctional Services Application and Certification for Payment" or other form that is acceptable by the Department of Public Safety and Correctional Services as form for Applications for Payment.

D. Application Preparation: Complete every entry on form. Type required information on form using format required by DPSCS. Do not prepare by hand printing. Notarize and execute by a person authorized to sign legal documents on behalf of Contractor. Owner, or Architect will return incomplete applications without action.

1. Entries shall match data on the schedule of values and Contractor's construction schedule. Use updated schedules if revisions were made.
2. Include amounts for work completed following previous Application for Payment, whether or not payment has been received. Include only amounts for work completed at time of Application for Payment.
3. Include amounts of Change Orders and Construction Change Directives issued before last day of construction period covered by application.

4. Indicate separate amounts for work being carried out under Owner-requested project acceleration.

E. Stored Materials: Include in Application for Payment amounts applied for materials or equipment purchased or fabricated and stored, but not yet installed. Differentiate between items stored on-site and items stored off-site.

1. Provide certificate of insurance, evidence of transfer of title to Owner, and consent of surety to payment, for stored materials.
2. Provide supporting documentation that verifies amount requested, such as paid invoices. Match amount requested with amounts indicated on documentation; do not include overhead and profit on stored materials.
3. Provide summary documentation for stored materials indicating the following:

    a. Value of materials previously stored and remaining stored as of date of previous Applications for Payment.
    b. Value of previously stored materials put in place after date of previous Application for Payment and on or before date of current Application for Payment.
    c. Value of materials stored since date of previous Application for Payment and remaining stored as of date of current Application for Payment.

4. Off-site storage for materials must be in a licensed and bonded warehouse, stored in segregated and secure facilities and accessible by Owner for inspection and measurement of quantity or counting of units.
5. Should materials be stored off-site, Contractor shall provide for transportation or reimbursement of travel costs by Owner for inspection and measurement of quantity or counting of units.

F. Transmittal: Submit 4 signed and notarized original copies of each Application for Payment to Architect by a method ensuring receipt within 24 hours. One copy shall include waivers of lien and similar attachments if required.

1. Transmit each copy with a transmittal form listing attachments and recording appropriate information about application.

G. Substantiating Data

1. When Architect, and/or Owner requires substantiating information, submit data to Architect and/or Owner justifying line item amounts in question.
2. Provide one copy of data with cover letter for each copy of submittal.
3. Show application number and date, and line item number and description.
4. Waivers of Mechanic's Lien: With each Application for Payment, submit waivers of mechanic's lien from entities lawfully entitled to file a mechanic's lien arising out of the Contract and related to the Work covered by the payment.
5. Submit partial waivers on each item for amount requested in previous application, after deduction for retainage, on each item.
6. When an application shows completion of an item, submit conditional final or full waivers.
7. Owner reserves the right to designate which entities involved in the Work must submit waivers.
8. Waiver Forms: Submit executed waivers of lien on forms acceptable to Owner.
9. Waiver Forms: Submit executed waivers of lien on forms, acceptable to Owner.

H. Initial Application for Payment: Administrative actions and submittals that must precede or coincide with submittal of first Application for Payment include the following:

1. List of subcontractors.
2. Schedule of values.
3. Sustainable design submittal for project materials cost data.
4. Contractor's construction schedule (preliminary if not final).
5. Products list (preliminary if not final).
6. Sustainable design action plans.
7. Schedule of unit prices.
8. Submittal schedule (preliminary if not final).
9. List of Contractor's principal consultants.
10. Copies of building permits.
11. Copies of authorizations and licenses from authorities having jurisdiction for performance of the Work.
12. Initial progress report.
13. Report of preconstruction conference.
14. Certificates of insurance and insurance policies.
15. Performance and payment bonds.
16. Current Certificates of Insurance.

I. Application for Payment at Substantial Completion: After Architect issues the Certificate of Substantial Completion, submit an Application for Payment showing 100 percent completion for portion of the Work claimed as substantially complete.

1. Include documentation supporting claim that the Work is substantially complete and a statement showing an accounting of changes to the Contract Sum.
2. This application shall reflect Certificate(s) of Substantial Completion issued previously for Owner occupancy of designated portions of the Work.

J. Final Payment Application: After completing Project closeout requirements, submit final Application for Payment with releases and supporting documentation not previously submitted and accepted, including, but not limited, to the following:

1. Evidence of completion of Project closeout requirements.
2. Insurance certificates for products and completed operations where required and proof that taxes, fees, and similar obligations were paid.
3. Updated final statement, accounting for final changes to the Contract Sum.
4. AIA Document G706, "Contractor's Affidavit of Payment of Debts and Claims."
5. AIA Document G706A, "Contractor's Affidavit of Release of Liens."
6. AIA Document G707, "Consent of Surety to Final Payment."
7. Evidence that claims have been settled.
8. Final meter readings for utilities, a measured record of stored fuel, and similar data as of date of Substantial Completion or when Owner took possession of and assumed responsibility for corresponding elements of the Work.
9. Final liquidated damages settlement statement.
10. AN AMOUNT, AS DESIGNATED IN SECTION 01 77 00, WILL BE RETAINED UNTIL SUCH TIME AS THE CONTRACTOR’S LEED DOCUMENTATION AND PROCESSES ARE SUCCESSFULLY COMPLETED.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 01 29 00

SECTION 01 31 00 - PROJECT MANAGEMENT AND COORDINATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative provisions for coordinating construction operations on Project including, but not limited to, the following:

1. Informational submittals
2. General coordination procedures.
3. Coordination drawings.
4. Requests for Information (RFIs).
5. Project Web site.
6. Project meetings.

B. Related Requirements:
1. Section 013200 "Construction Progress Documentation" for preparing and submitting Contractor's construction schedule.
2. Section 017300 "Execution" for procedures for coordinating general installation and field-engineering services, including establishment of benchmarks and control points.
3. Section 017700 "Closeout Procedures" for coordinating closeout of the Contract.
4. Division 36 Sections for coordinating the Work with Owner's Commissioning Authority.
5. Section 013510 "Sustainable Project Requirements" for coordinating LEED submittals and credit verification information

1.3 DEFINITIONS

A. RFI: Request from Owner, Architect, or Contractor seeking information required by or clarifications of the Contract Documents.

1.4 INFORMATIONAL SUBMITTALS

A. Subcontract List: Prepare a written summary identifying individuals or firms proposed for each portion of the Work, including those who are to furnish products or equipment fabricated to a special design. Include the following information in tabular form:

1. Name, address, and telephone number of entity performing subcontract or supplying products.
2. Number and title of related Specification Section(s) covered by subcontract.
3. Drawing number and detail references, as appropriate, covered by subcontract.

B. Key Personnel Names: Within 15 days of NTP and prior to commencement of construction operations, submit a list of key personnel assignments, including superintendent and other personnel in attendance at Project site. Identify individuals and their duties and responsibilities; list addresses and telephone numbers, including home, office, and cellular telephone numbers and e-mail addresses. Provide names, addresses, and telephone numbers of individuals assigned as alternates in the absence of individuals assigned to Project.

1. Post copies of list in project meeting room, in temporary field office, on Project Web site, and by each temporary telephone. Keep list current at all times.

1.5 GENERAL COORDINATION PROCEDURES

A. Coordination: Coordinate construction operations included in different Sections of the Specifications to ensure efficient and orderly installation of each part of the Work. Coordinate construction operations, included in different Sections, which depend on each other for proper installation, connection, and operation.

1. Schedule construction operations in sequence required obtaining the best results where installation of one part of the Work depends on installation of other components, before or after its own installation.
2. Coordinate installation of different components to ensure maximum performance and accessibility for required maintenance, service, and repair.
3. Make adequate provisions to accommodate items scheduled for later installation.

B. Prepare memoranda for distribution to each party involved, outlining special procedures required for coordination. Include such items as required notices, reports, and list of attendees at meetings.

1. Prepare similar memoranda for Owner and separate contractors if coordination of their Work is required.

C. Administrative Procedures: Coordinate scheduling and timing of required administrative procedures with other construction activities and activities of other contractors to avoid conflicts and to ensure orderly progress of the Work. Such administrative activities include, but are not limited to, the following:

1. Preparation of Contractor's construction schedule.
2. Preparation of the schedule of values.
3. Installation and removal of temporary facilities and controls.
4. Delivery and processing of submittals.
5. Progress meetings.
6. Preinstallation conferences.
7. Project closeout activities.
8. Startup and adjustment of systems.

D. Conservation: Coordinate construction activities to ensure that operations are carried out with consideration given to conservation of energy, water, and materials. Coordinate use of temporary utilities to minimize waste.

1. Salvage materials and equipment involved in performance of, but not actually incorporated into, the Work. See other Sections for disposition of salvaged materials that are designated as Owner's property.

1.6 COORDINATION DRAWINGS

A. Coordination Drawings, General: Prepare coordination drawings according to requirements in individual Sections, and additionally where installation is not completely shown on Shop Drawings, where limited space availability necessitates coordination, or if coordination is required to facilitate integration of products and materials fabricated or installed by more than one entity.

1. Content: Project-specific information, drawn accurately to a scale large enough to indicate and resolve conflicts. Do not base coordination drawings on standard printed data. Include the following information, as applicable:

a. Use applicable Drawings as a basis for preparation of coordination drawings. Prepare sections, elevations, and details as needed to describe relationship of various systems and components.
b. Coordinate the addition of trade-specific information to the coordination drawings by multiple contractors in a sequence that best provides for coordination of the information and resolution of conflicts between installed components before submitting for review.
c. Indicate functional and spatial relationships of components of architectural, structural, civil, mechanical, and electrical systems.
d. Indicate space requirements for routine maintenance and for anticipated replacement of components during the life of the installation.
e. Show location and size of access doors required for access to concealed dampers, valves, and other controls.
f. Indicate required installation sequences.
g. Indicate dimensions shown on the Drawings. Specifically note dimensions that appear to be in conflict with submitted equipment and minimum clearance requirements. Provide alternate sketches to Architect indicating proposed resolution of such conflicts. Minor dimension changes and difficult installations will not be considered changes to the Contract.

B. Coordination Drawing Organization: Prepare and organize coordination drawings as digital data files according to the following requirements::

1. Floor Plans and Reflected Ceiling Plans: Show architectural and structural elements, and mechanical, plumbing, fire-protection, fire-alarm, and electrical Work. Show locations of visible ceiling-mounted devices relative to acoustical ceiling grid. Supplement plan drawings with section drawings where required to adequately represent the Work.
2. Space between ceiling systems and floor or roof deck above: Indicate subframing for support of ceiling and wall systems, mechanical and electrical equipment, and related Work. Locate components within ceiling space to accommodate layout of mechanical (HVAC and ductwork distribution), plumbing, fire-protection, fire alarm and detection, fire suppression, electrical, data, security electronics equipment, cable trays or conduits, and light fixtures indicated on Drawings. Indicate areas of conflict between all systems and components.
3. Mechanical Rooms: Provide coordination drawings for mechanical rooms showing plans and elevations of mechanical, plumbing, fire-protection, fire alarm, and electrical equipment.
4. Structural Penetrations: Indicate penetrations and openings required for all disciplines.
5. Slab Edge and Embedded Items: Indicate slab edge locations and sizes and locations of embedded items for metal fabrications, sleeves, anchor bolts, bearing plates, angles, door floor closers, slab depressions for floor finishes, curbs and housekeeping pads, and similar items.

6. Mechanical and Plumbing Work: Show the following:

    a. Sizes and bottom elevations of ductwork, piping, and conduit runs, including insulation, bracing, flanges, and support systems.
    b. Dimensions of major components, such as dampers, valves, diffusers, access doors, cleanouts and electrical distribution equipment.
    c. Fire-rated enclosures around ductwork.

7. Electrical Work: Show the following:

    a. Runs of vertical and horizontal conduit 1-1/4 inches (32 mm) in diameter and larger.
    b. Light fixture, exit light, emergency battery pack, smoke detector, and other fire-alarm locations.
    c. Panel board, switch board, switchgear, transformer, busway, generator, and motor control center locations.
    d. Location of pull boxes and junction boxes, dimensioned from column center lines.

8. Fire-Protection System: Show the following:

    a. Locations of standpipes, mains piping, branch lines, pipe drops, and sprinkler heads.

    b. Location of zone control assemblies and identification of zones.

    c. Drawings shall be signed and sealed by a licensed fire protection or licensed fire protection contractor.

9. Review: Architect will review coordination drawings to confirm that the Work is being coordinated, but not for the details of the coordination, which are Contractor's responsibility. If Architect determines that coordination drawings are not being prepared in sufficient scope or detail, or are otherwise deficient, Architect will so inform Contractor, who shall make changes as directed and resubmit.
10. Coordination Drawing Prints: Prepare coordination drawing prints according to requirements in Section 013300 "Submittal Procedures."

11. Architect will furnish Contractor one set of digital data files of Drawings for use in preparing coordination digital data files.

    a. Architect makes no representations as to the accuracy or completeness of digital data files as they relate to Drawings.
    b. Digital Data Software Program: Drawings are available in AutoCAD, DWG files.
    c. Contractor shall execute a data licensing agreement in the form of Agreement included in this Project Manual .
    d. See Section 013300 “Submittal Procedures” for requirements and costs for sharing of the drawing files with the Contractor.

1.7 REQUESTS FOR INFORMATION (RFIs)

A. General: Immediately on discovery of the need for additional information or interpretation of the Contract Documents, Contractor shall prepare and submit an RFI in

the form specified, and enter it into the electronic record using the Project Document Control Software provided by the Contractor and approved by the Owner.

1. Architect will return RFIs submitted to Architect by other entities controlled by Contractor with no response.
2. Coordinate and submit RFIs in a prompt manner so as to avoid delays in Contractor's work or work of subcontractors.

B. Content of the RFI: Include a detailed, legible description of item needing information or interpretation and the following:

1. Project name.
2. Project number.
3. Date.
4. Name of Contractor.
5. Name of Architect.
6. RFI number, numbered sequentially.
7. RFI subject.
8. Specification Section number and title and related paragraphs, as appropriate.
9. Drawing number and detail references, as appropriate.
10. Field dimensions and conditions, as appropriate.
11. Contractor's suggested resolution. If Contractor's suggested resolution impacts the Contract Time or the Contract Sum, Contractor shall state impact in the RFI.
12. Contractor's signature.
13. Attachments: Include sketches, descriptions, measurements, photos, Product Data, Shop Drawings, coordination drawings, and other information necessary to fully describe items needing interpretation.

    a. Include dimensions, thicknesses, structural grid references, and details of affected materials, assemblies, and attachments on attached sketches.

C. RFI Forms: Software-generated form with substantially the same content as indicated above, acceptable to Architect.

1. Attachments shall be electronic files in Adobe Acrobat PDF format.

D. PROPER RFI and Contractor Responsibility:

1. An RFI is PROPER when prepared by the Contractor in accordance with the requirements of this Section.
2. An RFI is a properly prepared written request by the Contractor’s Project Manager to the Architect for interpretation of the Contract Documents when the intent of the Contract Documents is not reasonably inferable and an interpretation of the Contract Documents is required from the Architect in advance of performing Work.
3. It is the responsibility of the Contractor to make a reasonable and detailed review of the Contract Documents prior to the issuance of an RFI to the Architect to determine that the requested interpretation is not readily inferable from the Contract Documents.
4. When Contractor believes an RFI may result in a change in the Contract Sum, Contract Time, or both, do not submit an RFI.

    a. The Contractor shall submit a Notification of Change or Change Order Request in accordance with Section 012600 Contract Modification Procedures.

E. IMPROPER RFI and Contractor Responsibility:

1. RFI not prepared in accordance with requirements of this Section.
2. RFI that requests an interpretation of the Contract Documents that could have been reasonably inferred from the Contract Documents.
3. An IMPROPER RFI may be is subject to reimbursable costs.
4. An IMPROPER RFI will be returned to the Contractor unanswered.

    a. Architect shall notify Owner and Contractor that RFI is Improper within five (5) calendar days following receipt.
    b. The Architect may request from the Owner fair and reasonable costs for the time and materials expended by the Architect for the time expended in processing and responding to an IMPROPER RFI.
    c. Owner may deduct fair and reasonable costs for the time and materials expended by the Architect in processing and responding to an IMPROPER RFI from the Contractor on a monthly basis at the time of the Contractor's Payment Application Request.

5. The reimbursable cost is not a penalty, but a fair reimbursement of the costs the Contractor should have otherwise expended in researching the Contract Documents for the requested interpretation.

    a. The decision of the Architect in the determination of an IMPROPER RFI is final and binding.

6. An RFI submitted for any of the following reasons is, but not limited to, an IMPROPER RFI and may be subject to reimbursable costs:

    a. When the Architect's response will result in the issuance of a Request For Proposal by the Architect.
    b. The Contractor must submit a Notification of Change or Change Order Request, not an RFI when:

        1) Request when response may result in adjustment of the Contract Sum.
        2) Request when response may result in adjustment of the Contract Duration.

    c. Request for substitution of product, performance or standard of quality.
    d. Request for a change to the Contract Documents to respond to job site conditions or activities.
    e. Request for a clarification of a required Submittal or Shop Drawing either before or after such Submittal review by the A/E.
    f. Handwritten RFI.
    g. Request approval of submittals.
    h. Request approval of substitutions.
    i. Request for approval of Contractor's means and methods.
    j. Request coordination of various materials and systems indicated on Contract Documents with field conditions and with each other.
    k. RFI prepared by a subcontractor or material supplier.
    l. RFI submitted directly to the Architect by a subcontractor or material supplier.

F. Architect's Action: Architect will review each RFI, determine action required, and respond. Allow a minimum of seven 7 working days for Architect's response for each

RFI. RFIs received by Architect after 1:00 p.m. will be considered as received the following working day.

1. Improper RFIs will be returned without action:
   a.

2. Architect response period will be extended beyond 7 calendar days by the Architect for the following:
   a. Where Architect's action includes a request for additional information, in which case Architect's time for response will date from time of receipt of additional information.
   b. Where required by complicated RFI.
   c. When more than one design and/or engineering discipline is required to provide a response.
   d. Concurrent review of multiple RFI's.
   e. Receipt of Improper RFI.
3. Architect will advise Contractor in writing within five calendar days following receipt of original RFI if RFI response period will exceed 7 calendar days.
4. Architect's action on RFIs that may result in a change to the Contract Time or the Contract Sum may be eligible for Contractor to submit Change Proposal according to Section 012600 "Contract Modification Procedures."

   a. If Contractor believes the RFI response warrants change in the Contract Time or the Contract Sum, notify Architect in writing within 10 days of receipt of the RFI response.

G. RFI Log: Prepare, maintain, and submit a tabular log of RFIs organized by the RFI number. Submit log biweekly . Software log with not less than the following:

1. Project name.
2. Name and address of Contractor.
3. Name and address of Architect.
4. RFI number including RFIs that were returned without action or withdrawn.
5. RFI description.
6. Date the RFI was submitted.
7. Date Architect's response was received.

H. On receipt of Architect's action, update the RFI log and immediately distribute the RFI response to affected parties. Review response and notify Architect within seven days if Contractor disagrees with response.

1. Identification of related Minor Change in the Work, Construction Change Directive, and Proposal Request, as appropriate.
2. Identification of related Field Order, Work Change Directive, and Proposal Request, as appropriate.

1.8 PROJECT WEB SITE

A. Provide, administer, and use Project Web site for purposes of hosting and managing project communication and documentation until Final Completion. Project Web site shall include the following functions:

1. Project directory.
2. Project correspondence.

3. Meeting minutes.
4. Contract modifications forms and logs.
5. RFI forms and logs.
6. Task and issue management.
7. Photo documentation.
8. Schedule and calendar management.
9. Submittals forms and logs.
10. Payment application forms.
11. Drawing and specification document hosting, viewing, and updating.
12. Online document collaboration.
13. Reminder and tracking functions.
14. Archiving functions.

B. Contractor, subcontractors, and other parties granted access by Contractor to Project Web site shall execute a data licensing agreement in the form of Agreement acceptable to Owner and Architect.

1.9 PROJECT MEETINGS

A. General: Architect will schedule and conduct meetings and conferences at Project site unless otherwise indicated.

1. Attendees: Inform participants and others involved, and individuals whose presence is required, of date and time of each meeting at least one week in advance of the meeting date. Notify Owner and Architect of scheduled meeting dates and times.
2. Agenda: Prepare the meeting agenda. Distribute the agenda to all invited attendees at least three business days prior to the scheduled meeting date.
3. Minutes: Entity responsible for conducting meeting will record significant discussions and agreements achieved. Distribute the meeting minutes to everyone concerned, including Owner and Architect, within three days of the meeting.

B. Preconstruction Conference: Architect will schedule and conduct a preconstruction conference before starting construction, at a time convenient to Owner and Architect, but no later than 15 days after execution of the Agreement.

1. Conduct the conference to review responsibilities and personnel assignments.
2. Attendees: State’s Project Manager, Owner's Commissioning Authority,State’s Construction Inspection and Testing Firm (SCITF); Architect, and their consultants; Contractor and its superintendent; Contractor’s Construction Inspection and Testing Firm (CCITF); Contractor’s Quality Control Manager and the Contractor’s Specialty Subcontractors; major subcontractors; suppliers; and other concerned parties shall attend the conference. Participants at the conference shall be familiar with Project and authorized to conclude matters relating to the Work.

    a. Contractor’s Specialty Subcontractors include:

        1) Electronic Security Contractor (ESC)
        2) Mechanical Contractor
        3) Fire Protection Contractor
        4) Plumbing Contractor
        5) Electrical Contractor

3. Agenda: Discuss items of significance that could affect progress, including the following:

    a. Contractor Action Items

        1) Submittal of executed bonds and insurance certificates.
        2) Execution of Owner-Contractor Agreement.
        3) Submittals:

            a) List of subcontractors
            b) List of major products
            c) Schedule of values
            d) Preliminary Construction Progress Schedule
            e) Preliminary shop drawing submittal schedule.

        4) Designation of responsible Contractor personnel with emergency contact telephone numbers (three persons minimum).
        5) Equipment and material lists as specified.
        6) Temporary utilities.
        7) Testing services and procedures for testing.
        8) Requirements for startup of equipment (Commissioning).

    b. Owner / Agency Construction Manager Action Items

        1) Procedures and processing of RFIs, field decisions, submittals, substitutions, Applications for Payment, proposal requests, change orders, and Contract closeout procedures.
        2) Computer software programs to be utilized and distribution of computer generated sample reports to be utilized during construction.
        3) Scheduling and Schedules.
        4) Documentation in support of payment.
        5) Distribution of Contract Documents.
        6) Use of premises by Owner and Contractor, including work restrictions and working hours.
        7) Construction facilities and controls provided by Owner.
        8) Site Security.
        9) Responsibility for temporary facilities and controls.
        10) Procedures for maintaining record documents.
        11) Requisitions for Payment.
        12) Submittal Procedures..
        13) Security.
        14) Safety and housekeeping procedures.
        15) Survey and building layout.
        16) Progress photos
        17) Inspection and acceptance of utility systems and equipment placed into service during construction period.
        18) Critical work sequencing and long-lead items.
        19) Designation of key personnel and their duties.
        20) Lines of communications.
        21) Procedures for testing and inspecting.

    c. Distribution of the Contract Documents.
        1) Procedures for moisture and mold control.
        2) Procedures for disruptions and shutdowns.
        3) Construction waste management and recycling.

4) Parking availability.
5) Office, work, and storage areas.
6) Equipment deliveries and priorities.
7) First aid.

4. Minutes: Within seven calendar days, Architect will record and distribute meeting minutes and issue to the Contractor for subsequent distribution to all attendees.

   a. At the Owner's discretion, the Owner may record the proceedings of the Preconstruction Conference in audio and/or video.
   b. If recorded, the recording is made part of the Owner's official documents of Construction Administration Phase of the project

C. Commissioning Meetings: See Division 01 Section "General Commissioning Requirements for procedures for Commissioning Scoping Meeting.

D. LEED Coordination Conferences: LEED Consultant will schedule and conduct a sustainable design coordination conference at a time convenient to Owner Architect, and Contractor.

1. Conferences: Attend three (3) Construction LEED Coordination Meetings sponsored by the architect and led by the LEED Consultant. To be scheduled within 30 days of the NTP by the architect and conducted during a regular construction progress meeting.
2. Attendees: Authorized representatives of Owner, Architect, and their consultants; Contractor and its superintendent and sustainable design coordinator; major subcontractors; suppliers; and other concerned parties shall attend the conference. Participants at the conference shall be familiar with Project and authorized to conclude matters relating to the Work.
3. Agenda: Discuss items of significance that could affect meeting sustainable design requirements, including the following:

   a. Sustainable design LEED Scorecard.
   b. General requirements for sustainable design-related procurement and documentation.
   c. Project closeout requirements and sustainable design certification procedures.
   d. Role of sustainable design coordinator.
   e. Construction waste management.
   f. Construction operations and sustainable design requirements and restrictions.
   g. Construction Indoor Air Quality Plan.
   h. Contractors LEED Materials Tracking Logs or Spreadsheets.

4. Minutes: LEED Consultant will record and distribute meeting minutes.

E. Preinstallation Conferences: When requested by the Owner or Architect, or required in individual Specification Sections, the Contractor shall advise the Owner's Project Manager and Architect in writing of a Preinstallation Conference a minimum of fourteen (14) days prior to the scheduled commencement date of the Work.

1. The Preinstallation Conference shall be conducted seven (7) calendar days prior to the scheduled commencement date of the Work.
2. Preinstallation Conferences shall be held at the Contractor's on-site conference room.

3. Contractor shall prepare agenda, conduct conference, record minutes, and distribute meeting minutes within five (5) calendar days following the conference but not latter than three (3) calendar days prior to Work commencement.
4. Attendees:

    a. Owner's Project Manager.
    b. Contractor's Project Manager.
    c. Contractor's Quality Control Manager.
    d. Contractor's Field Engineer.
    e. Architect and/or A/E Project Manager.
    f. Entities directly affecting, or affected by, work of the Section, including but not limited to:
    g. Subcontractor Superintendent.
    h. Material vendors.
    i. Trade installers.
    j. Contractor's Construction and Inspection Testing Firm (CCITF) Project Manager.
    k. State's Construction and Inspection Testing Firm (SCITF) Project Manager.

5.
6. Agenda: Review progress of other construction activities and preparations for the particular activity under consideration, including requirements for the following:

    a. Contract Documents.
    b. Options.
    c. Related RFIs.
    d. Related Change Orders.
    e. Purchases.
    f. Deliveries.
    g. Submittals.
    h. LEED requirements.
    i. Review of mockups.
    j. Possible conflicts.
    k. Compatibility requirements.
    l. Time schedules.
    m. Weather limitations.
    n. Manufacturer's written instructions.
    o. Warranty requirements.
    p. Compatibility of materials.
    q. Acceptability of substrates.
    r. Temporary facilities and controls.
    s. Space and access limitations.
    t. Regulations of authorities having jurisdiction.
    u. Testing and inspecting requirements.
    v. Installation procedures.
    w. Coordination with other work.
    x. Required performance results.
    y. Protection of adjacent work.
    z. Protection of construction and personnel.

7. Record significant conference discussions, agreements, and disagreements, including required corrective measures and actions.
8. Reporting: Distribute minutes of the meeting to each party present and to other parties requiring information.

9. Do not proceed with installation if the conference cannot be successfully concluded. Initiate whatever actions are necessary to resolve impediments to performance of the Work and reconvene the conference at earliest feasible date.

F. Project Closeout Conference: Owner's Project Manager will schedule a project closeout conference, at a time convenient to Owner and Architect, but no later than 90 days prior to the scheduled date of Substantial Completion.

1. Conduct the conference to review requirements and responsibilities related to Project closeout.
2. Attendees: Authorized representatives of Owner, Owner's Commissioning Authority, Architect, and their consultants; Contractor and its superintendent; major subcontractors; suppliers; and other concerned parties shall attend the meeting. Participants at the meeting shall be familiar with Project and authorized to conclude matters relating to the Work.
3. Agenda: Discuss items of significance that could affect or delay Project closeout, including the following:

    a. Preparation of record documents.
    b. Procedures required prior to inspection for Substantial Completion and for final inspection for acceptance.
    c. Submittal of written warranties.
    d. Requirements for completing LEED documentation.
    e. Requirements for preparing operations and maintenance data.
    f. Requirements for delivery of material samples, attic stock, and spare parts.
    g. Requirements for demonstration and training.
    h. Preparation of Contractor's punch list.
    i. Procedures for processing Applications for Payment at Substantial Completion and for final payment.
    j. Submittal procedures.
    k. Coordination of separate contracts.
    l. Owner's partial occupancy requirements.
    m. Installation of Owner's furniture, fixtures, and equipment.
    n. Responsibility for removing temporary facilities and controls.

4. Minutes: Entity conducting meeting will record and distribute meeting minutes.

G. Owner's Progress Meetings (OPM): Architect will conduct progress meetings at biweekly intervals.
1. Attendees: In addition to attendees listed below, each contractor, subcontractor, supplier, and other entity concerned with current progress or involved in planning, coordination, or performance of future activities shall be represented at these meetings. All participants at the meeting shall be familiar with Project and authorized to conclude matters relating to the Work.

    a. The Owner and the State's Project Manager.
    b. The Using Agency Representative for Maintenance.
    c. The Using Agency Representative for Operations and Security.
    d. The Project Architect and/or the A/E Project Manager.
    e. State's Construction and Inspection Testing Firm (SCITF) Project Manager.
    f. The Contractor's Project Manager.
    g. The Contractor's Quality Control Manager (QCM).
    h. The Contractor's Field Engineer.

i. The Contractor's Construction and Inspection Testing Firm (CCITF) Project Manager.
j. The Contractor's Specialty Contractor(s) Project Manager.
k. The Contractor's Mechanical, Plumbing, Electrical Project Managers, as required by the Construction Progress Schedule.
l. The Contractor's other Subcontractor Project Managers as required by the Owner or the Architect.

2. Agenda: Review and correct or approve minutes of previous progress meeting. Review other items of significance that could affect progress. Include topics for discussion as appropriate to status of Project.
    1) Contractor's Construction Schedule: Review of progress since the last meeting, including determination of whether each activity is on time, ahead of schedule, or behind schedule, in relation to Contractor's construction schedule. Review schedule for next period.
    2) Review of minutes of previous meeting.
    3) Review of Work progress and on-site security.
    4) Review of Contractor's Request for Interpretations.
    5) Review of Architect's Request for Interpretation Log.
    6) Field observations, problems, and decisions.
    7) Review of submittals schedule and status of submittals.
    8) Review of off-site fabrication and delivery schedules.
    9) Maintenance of progress schedule.
    10) Corrective measures to regain projected schedules.
    11) Executed and planned progress during succeeding work periods.
    12) Coordination of projected progress.
    13) Maintenance of quality and work standards.
    14) Effect of proposed changes on progress schedule and coordination.

    b. Review of present and future needs of each entity present, including the following:

        1) Interface requirements.
        2) Sequence of operations.
        3) Status of submittals.
        4) Status of LEED documentation.
        5) Deliveries.
        6) Off-site fabrication.
        7) Access.
        8) Site utilization.
        9) Temporary facilities and controls.
        10) Progress cleaning.
        11) Quality and work standards.
        12) Status of correction of deficient items.
        13) Field observations.
        14) Status of RFIs.
        15) Status of proposal requests.
        16) Pending changes.
        17) Status of Change Orders.
        18) Pending claims and disputes.
        19) Documentation of information for payment requests.

3. Contractor Prepared Documents for the Owner's Progress Meeting

a. The Contractor's Project Manager shall provide documents containing representative information that the Contractor shall prepare and distribute to the Procurement Officer and each attendee at the start of each Owner's Progress Meeting, they include:

1) Prior Owner's Progress Meeting Minutes prepared by the Architect.
2) Schedule Narrative

a) "Look-Ahead Narrative": Describe by week each trade contractor's past two-week effort and the scheduled next four-week effort.
b) Indicate in the Narrative where the past two or more week scheduled tasks were not accomplished and describe the means and methods the Contractor will utilize to recover schedule slippage.
c) The two-week back and four-week Look-Ahead Narrative shall be based on the CPM Construction Schedule.

3) Request for Interpretation (RFI) Log.
4) Approved Change Order (CO) Log.
5) Shop Drawing and Product Submittal Log.

a) Shop Drawing and Product Submittal Log shall be a status report generated by the specified construction scheduling software, no exception.
b) The Submittal Log shall identify each Submittal item by specification Section sequential number.
c) The Submittal Log shall include and identify the early start, late start, early finish and late finish for each Submittal item.

6) New Business

a) Contractor produced itemized list of issues to be discussed.
b) Number each item starting with the current OPM number followed by a period and the sequential item number. Example: 7.01, 7.02, etc.

4. Minutes: Within seven calendar days, Architect will record meeting minutes and issue to the Owner and Contractor for subsequent distribution to their personnel, subcontractors, or other attendees that are associated with the Owner or Contractor. The Architect will distribute to its consultants.

a. Schedule Updating: Revise Contractor's construction schedule after each progress meeting where revisions to the schedule have been made or recognized. Issue revised schedule concurrently with the report of each meeting.

H. Contractor's Coordination Meetings (CCM): Contractor will conduct coordination meetings at biweekly (every 2 weeks) intervals, off-cycle from the OPM.

1. Attendees: In addition to the attendees listed below, each contractor, subcontractor, supplier, and other entity concerned with current progress or involved in planning, coordination, or performance of future activities shall be represented at these meetings. All participants at the meeting shall be familiar with Project and authorized to conclude matters relating to the Work.

a. The Owner and the State's Project Manager.
b. The Using Agency Representative for Maintenance.
c. The Using Agency Representative for Operations and Security.
d. State's Construction and Inspection Testing Firm (SCITF) Project Manager.
e. The Contractor's Project Manager.
f. The Contractor's Quality Control Manager (QCM).
g. The Contractor's Field Engineer.
h. The Contractor's Construction and Inspection Testing Firm (CCITF) Project Manager.
i. The Contractor's Specialty Contractor(s) Project Manager.
j. The Contractor's Mechanical, Plumbing, Electrical Project Managers, as required by the Construction Progress Schedule.
k. The Contractor's other Subcontractor Project Managers as required by the Owner or the Architect.

2. Agenda: Review and correct or approve minutes of previous coordination meeting. Review other items of significance that could affect progress. Include topics for discussion as appropriate to status of Project.

a. Contractor's Construction Schedule: Review of progress since the last meeting. Including determine of whether each activity is on time, ahead of schedule, or behind schedule, in relation to Contractor's construction schedule.

1) Review schedule for next period.
2) Review of Work progress and on-site security.
3) Review of Contractor's Request for Interpretations
4) Review of Contractor's Request for Interpretation Log.
5) Field observations, problems, and decisions.
6) Identification of problems that impede planned progress.
7) Review of submittals schedule and status of submittals.
8) Review of off-site fabrication and delivery schedules.
9) Maintenance of progress schedule.
10) Corrective measures to regain projected schedules.
11) Planned progress during succeeding work period.
12) Coordination of projected progress.
13) Maintenance of quality and work standards.
14) Effect of proposed changes on progress schedule and coordination.
15) Other business relating to Work.

b. Review of present and future needs of each entity present, including the following:

1) Interface requirements.
2) Sequence of operations.
3) Status of submittals.
4) Status of LEED documentation.
5) Deliveries.
6) Off-site fabrication.
7) Access.
8) Site utilization.
9) Temporary facilities and controls.
10) Progress cleaning.
11) Quality and work standards.
12) Status of correction of deficient items.

13) Field observations.
14) Status of RFIs.
15) Status of proposal requests.
16) Pending changes.
17) Status of Change Orders.
18) Pending claims and disputes.
19) Documentation of information for payment requests.

3. Contractor Prepared Documents for Contractor's Progress Meeting:

a. The Contractor's Project Manager shall provide documents containing representative information that the General Contractor shall prepare for distribution at each CCM, they include:

1) Schedule Narrative:

a) A description of the work by trade or system.
b) Describe the past two-week's effort and the next four weeks effort.
c) Indicate where the four-week scheduled tasks were not accomplished and report on the methods to be employed by the Contractor to recover schedule slippage.

2) Look-ahead Schedule:

a) Two-week back and four-week Look-ahead Bar Chart schedule developed from the CPM Construction Schedule.

3) Request for Interpretation Log (RFI).
4) Approved Change Order Log (ACO).
5) Shop Drawing and Products Submittal Log.
6) New Business:

a) General Contractor produced itemized list of issues to be discussed.
b) Number each item starting with the current meeting number, followed by a period and the sequential item number.
c) Example: 7.01, 7.02, etc.

4. Minutes: Within seven calendar days, Contractor will record meeting minutes and issue to the Owner and Contractor for subsequent distribution to their personnel, subcontractors, or other attendees that are associated with the Owner or Contractor. One copy shall be distributed to the Architect.

5. Schedule Updating: Revise Contractor's construction schedule after each progress meeting where revisions to the schedule have been made or recognized. Issue revised schedule concurrently with the report of each meeting.

I. Site Coordination Meetings: In addition to the Owner's Progress Meetings and the Contractor Coordination Meetings, the Contractor may be required to attend the Owner's Site Coordination Meeting.

1. The Site Coordination Meeting will be held in the State's on-site conference room.

2. The Site Coordination Meeting will be held in the State's on-site conference room.
3. The Contractor will receive a minimum notification of twenty-four (24) hours in advance of an Owner's Site Coordination Meeting by the Owner.
4. The Owner will prepare the agenda, conduct and issue meeting minutes to the Contractor and Architect and all attendees within five (5) calendar days.
5. Agenda: Review and correct or approve minutes of the previous coordination meeting. Review other items of significance that could affect progress. Include topics for discussion as appropriate to status of Project.
    a. Review present and future needs of the Owner's reresentatives present, including the following:

        1) Owner interface requirements or issues – operational, security.
        2) Sequence of operations.
        3) Utility interruptions
        4) Owner provided scope coordination (FFE, IT, Telecom, Security, etc.), including scheduling, deliveries, integration with Contractor work;
        5) Access.
        6) Site utilization.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 01 31 00

SECTION 01 32 00 - CONSTRUCTION PROGRESS DOCUMENTATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for documenting the progress of construction during performance of the Work, including the following:

1. Startup construction schedule.
2. Contractor's construction schedule.
3. Construction schedule updating reports.
4. Daily construction reports.
5. Material location reports.
6. Site condition reports.
7. Special reports.

B. Related Requirements:
1. Section 01 33 00 "Submittal Procedures" for submitting schedules and reports.
2. Section 01 35 10 "Sustainable Project Requirements" for LEED coordination and activities.
3. Section 01 40 00 "Quality Requirements" for submitting a schedule of tests and inspections.
4. Section 01 50 60 "Indoor Air Quality during Construction" for the plan and scheduling activities.
5. Section 01 91 13 "General Commissioning Requirements" to establish schedule and coordination with project commissioning activities.

1.3 DEFINITIONS

A. Activity: A discrete part of a project that can be identified for planning, scheduling, monitoring, and controlling the construction project. Activities included in a construction schedule consume time and resources.

1. Critical Activity: An activity on the critical path that must start and finish on the planned early start and finish times.
2. Predecessor Activity: An activity that precedes another activity in the network.
3. Successor Activity: An activity that follows another activity in the network.

B. Cost Loading: The allocation of the schedule of values for the completion of an activity as scheduled. The sum of costs for all activities must equal the total Contract Sum unless otherwise approved by Architect.

C. CPM: Critical path method, which is a method of planning and scheduling a construction project where activities are arranged based on activity relationships.

Network calculations determine when activities can be performed and the critical path of Project.

D. Critical Path: The longest connected chain of interdependent activities through the network schedule that establishes the minimum overall Project duration and contains no float.

E. Event: The starting or ending point of an activity.

F. Float: The measure of leeway in starting and completing an activity.

1. Float time is not for the exclusive use or benefit of either Owner or Contractor, but is a jointly owned, expiring Project resource available to both parties as needed to meet schedule milestones and Contract completion date.
2. Free float is the amount of time an activity can be delayed without adversely affecting the early start of the successor activity.
3. Total float is the measure of leeway in starting or completing an activity without adversely affecting the planned Project completion date.

G. Fragnet: A partial or fragmentary network that breaks down activities into smaller activities for greater detail.

H. Major Area: A story of construction, a separate building, or a similar significant construction element.

I. Milestone: A key or critical point in time for reference or measurement.

J. Network Diagram: A graphic diagram of a network schedule, showing activities and activity relationships.

K. Resource Loading: The allocation of manpower and equipment necessary for the completion of an activity as scheduled.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For firms and persons specified in "Quality Assurance" Article and in-house scheduling personnel to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of architects and owners, and other information specified.

B. Submittals Schedule: Submit five (5) copies of schedule. Arrange the following information in a tabular format:

1. Scheduled date for first submittal.
2. Specification Section number and title.
3. Submittal category (action or informational).
4. Name of subcontractor.
5. Description of the Work covered.

C. Scheduled date for Architect's final release or approval.

D. Format for Submittals: Submit required submittals in the following format:

1. Working electronic copy of schedule file, where indicated.

2. PDF electronic file.

E. Startup construction schedule.

1. Approval of cost-loaded, startup construction schedule will not constitute approval of schedule of values for cost-loaded activities.

F. Startup Network Diagram: Of size required to display entire network for entire construction period. Show logic ties for activities.

G. Contractor's Construction Schedule: Initial schedule, of size required to display entire schedule for entire construction period.

1. Submit a working electronic copy of schedule, using software indicated, and labeled to comply with requirements for submittals. Include type of schedule (initial or updated) and date on label.

H. CPM Reports: Concurrent with CPM schedule, submit each of the following reports. Format for each activity in reports shall contain activity number, activity description, cost and resource loading, original duration, remaining duration, early start date, early finish date, late start date, late finish date, and total float in calendar days.

1. Activity Report: List of all activities sorted by activity number and then early start date, or actual start date if known.
2. Logic Report: List of preceding and succeeding activities for all activities, sorted in ascending order by activity number and then early start date, or actual start date if known.
3. Total Float Report: List of all activities sorted in ascending order of total float.
4. Earnings Report: Compilation of Contractor's total earnings from the Notice to Proceed until most recent Application for Payment.

I. Construction Schedule Updating Reports: Submit with Applications for Payment.

J. Daily Construction Reports: Submit two copies at daily intervals. One copy to the Owner and one to the Owner. In the event that the General Contractor’s daily report is not received by 10:00 am to the Owner, it will be understood that no daily report was filled out properly and legally.

K. Material Location Reports: Submit at weekly intervals.

L. Site Condition Reports: Submit at time of discovery of differing conditions.

M. Special Reports: Submit at time of unusual event.

1.5 QUALITY ASSURANCE

A. Scheduling Consultant Qualifications: An experienced specialist in CPM scheduling and reporting, with capability of producing CPM reports and diagrams within 24 hours of Architect's request.

B. Prescheduling Conference: Conduct conference at Project site to comply with requirements in Section 013100 "Project Management and Coordination." Review methods and procedures related to the preliminary construction schedule and Contractor's construction schedule, including, but not limited to, the following:

1. Review software limitations and content and format for reports.
2. Verify availability of qualified personnel needed to develop and update schedule.
3. Discuss constraints, including work stages, area separations, interim milestones, and partial Owner occupancy.
4. Review delivery dates for Owner-furnished products.
5. Review schedule for work of Owner's separate contracts.
6. Review submittal requirements and procedures.
7. Review time required for review of submittals and resubmittals.
8. Review requirements for tests and inspections by independent testing and inspecting agencies.
9. Review time required for Project closeout and Owner startup procedures, including commissioning activities.
10. Review and finalize list of construction activities to be included in schedule.
11. Review procedures for updating schedule.

1.6 COORDINATION

A. Coordinate preparation and processing of schedules and reports with performance of construction activities and with scheduling and reporting of separate contractors.

B. Coordinate Contractor's construction schedule with the schedule of values, list of subcontracts, submittal schedule, progress reports, payment requests, and other required schedules and reports.

1. Secure time commitments for performing critical elements of the Work from entities involved.
2. Coordinate each construction activity in the network with other activities and schedule them in proper sequence.

C. Auxiliary Services: Cooperate with photographer and provide auxiliary services requested, including access to Project site and use of temporary facilities including temporary lighting.

PART 2 - PRODUCTS

2.1 SUBMITTALS SCHEDULE AND REGISTER

A. General: Compile a complete and comprehensive schedule and register of all submittals required by the Contract Documents and organized by specification section number anticipated to be made during progress of the work. Submit three (3) copies of submittal schedule and register to Owner, and Architect for review and comment within 15 days after Notice to Proceed and before any items are submitted. Upon review and comment by the Owner, and Architect, this schedule will become part of the Contract and the Contractor will be required to adhere to the schedule except when specifically otherwise permitted.

1. Revisions: Revise and update the schedule on a monthly basis as necessary to reflect conditions and sequences. Promptly submit revised schedules to the Owner, and Architect for review and comment.
2. Post copies appropriately in the Project and Field offices.

B. The submittal register shall be submitted in a format as prescribed by and to the level of detail required by the Owner and Architect. Submittal Register shall include such items as:

1. List of each type of required submittal item such as but not limited to shop drawings, product data, certificates of compliance, samples, guarantees and warranties, test reports, operation and maintenance manuals.
2. Listing of subcontractors.
3. Insurance certificate.
4. Performance and payment bonds.
5. Permits.
6. Payment applications.
7. Schedule of Values.
8. List of products.
9. Project closeout submittals.
10. Submittal dates.
11. Related section number.
12. Name of contractor, trade or manufacturer

C. Prepare and submit a schedule of submittals, arranged in chronological order by dates required by construction schedule. Indicate items requiring submission for each section number as listed in the Specification Table of Contents, as applicable.

D. The Owner shall have the right to require the Contractor to add and/or delete items on the submittal register at any time.

E. Coordinate Submittals Schedule with list of subcontracts, the Schedule of Values, and Contractor's Construction Schedule.

1. Initial Submittal: Submit concurrently with preliminary network diagram. Include submittals required during the first 60 days of construction. List those required to maintain orderly progress of the Work and those required early because of long lead-time for manufacture or fabrication.

a. At Contractor's option, show submittals on the Preliminary Construction Schedule, instead of tabulating them separately.

2.2 Final Submittal: Submit concurrently with the first complete submittal of Contractor's Construction Schedule.

2.3 CONTRACTOR'S CONSTRUCTION SCHEDULE, GENERAL

A. Time Frame: Extend schedule from date established for the Notice to Proceed to date of final completion.

1. Contract completion date shall not be changed by submission of a schedule that shows an early completion date, unless specifically authorized by Change Order.

B. The Work shall be prosecuted at such rate as will ensure meeting the milestones, Pre-Commissioning Construction Completion, Substantial Completion and Final Completion dates specified in the Contract. By execution of the Contract, the Contractor represents that he has analyzed the Work required by the Contract Documents, the methods of construction involved, the availability of qualified labor, constraints on access and use

of the site, the work of other contractors, and his own capacity to perform the work and agrees that the specified times are reasonable and that they include a reasonable allowance for bad weather based on Section 7.06 of the GENERAL CONDITIONS.

C. The Owner shall initiate required meetings to coordinate and review the Schedule in accordance with Division 013100, Project Management and Coordination.

D. Following these meetings and within fourteen (14) days of award of contract, the Contractor shall prepare and submit the following information for the Owner's, and Architect's review and comment.

1. A time scaled and crew loaded construction schedule in tabular form covering all activities required to complete the work. Included in this tabular form will be quantities of work (i.e. CY, etc.) for a particular activity and the estimated manhours for each work activity. Activities shall be in a format and at a level of detail approved by the Owner. Durations for all activities shall be shown in working days (as opposed to calendar days). Activities shall include, at a minimum, preparation and approval of shop drawings, fabrication, delivery, installation, start-up, punch-out through to substantial completion. Show relationships between the Contractor's own work activities and those of other contractors, subcontractors and suppliers based on a thorough review of the Contract Documents.
2. Graphic diagrams indicating major work areas and the proposed direction or sequence of work within each work area and across the overall project.
3. Assumed crew sizes, equipment production rates and similar data used to arrive at durations and sequence.
4. The General Contractor will utilize the Master Schedule to plan, coordinate and manage the work of all contractors, subcontractors and suppliers. The Contractor is to complete all work in accordance with the Project Construction Plan.
5. The Contractor agrees that it shall have no claim against the Owner, and/or Architect for an increase in the contract price, nor for a payment or allowance of any kind for damage, loss or expense resulting from delays regardless of whether the delay is the basis for an extension of time. The General Contractor shall have no claim for damage, loss or expense resulting from reasonable interruptions to, or necessary suspension of work to enable other contractors to perform their work.

E. Updates and Modifications to the Construction Schedule:

1. If, during the progress of the work, the Contractor determines he will not be able to complete his work in the time allotted within the Project Master Schedule for Construction, he must notify the Owner within five (5) days. The Owner may, at its reasonable discretion, make adjustments in the Project Master Schedule for Construction to accommodate the General Contractor if timely written notification is given to the Owner, the adjustment is within the statement milestone dates, and the change will not adversely impact other contractors.
2. In advance of progress meetings as specified in Section 013100, “Project Management and Coordination”, Contractor shall prepare a short interval schedule covering a minimum 2-week period coordinating the detailed activities of his own forces and his subcontractors and suppliers. The short interval schedules shall be prepared in bar chart form and submitted 24 hours prior to the progress meetings.
3. On a weekly basis, and in accordance with the GENERAL CONDITIONS, the Contractor shall provide detailed information on progress to date, planned work,

and quantities and types of labor, materials, and equipment required to complete the work in accordance with contractual requirements.

F. Adjustment of Contractor's Effort:

1. Whenever it becomes apparent that an activity completion date may not be met (after adjustments are made as specified herein), the Contractor shall take the following actions at no additional cost to the Owner to place the work back on schedule. For each proposed contract modification and concurrent with its submission, prepare a time-impact analysis using fragnets to demonstrate the effect of the proposed change on the overall project schedule.

    a. Increase manpower or add equipment.
    b. Increase number of working hours per shift, shifts per working day, working days per week, or any combination thereof.
    c. Reschedule activities to achieve maximum practical concurrence.
    d. If the General Contractor fails to take the above actions, the Owner may take such actions as he may deem necessary to place the work back on schedule and shall deduct the cost of such actions from monies due or to become due to the Contractor.

G. Performance Periods, and Liquidation Damages:

1. Performance Period: The Contractor shall commence the Work upon receipt of a Notice(s)-To-Proceed, and shall achieve Milestone, Pre-Commissioning Construction Completion, Substantial Completion, and Final Completion dates in accordance with the Project Construction schedule.
2. Liquidated Damages: Liquidated Damages shall be in compliance with the GENERAL CONDITIONS and REQUEST FOR PROPOSAL, as well as, Section 011000, “Summary”.

H. Submit revised schedules with each Application for Payment, identifying changes since previous version. Indicate estimated percentage of completion for each item of Work at each submission.

I. Activities: Treat each story or separate area as a separate numbered activity for each main element of the Work. Comply with the following:

1. Activity Duration: Define activities so no activity is longer than 20 days, unless specifically allowed by Architect.
2. Procurement Activities: Include procurement process activities for the following long lead items and major items, requiring a cycle of more than 60 days, as separate activities in schedule. Procurement cycle activities include, but are not limited to, submittals, approvals, purchasing, fabrication, and delivery.
3. Submittal Review Time: Include review and resubmittal times indicated in Section 013300 "Submittal Procedures" in schedule. Coordinate submittal review times in Contractor's construction schedule with submittal schedule.
4. Startup and Testing Time: Include days for commissioning, startup and testing as approved by Owner.
5. Substantial Completion: Indicate completion in advance of date established for Substantial Completion, and allow time for Owner’s, Architect's administrative procedures necessary for certification of Substantial Completion.
6. LEED Testing: Schedule indoor air quality testing when no other construction activities are occurring. Perform testing in accordance with Section 01 50 60 Indoor Air Quality plan during Construction" and provide LEED related testing for

credit IEQc3.2. Schedule indoor air quality flushout in compliance with LEED credit IEQc3.2, OPTION 1, two week flush out prior to occupancy.

7. Punch List and Final Completion: Include not more than 45 days for completion of punch list items for Construction Completion, and not more than 30 days for completion of punch list items for Final Completion.

J. Constraints: Include constraints and work restrictions indicated in the Contract Documents and as follows in schedule, and show how the sequence of the Work is affected.
   1. Work under More Than One Contract: Include a separate activity for each contract.
   2. Work by Owner: Include a separate activity for each portion of the Work performed by Owner.
   3. Products Ordered in Advance: Include a separate activity for each product. Include delivery date indicated in Section 011000 "Summary." Delivery dates indicated stipulate the earliest possible delivery date.
   4. Owner-Furnished Products: Include a separate activity for each product. Include delivery date indicated in Section 011000 "Summary." Delivery dates indicated stipulate the earliest possible delivery date.
   5. Work Restrictions: Show the effect of the following items on the schedule:
      a. Uninterruptible services.
      b. Partial occupancy before Substantial Completion.
      c. Use of premises restrictions.
      d. Provisions for future construction.
      e. Seasonal variations.
      f. Environmental control.

   6. Work Stages: Indicate important stages of construction for each major portion of the Work, including, but not limited to, the following:

      a. Subcontract awards.
      b. Submittals.
      c. Purchases.
      d. Mockups.
      e. Fabrication.
      f. Sample testing.
      g. Deliveries.
      h. Installation.
      i. Tests and inspections.
      j. Adjusting.
      k. Curing.
      l. Building flush-out.
      m. Startup and placement into final use and operation.
      n. Commissioning.
      o. LEED testing.
      p. Placement into final use and operation.

   7. Construction Areas: Identify each major area of construction for each major portion of the Work. Indicate where each construction activity within a major area must be sequenced or integrated with other construction activities to provide for the following:

      a. Structural completion.
      b. Temporary enclosure and space conditioning.
      c. Permanent space enclosure.
      d. Completion of mechanical installation.

e. Completion of electrical installation.
f. Substantial Completion.

1. Other Constraints: . Show the effects of the following items on the schedule.

a. Interface with Security requirements of existing Corrections facilities where work is required.
b. Interruptions of existing Secure Corrections facilities as a result of work within the SUI Building.
c. Interruptions of existing Secure Corrections facilities as a result of work within the “D” Block.
d. Interruptions of existing Secure Corrections facilities as a result of work with Forrest Street.

2. Coordination with Baltimore City Department of Public Works, Baltimore City Department of Transportation, BGE, Verizon and other utility entities or agencies as required to perform work.

K. Milestones: Include milestones indicated in the Contract Documents in schedule, including, but not limited to, the Notice to Proceed, Substantial Completion, and Final Completion

L. Cost Correlation: Superimpose a cost correlation timeline, indicating planned and actual costs. On the line, show planned and actual dollar volume of the Work performed as of planned and actual dates used for preparation of payment requests.

1. See Division 01, Section "Payment Procedures" for cost reporting and payment procedures.

M. Upcoming Work Summary: Prepare summary report indicating activities scheduled to occur or commence prior to submittal of next schedule update. Summarize the following issues:

1. Unresolved issues.
2. Unanswered Requests for Information.
3. Rejected or unreturned submittals.
4. Notations on returned submittals.
5. Pending modifications affecting the Work and Contract Time.

N. Recovery Schedule: When periodic update indicates the Work is 14 or more calendar days behind the current approved schedule, submit a separate recovery schedule indicating means by which Contractor intends to regain compliance with the schedule. Indicate changes to working hours, working days, crew sizes, equipment required to achieve compliance, and date by which recovery will be accomplished.

O. Computer Scheduling Software: Prepare schedules using current version of a program that has been developed specifically to manage construction schedules.

1. Use latest version of Primavera Professional Project Management, or its complement in Prolog, or other Scheduling/Project Management program that is as capable and robust and approved by Owner . Purchase and provide the Owner one unopened copy of the Project Management Software system. The software program shall become the property of the Owner.

2.4 STARTUP CONSTRUCTION SCHEDULE

A. Bar-Chart Schedule: Submit startup, horizontal, bar-chart-type construction schedule within 14 days of date established for Execution of Contract.

B. Preparation: Indicate each significant construction activity separately. Identify first workday of each week with a continuous vertical line. Outline significant construction activities for first 90 days of construction. Include skeleton diagram for the remainder of the Work and a cash requirement prediction based on indicated activities.

2.5 CONTRACTOR'S CONSTRUCTION SCHEDULE (CPM SCHEDULE)

A. General: Prepare network diagrams using AON (activity-on-node) format.

B. Startup Network Diagram: Submit diagram within 30 days of date established for the Notice to Proceed . Outline significant construction activities for the first 90 days of construction. Include skeleton diagram for the remainder of the Work and a cash requirement prediction based on indicated activities.

C. CPM Schedule: Prepare Contractor's construction schedule using a cost- and resource-loaded, time-scaled CPM network analysis diagram for the Work.

1. Develop network diagram in sufficient time to submit CPM schedule so it can be accepted for use no later than 30 days after date established for the Notice to Proceed .

    a. Failure to include any work item required for performance of this Contract shall not excuse Contractor from completing all work within applicable completion dates, regardless of Architect's approval of the schedule.

2. Conduct educational workshops to train and inform key Project personnel, including subcontractors' personnel, in proper methods of providing data and using CPM schedule information.
3. Establish procedures for monitoring and updating CPM schedule and for reporting progress. Coordinate procedures with progress meeting and payment request dates.
4. Use "one workday" as the unit of time for individual activities. Indicate nonworking days and holidays incorporated into the schedule in order to coordinate with the Contract Time.

D. CPM Schedule Preparation: Prepare a list of all activities required to complete the Work. Using the startup network diagram, prepare a skeleton network to identify probable critical paths.

1. Activities: Indicate the estimated time duration, sequence requirements, and relationship of each activity in relation to other activities. Include estimated time frames for the following activities:

    a. Preparation and processing of submittals.
    b. Mobilization and demobilization.
    c. Purchase of materials.
    d. Delivery.
    e. Fabrication.
    f. Utility interruptions.

g. Installation.
h. Work by Owner that may affect or be affected by Contractor's activities.
i. Testing and commissioning.
j. Punch list and final completion.
k. Activities occurring following final completion.

2. Critical Path Activities: Identify critical path activities, including those for interim completion dates. Scheduled start and completion dates shall be consistent with Contract milestone dates.
3. Processing: Process data to produce output data on a computer-drawn, time-scaled network. Revise data, reorganize activity sequences, and reproduce as often as necessary to produce the CPM schedule within the limitations of the Contract Time.
4. Format: Mark the critical path. Locate the critical path near center of network; locate paths with most float near the edges.

    a. Subnetworks on separate sheets are permissible for activities clearly off the critical path.

5. Cost- and Resource-Loading of CPM Schedule: Assign cost to construction activities on the CPM schedule. Do not assign costs to submittal activities. Obtain Architect's approval prior to assigning costs to fabrication and delivery activities. Assign costs under main subcontracts for testing and commissioning activities, operation and maintenance manuals, punch list activities, Project record documents, LEED documentation, and demonstration and training (if applicable), in the percent amount of of the Contract Sum as determined in collaboration with the Owner and Architect .

    a. Each activity cost shall reflect an appropriate value subject to approval by Architect.
    b. Total cost assigned to activities shall equal the total Contract Sum.

E. Contract Modifications: For each proposed contract modification and concurrent with its submission, prepare a time-impact analysis using a network fragment to demonstrate the effect of the proposed change on the overall project schedule.

F. Initial Issue of Schedule: Prepare initial network diagram from a sorted activity list indicating straight "early start-total float." Identify critical activities. Prepare tabulated reports showing the following:

1. Contractor or subcontractor and the Work or activity.
2. Description of activity.
3. Main events of activity.
4. Immediate preceding and succeeding activities.
5. Early and late start dates.
6. Early and late finish dates.
7. Activity duration in workdays.
8. Total float or slack time.
9. Average size of workforce.
10. Dollar value of activity (coordinated with the schedule of values).

G. Schedule Updating: Concurrent with making revisions to schedule, prepare tabulated reports showing the following:

1. Identification of activities that have changed.

2. Changes in early and late start dates.
3. Changes in early and late finish dates.
4. Changes in activity durations in workdays.
5. Changes in the critical path.
6. Changes in total float or slack time.
7. Changes in the Contract Time.

H. Value Summaries: Prepare two cumulative value lists, sorted by finish dates.

1. In first list, tabulate activity number, early finish date, dollar value, and cumulative dollar value.
2. In second list, tabulate activity number, late finish date, dollar value, and cumulative dollar value.
3. In subsequent issues of both lists, substitute actual finish dates for activities completed as of list date.
4. Prepare list for ease of comparison with payment requests; coordinate timing with progress meetings.

    a. In both value summary lists, tabulate "actual percent complete" and "cumulative value completed" with total at bottom.
    b. Submit value summary printouts one week before each regularly scheduled progress meeting.

2.6 REPORTS

A. Daily Construction Reports: Prepare a daily construction report recording the following information concerning events at Project site:

1. Project Title.
2. Contract Number.
3. Date Report Represents.
4. Date Report was prepared.
5. Field Engineer’s Name.
6. Work start time and work stop time.
7. Contractor’s project administration manpower by description and total.
8. List of subcontractors at Project site.
9. List of separate contractors at Project site.
10. Manpower distribution and totals by category of trade and trade skill level.
11. Summary of manpower tasks scheduled and accomplished during the reporting period.
12. Equipment at Project site.
13. Material deliveries.
14. Official Weather Report from the nearest Federal Weather Reporting Station or as approved by the Architect. High and low temperatures and general weather conditions, including presence of rain or snow.
15. Accidents.
16. Meetings and significant decisions.
17. Unusual events (see special reports).
18. Stoppages, delays, shortages, and losses.
19. Meter readings and similar recordings.
20. Emergency procedures.
21. Orders and requests of authorities having jurisdiction.
22. Change Orders received and implemented.
23. Construction Change Directives received and implemented.
24. Services connected and disconnected.

25. Equipment or system tests and startups.
26. Partial completions and occupancies.
27. Substantial Completions authorized.

B. Material Location Reports: At weekly intervals, prepare and submit a comprehensive list of materials delivered to and stored at Project site. List shall be cumulative, showing materials previously reported plus items recently delivered. Include with list a statement of progress on and delivery dates for materials or items of equipment fabricated or stored away from Project site. Indicate the following categories for stored materials:

1. Material stored prior to previous report and remaining in storage.
2. Material stored prior to previous report and since removed from storage and installed.
3. Material stored following previous report and remaining in storage.

C. Site Condition Reports: Immediately on discovery of a difference between site conditions and the Contract Documents, prepare and submit a detailed report. Submit with a Request for Information. Include a detailed description of the differing conditions, together with recommendations for changing the Contract Documents.

2.7 SPECIAL REPORTS

A. General: Submit special reports directly to Owner within one day of an occurrence. Distribute copies of report to parties affected by the occurrence.

B. Reporting Unusual Events: When an event of an unusual and significant nature occurs at Project site, whether or not related directly to the Work, prepare and submit a special report. List chain of events, persons participating, response by Contractor's personnel, evaluation of results or effects, and similar pertinent information. Advise Owner in advance when these events are known or predictable.

PART 3 - EXECUTION

3.1 CONTRACTOR'S CONSTRUCTION SCHEDULE

A. Scheduling Consultant: Engage a consultant to provide planning, evaluation, and reporting using CPM scheduling.

1. In-House Option: Owner may waive the requirement to retain a consultant if Contractor employs skilled personnel with experience in CPM scheduling and reporting techniques. Submit qualifications.
2. Meetings: Scheduling consultant shall attend all meetings related to Project progress, alleged delays, and time impact.

B. Contractor's Construction Schedule Updating: At monthly intervals, update schedule to reflect actual construction progress and activities. Issue schedule one week before each regularly scheduled progress meeting.

1. Revise schedule immediately after each meeting or other activity where revisions have been recognized or made. Issue updated schedule concurrently with the report of each such meeting.

2. Include a report with updated schedule that indicates every change, including, but not limited to, changes in logic, durations, actual starts and finishes, and activity durations.
3. As the Work progresses, indicate final completion percentage for each activity.

C. Distribution: Distribute copies of approved schedule to Architect Owner, separate contractors, testing and inspecting agencies, and other parties identified by Contractor with a need-to-know schedule responsibility.

1. Post copies in Project meeting rooms and temporary field offices.
2. When revisions are made, distribute updated schedules to the same parties and post in the same locations. Delete parties from distribution when they have completed their assigned portion of the Work and are no longer involved in performance of construction activities.

END OF SECTION 01 32 00

SECTION 01 32 33 - PHOTOGRAPHIC DOCUMENTATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for the following:

1. Preconstruction photographs.
2. Periodic construction photographs.
3. Final completion construction photographs.

B. Related Requirements:
1. Section 013300 "Submittal Procedures" for submitting photographic documentation.
2. Section 017700 "Closeout Procedures" for submitting photographic documentation as project record documents at Project closeout.
3. Section 017900 "Demonstration and Training" for submitting video recordings of demonstration of equipment and training of Owner's personnel.

1.3 INFORMATIONAL SUBMITTALS

A. Monthly submissions: Photographs must be submitted with application payment
1. Submission shall include photographs taken at ground level, around the perimeter of the building and general interior construction images.

B. Final submission: Contractor shall submit 1 flash drive containing all construction photographs for both the Owner and the Architect.

1.4 INFORMATIONAL SUBMITTALS

A. Digital Photographs: Submit image files within three days of taking photographs.

1. Digital Camera: Minimum sensor resolution of 8 megapixels.
2. Format: Minimum 3200 by 2400 pixels, in unaltered original files, with same aspect ratio as the sensor, uncropped, date and time stamped, in folder named by date of photograph, accompanied by key plan file.
3. Identification: Provide the following information with each image description in file metadata tag:

a. Name of Project.
b. Name of Architect.
c. Name of Contractor.
d. Date photograph was taken.

e. Description of vantage point, indicating location, direction (by compass point), and elevation or story of construction.

B. Construction Photographs: Submit 2 sets of prints of each photographic view within seven days of taking photographs.

1. Format: 4 x 5 inch prints on single-weight, white paper; enclosed back to back in clear plastic sleeves that are punched for standard three-ring binder.
   a. Photographs printed on injet printers will be accepted
   b. Photographs shall be submitted in color

2. Identification: On back of each print, provide an applied label or rubber-stamped impression with the following information:

   a. Name of Project.
   b. Name of Owner and Architect.
   c. Name of Contractor.
   d. Date photograph was taken if not date stamped by camera.
   e. Description of vantage point, indicating location, direction and elevation or story of construction.
   f. Unique sequential identifier keyed to accompanying key plan.

1.5 QUALITY ASSURANCE

A. Web-Based Photographic Documentation Service Provider: A firm specializing in providing photographic equipment, Web-based software, and related services for construction projects, with record of providing satisfactory services similar to those required for Project.

1.6 USAGE RIGHTS

A. Obtain and transfer copyright usage rights from photographer to Owner for unlimited reproduction of photographic documentation.

B. Photographs shall be taken in such a way as to show progress of work but camera location, shall not view any existing corrections and security sensitive areas of adjacent DPSCS sites as determined by Owner.

PART 2 - PRODUCTS

2.1 PHOTOGRAPHIC MEDIA

A. Digital Images: Provide images in JPG format, produced by a digital camera with minimum sensor size of 8 megapixels, and at an image resolution of not less than 3200 by 2400 pixels.

PART 3 - EXECUTION

3.1 CONSTRUCTION PHOTOGRAPHS

A. General: Take photographs using the maximum range of depth of field, and that are in focus, to clearly show the Work. Photographs with blurry or out-of-focus areas will not be accepted.

1. Maintain key plan with each set of construction photographs that identifies each photographic location.

B. Digital Images: Submit digital images exactly as originally recorded in the digital camera, without alteration, manipulation, editing, or modifications using image-editing software.

1. Date and Time: Include date and time in file name for each image.
2. Field Office Images: Maintain one set of images accessible in the field office at Project site, available at all times for reference. Identify images in the same manner as those submitted to Architect.

C. Preconstruction Photographs: Before commencement of demolition, take photographs of Project site and surrounding properties, including existing items to remain during construction, from different vantage points, as directed by Architect.

1. Flag construction limits before taking construction photographs.
2. Take 30 photographs to show existing conditions adjacent to property before starting the Work.
3. Take 30 photographs of existing buildings either on or adjoining property to accurately record physical conditions at start of construction.
4. Take additional photographs as required to record settlement or cracking of adjacent structures, pavements, and improvements.

D. Periodic Construction Photographs: Take 30 photographs weekly, with timing each month adjusted to coincide with the cutoff date associated with each Application for Payment. Select vantage points to show status of construction and progress since last photographs were taken.

E. Architect or Owner-Directed Construction Photographs: From time to time, Architect or Owner will instruct photographer about number and frequency of photographs and general directions on vantage points. Select actual vantage points and take photographs to show the status of construction and progress since last photographs were taken.

F. Time-Lapse Sequence Construction Photographs: Take 20 photographs as indicated, to show status of construction and progress since last photographs were taken.

1. Frequency: Take photographs weekly, with timing each month adjusted to coincide with the cutoff date associated with each Application for Payment.
2. Vantage Points: Following suggestions by Architect or Owner and Contractor, photographer to select vantage points. During each of the following construction phases, take not less than two of the required shots from same vantage point each time to create a time-lapse sequence as follows:

a. Commencement of the Work, through completion of subgrade construction.
b. Above-grade structural framing.
c. Exterior building enclosure.
d. Interior Work, through date of Substantial Completion.

G. Final Completion Construction Photographs: Take 30 color photographs after date of Substantial Completion for submission as project record documents. Architect or Owner will inform photographer of desired vantage points.

1. Do not include date stamp.

END OF SECTION 01 32 33

SECTION 01 33 00 - SUBMITTAL PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes requirements for the submittal schedule and administrative and procedural requirements for submitting Shop Drawings, Product Data, Samples, and other submittals.

B. Related Requirements:

1. Section 012900 "Payment Procedures" for submitting Applications for Payment and the schedule of values.
2. Section 013200 "Construction Progress Documentation" for submitting schedules and reports, including Contractor's construction schedule.
3. Section 017823 "Operation and Maintenance Data" for submitting operation and maintenance manuals.
4. Section 017839 "Project Record Documents" for submitting record Drawings, record Specifications, and record Product Data.
5. Section 017900 "Demonstration and Training" for submitting video recordings of demonstration of equipment and training of Owner's personnel.
6. Section 103510 Sustainable Project Requirements

1.3 DEFINITIONS

A. Action Submittals: Written and graphic information and physical samples that require Architect's responsive action. Action submittals are those submittals indicated in individual Specification Sections as "action submittals."

B. Informational Submittals: Written and graphic information and physical samples that do not require Architect's responsive action. Submittals may be rejected for not complying with requirements. Informational submittals are those submittals indicated in individual Specification Sections as "informational submittals."

C. File Transfer Protocol (FTP): Communications protocol that enables transfer of files to and from another computer over a network and that serves as the basis for standard Internet protocols. An FTP site is a portion of a network located outside of network firewalls within which internal and external users are able to access files.

D. Portable Document Format (PDF): An open standard file format licensed by Adobe Systems used for representing documents in a device-independent and display resolution-independent fixed-layout document format.

E. SharePoint Site: A website for the use of the project where files, calendars and discussion can be shared.

1.4 ACTION SUBMITTALS

A. Submittal Schedule: Submit a schedule of submittals, arranged in chronological order by dates required by construction schedule. Include time required for review, ordering, manufacturing, fabrication, and delivery when establishing dates. Include additional time required for making corrections or revisions to submittals noted by Architect and additional time for handling and reviewing submittals required by those corrections.

1. Coordinate submittal schedule with list of subcontracts, the schedule of values, and Contractor's construction schedule.
2. Initial Submittal: Submit concurrently with startup construction schedule. Include submittals required during the first 60 days of construction. List those submittals required to maintain orderly progress of the Work and those required early because of long lead time for manufacture or fabrication.
3. Final Submittal: Submit concurrently with the first complete submittal of Contractor's construction schedule.

    a. Submit revised submittal schedule to reflect changes in current status and timing for submittals.

4. Format: Arrange the following information in a tabular format:

    a. Scheduled date for first submittal.
    b. Specification Section number and title.
    c. Submittal category: Action; informational.
    d. Name of subcontractor.
    e. Description of the Work covered.
    f. Scheduled date for Architect's final release or approval.
    g. Scheduled date of fabrication.
    h. Scheduled dates for purchasing.
    i. Scheduled dates for installation.
    j. Activity or event number.
    k. For LEED related submittals, complete the LEED Material Submittal Sheet attached to this section.

1.5 SUBMITTAL ADMINISTRATIVE REQUIREMENTS

A. Digital Data Files: Electronic digital data files of the Contract Drawings will be provided by Design Team for Contractor's use in preparing submittals.

1. The Design Team will furnish Contractor digital data drawing files of the Contract Drawings for use in preparing Shop Drawings and Project record drawings.

    a. The Design Team makes no representations as to the accuracy or completeness of digital data drawing files as they relate to the Contract Drawings.
    b. Digital Drawing Software Program: The Contract Drawings are available in <**Insert name and version of digital drawing software program and operating system**>.

c. Contractor shall execute a data licensing agreement with each individual Design Team members.

2. Individual Drawings Costs: Contractor to coordinate the cost of each electronic drawing file, paid in advance by certified check or money order payable to the associated Design Team member. Costs are for clearing specific proprietary information from drawing file.
   a. Architectural cost: **$300** per electronic drawing file.
   b. The following digital data drawing files will be furnished for each appropriate discipline:

      1) Floor plans.
      2) Reflected ceiling plans.

3. BIM model will not be provided by the A/E.

4. Contractor is responsible for coordinated directly with each Team Member to determine drawing costs and obtaining associated waiver form(s). DO NOT contact the Architect for requests not related to the Architect's documents.

B. Coordination: Coordinate preparation and processing of submittals with performance of construction activities.

1. Coordinate each submittal with fabrication, purchasing, testing, delivery, other submittals, and related activities that require sequential activity.
2. Submit all submittal items required for each Specification Section concurrently unless partial submittals for portions of the Work are indicated on approved submittal schedule.
3. Submit action submittals and informational submittals required by the same Specification Section as separate packages under separate transmittals.
4. Coordinate transmittal of different types of submittals for related parts of the Work so processing will not be delayed because of need to review submittals concurrently for coordination.

   a. Architect reserves the right to withhold action on a submittal requiring coordination with other submittals until related submittals are received.

C. Processing Time: Allow time for submittal review, including time for resubmittals, as follows. Time for review shall commence on Architect's receipt of submittal. No extension of the Contract Time will be authorized because of failure to transmit submittals enough in advance of the Work to permit processing, including resubmittals.

1. Initial Review: Allow 15 days for initial review of each submittal. Allow additional time if coordination with subsequent submittals is required. Architect will advise Contractor when a submittal being processed must be delayed for coordination.
2. Intermediate Review: If intermediate submittal is necessary, process it in same manner as initial submittal.
3. Resubmittal Review: Allow 15 days for review of each resubmittal.
4. Sequential Review: Where sequential review of submittals by Architect's consultants, Owner, or other parties is indicated, allow 21 days for initial review of each submittal.
5. Concurrent Consultant Review: Where the Contract Documents indicate that submittals may be transmitted simultaneously to Architect and to Architect's consultants, allow 15 days for review of each submittal. Submittal will be returned to before being returned to Contractor.

D. Paper Submittals: Place a permanent label or title block on each submittal item for identification.

1. Indicate name of firm or entity that prepared each submittal on label or title block.
2. Provide a space approximately 6 by 8 inches (150 by 200 mm) on label or beside title block to record Contractor's review and approval markings and action taken by Architect.
3. Include the following information for processing and recording action taken:

    a. Project name.
    b. Date.
    c. Name of Architect.
    d. Name of Contractor.
    e. Name of subcontractor.
    f. Name of supplier.
    g. Name of manufacturer.
    h. Submittal number or other unique identifier, including revision identifier.

        1) Submittal number shall use Specification Section number followed by a decimal point and then a sequential number (e.g., 061000.01). Resubmittals shall include an alphabetic suffix after another decimal point (e.g., 061000.01.A).

    i. Number and title of appropriate Specification Section.
    j. Drawing number and detail references, as appropriate.
    k. Location(s) where product is to be installed, as appropriate.
    l. Other necessary identification.

4. Additional Paper Copies: Unless additional copies are required for final submittal, and unless Architect observes noncompliance with provisions in the Contract Documents, initial submittal may serve as final submittal.

    a. Submit one copy of submittal to concurrent reviewer in addition to specified number of copies to Architect.

5. Transmittal for Paper Submittals: Assemble each submittal individually and appropriately for transmittal and handling. Transmit each submittal using a transmittal form. Architect will return without review submittals received from sources other than Contractor.

    a. Transmittal Form for Paper Submittals: Provide locations on form for the following information:

        1) Project name.
        2) Date.
        3) Destination (To:).
        4) Source (From:).
        5) Name and address of Architect.
        6) Name of Contractor.
        7) Name of firm or entity that prepared submittal.
        8) Names of subcontractor, manufacturer, and supplier.
        9) Category and type of submittal.
        10) Submittal purpose and description.
        11) Specification Section number and title.

12) Specification paragraph number or drawing designation and generic name for each of multiple items.
13) Drawing number and detail references, as appropriate.
14) Indication of full or partial submittal.
15) Transmittal number, numbered consecutively.
16) Submittal and transmittal distribution record.
17) Remarks.
18) Signature of transmitter.

E. Electronic Submittals: Identify and incorporate information in each electronic submittal file as follows:

1. Assemble complete submittal package into a single indexed file incorporating submittal requirements of a single Specification Section and transmittal form with links enabling navigation to each item.
2. Name file with submittal number or other unique identifier, including revision identifier.

a. File name shall use project identifier, Specification Section number and name, followed by a decimal point and then a sequential number (e.g., **YDC_04 20 00.01 – Unit Masonry**). Resubmittals shall include an alphabetic suffix after another decimal point (e.g., YDC_04 20 00.01.**A** – Unit Masonry).

1) Submitted files not following this format will not be reviewed.

3. Provide means for insertion to permanently record Contractor's review and approval markings and action taken by Architect.
4. Transmittal Form for Electronic Submittals: Use electronic PDFs containing the following information:

a. Project name.
b. Date.
c. Name and address of Architect.
d. Name of Contractor.
e. Name of firm or entity that prepared submittal.
f. Names of subcontractor, manufacturer, and supplier.
g. Category and type of submittal.
h. Submittal purpose and description.
i. Specification Section number and title.
j. Specification paragraph number or drawing designation and generic name for each of multiple items.
k. Drawing number and detail references, as appropriate.
l. Location(s) where product is to be installed, as appropriate.
m. Related physical samples submitted directly.
n. Indication of full or partial submittal.
o. Transmittal number, numbered consecutively.
p. Submittal and transmittal distribution record.
q. Other necessary identification.
r. Remarks.

F. Options: Identify options requiring selection by Architect.

G. Deviations and Additional Information: On an attached separate sheet, prepared on Contractor's letterhead, record relevant information, requests for data, revisions other than those requested by Architect on previous submittals, and deviations from

requirements in the Contract Documents, including minor variations and limitations. Include same identification information as related submittal.

H. Resubmittals: Make resubmittals in same form and number of copies as initial submittal.

1. Note date and content of previous submittal.
2. Note date and content of revision in label or title block and clearly indicate extent of revision.
3. Resubmit submittals until they are marked with approval notation from Architect's action stamp.

I. Distribution: Furnish copies of final submittals to manufacturers, subcontractors, suppliers, fabricators, installers, authorities having jurisdiction, and others as necessary for performance of construction activities. Show distribution on transmittal forms.

J. Use for Construction: Retain complete copies of submittals on Project site. Use only final action submittals that are marked with approval notation from Architect's action stamp.

PART 2 - PRODUCTS

2.1 SUBMITTAL PROCEDURES

A. General Submittal Procedure Requirements: Prepare and submit submittals required by individual Specification Sections. Types of submittals are indicated in individual Specification Sections.

1. Post electronic submittals as PDF electronic files directly to [**Project Web site**] [**Architect's FTP site**] specifically established for Project.

    a. Architect will return annotated file. Annotate and retain one copy of file as an electronic Project record document file.

2. Submit electronic submittals via email as PDF electronic files.

    a. Architect will return annotated file. Annotate and retain one copy of file as an electronic Project record document file.

3. Submit electronic submittals as **ONE** PDF file for each specification section. Submittals submitted as individual files for each submission element will be rejected.
4. Action Submittals: Submit electronic copies of each submittal unless otherwise indicated.
5. Informational Submittals: Submit electronic copies of each submittal unless otherwise indicated. Architect will not return copies.
6. Certificates and Certifications Submittals: Provide a statement that includes signature of entity responsible for preparing certification. Certificates and certifications shall be signed by an officer or other individual authorized to sign documents on behalf of that entity.

    a. Provide a digital signature with digital certificate on electronically submitted certificates and certifications where indicated.

b. Provide a notarized statement on original paper copy certificates and certifications where indicated.

B. Product Data: Collect information into a single submittal for each element of construction and type of product or equipment.

1. If information must be specially prepared for submittal because standard published data are not suitable for use, submit as Shop Drawings, not as Product Data.
2. Mark each copy of each submittal to show which products and options are applicable.
3. Include the following information, as applicable:

a. Manufacturer's catalog cuts.
b. Manufacturer's product specifications.
c. Standard color charts.
d. Statement of compliance with specified referenced standards.
e. Testing by recognized testing agency.
f. Application of testing agency labels and seals.
g. Notation of coordination requirements.
h. Availability and delivery time information.

4. For equipment, include the following in addition to the above, as applicable:

a. Wiring diagrams showing factory-installed wiring.
b. Printed performance curves.
c. Operational range diagrams.
d. Clearances required to other construction, if not indicated on accompanying Shop Drawings.

5. Submit Product Data before or concurrent with Samples.
6. Submit Product Data in the following format:

a. PDF electronic file.

C. Shop Drawings: Prepare Project-specific information, drawn accurately to scale. Do not base Shop Drawings on reproductions of the Contract Documents or standard printed data.

1. Preparation: Fully illustrate requirements in the Contract Documents. Include the following information, as applicable:

a. Identification of products.
b. Schedules.
c. Compliance with specified standards.
d. Notation of coordination requirements.
e. Notation of dimensions established by field measurement.
f. Relationship and attachment to adjoining construction clearly indicated.
g. Seal and signature of professional engineer if specified.

2. Sheet Size: Except for templates, patterns, and similar full-size drawings, submit Shop Drawings on sheets at least 11 by 17 inches, but no larger than 30 by 42 inches.
3. Submit Shop Drawings in the following format:
a. PDF electronic file.

b. If requested by the Architect, The Contractor to provide Five opaque (bond) copies of each submittal. Architect will return 3 copies.

c. Prepare Shop Drawings in the following format: Same digital data software program, version, and operating system as the original Drawings.
d. Refer to Section 013100 "Project Management and Coordination" for requirements for coordination drawings.

D. Samples: Submit Samples for review of kind, color, pattern, and texture for a check of these characteristics with other elements and for a comparison of these characteristics between submittal and actual component as delivered and installed.

1. Transmit Samples that contain multiple, related components such as accessories together in one submittal package.
2. Identification: Attach label on unexposed side of Samples that includes the following:

a. Generic description of Sample.
b. Product name and name of manufacturer.
c. Sample source.
d. Number and title of applicable Specification Section.
e. Specification paragraph number and generic name of each item.

3. Disposition: Maintain sets of approved Samples at Project site, available for quality-control comparisons throughout the course of construction activity. Sample sets may be used to determine final acceptance of construction associated with each set.

a. Samples that may be incorporated into the Work are indicated in individual Specification Sections. Such Samples must be in an undamaged condition at time of use.
b. Samples not incorporated into the Work, or otherwise designated as Owner's property, are the property of Contractor.

4. Samples for Verification: Submit full-size units or Samples of size indicated, prepared from same material to be used for the Work, cured and finished in manner specified, and physically identical with material or product proposed for use, and that show full range of color and texture variations expected. Samples include, but are not limited to, the following: partial sections of manufactured or fabricated components; small cuts or containers of materials; complete units of repetitively used materials; swatches showing color, texture, and pattern; color range sets; and components used for independent testing and inspection.

a. Number of Samples: Submit Four sets of Samples. Architect will retain two Sample sets; remainder will be returned. Mark up and retain one returned Sample set as a project record sample.

1) Submit a single Sample where assembly details, workmanship, fabrication techniques, connections, operation, and other similar characteristics are to be demonstrated.

5. Electronic submittals of manufacturer’s color samples and color charts will not be reviewed. Only physical samples and manufacture’s original color charts will be reviewed. Delays of submitting hard copies will result in addition review time.

E. Product Schedule: As required in individual Specification Sections, prepare a written summary indicating types of products required for the Work and their intended location. Include the following information in tabular form:

1. Type of product. Include unique identifier for each product indicated in the Contract Documents or assigned by Contractor if none is indicated.
2. Manufacturer and product name, and model number if applicable.
3. Number and name of room or space.
4. Location within room or space.
5. Submit product schedule in the following format:

    a. PDF electronic file.

F. Coordination Drawing Submittals: Comply with requirements specified in Section 013100 "Project Management and Coordination."

G. Contractor's Construction Schedule: Comply with requirements specified in Section 013200 "Construction Progress Documentation."

H. Application for Payment and Schedule of Values: Comply with requirements specified in Section 012900 "Payment Procedures."

I. Test and Inspection Reports and Schedule of Tests and Inspections Submittals: Comply with requirements specified in Section 014000 "Quality Requirements."

J. Closeout Submittals and Maintenance Material Submittals: Comply with requirements specified in Section 017700 "Closeout Procedures."

K. Maintenance Data: Comply with requirements specified in Section 017823 "Operation and Maintenance Data."

L. Sustainable Design Submittals: Comply with requirements specified in Section 013510 Sustainable Project Requirements - LEED v2009 for New Construction and Major Renovations."

M. Qualification Data: Prepare written information that demonstrates capabilities and experience of firm or person. Include lists of completed projects with project names and addresses, contact information of architects and owners, and other information specified.

N. Welding Certificates: Prepare written certification that welding procedures and personnel comply with requirements in the Contract Documents. Submit record of Welding Procedure Specification and Procedure Qualification Record on AWS forms. Include names of firms and personnel certified.

O. Installer Certificates: Submit written statements on manufacturer's letterhead certifying that Installer complies with requirements in the Contract Documents and, where required, is authorized by manufacturer for this specific Project.

P. Manufacturer Certificates: Submit written statements on manufacturer's letterhead certifying that manufacturer complies with requirements in the Contract Documents. Include evidence of manufacturing experience where required.

Q. Product Certificates: Submit written statements on manufacturer's letterhead certifying that product complies with requirements in the Contract Documents.

R. Material Certificates: Submit written statements on manufacturer's letterhead certifying that material complies with requirements in the Contract Documents.

S. Material Test Reports: Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting test results of material for compliance with requirements in the Contract Documents.

T. Product Test Reports: Submit written reports indicating that current product produced by manufacturer complies with requirements in the Contract Documents. Base reports on evaluation of tests performed by manufacturer and witnessed by a qualified testing agency, or on comprehensive tests performed by a qualified testing agency.

U. Research Reports: Submit written evidence, from a model code organization acceptable to authorities having jurisdiction, that product complies with building code in effect for Project. Include the following information:

1. Name of evaluation organization.
2. Date of evaluation.
3. Time period when report is in effect.
4. Product and manufacturers' names.
5. Description of product.
6. Test procedures and results.
7. Limitations of use.

V. Preconstruction Test Reports: Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting results of tests performed before installation of product, for compliance with performance requirements in the Contract Documents.

W. Compatibility Test Reports: Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting results of compatibility tests performed before installation of product. Include written recommendations for primers and substrate preparation needed for adhesion.

X. Field Test Reports: Submit written reports indicating and interpreting results of field tests performed either during installation of product or after product is installed in its final location, for compliance with requirements in the Contract Documents.

Y. Design Data: Prepare and submit written and graphic information, including, but not limited to, performance and design criteria, list of applicable codes and regulations, and calculations. Include list of assumptions and other performance and design criteria and a summary of loads. Include load diagrams if applicable. Provide name and version of software, if any, used for calculations. Include page numbers.

2.2 DELEGATED-DESIGN SERVICES

A. Performance and Design Criteria: Where professional design services or certifications by a design professional are specifically required of Contractor by the Contract Documents, provide products and systems complying with specific performance and design criteria indicated.

1. If criteria indicated are not sufficient to perform services or certification required, submit a written request for additional information to Architect.

B. Delegated-Design Services Certification: In addition to Shop Drawings, Product Data, and other required submittals, submit digitally signed PDF electronic files copies of certificate, signed and sealed by the responsible design professional licensed in the State Of Maryland, for each product and system specifically assigned to Contractor to be designed or certified by a design professional.

1. Indicate that products and systems comply with performance and design criteria in the Contract Documents. Include list of codes, loads, and other factors used in performing these services.

PART 3 - EXECUTION

3.1 CONTRACTOR'S REVIEW

A. Action and Informational Submittals: Review each submittal and check for coordination with other Work of the Contract and for compliance with the Contract Documents. Note corrections and field dimensions. Mark with approval stamp before submitting to Architect.

B. Project Closeout and Maintenance Material Submittals: See requirements in Section 017700 "Closeout Procedures."

C. Approval Stamp: Stamp each submittal with a uniform, approval stamp. Include Project name and location, submittal number, Specification Section title and number, name of reviewer, date of Contractor's approval, and statement certifying that submittal has been reviewed, checked, and approved for compliance with the Contract Documents.

3.2 ARCHITECT'S ACTION

A. Action Submittals: Architect will review each submittal, make marks to indicate corrections or revisions required, and return it. Architect will stamp each submittal with an action stamp and will mark stamp appropriately to indicate action.

B. Informational Submittals: Architect will review each submittal and will not return it, or will return it if it does not comply with requirements. Architect will forward each submittal to appropriate party.

C. Partial submittals prepared for a portion of the Work will be reviewed when use of partial submittals has received prior approval from Architect.

D. Incomplete submittals are unacceptable, will be considered nonresponsive, and will be returned for resubmittal without review.

E. Submittals not required by the Contract Documents may be returned by the Architect without action.

END OF SECTION 01 33 00

SECTION 01 35 10 - SUSTAINABLE PROJECT REQUIREMENTS

PART 1 GENERAL

1.1 SUMMARY

A. Section includes:

1. US Green Building Council
2. References
3. Sustainability Consultant
4. Sustainable Project Requirements
5. Overall Environmental Requirements
6. Environmental requirements implementation
7. Submittals
8. Quality Assurance
9. Qualifications
10. Pre-Construction meeting
11. Construction worker training program
12. Prohibited materials.

B. Related Sections:

1. Section 01 3300 – Submittal procedures
2. Section 01 5060 – Indoor air quality during construction
3. Section 01 7419 – construction waste management and disposal
4. Section 01 9113 – General Commissioning nRequirements
5. Individual specification sections for additional product requirements.

C. Inclusion of information or requirements for any activity, material, component, or assembly in this Section does not supersede or invalidate information or requirements for the same found in any other Section. In case of any conflicts or omissions, the Architect will resolve the issue.

D. Related documents

1. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Divisions 01 Specification Sections, apply to this Section.

E. Summary

1. Section includes general requirements and procedures for compliance with certain USGBC LEED prerequisites and credits needed for Project to obtain a minimum LEED Silver certification based on USGBC's "LEED 2009 for New Construction & Major Renovations."

2. Other LEED prerequisites and credits needed to obtain LEED certification depend on product selections and may not be specifically identified as LEED requirements. Compliance with requirements needed to obtain LEED prerequisites and credits may be used as one criterion to evaluate substitution requests and comparable product requests.

3. Additional LEED prerequisites and credits needed to obtain the indicated LEED certification depend on Architect's design and other aspects of Project that are not part of the Work of the Contract.

4. A copy of the LEED Project checklist is attached at the end of this Section for information only.

5. Specific requirements for LEED are included in greater detail in other Sections.

1.2 US GREEN BUILDING COUNCIL

A. LEED® – an acronym for the phrase 'Leadership in Energy and Environmental Design' – is a registered trademark of the U.S. Green Building Council (USGBC), and is used here by permission. The LEED green building certification program is the nationally accepted benchmark for the design, construction and operation of high performance green buildings.

B. The USGBC is a 501(c)(3) non-profit that developed the LEED Green Building Rating System.

1.3 DEFINITIONS & REFERENCES

A. Chain-of-Custody Certificates: Certificates signed by manufacturers certifying that wood used to make products was obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship." Certificates shall include evidence that manufacturer is certified for chain of custody by an FSC-accredited certification body.

B. Regional Materials: Materials that have been extracted, harvested, or recovered, as well as manufactured, within 500 miles (800 km) of Project site. If only a fraction of a product or material is extracted/harvested/recovered and manufactured locally, then only that percentage (by weight) shall contribute to the regional value.

C. Recycled Content: The recycled content value of a material assembly shall be determined by weight. The recycled fraction of the assembly is then multiplied by the cost of assembly to determine the recycled content value.

1. "Post-consumer" material is defined as waste material generated by households or by commercial, industrial, and institutional facilities in their role as end users of the product, which can no longer be used for its intended purpose.

2. "Pre-consumer" material is defined as material diverted from the waste stream during the manufacturing process. Excluded is reutilization of materials such as rework, regrind, or scrap generated in a process and capable of being reclaimed within the same process that generated it.

D. US Green Building Council:

1. LEED Reference Guide for Green Building Design and Construction, Version 3.0 (2009), along with all errata and addenda released by the US Green Building Council on their website, www.usgbc.org,on or before 12 November 2014.

E. Other:

1. All publications included by reference in the SUMMARY OF REFERENCED STANDARDS sections and RESOURCES sections of all Credit Sections applicable to this Project, found in the LEED Reference Guide for Green Building Design and Construction, 2009 Edition, along with all errata and addenda released by the US Green Building Council on their website, www.usgbc.org ,on or before 12 NOVEMBER 2014.

1.4 SUSTAINABILITY CONSULTANT

A. The Sustainability Consultant for the Project is:

Kim Schaefer, AIA, LEED AP
TerraLogos: eco architecture, p.c.
2901 East Baltimore Street, Suite 300
Baltimore, MD 21224
www.terralogos.com
Kims@terralogos.com
410.276.8519

In association with:
Peter Doo, FAIA, LEED Fellow
Doo Consulting, Inc
531 Piccadilly Rd
Baltimore, MD 21204
www.dooconsulting.net

B. See References for additional information.

1.5 SUSTAINABLE PROJECT REQUIREMENTS

A. LEED CERTIFICATION

1. The Owner has registered the Project with the U.S. Green Building Council (USGBC) in the LEED program. This Project is required to achieve a LEED Silver Rating under the LEED New Construction v2009 program, which requires that a minimum of 50 points shall be earned by the Project.
2. 59 (fifty-nine) LEED credit points are currently selected by the project team to earn a Silver LEED rating. Contractor is directly responsible for achieving 20 to 22 of these credit points. Contractor is directly responsible for achieving two pre-requisite credits. (SSp1 & EAp1)
3. Contractor is directly responsible for providing and/or updating LEED project information monthly throughout the course of the project as part of the regular on-site progress meetings. The following information shall be reported in the designated field progress meetings
4. LEED Updates – discuss any issues that may impact the LEED credits, as you go through each of the items listed below. For this project I recommend reviewing this material at each Construction Progress meeting and sending TL an update of the forms once a month.
5. Material Tracking Logs updated for credit MRc4, 5, & 7; IEQc4
6. Review of Construction Waste Demolition Tracking Log and progress
7. Update on IAQ Plan and measures, report any infractions, include photograph
8. Update on Commissioning Activities and schedule, training activities
9. Schedule or construction activities that may impact LEED credits

10. Attach copy of updated LEED Tracking Logs.
11. Portions of the LEED Scorecard and Design Credit submittals are not complete. The Contractor is to comply with all LEED credits marked “Yes” AND “Maybe”, with final and the most current credit selections and responsibilities being recorded in the project’s SmartSheet LEED Scorecard. Per item no.B.3, the contractor shall be granted access to the Smartsheet online scorecard and task list.

B. LEED SCORECARD

1. Refer to the Project LEED Scorecard included in this section for specific credits to be achieved, design intention, and construction practices to be followed throughout the course of the project.
2. The Contractor shall comply with all requirements for each LEED Credit listed in the Project LEED Scorecard in accordance with USGBC guiding documents. See paragraph 1.3 REFERENCES, above.
3. Contractor shall be granted access to the Sustainability Consultant’s Smartsheet online scorecard and task list. Contractor shall notify the Sustainability Consultant within 10 days of the Notice to Proceed date that they have access to the Smartsheet project LEED Scorecard
4. The Contractor shall have primary responsibility for LEED compliance and documentation for all credit line items marked with a ’GC’ (which stands for General Contractor) in the column labeled ‘BIC’ in the project’s Smartsheet LEED Scorecard.

C. CONTRACTOR LEED DOCUMENTATION RESPONSIBILITIES

1. The Sustainability Consultant shall make available to the Contractor, access to the following:

   a. SMART SHEET ACCESS, Contractor Guidelines for meeting credit requirements, and the LEED Online account. The Name and contact information for the Contractor’s LEED coordinator shall be provided, to the Architect and Sustainability Consultant within 30 days of the notice to proceed.

2. The Contractor shall maintain on site, the LEED credit records, tracking logs, submittals, LEED related progress notes and any other documentation required to successfully complete the LEED application throughout the project in a 3-ring binder with electronic file backup.
3. Payment Retainage: In accordance with Section 01 78 39, retainage shall be imposed until Contractor has submitted all required LEED documentation.
4. The Contractor shall fully complete and sign-off on the LEED-Online Credit Template, form or other required documentation for each credit Contractor is directly responsible for.
5. All such requisite documentation and back-up for each credit Contractor is directly responsible for is subject to review and approval by the Sustainability Consultant. Upon any such direction by the Sustainability Consultant, Contractor shall revise and resubmit documentation until found acceptable by the Sustainability Consultant.
6. See References for more information.
7. See Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL and Section 01 50 60 – CONSTRUCTION INDOOR AIR QUALITY.

D. LEED®

1. The intention of the LEED Rating system is to design, build and operate energy efficient, water-conserving, healthy buildings that minimize their impact on the natural resource base and limit disruption to their physical site.
2. The ultimate certification of the building is solely at the discretion of the U.S. Green Building Council (USGBC). While every effort will be made to satisfy the requirements and provide the necessary documentation for a LEED Rating, the work executed or the LEED documentation provided is not a guarantee of certification. Certification is strictly based upon review by the USGBC via the LEED ONLINE (LOV3) system available at https://www.leedonline.com.

1.6 OVERALL ENVIRONMENTAL REQUIREMENTS

A. Notify the Owner and Architect if conflicts arise between performance of the work and environmental goals before ordering material or executing the work.

B. This specification is not intended to limit alternative means of achieving these requirements. Suggestions and input from the Contractor for implementing these requirements are encouraged. A team approach is encouraged.

1.7 ENVIRONMENTAL REQUIREMENTS PARAGRAPHS

A. Many Specifications Sections include an Environmental Requirements paragraph, which does include specific LEED credit references. These specific LEED credit references identify LEED requirements and Contractor responsibilities related to the particular Specification Section.

B. These specific LEED credit references constitute neither a comprehensive nor exclusive list of all possible LEED requirements and Contractor responsibilities for that Specifications section, and shall not be so construed.

C. The Contractor is responsible for fulfilling all general project environmental requirements as well as all LEED construction-related requirements.

D. Contractor shall not be absolved of any such general project environmental requirement or LEED construction-related requirement due to any omission thereof in any specific section or sections of these Specifications.

1.8 ADMINISTRATIVE REQUIREMENTS

A. Respond to questions and requests from Architect and the USGBC regarding LEED credits that are the responsibility of the Contractor, that depend on product selection or product qualities, or that depend on Contractor's procedures until the USGBC has made its determination on the project's LEED certification application. Document responses as informational submittals.

1.9 ACTION SUBMITTALS

A. General: Submit additional LEED submittals required by other Specification Sections.

1. LEED submittals are in addition to other submittals. If submitted item is identical to that submitted to comply with other requirements, submit duplicate copies as a separate submittal to verify compliance with indicated LEED requirements.
2. LEED Documentation Submittals:

    a. Credit EAc 5: Product data and wiring diagrams for sensors and data collection system used to provide continuous metering of building energy-

consumption performance over a period of time of not less than one year of postconstruction occupancy.

b. Credit MR 2: Comply with Section 017419 "Construction Waste Management and Disposal."

c. Credit MR 4: Product data and certification letter from product manufacturers indicating percentages by weight of post-consumer and pre-consumer recycled content for products having recycled content. Include statement indicating material cost for each product having recycled content.

d. Credit MR 5: Product data for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

e. Credit MR 7: Product data and chain-of-custody certificates for products containing certified wood. Include statement indicating cost for each certified wood product.

f. Credit IEQ 3.1:
   i) Construction indoor-air-quality management plan.
   ii) Product data for temporary filtration media.
   iii) Product data for filtration media used during occupancy.
   iv) Construction Documentation: Six photographs at three different times during the construction period, along with a brief description of the SMACNA approach employed, documenting implementation of the indoor-air-quality management measures, such as protection of ducts and on-site stored or installed absorptive materials.

g. Credit IEQc3.2:
   v.) Signed statement describing the building air flush-out procedures including the dates when flush-out was begun and completed and statement that filtration media was replaced after flush-out.

   vi.) Product data for filtration media used during flush-out and during occupancy.

   vii.) Report from testing and inspecting agency indicating results of indoor-air-quality testing and documentation showing compliance with indoor-air-quality testing procedures and requirements.

h. Credit IEQ 4.1: Product data for adhesives and sealants used inside the weatherproofing system indicating VOC content of each product used.

i.) Credit IEQ 4.2: Product data for paints and coatings used inside the weatherproofing system indicating VOC content of each product used.

ii.) Credit IEQ 4.4: Product data for products containing composite wood or agrifiber products or wood glues indicating that they do not contain urea-formaldehyde resin.

3. INFORMATIONAL SUBMITTALS
   1. Qualification Data: For LEED coordinator.
   2. Project Materials Cost Data: Provide statement indicating total cost for materials used for Project. Costs exclude labor, overhead, and profit. Include breakout of costs for the following categories of items:
      a. Furniture.
      b. Plumbing.
      c. Mechanical.
      d. Electrical.
      e. Specialty items such as elevators and equipment.
      f. Wood-based construction materials.

3. LEED Action Plans: Provide preliminary submittals within [30] thirty days of date established for the Notice to Proceed indicating how the following requirements will be met:
   a. Credit MR 2: Waste management plan complying with Section 017419 "Construction Waste Management and Disposal."
   b. Credit MR 4: List of proposed materials with recycled content. Indicate cost, post-consumer recycled content, and pre-consumer recycled content for each product having recycled content.
   c. Credit MR 5: List of proposed regional materials. Identify each regional material, including its source, cost, and the fraction by weight that is considered regional.
   d. Credit MR 7: List of proposed certified wood products. Indicate each product containing certified wood, including its source and cost of certified wood products.
   e. Credit IEQ 3.1: Construction indoor-air-quality management plan.
4. LEED Progress Reports: Concurrent with each Application for Payment, submit reports comparing actual construction and purchasing activities with LEED action plans for the following:
   a. Credit MR 2: Waste reduction progress reports complying with Section 017419 "Construction Waste Management and Disposal."
   b. Credit MR 4: Recycled content.
   c. Credit MR 5: Regional materials.
   d. Credit MR 7: Certified wood products.

5. QUALITY ASSURANCE
   a. LEED Coordinator: Engage an experienced LEED-Accredited Professional to coordinate LEED requirements. LEED coordinator may also serve as waste management coordinator.

1.10 ENVIRONMENTAL REQUIREMENTS IMPLEMENTATION

A. Contractor shall designate an on-site party (or parties) responsible for instructing workers and overseeing the environmental requirements for the project and compiling applicable LEED credit documentation.

B. DISTRIBUTION:

The Contractor shall distribute copies of the environmental requirements to the Job-Site Superintendent, each Subcontractor and Supplier, and shall distribute LEED tracking updates to the GC or Construction Manager at regular progress meetings. The GC or Construction Manager shall maintain and make available a reference copy of the LEED construction back-up documentation, Scorecard and LEED-related logs and submittals on the construction site.

C. MEETINGS:

Environmental Requirements and LEED Coordination items shall be discussed at the following meetings. See Section 01 300 ADMINISTRATIVE REQUIREMENTS.
   a. Pre-construction meeting
   b. Construction LEED progress review meetings – as determined by the project team
   c. Attend (3) designated Construction LEED Coordination meetings held by the Architect and Sustainability Consultant

1.11 SUBMITTALS

A. Section 013300 - SUBMITTAL PROCEDURES: Requirements for submittals.

B. Construction Plans:
1. Construction Waste Management Plan:
1. Comply with all LEED requirements.
2. Subject to review and approval by the Sustainability Consultant. Revise and resubmit, if so directed by Sustainability Consultant, until approved.
3. Indicate analysis of estimated job site waste to be generated, including types and quantities; and proposed alternatives to use of landfill.
4. Submit monthly reports of actual recycling rates, salvage rates, and landfill rates.
2. Construction Indoor Air Quality (IAQ) Plan:
1. Comply with all LEED requirements.
2. Subject to review and approval by the Sustainability Consultant. Revise and resubmit, if so directed by Sustainability Consultant, until approved.
3. Indicate absorptive material and HVAC system protection; source control; pathway interruption; housekeeping and construction sequencing.
3. Materials Tracking Logs
1. Contractor shall maintain material cost tracking for all selected and applicable credits. The cost of the material only is to be tracked throughout the construction phase of the project.
2. Subject to review and approval by the Sustainability Consultant. Revise and resubmit, if so directed by Sustainability Consultant, until approved.

1.12 QUALITY ASSURANCE

A. Perform Work in accordance with LEED Reference Guide to achieve certification at Silver Rating, at a minimum, under LEED NC v2009 Rating System.
1. Owner and Architect/Engineer identified Project sustainable Project requirements.
2. Furnish products with materials and properties for entire Project to meet or exceed specified sustainable Project requirements.
3. Perform Work using means and methods for entire Project to meet or exceed specified sustainable Project requirements.

1.13 LEED DOCUMENTATION RESPONSIBILITIES

A. The following Construction Credits will be the Contractor’s responsibility for final sign-off, confirmation and/or coordination with additional responsible parties as noted on the project LEED Scorecard.

1. SSp1
2. EAp1
3. EAc3
4. EAc5
5. EAc6
6. MRc2
7. MRc4
8. MRc5

9. MRc7
10. IEQc3.1/3.2
11. IEQc4

B. Contractor shall submit all LEED documentation to the Sustainability Consultant for review and approval. Contractor shall revise and resubmit, as required by Sustainability Consultant.

C. See Paragraph 1.12 Resolution of LEED Issues.

1.14 RESOLUTION OF LEED ISSUES

A. All questions regarding the either the scope of, quality of, and/or level of detail required for LEED documentation will be decided by the Sustainability Consultant. The Sustainability Consultant shall be the ultimate arbiter of all such issues.

B. LEED Requests for Clarification – Contractor shall respond to any Request for Clarification from the LEED review team.
1. Contractor shall be responsible for revising any documentation and / or supplying any additional documentation identified by the Sustainability Consultant as being required in the response to any such LEED Request for Clarification.
2. Contractor shall submit all LEED documentation and documentation revisions to the Sustainability Consultant for review and approval. Contractor shall revise and resubmit, as required by Sustainability Consultant.
3. All such revisions of LEED documentation, production of additional documentation, and any and all other activities required for responding to such LEED Requests for Clarification shall be at no increase to Contract Sum.

C. LEED Appeals – Owner retains the right to appeal any LEED review decisions.
1. Contractor shall be responsible for revising any documentation and / or supplying any additional documentation identified by the Sustainability Consultant as being required to support any such appeal.
2. Contractor shall submit all LEED documentation and documentation revisions to the Sustainability Consultant for review and approval. Contractor shall revise and resubmit, as required by Sustainability Consultant.
3. All such revisions of LEED documentation, production of additional documentation, and any and all other activities required for such LEED appeals shall be at no increase to Contract Sum.

1.15 QUALIFICATIONS

A. Monitor and manage compliance with this section under direct supervision of LEED Accredited Professional.

B. Contractor shall engage a LEED Construction Coordinator to manage the contractor's LEED certification requirements and LEED Construction process on behalf of the Construction team. This individual must be LEED AP, but preferably LEED AP BD+C. The LEED Construction Coordinator must have a minimum of 7 years of LEED project experience, including LEED Silver or greater certified completed projects of similar size and complexity to this Project.

1.16 PRE-INSTALLATION MEETINGS

A. Section 013000 - Administrative Requirements: Pre-installation meeting.

1.17 CONSTRUCTION WORKER TRAINING PROGRAM

A. Contractor shall prepare and implement a construction worker training plan and associated implementation and sustainability policies.

B. This training plan shall be subject to review and approval by the Sustainability Consultant. Revise and resubmit, if so directed by Sustainability Consultant, until approved.

C. This training plan shall be designed to fully train all Contractor and Sub-Contractor employees working on site of the sustainability requirements for the Project and appropriate sustainability requirements implementation measures.

D. No workers will work on site before successfully completing the requirements of this training plan.

E. LANGUAGE REQUIREMENTS
1. All training sessions shall be offered in both English and Spanish.
2. All information materials for use in implementing this plan shall be written in both English and Spanish.
3. All informational signage for use in implementing this plan shall be written in both English and Spanish.

F. Construction worker training plan shall incorporate, at a minimum, the following elements:

1. Identification of all workers, by job position classification, covered by the plan.
2. Identification of all trainers, by job position classification, covered by the plan.
3. Identification of all training topics, as applicable, correlated with employees requiring each type of training. These topics shall include, at a minimum:
   a. General sustainability principles for the project
   b. Specific sustainability project requirements as they apply to each worker's activities on site.
   c. Specific procedures to implement the general sustainability principles
   d. Consequences for the Contractor for failing to achieve any one of the sustainability requirements for the project.
   e. Consequences for workers for failing to conform to the requirements of the training plan, sustainability policies, and implementation policies.
4. Regular refresher training, to be scheduled no less than bi-weekly.
   a. Time schedule for implementing the plan.
   b. Supervisory structure for implementing the plan
   c. Plan for identifying and implementing ongoing corrective training needs.
   d. List of all written materials required.
   e. List of all signage required.
   f. Schedule of training facilities.

PART 2 PRODUCTS

2.1 MATERIALS, GENERAL

A. Provide products and procedures necessary to obtain LEED credits required in this Section. Although other Sections may specify some requirements that contribute to LEED credits, the Contractor shall determine additional materials and procedures necessary to obtain LEED credits indicated.

B. RECYCLED CONTENT OF MATERIALS
1. Credit MR 4: Building materials shall have recycled content such that post-consumer recycled content plus one-half of pre-consumer recycled content for Project constitutes a minimum of [20] percent of cost of materials used for Project.
   a. Cost of post-consumer recycled content plus one-half of pre-consumer recycled content of an item shall be determined by dividing weight of post-consumer recycled content plus one-half of pre-consumer recycled content in the item by total weight of the item and multiplying by cost of the item.
   b. Do not include furniture, plumbing, mechanical and electrical components, and specialty items such as elevators and equipment in the calculation.

C. REGIONAL MATERIALS
1. Credit MR 5: Not less than [20] percent of building materials (by cost) shall be regional materials.

D. CERTIFIED WOOD
1. Credit MR 7: Not less than 100 percent (by cost) of wood-based materials shall be produced from wood obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship."
   a. Wood-based materials include, but are not limited to, the following materials when made from wood, engineered wood products, or wood-based panel products:
      i) Rough carpentry.
      ii) Miscellaneous carpentry.
      iii) Heavy timber construction.
      iv) Wood decking.
      v) Metal-plate-connected wood trusses.
      vi) Structural glued-laminated timber.
      vii) Finish carpentry.
      viii) Architectural woodwork.
      ix) Wood paneling.
      x) Wood veneer wall covering.
      xi) Wood flooring.
      xii) Wood lockers.
      xiii) Wood cabinets.

E. LOW-EMITTING MATERIALS
1. Credit IEQ 4.1: For field applications that are inside the weatherproofing system, adhesives and sealants shall comply with the following VOC content limits when calculated according to 40 CFR 59, Subpart D (EPA Method 24):

b. Wood Glues: 30 g/L.
c. Metal-to-Metal Adhesives: 30 g/L.
d. Adhesives for Porous Materials (Except Wood): 50 g/L.
e. Subfloor Adhesives: 50 g/L.
f. Plastic Foam Adhesives: 50 g/L.
g. Carpet Adhesives: 50 g/L.
h. Carpet Pad Adhesives: 50 g/L.
i. VCT and Asphalt Tile Adhesives: 50 g/L.
j. Cove Base Adhesives: 50 g/L.
k. Gypsum Board and Panel Adhesives: 50 g/L.
l. Rubber Floor Adhesives: 60 g/L.
m. Ceramic Tile Adhesives: 65 g/L.
n. Multipurpose Construction Adhesives: 70 g/L.
o. Fiberglass Adhesives: 80 g/L.
p. Contact Adhesive: 80 g/L.
q. Structural Glazing Adhesives: 100 g/L.
r. Wood Flooring Adhesive: 100 g/L.
s. Structural Wood Member Adhesive: 140 g/L.
t. Single-Ply Roof Membrane Adhesive: 250 g/L.
u. Special-Purpose Contact Adhesive (contact adhesive that is used to bond melamine-covered board, metal, unsupported vinyl, rubber, or wood veneer 1/16 inch or less in thickness to any surface): 250 g/L.
v. Top and Trim Adhesive: 250 g/L.
w. Plastic Cement Welding Compounds: 250 g/L.
x. ABS Welding Compounds: 325 g/L.
y. CPVC Welding Compounds: 490 g/L.
z. PVC Welding Compounds: 510 g/L.
aa. Adhesive Primer for Plastic: 550 g/L.
bb. Sheet-Applied Rubber Lining Adhesive: 850 g/L.
cc. Aerosol Adhesive, General-Purpose Mist Spray: 65 percent by weight.
dd. Aerosol Adhesive, General-Purpose Web Spray: 55 percent by weight.
ee. Special-Purpose Aerosol Adhesive (All Types): 70 percent by weight.
ff. Other Adhesives: 250 g/L.
gg. Architectural Sealants: 250 g/L.
hh. Nonmembrane Roof Sealants: 300 g/L.
ii. Single-Ply Roof Membrane Sealants: 450 g/L.
jj. Other Sealants: 420 g/L.
kk. Sealant Primers for Nonporous Substrates: 250 g/L.
ll. Sealant Primers for Porous Substrates: 775 g/L.
mm. Modified Bituminous Sealant Primers: 500 g/L.
nn. Other Sealant Primers: 750 g/L.

2. Credit IEQ 4.2: For field applications that are inside the weatherproofing system, paints and coatings shall comply with the following VOC content limits when calculated according to 40 CFR 59, Subpart D (EPA Method 24):
a. Flat Paints and Coatings: VOC not more than 50 g/L.
b. Nonflat Paints and Coatings: VOC not more than 150 g/L.
c. Dry-Fog Coatings: VOC not more than 400 g/L.
d. Primers, Sealers, and Undercoaters: VOC not more than 200 g/L.
e. Anticorrosive and Antirust Paints Applied to Ferrous Metals: VOC not more than 250 g/L.

f. Zinc-Rich Industrial Maintenance Primers: VOC not more than 340 g/L.
g. Pretreatment Wash Primers: VOC not more than 420 g/L.
h. Clear Wood Finishes, Varnishes: VOC not more than 350 g/L.
i. Clear Wood Finishes, Lacquers: VOC not more than 550 g/L.
j. Floor Coatings: VOC not more than 100 g/L.
k. Shellacs, Clear: VOC not more than 730 g/L.
l. Shellacs, Pigmented: VOC not more than 550 g/L.
m. Stains: VOC not more than 250 g/L.

3. Credit IEQ 4.4: Composite wood, agrifiber products, and adhesives shall not contain urea-formaldehyde resin.
4. Prerequisite EA 3: Remove CFC-based refrigerants from existing HVAC&R equipment indicated to remain and replace with refrigerants that are not CFC based. Replace or adjust existing equipment to accommodate new refrigerant as described in HVAC Sections.
5. Credit EAc4: Remove clean-agent fire-extinguishing agents that contain HCFCs or halons and replace with agent that does not contain HCFCs or halons. See Section 212200 "Clean-Agent Fire-Extinguishing Systems" for additional requirements.
6. MEASUREMENT AND VERIFICATION
Credit EA 5: Implement measurement and verification plan in accordance with the EVO's "International Performance Measurement and Verification Protocol (IPMVP), Volume III: Concepts and Options for Determining Energy Savings in New Construction," and as further defined by the following:
   a. Insert measurement and verification plan design team submitted for credit.
   b. If not already in place, install metering equipment to measure energy usage. Monitor, record, and trend log measurements.
   c. Evaluate energy performance and efficiency by comparing actual to predicted performance.
   d. Measurement and verification period shall cover at least one year of postconstruction occupancy.

7. CONSTRUCTION WASTE MANAGEMENT
   a. Credit MR 2: Comply with Section 017419 "Construction Waste Management and Disposal."
8. CONSTRUCTION INDOOR-AIR-QUALITY MANAGEMENT
   a. Credit IEQ 3.1: Comply with SMACNA's "SMACNA IAQ Guideline for Occupied Buildings under Construction."
   b. If Owner authorizes use of permanent heating, cooling, and ventilating systems during construction period as specified in Section 015000 "Temporary Facilities and Controls," install filter media having a MERV 8 according to ASHRAE 52.2 at each return-air inlet for the air-handling system used during construction.
   c. Replace all air filters immediately prior to occupancy.
9. Credit IEQ 3.2:
   a. After construction ends, prior to occupancy and with all interior finishes installed, perform a building flush-out by supplying a total volume of 14000 cu. ft. (4 300 000 L) of outdoor air per sq. ft. (sq. m) of floor area while maintaining an internal temperature of at least 60 deg F (16 deg C) and a relative humidity no higher than 60 percent.
   b. Air-Quality Testing:

i) Conduct baseline indoor-air-quality testing, after construction ends and prior to occupancy, using testing protocols consistent with the EPA's "Compendium of Methods for the Determination of Air Pollutants in Indoor Air," and as additionally detailed in the USGBC's "Green Building Design and Construction Reference Guide."

ii) Demonstrate that the contaminant maximum concentrations listed below are not exceeded:

(1) Formaldehyde: 27 ppb.
(2) Particulates (PM10): 50 micrograms/cu. m.
(3) Total Volatile Organic Compounds (TVOC): 500 micrograms/cu. m.
(4) 4-Phenylcyclohexene (4-PH): 6.5 micrograms/cu. m.
(5) Carbon Monoxide: 9 ppm and no greater than 2 ppm above outdoor levels.

iii) For each sampling point where the maximum concentration limits are exceeded, conduct additional flush-out with outside air and retest the specific parameter(s) exceeded to indicate the requirements are achieved. Repeat procedure until all requirements have been met. When retesting noncomplying building areas, take samples from same locations as in the first test.

iv) Air-sample testing shall be conducted as follows:

(1) All measurements shall be conducted prior to occupancy but during normal occupied hours, and with building ventilation system starting at the normal daily start time and operated at the minimum outside air flow rate for the occupied mode throughout the duration of the air testing.

(2) Building shall have all interior finishes installed including, but not limited to, millwork, doors, paint, carpet, and acoustic tiles. Nonfixed furnishings such as workstations and partitions are encouraged, but not required, to be in place for the testing.

(3) Number of sampling locations varies depending on the size of building and number of ventilation systems. For each portion of building served by a separate ventilation system, the number of sampling points shall not be less than one per 25,000 sq. ft. (2300 sq. m) or for each contiguous floor area, whichever is larger, and shall include areas with the least ventilation and greatest presumed source strength.

(4) Air samples shall be collected between 3 and 6 feet (0.9 and 1.8 m) from the floor to represent the breathing zone of occupants, and over a minimum four-hour period.

2.2 PROHIBITED MATERIALS

A. Contractor shall not use any materials, components, or assemblies on this Project not included in submittals approved by Architect/Engineers.

PART 3 EXECUTION - Not Used

SECTION 01 35 23 – ENVIRONMENTAL INSPECTION, TESTING, AND LABORATORY SERVICES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

B. This section is subject to the State of Maryland Department of Public Safety and Correctional Services General Conditions of the Contract between owner and Contractor.

1.2 SUMMARY

A. Section Includes:

1. Selection of payment.
2. Environmental Inspection and Testing Agency (EITA) responsibilities
3. Environmental inspection and testing reports.
4. Limits on EITA authority
5. Contractor responsibilities.

B. Related Requirements:

1. Division 1 Specification Sections.
2. Division 2 Specification Sections.

C. References:

1. Field Sampling and Analysis Technologies Matrix and Reference Guide (Document # EPA/542B-98/002; March 1998 or latest edition)

1.3 SELECTION AND PAYMENT:

A. General:

1. Contractor will employ and pay for the services of an independent EITA to perform environmental inspection and laboratory testing.
2. EITA must possess at least 3 years of experience in identifying and testing contaminated medium and materials.
3. EITA shall employ qualified environmental professions as defined in ASTM Standard E 1903. The environmental professional shall be required to have specific certifications as necessary.
4. EITA shall perform environmental inspection, field-testing, laboratory testing, and laboratory analysis in support of the Contractor's Work.
5. Employment of EITA shall not relieve Contractor of obligation to perform Work with requirements of Contractor Documents.

1.4 ENVIRONMENTAL INSPECTION AND TESTING AGENCY (EITA) RESPONSIBILITIES

A. Inspect, collect, and test samples of suspect contaminated mediums/material encountered during the Project not previously identified in Specification Sections

B. Provide qualified environmental professional at site to observe and visually monitor mediums/materials during project

C. Environmental testing laboratory shall have American Association for Laboratory Accreditation (A2LA) or equivalent; Army Corps of Engineers validation or equivalent; and participate in the National Voluntary Laboratory Accreditation Program (NVLAP)

D. Cooperate with Owner, Architect, and Engineers, and Contractor in performance of services.

E. Inspect and maintain all records of environmental compliance including disposal of contaminated medium/materials and the perspective impact on the Project.

F. Perform inspection, sampling, and testing of suspect contaminated mediums in compliance with specified standards.

G. Promptly notify Owner, Architect Engineer, and Contractor in writing of suspect contaminated mediums/materials and the perspective impact on the Project.

H. Perform additional inspections and tests required by the Owner, Architect/Engineer, and/or Contractor as directed by the Owner.

I. Contractor shall require EITA to attend Preconstruction Conference, Owner's Progress Meetings and Contractor's Coordination Meetings

J. EITA shall certify at completion of removal of any contaminated medium/material that 'The contaminated medium/material has been removed/remediated in compliance with all applicable local, state, and federal regulation.'

PART 2 - PRODUCTS

2.1 ENVIRONMENTAL INSPECTION AND INSPECTION REPORTS

A. After each inspection and test, promptly distribute four (4) copies of the reports to Owner, Architect/Engineer, and Contractor through the Contractor.

B. Reports shall include:

1. Date issued
2. Project title, number and location
3. Location of testing
4. Name of environmental professional and testing laboratory.
5. Date and time of sampling and testing
6. Reasons for sampling
7. Type of inspection or test
8. Sampling and test methods used
9. Date of laboratory test

10. Results of tests and interpretation
11. Conclusion and recommendations
12. Conformance with Contract Documents

PART 3 - EXECUTION

3.1 LIMITS ON ENVIRONMENTAL INSPECTION AND TESTING AGENCY (EITA) AUTHORITY:

A. EITA may not release, revoke, alter, or enlarge on requirements of Contract Documents.

B. EITA may not approve or accept any portion of the Work.

C. EITA may not assume any duties of Contractor.

D. EITA has no authority to stop the Work unless adverse health or safety conditions to human and/or the environment exist.

3.2 CONTRACTOR RESPONSIBILITIES:

A. Cooperate with (EITA) and provide access to the Work.

B. Provide incidental (non-environmental) labor and facilities, and provide access to obtain and handle samples.

C. Contractor shall provide corrective action when notified of defects.

D. In the event that the Contractor takes exception to the inspection and test report, the Contractor shall schedule a meeting, if necessary, with the Owner and EITA in an effort to resolve any conflict.

END OF SECTION 01 35 23

SECTION 01 40 00 - QUALITY REQUIREMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for quality assurance and quality control.

B. Testing and inspecting services are required to verify compliance with requirements specified or indicated. These services do not relieve Contractor of responsibility for compliance with the Contract Document requirements.

1. Specific quality-assurance and -control requirements for individual construction activities are specified in the Sections that specify those activities. Requirements in those Sections may also cover production of standard products.
2. Specified tests, inspections, and related actions do not limit Contractor's other quality-assurance and -control procedures that facilitate compliance with the Contract Document requirements.
3. Requirements for Contractor to provide quality-assurance and -control services required by Architect, Owner, Commissioning Authority, or authorities having jurisdiction are not limited by provisions of this Section.
4. Specific test and inspection requirements are not specified in this Section.

C. Related Requirements:

1. Section 014001 “Quality Control Program” for Contractor’s Quality Control Plan, and for qualifications of Contractor’s Construction Inspection and Testing Firm (CCITF).

2. Section 014002 “Inspection, Testing and Laboratory Services” for responsibilities of Contractor’s Construction, Inspection and Testing firm (CCITF).

3. Divisions 02 through 33 Sections for specific test and inspection requirements.

4. Section 013510 "Sustainable Project Requirements" for LEED related testing.

1.3 DEFINITIONS

A. Quality-Assurance Services: Activities, actions, and procedures performed before and during execution of the Work to guard against defects and deficiencies and substantiate that proposed construction will comply with requirements.

B. Quality-Control Services: Tests, inspections, procedures, and related actions during and after execution of the Work to evaluate that actual products incorporated into the

Work and completed construction comply with requirements. Services do not include contract enforcement activities performed by Architect.

C. Mockups: Full-size physical assemblies that are constructed on-site. Mockups are constructed to verify selections made under Sample submittals; to demonstrate aesthetic effects and, where indicated, qualities of materials and execution; to review coordination, testing, or operation; to review constructability, to show interface between assemblies and dissimilar materials; to ensure there are no thermal and moisture problems, and to demonstrate compliance with specified installation tolerances. Mockups are not Samples. Unless otherwise indicated, approved mockups establish the standard by which the Work will be judged.

1. Laboratory Mockups: Full-size physical assemblies constructed at testing facility to verify performance characteristics.
2. Integrated Exterior Mockups: Mockups of the exterior envelope erected separately from the building but on Project site, consisting of multiple products, assemblies, and subassemblies.
3. Room Mockups: Mockups of typical interior spaces complete with wall, floor, and ceiling finishes, doors, windows, millwork, casework, specialties, furnishings and equipment, and lighting.

D. Preconstruction Testing: Tests and inspections performed specifically for Project before products and materials are incorporated into the Work, to verify performance or compliance with specified criteria.

E. Product Testing: Tests and inspections that are performed by an NRTL, an NVLAP, or a testing agency qualified to conduct product testing and acceptable to authorities having jurisdiction, to establish product performance and compliance with specified requirements.

F. Source Quality-Control Testing: Tests and inspections that are performed at the source, e.g., plant, mill, factory, or shop.

G. Field Quality-Control Testing: Tests and inspections that are performed on-site for installation of the Work and for completed Work.

H. Testing Agency: An entity engaged to perform specific tests, inspections, or both. Testing laboratory shall mean the same as testing agency.

I. Installer/Applicator/Erector: Contractor or another entity engaged by Contractor as an employee, Subcontractor, or Sub-subcontractor, to perform a particular construction operation, including installation, erection, application, and similar operations.

1. Use of trade-specific terminology in referring to a trade or entity does not require that certain construction activities be performed by accredited or unionized individuals, or that requirements specified apply exclusively to specific trade(s).

J. Experienced: When used with an entity or individual, "experienced" means having successfully completed a minimum of five previous projects similar in nature, size, and extent to this Project; being familiar with special requirements indicated; and having complied with requirements of authorities having jurisdiction.

1.4 CONFLICTING REQUIREMENTS

A. Referenced Standards: If compliance with two or more standards is specified and the standards establish different or conflicting requirements for minimum quantities or quality levels, comply with the most stringent requirement. Refer conflicting requirements that are different, but apparently equal, to Architect for a decision before proceeding.

B. Minimum Quantity or Quality Levels: The quantity or quality level shown or specified shall be the minimum provided or performed. The actual installation may comply exactly with the minimum quantity or quality specified, or it may exceed the minimum within reasonable limits. To comply with these requirements, indicated numeric values are minimum or maximum, as appropriate, for the context of requirements. Refer uncertainties to Architect for a decision before proceeding.

1.5 INFORMATIONAL SUBMITTALS

A. Testing Agency Qualifications: For testing agencies specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include proof of qualifications in the form of a recent report on the inspection of the testing agency by a recognized authority.

1.6 CONTRACTOR'S QUALITY-CONTROL PLAN

1.7 Quality-Control Plan, General: See Division 01, Section “Quality Control Program”.

1.7 REPORTS AND DOCUMENTS

A. Test and Inspection Reports: See Section 014002, “Inspection, Testing and Laboratory Services”.

B. Manufacturer's Technical Representative's Field Reports: Prepare written information documenting manufacturer's technical representative's tests and inspections specified in other Sections. Include the following:

1. Name, address, and telephone number of technical representative making report.
2. Statement on condition of substrates and their acceptability for installation of product.
3. Statement that products at Project site comply with requirements.
4. Summary of installation procedures being followed, whether they comply with requirements and, if not, what corrective action was taken.
5. Results of operational and other tests and a statement of whether observed performance complies with requirements.
6. Statement whether conditions, products, and installation will affect warranty.
7. Other required items indicated in individual Specification Sections.

C. Factory-Authorized Service Representative's Reports: Prepare written information documenting manufacturer's factory-authorized service representative's tests and inspections specified in other Sections. Include the following:

1. Name, address, and telephone number of factory-authorized service representative making report.
2. Statement that equipment complies with requirements.
3. Results of operational and other tests and a statement of whether observed performance complies with requirements.
4. Statement whether conditions, products, and installation will affect warranty.
5. Other required items indicated in individual Specification Sections.

D. Permits, Licenses, and Certificates: For Owner's records, submit copies of permits, licenses, certifications, inspection reports, releases, jurisdictional settlements, notices, receipts for fee payments, judgments, correspondence, records, and similar documents, established for compliance with standards and regulations bearing on performance of the Work.

1.8 QUALITY ASSURANCE

A. General: Qualifications paragraphs in this article establish the minimum qualification levels required; individual Specification Sections specify additional requirements.

B. Manufacturer Qualifications: A firm experienced in manufacturing products or systems similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.

C. Fabricator Qualifications: A firm experienced in producing products similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.

D. Installer Qualifications: A firm or individual experienced in installing, erecting, or assembling work similar in material, design, and extent to that indicated for this Project, whose work has resulted in construction with a record of successful in-service performance.

E. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of the system, assembly, or product that are similar in material, design, and extent to those indicated for this Project.

F. Specialists: Certain Specification Sections require that specific construction activities shall be performed by entities who are recognized experts in those operations. Specialists shall satisfy qualification requirements indicated and shall be engaged for the activities indicated.

1. Requirements of authorities having jurisdiction shall supersede requirements for specialists.

G. Testing Agency Qualifications: An NRTL, an NVLAP, or an independent agency with the experience and capability to conduct testing and inspecting indicated, as documented according to ASTM E 329 ; and with additional qualifications specified in individual Sections; and, where required by authorities having jurisdiction, that is acceptable to authorities.

1. NRTL: A nationally recognized testing laboratory according to 29 CFR 1910.7.

2. NVLAP: A testing agency accredited according to NIST's National Voluntary Laboratory Accreditation Program.

H. Manufacturer's Technical Representative Qualifications: An authorized representative of manufacturer who is trained and approved by manufacturer to observe and inspect installation of manufacturer's products that are similar in material, design, and extent to those indicated for this Project.

I. Factory-Authorized Service Representative Qualifications: An authorized representative of manufacturer who is trained and approved by manufacturer to inspect installation of manufacturer's products that are similar in material, design, and extent to those indicated for this Project.

J. Preconstruction Testing: Where testing agency is indicated to perform preconstruction testing for compliance with specified requirements for performance and test methods, comply with the following:

1. Contractor responsibilities include the following:

a. Provide test specimens representative of proposed products and construction.
b. Submit specimens in a timely manner with sufficient time for testing and analyzing results to prevent delaying the Work.
c. Provide sizes and configurations of test assemblies, mockups, and laboratory mockups to adequately demonstrate capability of products to comply with performance requirements.
d. Build site-assembled test assemblies and mockups using installers who will perform same tasks for Project.
e. Build laboratory mockups at testing facility using personnel, products, and methods of construction indicated for the completed Work.
f. When testing is complete, remove test specimens, assemblies, and mockups; do not reuse products on Project unless approved by Owner and Architect.

2. Testing Agency Responsibilities: Submit a certified written report of each test, inspection, and similar quality-assurance service to Architect and Commissioning Authority, with copy to Contractor. Interpret tests and inspections and state in each report whether tested and inspected work complies with or deviates from the Contract Documents.

K. Mockups: Before installing portions of the Work requiring mockups, build mockups for each form of construction and finish required to comply with the following requirements, using materials indicated for the completed Work:

1. Build mockups in location and of size indicated or, if not indicated, as directed by Architect.
2. Notify Owner and Architect seven days in advance of dates and times when mockups will be constructed.
3. Employ supervisory personnel who will oversee mockup construction. Employ workers that will be employed during the construction at Project.
4. Demonstrate the proposed range of aesthetic effects and workmanship.
5. With input from Owner, obtain Architect's approval of mockups before starting work, fabrication, or construction.

a. Allow seven days for initial review and each re-review of each mockup.

6. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
7. Demolish and remove mockups when directed unless otherwise indicated.

L. Integrated Exterior Mockups: Construct integrated exterior mockup according to approved Shop Drawings . Coordinate installation of exterior envelope materials and products for which mockups are required in individual Specification Sections, along with supporting materials.

1. The following Sections include requirements for Integrated Exterior Mockups:

a. Division 04 Section “Unit Masonry.”
b. Division 04 Section “Cast Stone Masonry.”
c. Division 07 Section “Formed Metal Wall Panels.”
d. Division 07 Section “Fluid-Applied Membrane Air Barriers.”
e. Division 07 Section “Formed Metal Wall Panels.”
f. Division 07 Section “Intumescent Fireproofing.”
g. Division 09 Section “Resinous Flooring and Wall Coatings.”
h. Division 09 Section “Fluid Applied Athletic Flooring.”

M. Room Mockups: Construct room mockups incorporating required materials and assemblies, finished according to requirements. Provide required lighting and additional lighting where required to enable Architect to evaluate quality of the Work. Provide room mockups of the following rooms:

1. Typical housing unit cell and typical cell mechanical chase, including all MEP and security equipment.

N. Laboratory Mockups: Comply with requirements of preconstruction testing and those specified in individual Specification Sections in Divisions 02 through 33.

1.9 QUALITY CONTROL

A. Contractor Responsibilities:

1. See Section 014001, “Quality Control Program”.
2. When the words Quality Control are used within the Contract Documents, the work of providing qualitative control, monitoring and documenting the quality of the contract is the responsibility of the Contractor.

B. Manufacturer's Field Services: See Section 014001, Quality Control Program”

C. Manufacturer's Technical Services: Where indicated, engage a manufacturer's technical representative to observe and inspect the Work. Manufacturer's technical representative's services include participation in preinstallation conferences, examination of substrates and conditions, verification of materials, observation of Installer activities, inspection of completed portions of the Work, and submittal of written reports.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 01 40 00

SECTION 01 40 01 - QUALITY CONTROL PROGRAM

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Contractor's Quality Control Firm and Quality Control Program.

B. Quality Control of products and workmanship.

C. Manufacturer's instructions.

D. Manufacturer's certificates and field services.

1.2 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions.

1.3 RELATED SECTIONS

A. Division 01 Section 014000 "Quality Requirements" for administrative and procedural requirements for quality assurance and quality control.

B. Division 01 Section 014002 "Inspection, Testing and Laboratory Services" for requirements for Contractor's Construction, Inspection and Testing Firm (CCITF).

1.4 DESCRIPTION: PROJECT QUALITY CONTROL

A. Coordinate with requirements of Division 1 Specification Sections.

B. The Contractor shall take note of the following:

1. When the words Quality Control are used within the Contract Documents the work of providing qualitative control, monitoring and documenting the quality of the contract is the responsibility of the Contractor.

C. The Contractor shall employ a full time, on-site Quality Control Manager (QCM) for the duration of the contract to provide and implement Quality Control measures and services identified in the Contract Documents and in accordance with the Contractor's written Quality Control Program as reviewed and approved by the State.

D. Apparent Awardee shall engage a full time Security Detention Construction Coordinator (SDCC) to manage, coordinate, and ensure compliance with all Security related construction work and requirements, including integration with other new construction. The SDCC shall manage all Security Detention Equipment (doors, windows, hardware, enclosures, furnishings, materials, etc.), and all Electronic Safety and Security systems, This individual must have a minimum of 10 years of Security detention equipment and systems project experience within correctional facilities, including one (1) completed

correctional project of $20 million or more and two (2) completed correctional projects of $15 million or more.

E. The Contractor's full time independent Construction and Testing Firm shall be a separate company with no affiliation to the Contractor. The Contractor's independent Quality Control Construction and Testing Firm shall be known as the Contractor's Construction Inspection and Testing Firm (CCITF). Contractor's CCITF shall provide Quality Control testing and inspection of the Project for the duration of the Project. The primary function of the CCITF will be to ensure adherence to applicable codes and regulations. The CCIT Team shall include, but not be limited to, the following disciplines. The final configuration of the CCIT team shall be determined by the individual project manual sections. In certain circumstances, the same person may perform separate inspection functions providing they hold the requisite certifications and meet all experience and education requirements as set forth in the applicable code or regulation.

1. **CCITF Manager (CCITFM)**: This position requires a minimum of ten (10) years of actual field experience in managing quality control in the construction of buildings, including mechanical, electrical, site/civil work, architectural, structural, and other engineering work OR a graduate degree in architecture, civil engineering, construction management, and building construction with a minimum of five (5) years on-site construction inspection and quality control experience; AND a least two (2) years of the experience shall be in corrections and or similar facilities projects. The CCITFM shall have a strong background quality control and inspection of building construction, including mechanical, electrical, and plumbing systems. With the ultimate approval of Contractor's Project and Quality Control Manager, this person shall be responsible for the coordination of all of the required construction inspection and testing (on call) services as well as the activities of all CCITF personnel. The CCITFM shall have in-depth knowledge of the Project construction contract documents and current Maryland State Building Codes including the International Building Code (IBC) 2006, NFPA, ASTM, etc. The CCITFM shall report to the Contractor's Project Manager. The CCITFM shall be employed on a full-time basis at the jobsite during construction and site preparation of the facilities; responsible for ensuring and verifying that the construction work is performed in complete conformance with the construction contract documents and any approved modifications thereto; and shall issue to the Owner and Agency Construction Manager, through the contractor, written certification of such conformity.

2. **General Construction Inspector (GCI)**: This position requires a minimum of eight (8) years of field experience in the construction of buildings, including mechanical, electrical, site work, architectural, structural, and other construction related engineering work or a graduate architect or civil engineer with a minimum of five (5) years on-site experience in construction inspection. The GCI shall be employed on a full-time basis at the jobsite during the facility construction and shall ensure that all work is performed in complete conformity with the Contract documents and approved modifications thereto. The GCI shall report, and issue written inspection daily reports to the CCITFM. In the absence of the CCITFM or when working multiple shifts, the GCI shall perform similar duties.

3. **Architectural Inspector (AI) – Part-Time**: A graduate architect with a minimum of five (5) years experience in the architectural aspects of construction for correctional or similar facilities including, but not limited to, paint application; gypsum wallboard installation; partition wall framing; and wall, ceiling, floor, roof, concrete, and masonry finishes.

4. **Structural Inspector (SI) – Part-Time**: A registered engineer with a minimum of eight (8) years field experience in inspection of structural work, including, precast, pre-stressed, and cast-in-place concrete; structural and reinforcing steel; and reinforced masonry during major building construction projects similar to this Project. The SI shall inspect and assure the integrity of the Contract structural work.

5. **Steel/Welding Inspector (WI) – Part-Time**: A certified welding inspector with a minimum of five (5) years experience inspecting welds for conformity with the applicable standards and specifications of the American Welding Society, American Society of Mechanical Engineers (ASME), and American Institute of Steel Construction (AISC). Experience shall include low and high pressure steel piping, steel erection inspection, shop fabrication, steel joists and metal work installation, and proven ability to read and interpret shop drawings and specifications.

6. **Non-Destructive Evaluation (NDE) Test Inspector– Part-Time**: The NDE test inspector shall be certified by the American Society for Non-Destructive Testing criteria level II radiography, ultrasonic, liquid penetrant and magnetic particle tests. This position requires a minimum of five (5) years experience inspecting piping and structural steel welds for conformity with applicable standards and specifications of the American Welding Society and ASME Boiler Construction Code.

7. **Electrical Inspector (EI) – Part-Time**: A licensed master electrician with a minimum of ten (10) years of field experience inspecting the installation and construction progress of electrical systems, including telecommunication/security systems, fire alarm and annunciation systems for conformity with applicable State and local codes and construction documents. Must be familiar with International Electrical Testing association, acceptance Testing Specifications for Electrical Power Distribution Equipment and Systems.

8. **Plumbing Inspector (PI) – Part-Time**: A licensed master plumber with a minimum of ten (10) years field experience inspecting the installation of plumbing systems in accordance with State Plumbing Code and the Contract documents. The PI shall inspect and assure the integrity of plumbing systems and meet education and experience requirements in accordance with the latest State plumbing code and any applicable local code for the Project.

9. **Mechanical Inspector (MI) – Part-Time**: This position requires a minimum of ten (10) years field experience as an inspector or installer of complex mechanical systems. The MI shall inspect the installation of systems for conformity with applicable State codes and the construction contract documents. Experience shall include a working knowledge of heating and air conditioning systems, preferably in correctional or institutional type installations. The MI shall be thoroughly conversant with the high pressure boiler rules of the State Department of labor and licensing regulations and shall assist DPSCS in obtaining an Emission Certification from the Maryland Department of the Environment (MDE) before any boiler will be fired for its intended use.

10. **Geotechnical/Materials Inspector (GMI) – Part-Time**: This position requires a minimum of five (5) years experience in the inspection of foundation installations, footings, underpinning and construction materials. The acceptable experience shall be from regions with geotechnical/material conditions similar to this Project or those existing throughout the State.

11. **Roofing Inspector (RI) – Part-Time**: This position requires a minimum of eight (8) years experience inspecting the application EPDM membranes, slate, built-up-roofing, metal roofing, roof drains, scuppers, metal sheet flashing, roof ladders, roof walks, ballast, etc.

12. **Civil Inspector (CI) – Part-Time**: A certified inspector with a minimum of five (5) years experience inspecting civil works such as paving, utilities, and site work. NICET certification is required.

13. **Electronic Security Inspector (ESI) – Part-Time**: A certified technician with a minimum of ten (10) years of field experience or a registered electrical engineer with a minimum of 5 years experience inspecting the installation and construction progress of security electronics and communications systems including CCTV/MATV telecommunications/security systems, fire alarm, fence detection and annunciation systems for conformity with contract documents, applicable State and local codes and the construction documents or be an active registered communication designer (RCPD) with a minimum of 3 years experience.

14. **Soils & Materials Technician (SMT) – Part-Time**: A qualified and certified person with minimum 5 years field experience to perform tests on soils, concrete, masonry and other materials as applicable for the project. The technician will perform his work under the direction and guidance of the CCITFM.

F. The CCITF shall be under the direct control and management of the Contractor's Quality Control Manager (QCM) for the duration of the project.

G. The CCITF Manager and QCM are fully responsible and accountable to the Contractor's Project Manager for the Quality Control of the Project for the duration of the Project.

H. Provide an independent Environmental Inspection & Testing Firm to perform environmental inspection & laboratory testing. The Contractor's independent Environmental Inspection & Testing Firm shall be known as Environmental Inspection & Testing Agency (EITA).

I. Through the Agency Construction Manager, the Owner will employ a full time independent Construction Inspection and Testing Firm for the benefit of the Owner to ensure that the contractor has complied with Quality Control requirements. The Owner's independent testing/inspection firm shall be known as the State's Construction Inspection and Testing Firm (SCITF).

1.5 CCITF AND EITA SERVICES

A. Provide for specified Quality Control services and environmental inspection and testing services through independent inspection & testing agencies (CCITF and EITA) employed by the Contractor.

1. In Project Manual Sections, services may be identified to be provided by the Contractor's Construction Inspection and Testing Firm (CCITF) or may refer only to field and/or laboratory testing and inspection requirements. These services and requirements are the sole responsibility of Contractor. In all cases and circumstances the Contractor shall provide and pay for these services.
2. In Sections, environmental services may be identified to be provided by the Environmental Inspection & Testing Agency (EITA) or may refer to environmental

inspection, laboratory testing and analysis requirements. These services and requirements are the sole responsibility of contractor. In all cases and circumstances the Contractor shall provide and pay for these services.

1.6 SCITF SERVICES

A. The Owner reserves the right to ensure that the contractor has complied with Quality Control testing, inspection, environmental inspection, and laboratory testing and analysis requirements.

B. The Owner will employ services of independent agencies under separate contracts, to periodically test, inspect, review fabrications, construction activities, work in place, or other testing by the Contractor.

C. The Owner will employ services of independent environmental professionals to inspect and review the environmental sampling, testing and analysis data performed by EITA.

D. These activities by the Owner do not relieve the Contractor of his responsibility for providing Quality Control activities in compliance with the Contract Documents.

1.7 QCM AND CCITF REQUIREMENTS

A. Contractor's QCM and CCITF shall have a minimum of ten (10) years of construction related experience where the technical and costs requirements are similar to the technical and cost requirements of this project.

1. Identify and submit qualifications of the Contractor's candidate CCITF at the Preconstruction Conference for State's review and approval.

a. The State reserves the right to reject or accept the candidate QCM at their sole discretion.

2. Identify and submit qualifications of the Contractor's candidate CCITF Manager at the Preconstruction Conference for State's review and approval.

a. Candidate CCITF shall meet requirements for Testing Agency Qualifications defined under Section 014000 QUALITY REQUIREMENTS, Paragraph 1.8 G.

b. The State reserves the right to reject or accept the candidate CCITF Manager at their sole discretion.

1.8 CONTRACTOR'S QUALITY CONTROL PROGRAM

A. Quality Control (QC) is defined to involve and require related testing and inspection procedures, and refers to collective actions required to ensure that fabricated and installed materials, equipment, systems comply with Contract Documents and regulations by governing agencies and authorities.

B. Perform required actions and include specified surveillance, inspection, testing, measuring, reporting, and correction-of-defects.

C. Completion of required Quality Control actions on a unit of work does not relieve Contractor of responsibility for compliance with other requirements of the Contract Documents.

D. Tests and Inspections that may or may not be performed by the State's Construction Inspection and Testing Firm (SCITF) is not to be construed as replacement for the Contractor's Quality Control Tests and Inspections.

E. Specified and identified Quality Control requirements are not intended to limit Contractor's and Contractor's Fabricator's procedures that achieve compliance with the requirements of the Contract Documents; nor are these intended to limit related requirements which may be imposed by other provisions hereof, or by governing agencies and authorities.

1.9 QUALITY CONTROL ORGANIZATION AND SUBMITTALS

A. Quality Control Plan: Submit the Contractor's Quality Control Plan (QCP) at the Preconstruction Conference.

1. Plan shall indicate the required staff qualifications, personnel assignments, procedures, instructions, record keeping, and forms to be used for implementing and reporting QC requirements.
2. Upon receipt of the State's review and acceptance of the Contractor's Quality Control Plan, coordinate and integrate the principal actions and work into the Contractor's Construction Progress Schedule.
3. Include in the QC Plan a complete listing by specification Section of inspections and tests to be performed; and chart how the results will be reported to the Owner, Architect and SCITF.

    a. Submit in QC Plan copy of Contractor's letter of authorization appointing qualifications of the QCM for overall management of the QCP and his authority to act for the Contractor in QC matters. Acceptance of the candidate QCM qualifications is subject to the State's review and approval.
    b. When acceptable to the State, schedule and maintain QC staff on Project Site and elsewhere, whenever work is scheduled and performed such that qualified QC staff perform and document the QC work.
    c. Include in the QC Plan and maintain a current listing of QC staff assignments, indicating names, qualifications, duties, authorizations, and responsibilities.

4. Indicate and include in the QC Plan specifically how the related Sections under Divisions 0 and 1, inclusive of the State's General Requirements, are to be implemented.
5. Prior to the start of work, meet with the Agency Construction Manager and his staff and review the QC Plan and how the Contractor will implement and integrate the QC Plan with the Construction Progress Schedule.
6. Develop a mutual understanding of the QC Plan details and time frames, acceptable to the State for both onsite and offsite activities; including interrelationships between QC actions and SCITF related actions.
7. Prepare and distribute detailed minutes of meeting, and subsequent meetings; signed by both the Contractor's PM, QCM and Agency Construction Manager.

    a. Do not proceed with work subject to QC requirements until acceptance of QC Plan has been granted by QCM and Agency Construction Manager.

b. Continued acceptance is subject to satisfactory performance of work, including satisfactory execution of QC Plan provisions.
c. Do not change accepted QC Plan, except with prior written approval of Agency Construction Manager and QCM on proposed change.
d. State reserves the right to require changes in the QC Plan, where required by the Agency Construction Manager as necessary to assure required qualities and Contract compliance.

1.10 QUALITY CONTROL SERVICES

A. General: Include sample taking, testing, analysis, reporting, and similar activities as part of this contract.

B. QC Pre-Analysis and Preparation: Prior to start of each unit of work subject to QC inspection and testing, review related Contract Document requirements; and ensure that preliminary actions have been completed, including submittal/approval procedures, procurement of materials/equipment/services required for the work, installation personnel and equipment available at the site, and inspection and test equipment and agencies are present. Notify Agency Construction Manager a minimum of 48 hours in advance of each QC preanalysis inspection procedure, and provide written record of such procedure to the QCM and Agency Construction Manager.

C. Where indicated, scheduled and/or identified, engage the QC service to perform inspections associated with or required in connection with QC activities, including written confirmation that materials being used in the work comply with the requirements of the Contract Documents.

D. For QC services on work to be provided over prepared substrates; engage the related QC service to inspect and test prepared substrates for suitability to receive the superimposed work; and include the results of substrate inspections and testing in related QC reporting.

E. Proceed with initial QC service related to each element of work as soon as possible after installation of a suitable increment of work has been accomplished. QCM shall notify Agency Construction Manager at least 48 hours in advance of each anticipated QC service, and include anticipated schedule for follow-up services, through installation of remaining increments. Conclude each QC sequence of service for a unit-of-work with a completion set of services, and a summary report for entire QC services on the unit of work.

F. Provide testing as scheduled, specified, indicated or as otherwise required to ensure accurate determination of quality compliances with requirements of the Contract Documents. Comply with recognized standards of testing for each industry and trade. Use recognized independent testing laboratory services acceptable to the State. Provide written report of each QC inspection and test performed, including the following information:

1. Contract Title and Contract Number.
2. Test title, source, and sequence number.
3. Date(s) and location(s) of samples, and dates of tests; related Contract Document Specification Section and Article.
4. Identify the recognized industry/trade test method and specification.
5. Name of testing laboratory, and individual conducting inspection/test procedure.

6. Ambient conditions at time of sample taking, and at time of inspection/test procedure.
7. Inspection/test data, results, interpretations, and analysis of information developed.
8. Test agency's/individual's comments and professional opinions concerning; whether test has "passed", whether work-in-place complies with contract requirements, and whether retesting or other testing is recommended; complete with responsible individual's signature and date.
9. Other data as required/implied, by nature of particular inspection/test procedure being completed, or by provisions in related technical section of these Contract Specifications.
10. Include statement of person or agency conducting the inspection/test procedure; to the effect of "certification" that materials/equipment/services incorporated into the work comply with requirements of the Contract Documents; or "expressing" reservations thereto, as observed or determined.

G. Maintain complete record and log of entire QC actions, ready for Agency Construction Manager examination at any time. Highlight defects, deficiencies, and noncompliance's found; along with corrective actions/reconstructions completed, to be completed, or recommended for acceptance of Agency Construction Manager.

H. Completion Inspection: At the time each unit of work or separate increment thereof is substantially complete, and regardless of whether subjected to specific QC inspection and testing, conduct a completion inspection and develop a "punch list" of deficiencies to be corrected on non-complying elements, and include in QC documentation. Include in report the dates established or estimated for completion of corrections, as required to comply with Construction Progress Schedule and Close-Out Procedures identified elsewhere.

1.11 COINCIDENTAL SERVICES

A. Provide incidental services needed by engaged QC agency/services, including services performed by SCITF and by its engaged services. Incidental services include, but are not limited to the following:

1. Use of Contractor's QC testing laboratory.
2. Assistance in gaining access to work, and taking of test samples, and subsequent repair of work and substrates.
3. Temporary facilities, as reasonably utilized by quality control/testing services.
4. The handling, curing, storage, and protection of test samples at the Project Site.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 WORKMANSHIP

A. Comply with industry-referenced standards except where more restrictive tolerances or specified requirements indicate more rigid standards; the more restrictive requirement shall apply.

B. Provide sufficient quantity of qualified personnel to comply with requirements of specifications for this project.

C. Secure products in place with positive anchorage devices designed and sized to withstand stresses, vibration, and racking.

D. Provide finishes to match approved samples and mockups.

3.2 MANUFACTURER'S INSTRUCTIONS

A. Require compliance with instructions in full detail, including each step in construction sequence.

B. Should instruction conflict with Contract Documents, request clarification from Architect before proceeding.

3.3 MANUFACTURER'S CERTIFICATES

A. When required by Specification Sections, submit manufacturer's certificate in original duplicate, certifying that products meet or exceed specified requirements, executed by responsible officer of the manufacturer.

3.4 MANUFACTURER'S FIELD SERVICES

A. Provide qualified manufacturer representative when required by Specification Section or as a result of review and evaluation of Contractor's sub-contractor's named list.

B. Provide qualified manufacturer representative, at no additional cost to Owner, to perform the following:

1. Observe field conditions.
2. Conditions of surfaces and installation.
3. Quality of workmanship.
4. Start-up of equipment.
5. Test, adjust, and balance equipment.
6. Provide written report of observations and recommendations to Contractor within two days of each site visit.

C. Submit report to architect in accordance with Section 013300.

3.5 CORRECTION OF WORK

A. Defects in Work: Where QC procedures disclose defects in the work, and where similar procedures by SCITF disclose defects; provide remedial actions, as agreed upon with Agency Construction Manager, to upgrade, repair, restore, reconstruct, replace, or otherwise correct defects in the work, so as to provide compliance with requirements of the Contract Documents. Refer to State's General Conditions which establish the State's recourses where Contractor has failed or refused to comply with Agency Construction Manager's notification(s) of noncompliance(s) resulting from the QC and/or QA procedures, including the recourse of possibly suspending work in

accordance with related sections in the General Conditions of the Construction Contract.

1. Provide reinspection/retesting of corrected work, comparable with that required for initial work, and as directed by the Agency Construction Manager; repeat until compliances are achieved.

    a. Where SCITF inspection/testing service has disclosed defects, followed by Contractor's correction of work; State will perform the reinspection/retesting of corrected work, but at Contractor's expense.

2. Neither the required QC procedure, nor detection of defects, nor correction of defects, nor the reinspection/retesting of corrected work, provides a basis for Contractor's claim for Contract Modification, Additional Compensation, or request for extension of Contract Time.

3.6 RESTORATION AND PROTECTION

A. General, Final Restoration: Upon completion of inspection, sample taking, testing, and correction-of-defects for the work in place; repair damaged work and substrates, and restore finishes to eliminate deficiencies in visual and performance qualities; comply with Agency Construction Manager's requests. Restore protection as specified. Comply with provisions of Division 01 Section "Execution."

B. Continued Protection: As an integral action of the QC Plan, provide continued protection of completed work through remainder of Construction Time, and monitor protective measures in relation to construction activities.

END OF SECTION 014001

SECTION 01 40 02 - INSPECTION, TESTING AND LABORATORY SERVICES

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Selection and payment.

B. Laboratory responsibilities.

C. Laboratory reports.

D. Limits on testing laboratory authority.

E. Contractor responsibilities.

F. Schedule of inspections and tests.

1.2 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions.

1.3 RELATED SECTIONS

A. Division 01 Section 014000 “Quality Requirements” for administrative and procedural requirements for quality assurance and quality control.

B. Division 01 Section 014001 “Quality Control Program ” for requirements for Contractor’s Quality Control firm and Quality Control Program.

1.4 REFERENCES

A. ANSI/ASTM D 3740:

1. Practice for Evaluation of Agencies Engaged in Testing and/or Inspection of Soil and Rock as Used in Engineering Design and Construction.

B. ANSI/ASTM E 329:

1. Recommended Practice for Inspection and Testing Agencies for Concrete, Steel, and Bituminous Materials as Used in Construction.

1.5 SELECTION AND PAYMENT

A. General:

1. Comply with requirements of Section 011000, “Summary” as applicable.

2. Contractor will employ and pay for services of a Maryland licensed independent construction inspection and testing laboratory firm.
3. Contractor's Construction, Inspection and Testing Firm (CCITF) shall perform construction inspection, field testing, laboratory testing and laboratory analysis in support of the Contractor's Work.
4. Employment of CCITF shall not relieve Contractor of obligation to perform Work in compliance with requirements of Contract Documents.

1.6 LABORATORY RESPONSIBILITIES

A. Test samples of concrete and mortar mixes utilized in the Project from on-site and off-site construction and fabrication Work.

B. Provide qualified personnel at site to observe and test soil placement for compaction requirements.

C. Perform destructive and non-destructive testing of welds, bolts, fasteners and other component assembly methods.

D. Cooperate with Owner, Architect and Engineers, and Contractor in performance of services.

E. Perform inspection, sampling, and testing of products in compliance with specified standards.

F. Ascertain compliance of materials, methods and mixes with requirements of Contract Documents.

G. Promptly notify Owner, Architect, Engineer and Contractor in writing of observed irregularities or non-conformance or non-compliance with Contract Document requirements of the Work or products.

H. Perform additional inspections and tests required by Owner, Architect/Engineer and/or Contractor as directed by the Owner at no additional cost to the Owner.

I. Contractor shall require CCITF to attend Preconstruction Conference, Owner's Progress Meetings and Contractor's Coordination Meetings.

PART 2 - PRODUCTS

2.1 LABORATORY REPORTS

A. After each inspection and test, promptly distribute four (4) copies of laboratory reports to Owner, Architect/Engineer and Contractor through the Contractor.

B. Reports shall include the following:

1. Data issued.
2. Project title and number.
3. Name of inspector.
4. Date and time of sampling or inspection.
5. Identification of product and Specification Section.

6. Location in the Project.
7. Type of inspection or test.
8. Date of observation and/or test.
9. Date of laboratory test and/or analysis.
10. Results of tests.
11. Conformance with Contract Documents.

C. When requested by Owner and/or Architect/Engineer, provide interpretation of test results.

PART 3 - EXECUTION

3.1 LIMITS ON CCITF AUTHORITY

A. CCITF may not release, revoke, alter, or enlarge on requirements of Contract Documents.

B. CCITF may not approve or accept any portion of the Work.

C. CCITF may not assume any duties of Contractor.

D. CCITF has no authority to stop the Work unless life-threatening health or safety conditions exist.

3.2 CONTRACTOR RESPONSIBILITIES

A. Deliver to CCITF at agreed upon location, adequate samples of materials proposed to be used that require testing, along with proposed mix designs.

B. Cooperate with CCITF personnel, and provide access to the Work.

C. Provide incidental labor and facilities to provide access to Work to be tested, to obtain and handle samples at the site or at source of products to be tested, and to facilitate tests and inspections, storage and curing of test samples.

D. Contractor shall notify Owner, Architect, CCITF and SCITF twenty-four (24) hours prior to expected time for operations requiring inspection and testing services.

E. Contractor shall provide corrective action when notified of defects.

F. In the event that the Contractor takes exception to CCITF or SCITF inspection report, the Contractor shall schedule a meeting, if necessary, with the Owner, CCITF, SCITF in an effort to resolve any conflict.

G. The Contractor shall arrange and pay for any re-testing found necessary to substantiate the validity of the Contractor’s claim at no additional cost to the Owner.

3.3 SCHEDULE OF INSPECTIONS AND TESTS

A. Schedule of Tests and Inspections: Prepare in tabular form and include the following:

1. Specification Section number and title.
2. Entity responsible for performing tests and inspections.
3. Description of test and inspection.
4. Identification of applicable standards.
5. Identification of test and inspection methods.
6. Number of tests and inspections required.
7. Time schedule or time span for tests and inspections.
8. Requirements for obtaining samples.
9. Unique characteristics of each quality-control service.

END OF SECTION 01 40 02

SECTION 01 42 00 - REFERENCES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 DEFINITIONS

A. General: Basic Contract definitions are included in the Conditions of the Contract.

B. "Approved": When used to convey Architect's action on Contractor's submittals, applications, and requests, "approved" is limited to Architect's duties and responsibilities as stated in the Conditions of the Contract.

C. "Directed": A command or instruction by Architect. Other terms including "requested," "authorized," "selected," "required," and "permitted" have the same meaning as "directed."

D. "Indicated": Requirements expressed by graphic representations or in written form on Drawings, in Specifications, and in other Contract Documents. Other terms including "shown," "noted," "scheduled," and "specified" have the same meaning as "indicated."

E. "Regulations": Laws, ordinances, statutes, and lawful orders issued by authorities having jurisdiction, and rules, conventions, and agreements within the construction industry that control performance of the Work.

F. "Furnish": Supply and deliver to Project site, ready for unloading, unpacking, assembly, installation, and similar operations.

G. "Install": Unload, temporarily store, unpack, assemble, erect, place, anchor, apply, work to dimension, finish, cure, protect, clean, and similar operations at Project site.

H. “Manufacturing”: Refers to the final assembly of components into the building product.

I. “Ozone depleting substances”: Materials and chemical compounds that are destructive to the ozone layer. CFCs and HCFCs, aerosol sprays and other similar substances are considered “ozone depleting

J. “Post-Consumer Recycled Content”: Building material generated by collection after use by consumers, installed in a project. LEED gives a higher value to post-consumer RCM.

K. “Post-Industrial Recycled Content”: Building material generated by collection of waste material or by-products of the manufacturing process.

L. "Provide": Furnish and install, complete and ready for the intended use.

M. "Project Site": Space available for performing construction activities. The extent of Project site is shown on Drawings and may or may not be identical with the description of the land on which Project is to be built.

N. “Rapidly Renewable Material”: Materials that substantially replenish themselves faster than traditional extraction demand and do not result in significant biodiversity loss, increase erosion, air quality impacts and that are sustainably managed.

O. “Recycled Content Materials”: Building materials that contain in aggregate, a minimum weighted average of post-consumer or post-industrial recycled content material.

P. “Salvage or Re-Used Materials”: Materials recovered from existing buildings and reprocessed for reuse in other buildings.

Q. “Volatile Organic Compounds (VOC)”: Carbon compounds that participate in atmospheric photochemical reactions and contribute to smog and air pollution.

1.3 INDUSTRY STANDARDS

A. Applicability of Standards: Unless the Contract Documents include more stringent requirements, applicable construction industry standards have the same force and effect as if bound or copied directly into the Contract Documents to the extent referenced. Such standards are made a part of the Contract Documents by reference.

B. Publication Dates: Comply with standards in effect as of date of the Contract Documents unless otherwise indicated.

C. Copies of Standards: Each entity engaged in construction on Project should be familiar with industry standards applicable to its construction activity. Copies of applicable standards are not bound with the Contract Documents.

1. Where copies of standards are needed to perform a required construction activity, obtain copies directly from publication source.

1.4 ABBREVIATIONS AND ACRONYMS

A. Industry Organizations: Where abbreviations and acronyms are used in Specifications or other Contract Documents, they shall mean the recognized name of the entities indicated in Gale's "Encyclopedia of Associations: National Organizations of the U.S." or in Columbia Books' "National Trade & Professional Associations of the United States."

B. Industry Organizations: Where abbreviations and acronyms are used in Specifications or other Contract Documents, they shall mean the recognized name of the entities in the following list. This information is subject to change and is believed to be accurate as of the date of the Contract Documents.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 01 42 00

SECTION 01 50 00 - TEMPORARY FACILITIES AND CONTROLS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes requirements for temporary utilities, support facilities, and security and protection facilities.

B. Related Requirements:

1. Section 011000 "Summary" for work restrictions and limitations on utility interruptions.
2. Section 31200 “Earth Moving” for dewatering procedures.
3. Section 312319 "Dewatering" for disposal of ground water at Project site.
4. Section 321216 "Asphalt Paving" for construction and maintenance of asphalt pavement for temporary roads and paved areas.
5. Section 321313 "Concrete Paving" for construction and maintenance of cement concrete pavement for temporary roads and paved areas.

1.3 USE CHARGES

A. General: Installation and removal of and use charges for temporary facilities shall be included in the Contract Sum unless otherwise indicated. Allow other entities to use temporary services and facilities without cost, including, but not limited to, Owner's construction forces, Architect, testing agencies, and authorities having jurisdiction.

B. Sewer Service: Contractor shall pay sewer-service use charges for sewer usage by all entities for construction operations.

C. Water Service: Contractor shall pay water-service use charges for water used by all entities for construction operations.

D. Electric Power Service:

1. At the staging area bounded by Graves, Madison, Forrest & Monument Streets State-owned electrical services are available at 208/120V at the JI Building main switchboard located in the Basement at the corner of Madison & Graves Street. The Contractor may, if he so elects, make temporary connections at this switch board on the State-owned system that has sufficient capacity which is up to a new 600A breaker to carry the added temporary load. If this is done, the Contractor shall be assessed a flat rate of $500.00 per month for power consumed during the period of construction. This monthly amount used for the duration of the project will be deducted from the contract value before final

payment is made to the Contractor. The State reserves the right to amend the assessed rate.

Temporary feeders shall be installed underground beneath Graves Street connected to the above referenced new SQD-style breaker in the QED Switchboard and equipment required for this temporary connection shall be at the expense of the Contractor. The Contractor shall at his expense restore the connection point on the State-owned system to its original condition at conclusion of the project. (See attached Drawing of the Contractor Staging Area Street Utility Site Plan.)

2. At the YDC (Youth Detention Center) construction site, State-owned electrical service is available at 480/277V at the OSTC/SUI Building basement, which presently sub feeds the BPRU building that is to be demolished. This is a BGE secondary service metered at the 480V level with a CT cabinet in the basement of OSTC switchboard. The Contractor may, if he so elects, make temporary connections at this panel on the State-owned system that has sufficient capacity to carry the added temporary load. This OSTC switchboard is fed from a BGE owned 15kV switch and 1000kVA transformer that are to be removed by BGE during the project. A temporary BGE transformer and contractor furnished main and feeder as required in other parts of this specification to refeed the OSTC switchboard. If temporary power is used from OSTC, the Contractor shall be assessed additionally a flat rate of $200.00 per month for power consumed during the construction period. This monthly amount used for the duration of the project will be deducted from the contract value before final payment is made to the Contractor. The State reserves the right to amend the assessed rate. Equipment required for this temporary connection shall be at the expense of the Contractor. The Contractor shall at his expense restore the connection point on the State-owned system to its original condition at conclusion of the project.

3. Where no adequate State-owned electrical services exist, the Contractor shall make arrangements with the local electric utility company for the provision of temporary service and pay for electricity used by all entities during the project construction (Owner, Architect, Testing Agencies, and Authorities Having Jurisdiction). All charges incurred for the provision and use of this temporary service shall be borne by the Contractor. Provide adequate service to start-up and test electrical systems and equipment if permanent power is not available.

4. In all cases the Contractor shall submit to the Owner's Representative for approval a sketch or sketches showing the route of all temporary connections with descriptions of wire sizes and types, protective devices and similar equipment to be used in providing the temporary service.

1.4 INFORMATIONAL SUBMITTALS

A. Site Plan: Show temporary facilities, utility hookups, staging areas, and parking areas for construction personnel.

1. Show route of all temporary electrical connections with locations of poles, descriptions of wire sizes and types, transformers, meters, protective devices and similar equipment to be used in providing temporary service.

B. Erosion- and Sedimentation-Control Plan: Show compliance with requirements of EPA Construction General Permit or authorities having jurisdiction, whichever is more stringent.

C. Temporary Utility Reports: Submit reports of tests, inspections, meter readings, and similar procedures performed on temporary utilities.

D. Implementation and Termination Schedule: Within 15 days of date established for submittal of Contractor's Construction Schedule, submit a schedule indicating implementation and termination of each temporary utility.

E. Moisture-Protection Plan: Describe procedures and controls for protecting materials and construction from water absorption and damage.

1. Describe delivery, handling, and storage provisions for materials subject to water absorption or water damage.
2. Indicate procedures for discarding water-damaged materials, protocols for mitigating water intrusion into completed Work, and replacing water-damaged Work.
3. Indicate sequencing of work that requires water, such as sprayed fire-resistive materials, plastering, and terrazzo grinding, and describe plans for dealing with water from these operations. Show procedures for verifying that wet construction has dried sufficiently to permit installation of finish materials.

F. Dust- and HVAC-Control Plan: Submit coordination drawing and narrative that indicates the dust- and HVAC-control measures proposed for use, proposed locations, and proposed time frame for their operation. Identify further options if proposed measures are later determined to be inadequate. Include the following:

1. Locations of dust-control partitions at each phase of work.
2. HVAC system isolation schematic drawing.
3. Location of proposed air-filtration system discharge.
4. Waste handling procedures.
5. Other dust-control measures.

1.5 QUALITY ASSURANCE

A. Electric Service: Comply with NECA, NEMA, and UL standards and regulations for temporary electric service. Install service to comply with NFPA 70.

B. Tests and Inspections: Arrange for authorities having jurisdiction to test and inspect each temporary utility before use. Obtain required certifications and permits.

C. Accessible Temporary Egress: Comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines for access to Project conference room and for any work within OSTC portion of SUI Building that inhibits egress or access to any exit or space.

1.6 PROJECT CONDITIONS

A. Temporary Utilities: At earliest feasible time, when acceptable to Owner, change over from use of temporary service to use of permanent service.

1. Temporary Use of Permanent Facilities: Engage Installer of each permanent service to assume responsibility for operation, maintenance, and protection of each permanent service during its use as a construction facility before Owner's acceptance, regardless of previously assigned responsibilities.

B. Conditions of Use: The following conditions apply to use of temporary services and facilities by all parties engaged in the Work:

1. Keep temporary services and facilities clean and neat.
2. Relocate temporary services and facilities as required by progress of the Work.

PART 2 - PRODUCTS

2.1 MATERIALS

A. General: Provide new materials. Undamaged, previously used materials in serviceable condition may be used if approved by Owner and Architect. Provide materials suitable for use intended.

B. Chain-Link Fencing: Minimum 2-inch, 0.148-inch- thick, galvanized-steel, chain-link fabric fencing; minimum 6 feet high with galvanized-steel pipe posts; minimum 2-3/8-inch- OD line posts and 2-7/8-inch- OD corner and pull posts, with 1-5/8-inch- OD top rails , with galvanized barbed-wire top strand.

C. Lumber and Plywood: Comply with requirements in Division 6 Section " Rough Carpentry."

D. Paint: Comply with requirements in Division 9 Section "Painting."

E. Tarpaulins: Fire-resistive labeled with flame-spread rating of 15 or less.

F. Water: Potable.

G. Polyethylene Sheet: Reinforced, fire-resistive sheet, 10-mil minimum thickness, with flame-spread rating of 15 or less per ASTM E 84 and passing NFPA 701 Test Method 2.

H. Dust-Control Adhesive-Surface Walk-off Mats: Provide mats minimum 36 by 60 inches.

I. Insulation: Unfaced mineral-fiber blanket, manufactured from glass, slag wool, or rock wool; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively.

2.2 TEMPORARY FACILITIES

A. Field Offices and Facilities, General:

1. Security: Offices shall be located within perimeter fence enclosure. Modular units shall be secure
2. Provide prefabricated or mobile units with serviceable finishes, temperature controls, and foundations adequate for normal loading.

3. Provide all temporary offices and facilities within designated areas as shown on the staging plan on drawings. Placement and schedule duration shall be coordinated by the Contractor. Contractor is responsible to verify that all field offices, trailers and storage sheds shall be in accordance with the local Fire Marshall having jurisdiction.
4. Construction personnel will not be allowed to use parking areas designated for Owner, and Architect.
5. Subcontractors will not be allowed to have on-site construction trailers.
6. Contractor shall maintain the use of designated space for offices and sheds. This includes removal of weeds, debris, trash and clean-up of the area after removal of such temporary structures.
7. Temporary field offices and sheds shall not be used for living quarters.
8. Offices and sheds shall be of suitable design, maintenance and appearance, and meet the approval of the Owner and all applicable local codes.
9. All temporary offices including foundations must be removed within ten (10) days of written notice from the Owner, including restoration of grade. Structures not removed in a timely manner will be removed by the Owner at the Contractor's expense.
10. Offices shall be weathertight.
11. The office shall be set up, equipped and made ready for use at least 24 hours prior to the beginning of construction, and it shall remain until all work has been completed.

B. Contractor's Field Office: Of sufficient size to accommodate needs of Contractor.

1. Electronic Communication Service sufficient for Contractor's activities.
2. Minimum of 12 white adjustable-band protective helmets for visitors.
3. Minimum of 12 clear plastic safety eyeglasses for visitors.
4. Minimum of six pairs of yellow rubber pull-on boots for visitors, maintained clean.
5. One 10-inch outdoor weather high-low thermometer,
6. One rain gage.
7. Submittal Storage:

    a. Separate secure, lighted and ventilated storage room to maintain products and samples of individual Sections, minimum size 12 by 16 feet.
    b. Organize and construct Storage Room complete with plywood or steel shelves and bins to receive and maintain Submittal products and samples.
    c. Organize Submittal products and samples in accordance with the individual specification Divisions.
8. Provide electrical, water and sewer service, and trash removal and recycling service, to field offices.

9. Furniture required for Project-site documents including file cabinets, plan tables, plan racks, and bookcases.
10. Conference room of sufficient size to accommodate meetings of 20 individuals. Provide electrical power service and 120-V ac duplex receptacles, with no fewer than one receptacle on each wall. Furnish room with conference table, chairs, and 4-foot- square tack and marker boards. Provide ability for multiple use internet connectivity within conference room via hard or WI-FI capability.
11. Drinking water and private toilet.
12. Coffee machine and supplies.
13. Heating and cooling equipment necessary to maintain a uniform indoor temperature of 68 to 72 deg F.
14. Lighting fixtures capable of maintaining average illumination of 20 fc at desk height.

15. Provide one office for Owner's representatives; with data/internet and telecommunication capability;
16. Provide area and desk for Architect's representative to work when in field with data/internet and telecommunication capability;

C. Material Storage and Material/Fabrication Sheds: Provide sheds sized, furnished, and equipped to accommodate materials and equipment for construction operations.

1. Store combustible materials apart from building.
2. All temporary sheds including foundations must be removed within ten (10) days of written notice from the Owner, including restoration of grade. Structures not removed in a timely manner will be removed by the Owner at the Contractor's expense.
3. Sheds of combustible construction shall not be provided within at least seventy-five (75) feet from the new construction or within the new construction or as directed by the Owner.
4. Use of only Underwriters Laboratory approved heaters is permitted in field offices or storage sheds in compliance with OSHA and MOSHA requirements, and they shall have fire resistive material underneath and at the sides near partitions and walls.
5. Temporary storage of materials in the building and on the site will be limited to the same areas immediately under construction for materials intended for that particular portion of the work. Material, equipment and tools shall not be stored on site in excess of five (5) working days prior to installation or use without Owner approval. Contractor and Subcontractors must move any stored products, under their control, which interfere with operations of the Owner or separate Contractors as directed. The Contractor and Subcontractors shall cooperate in this regard.
6. Contractor shall provide sufficient protection for their materials and equipment from damages by weather or construction work.
7. During progress of work and upon completion of the work, remove all debris and leave the area in a clean and orderly condition.
8. Contractor and Subcontractors shall submit a receipt of shipment for all equipment stored on site or off-site to the Owner. No materials or equipment shall be removed from the site without the permission of the Owner.

9. Payments will be made for materials properly stored off site when site does not permit on-site storage and protection. Properly stored shall mean in an insured warehouse with the Owner being named as the insured, and all material identified as property of the Owner. The Contractor is responsible for all associated off-site storage costs, transportation, insurance, etc. The Owner will require verification in writing for all material so stored.

2.3 EQUIPMENT

A. Fire Extinguishers: Portable, UL rated; with class and extinguishing agent as required by locations and classes of fire exposures.

1. Comply with NFPA 10 and NFPA 241 for classification, extinguishing agent, and size required by location and class of fire exposure.

B. Self-Contained Toilet Units: Single-occupant units of chemical, aerated recirculation, or combustion type; vented; fully enclosed with a glass-fiber-reinforced polyester shell or similar nonabsorbent material.

C. Drinking-Water Fixtures: Containerized, tap-dispenser, bottled-water drinking-water units, including paper cup supply. Where power is accessible, provide electric water coolers to maintain dispensed water temperature at 45 to 55 deg F (7.2 to 12.7 deg C).

D. Electrical Outlets: Properly configured, NEMA-polarized outlets to prevent insertion of 110- to 120-V plugs into higher-voltage outlets; equipped with ground-fault circuit interrupters, reset button, and pilot light.

E. Power Distribution System Circuits: Where permitted and overhead and exposed for surveillance, wiring circuits, not exceeding 125-V ac, 20-A rating, and lighting circuits may be nonmetallic sheathed cable.

F. HVAC Equipment: Unless Owner authorizes use of permanent HVAC system, provide vented, self-contained, liquid-propane-gas or fuel-oil heaters with individual space thermostatic control.

1. Use of gasoline-burning space heaters, open-flame heaters, or salamander-type heating units is prohibited.
2. Heating Units: Listed and labeled for type of fuel being consumed, by a qualified testing agency acceptable to authorities having jurisdiction, and marked for intended location and application.
3. Permanent HVAC System: If Owner authorizes use of permanent HVAC system for temporary use during construction, provide filter with MERV of 8 at each return-air grille in system and remove at end of construction and clean HVAC system as required in Section 017700 "Closeout Procedures".

2.4 WORK WITHIN OWNER OCCUPIED AREAS

A. Isolation of Occupied Areas: Proved floor-to-ceiling , solid, temporary partition assembly to isolate work areas within occupied OSTC portion of the SUI building.

B. Inmates Work Schedule: Hours of occupation are between 7:00 am and 3:30 pm.

C. Installation of the fire alarm and sprinkler systems shall occur between 4:00 pm and 6:00 am. An Owner’s security officer shall be present during the time of installation.

D. Maintain proper access and egress from temporary work areas with secure detention locks. Keys shall be provided to Owner.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

A. Locate facilities where they will serve Project adequately and result in minimum interference with performance of the Work. Relocate and modify facilities as required by progress of the Work.

1. Locate facilities to limit site disturbance as specified in Section 011000 "Summary."

B. Provide each facility ready for use when needed to avoid delay. Do not remove until facilities are no longer needed or are replaced by authorized use of completed permanent facilities.

3.2 TEMPORARY UTILITY INSTALLATION

A. General: Install temporary service or connect to existing service.

1. Arrange with utility company, Owner, and existing users for time when service can be interrupted, if necessary, to make connections for temporary services.
2. No utility services shall be interrupted by the Contractor to make connections, to relocate, or for any purpose without approval of the Owner.
3. Special attention shall be paid where interruptions of service is required within or adjacent to secure corrections facilities. Contractor shall coordinate with the Owner and obtain approval prior to any interruption to or installation within or adjacent to any Secure Corrections environment. The Contractor must prepare shut-down plan and schedule for review and approval. No additional time shall be permitted for the interruption unless agreed upon by all parties. Additional time or remobilization to perform the work affected by interruptions to secure corrections facilities shall be at the Contractor's expense.
4. Request for permission to shut down services shall be submitted in writing to the Owner not less than 15 days prior to date of proposed interruption. The request shall give the following information:

    a. Nature of Utility (Gas, L.P. or H.P., Water, Security, IT, Electrical, Etc.)
    b. Size of line and location of shutoff.
    c. Buildings and services affected.
    d. Hours and date of shutoff.
    e. Estimated length of time service will be interrupted.

5. Services will not be shut off until receipt of approval of the proposed hours and date from the Owner.
6. Shutoffs which will cause interruption of State and/or City work operations as determined by the Contractor shall be accomplished during regular non-work hours or on non-work days of the State and/or City without any additional cost to the State and/or City.
7. Operation of valves on water mains will be by State and/or City personnel. Where shutoff of water lines interrupts service to fire hydrants or fire sprinkler systems, the Contractor shall arrange his operations and have sufficient material and personnel available to complete the work without undue delay or to restore service without delay in event of emergency. All costs are to be borne by the Contractor.
8. Flow in gas mains which have been shut off shall not be restored until the CCITF through the Owner has determined that all items serviced by the gas line have been shut off.
9. Power Outages: The Contractor shall carefully plan his work with a view to limiting outages of the lighting and power. All temporary outages and/or interruptions necessary shall be planned at least seventeen (15) days in advance and submitted to the Owner, for approval. All total outages shall be on Saturdays, Sundays and holidays as approved by the Owner. Power shall be restored after each outage and shall be made operational for normal workday schedule.
10. **Maintenance of Power to The Occupational Skills Training Center (OSTC) functions in SUI Building:** The OSTC must remain occupied and in operation

during the construction period. The Contractor must provide temporary power to maintain operation and function of the OSTC at all times:

a. Provide 400kW generator 480/277V and feed the existing switchboard. Contractor will be responsible for fuel, cabling, and conduit between generator and switchboard.

OR

b. Coordinate with BGE to provide a temporary Medium Voltage switch, transformer, conduit, CT cabinet, metering and all associated appurtenances required to maintain power to the OSTC and other occupied areas of the SUI Building. Locate the temporary equipment on the sidewalk between Truxton street and the SUI Building. This will include new underground conduits from the nearest BGE manhole to the transformer and underground conduits from the BGE transformer to a CT cabinet located on the exterior of the SUI Building per BGE standards. Provide bollards around the transformer per BGE standards. Adjacent to the CT cabinet, provide a new 600A 480V breaker in a NEMA 3R enclosure and extend two sets of 4 # 350kcmil in 2-4" EMT conduits routed in the basement of the SUI Building to the existing-to-remain switchboard.

This reconnection or cutover from the existing to the temporary service shall be performed while the OSTC area is unoccupied (after 4:00pm and until 6:00am on weekdays, or else on weekends). The contractor shall be fully responsible to coordinate all aspects of the BGE work to maintain service to occupied areas of the SUI Building. The energy usage component of this service shall be paid by the Owner. An allowance as described in Section 01 21 00 SPECIALTY ALLOWANCES is included to cover the BGE cost for this service.

B. Alterations to the Utilities: Where changes and relocations of utility lines are noted to be performed by others, the Contractor shall give the Owner at least thirty (30) days written notice in advance of the time that the change or relocation is required. In the event that, after the expiration of thirty (30) days after the receipt of such notice by the Owner, such utility lines have not been changed or relocated and delay is occasioned to the completion of the work under this contract, the Contractor will be entitled to a time extension equal to the period of time lost by the Contractor after the expiration of said thirty (30) day period. Any modification to existing or relocated lines required as a result of the Contractor's method of operation shall be made wholly at the Contractor's expense and no additional time will be allowed for delays incurred by such modifications.

C. Sewers and Drainage: Provide temporary utilities to remove effluent lawfully.

1. Connect temporary sewers to as directed by authorities having jurisdiction.

D. Water Service: Install water service and distribution piping in sizes and pressures adequate for construction.

1. The Contractor will pay for water used on this project. Contractor shall exercise measures to conserve water.
2. Contractor shall provide and maintain a source for drinking water. Contractor shall be responsible to provide containers, paper cups, ice, hoses, etc. for their needs.

3. Immediately after award of contract, the Contractor shall furnish, install, maintain and subsequently remove a temporary hookup to the City potable water system where directed for construction purposes. Distribution of temporary water will be paid for by the Contractor. A minimum of two hose bibs shall be provided by the Contractor as directed. Extend branch piping with outlets located so water is available by hoses with threaded connections. Provide temporary pipe insulation to prevent freezing.

E. Sanitary Facilities: Provide temporary toilets, wash facilities, and drinking water for use of construction personnel. Comply with requirements of authorities having jurisdiction for type, number, location, operation, and maintenance of fixtures and facilities.

1. At no time are the permanent sanitary facilities of the project available to Contractor.
2. Disposable Supplies: Provide toilet tissue, paper towels, paper cups, and similar disposable materials for each facility. Maintain adequate supply. Provide covered waste containers for disposal of used material.
3. Toilets: Install self-contained toilet units. Shield toilets to ensure privacy. Provide separate facilities for male and female personnel.
4. Wash Facilities: Install wash facilities supplied with potable water at convenient locations for personnel who handle materials that require wash up. Dispose of drainage properly. Supply cleaning compounds appropriate for each type of material handled.
5. Provide safety showers, eyewash fountains, and similar facilities for convenience, safety, and sanitation of personnel.
6. Locate toilets and drinking-water fixtures so personnel need not walk more than two stories vertically to facilities.

F. Heating and Cooling: Provide temporary heating and cooling required by construction activities for curing or drying of completed installations or for protecting installed construction from adverse effects of low temperatures or high humidity. Select equipment that will not have a harmful effect on completed installations or elements being installed.

1. Contractor shall pay and provide for temporary heat and cold weather protection as necessary to carry out the work and allow operations to continue during inclement or cold weather, to protect all work and materials against injury from dampness or cold, to dry out building, and to provide suitable working conditions for the installation and curing of materials.

    a. Heat and protection shall be provided to maintain specified, recommended, and approved environmental conditions and temperatures. The temperature shall not be allowed to reach a level that will cause damage to any portion of the work, including materials stored in the building, which may be subject to damage by low or high temperatures. Maintain minimum ambient temperature of 50 degrees F (10 degrees C) in areas where construction is in progress, unless indicated otherwise in specifications.
    b. Adequate venting, maintenance, care and supervision of such temporary heating and equipment shall be exercised so that finished work will not be damaged by its operation and to meet all state and city codes.
    c. Contractor in coordination with the Owner shall provide a plan for temporary heating and cold weather protection.

2. Contractor Use of Heating Plant:

a. Upon obtaining written approval from the Owner, the Contractor may, at his option, utilize the heating system installed under this contract to provide space heating prior to the time of completion of the building. All fuel or power for such space heating and for the required tests of heating equipment shall be furnished by the Contractor and shall be as specified.
b. The heating system shall be operated only by qualified personnel and shall be operated with all auxiliaries and in accordance with the manufacturer's instructions and good operating practice. Heating systems shall not be operated for space heating until the Owner is furnished a written statement signed by the Contractor certifying that all water treating equipment, combustion control equipment, and the safety controls have been properly installed and are operating satisfactorily. If at any time the Owner determines that the equipment is being improperly operated or maintained, the Contractor may be directed to discontinue its use.
c. Heating Systems shall be operated and controlled to prevent temperature in any room or space in the building from exceeding 90 degrees F.
d. Contractor shall, prior to the time of final acceptance of all work under this contract, place the heating system, related equipment, and ductwork in a condition equal to new. The heating systems shall be cleaned, lubricated, and adjusted, and parts and filters shall be replaced or cleaned, as required. Provide all necessary touch-up painting. Contractor shall pay for all costs for maintenance, attendance and restoration to "like new" condition of the system.
e. Contractor shall assume full responsibility for the entire heating system until final acceptance of the system by the Owner. Contractor shall pay the cost of extending warranty and guarantee periods on any permanent equipment used prior to substantial completion.

3. Interior or exterior surfaces damaged by the use of heating units shall be replaced with new materials at the Contractor's expense.

G. Isolation of Work Areas in Occupied Facilities (SUI Building and “D” Block): Prevent dust, fumes, and odors from entering occupied areas.

1. Prior to commencing work, isolate the HVAC system in area where work is to be performed according to coordination drawings.

a. Disconnect supply and return ductwork in work area from HVAC systems servicing occupied areas.
b. Maintain negative air pressure within work area using HEPA-equipped air-filtration units, starting with commencement of temporary partition construction, and continuing until removal of temporary partitions is complete.

2. Maintain dust partitions during the Work. Use vacuum collection attachments on dust-producing equipment. Isolate limited work within occupied areas using portable dust-containment devices.
3. Perform daily construction cleanup and final cleanup using approved, HEPA-filter-equipped vacuum equipment.

H. Ventilation and Humidity Control: Provide temporary ventilation required by construction activities for curing or drying of completed installations or for protecting installed construction from adverse effects of high humidity. Select equipment that will not have a harmful effect on completed installations or elements being installed. Coordinate ventilation requirements to produce ambient condition required and minimize energy consumption.

1. Provide dehumidification systems when required to reduce substrate moisture levels to level required to allow installation or application of finishes.
2. Ventilate enclosed areas to assist cure of materials, to dissipate humidity, and to prevent accumulation of dust, fumes, vapors, or gases.
3. Utilize existing ventilation equipment. Extend and supplement equipment with temporary fan units as required to maintain clean air for construction operations.

I. Electric Power Service: Provide electric power service and distribution system of sufficient size, capacity, and power characteristics required for construction operations.

1. Install electric power service overhead unless otherwise indicated.
2. Regulations and Compliance:

   a. All temporary equipment and wiring for power, lighting and distribution requirements shall conform to National Electrical Code, OSHA requirements, and be in accordance with all other applicable provisions of federal, state and city governing laws, codes, and ordinances.
   b. All temporary wiring and distribution equipment shall be maintained so as not to constitute a hazard to persons or property.
   c. Contractor is responsible to provide an assured grounding program in accordance with OSHA regulations for their own electrical power requirements.

3. Power Service:

   a. Contractor shall provide, install, and pay for labor, equipment and materials required to make connections to local utility company and to provide temporary electrical service for power and light distribution. The Contractor shall coordinate the location of the electrical power and lighting.
   b. Contractor will provide for each construction trailer(s) a 120/208 volt (or 120/140 volt), 100 ampere single phase power source to which the Contractor can connect to. The cost of hook up and removal of temporary electrical service to trailer shall be Contractor's responsibility.
   c. Protection shall be provided for the power supply source complete with disconnect switch, overcurrent protection, and other required electrical devices.
   d. Contractor will provide the temporary electrical service to the temporary hoist.
   e. Power consumption shall not disrupt Owner's need for continuous service.
   f. Subcontractors requiring service of capacity or characteristics other than specified must make arrangements with the Contractor and pay for their own installation, removal, and service.
   g. Where 3 phase power is required, the Contractor must pick up service at the distribution panel located outside the building.

4. Power Distribution:

   a. Contractor will provide and maintain temporary power distribution. Construction power shall be 120/208 volts, 3 phase, 4 wire plus ground. Provide the following outlets together with feeders, branch wiring, grounding, distribution boxes, protective devices and ground fault interrupting devices.

      1) Power centers - on each floor of the new building, provide a minimum of two (2) power centers or not less than one (1) per 10,000 SF rated not less than 100 amperes at 120/208 volt, 3

phase, 4 wire plus ground. Locate the power centers such that each will serve approximately equal areas and as far as possible, each shall be in the center of the respective area served.

2) 120 volt duplex outlets - Provide weatherproof, G.F.I. protected, 20 ampere grounded outlets at a minimum rate equal to 1 - duplex outlet per 400 square feet. Outlets may be grouped in clusters of up to six duplex types with corresponding pro-rated increase in area served, provided that every portion of the construction and remodeled premises can be reached from the nearest outlet using a flexible cord no more than 50 feet in length.

3) The necessary grounded portable cords, lamps, lightstands, and fuses from the distribution outlets to points of use shall be provided by Contractor to suit requirements.

5. As partitions are erected, locations of power distribution points shall be added or relocated.

J. Lighting: Provide temporary lighting with local switching that provides adequate illumination for construction operations, observations, inspections, and traffic conditions.

1. Install and operate temporary lighting that fulfills security and protection requirements without operating entire system.
2. Lighting shall be achieved using 120 volt guarded incandescent fixtures, or other suitable fixture types, to OSHA required minimum levels of illumination.
3. General interior lighting levels shall be a minimum of 25-foot candles.
4. Provide a minimum of 70-foot candles of lighting in Contractor field offices.
5. Higher lighting levels, 70 to 100-foot candles at direction of Owner or Architect shall be provided for detail finish work at no additional cost to the Owner.
6. 120 volt temporary lighting as required in interior work areas.
7. Provide adequate security lighting at guarded entrances outside storage areas, parking areas, and in areas of Contractor's, Owner's, and Architect's field offices and sheds.
8. As partitions are erected, locations of lighting distribution points shall be added or relocated.

K. Maintenance of Temporary Power and Lighting:

1. Contractor shall be responsible for the following:

a. Servicing, repairing and rearrangement of service equipment, temporary power, temporary lighting, and relamping.
b. Removal and disposal of temporary electrical power and lighting at completion of the project or when so directed by the Owner and repair of damage caused by new work.

L. Permanent Electrical Power and Lighting:

1. When permanent electrical power and lighting systems are in operating condition, they will be used for temporary power and lighting for construction purposes once the Contractor:

a. Obtains the approval of the Owner.
b. Assumes full responsibility for operation of the entire power and lighting systems and replacement of any burned out lamps.

c. Verifies that warranty dates will start upon the receipt of certificates of usage and occupancy and not during or before periods of construction.
d. Pays costs for operation, maintenance, and restoration of the systems.

M. Telephone Service: Provide temporary telephone service in common-use facilities for use by all construction personnel.

1. Install Contractor's desired number of dedicated telephone line(s) for each field office.

2. Provide additional telephone lines for the following:
   a. Provide one telephone line for Owner's use.

3. At each telephone, post a list of important telephone numbers.

   a. Police and fire departments.
   b. Ambulance service.
   c. Contractor's home office.
   d. Contractor's emergency after-hours telephone number.
   e. Architect's office.
   f. Engineers' offices.
   g. Owner's office.
   h. Principal subcontractors' field and home offices.

4. Provide superintendent with cellular telephone or portable two-way radio for use when away from field office.

5. Printer: "All-in-one" unit equipped with printer server, combining color printing, photocopying, scanning, and faxing.
6. Internet Service per Owner requirements..
7. Internet Security: Integrated software, providing software firewall, virus, spyware, phishing, and spam protection in a combined application.
8. Backup: External hard drive, with automated backup software providing daily backups.

3.3 SUPPORT FACILITIES INSTALLATION

A. General: Comply with the following:

1. Provide construction for temporary offices, shops, and sheds located within construction staging area that is noncombustible according to ASTM E 136. Comply with NFPA 241.
2. Maintain support facilities until Architect schedules Substantial Completion inspection. Remove before Substantial Completion. Personnel remaining after Substantial Completion will be permitted to use permanent facilities, under conditions acceptable to Owner.

B. Traffic Controls: Comply with requirements of authorities having jurisdiction.

1. Protect existing site improvements to remain including curbs, pavement, and utilities.
2. Maintain access for fire-fighting equipment and access to fire hydrants.

C. Parking: Provide temporary parking areas for supervisory construction personnel in Contractor Administrative area.

1. Provide four reserved parking spaces for use by Owner and three reserved spaces Architect/Engineer adjacent to Field Office.
2. Provide reserved signage and designation at each parking stall.
3. Signage shall be non-corrosive metal, post mounted approximately 14-inches wide by 18-inches high.

D. Dewatering Facilities and Drains: Comply with requirements of authorities having jurisdiction. Maintain Project site, excavations, and construction free of water.

1. Dispose of rainwater in a lawful manner that will not result in flooding Project or adjoining properties or endanger permanent Work or temporary facilities.
2. Remove snow and ice as required to minimize accumulations.

E. Project Signs: The Contractor shall provide a project signs as indicated. No other signs or advertising shall be displayed on the premises without the approval of the Architect and Owner. This does not exclude the posting of required trade notice and cautionary signage by Contractor. Prepare Project identification and other signs in sizes as determined by Owner. Install signs where indicated to inform public and persons seeking entrance to Project. Do not permit installation of unauthorized signs.

1. Identification Signs: Install State Project identification signs as provided by Owner. Provide and install Architect's and Engineer's signs as indicated on drawings.
2. Temporary Signs: Provide other signs as indicated and as required to inform public and individuals seeking entrance to Project.

    a. Provide temporary, directional signs for construction personnel and visitors.

3. Maintain and touchup signs so they are legible at all times.

F. Waste Disposal Facilities: Comply with requirements specified in Section 017419 "Construction Waste Management and Disposal."

G. Waste Disposal Facilities: Provide waste-collection containers in sizes adequate to handle waste from construction operations. Comply with requirements of authorities having jurisdiction. Comply with progress cleaning requirements in Section 017300 "Execution."

H. Temporary Construction Aids:

1. Lifts and Hoists: Provide facilities necessary for hoisting materials and personnel.

    a. Cranes, truck cranes, hoists, lifts and similar devices used for hoisting materials are considered "tools and equipment" and not temporary facilities.
    b. The Contractor shall furnish, install, maintain and operate a temporary material hoist for the convenience of the Contractor. The hoist shall be installed upon completion of the building frame and removed after permanent elevator service is operational. The hoist shall be minimum 4,000 lb. size capacity and shall be furnished free of charge during normal working hours. All contractors shall conform to the hoisting schedule

established by the Contractor. Hoisting requirements in excess of the capacity or size of this hoist shall be provided by Contractor at his expense.

c. The hoist shall not be used for the placement of concrete, exterior masonry or roofing materials or the transporting of workmen. The operating cost for all overtime hoisting shall be paid by the Contractor requiring such services. Upon the removal of the hoist, Contractor shall complete the portion of their work interrupted by the temporary openings at no additional cost to the Owner.

d. The operating cost for all use of the elevator shall be paid by the Contractor. No guarantee of elevator acceptability or use by Contractor is made or implied.

I. Temporary Elevator Use: Use of new elevators is not permitted .

J. Existing Elevator Use:

1. Use of Owner's existing freight elevator within SUI Building will be permitted under the following conditions:
   a. Access to the elevator must be coordinated with Owner and Owner's security officer.
   b. Elevator can used for moving material
   c. Elevator is used and scheduled in coordination with Owner and OSTC administration approval.
   d. Elevator use is coordinated and scheduled with Security.
   e. Elevator is cleaned and maintained in a condition acceptable to Owner.
   f. At Substantial Completion, restore elevators to condition existing before initial use, including replacing worn cables, guide shoes, and similar items of limited life.
   g. Do not load elevators beyond their rated weight capacity.
   h. Provide protective coverings, barriers, devices, signs, or other procedures to protect elevator car and entrance doors and frame. If, despite such protection, elevators become damaged, engage elevator Installer to restore damaged work so no evidence remains of correction work. Return items that cannot be refinished in field to the shop, make required repairs and refinish entire unit, or provide new units as required.

K. Temporary Stairs, Ladders, Ramps, Runways: Until permanent stairs are available, provide temporary stairs where ladders are not adequate.

1. Contractor is to provide and maintain all necessary temporary stairs, ladders, ramps, and runways to facilitate conveyance of men, materials, tools, and equipment for proper execution of their work.
2. All protection and safety barricades, devices, covers, etc., shall be provided by Contractor as it relates to the safe conduct of the work and protection of people and property in their work area in accordance with OSHA and MOSHA requirements.
3. Temporary Use of Permanent Stairs: Use of new stairs for construction traffic will be permitted, provided stairs are protected and finishes restored to new condition at time of Substantial Completion. Cost of repair, replacement, or restoration to new condition shall be at Contractor's expense.

L. Temporary Scaffolding

1. Contractor is responsible for providing and maintaining any and all scaffolds and other staging, as required to complete the work. All such scaffolds and staging

equipment shall be erected, maintained and subsequently removed by Contractor in accordance with all applicable safety regulations.

M. Temporary Shoring and Bracing:

1. Provide, erect, maintain and remove all shoring and bracing of all walls, partitions and parapets requiring vertical reinforcement as required by local codes or laws, as required for the protection of workmen or the public, and as required to support them, in such a manner that they will be safe from falling or collapsing during the processing of the work.
2. In the event of damage to such work immediately make all repairs and replacements necessary to the approval of the Owner, and Architect, and at no additional cost.
3. Arrange bracing and shoring so as to not place stress on any portion of the completed work until the general construction thereof has proceeded far enough to provide sufficient strength.
4. Exercise care in the erecting and removal of shoring and bracing to prevent collapse of the work being supported.
5. Prior to the removal of all shoring and forms, the Contractor shall be responsible for temporary protection at the building floor perimeters and openings.

N. Temporary Barriers and Barricades:

1. The Contractor or Subcontractors performing excavation work shall be responsible to furnish, install and maintain temporary barricades and/or fencing of all open excavations until such time as the backfilling is complete. Flasher lights shall be provided on barricades and fencing by the Contractor in accordance with OSHA and MOSHA. As a minimum, all barricades across roads and walks shall have lights on them in working condition.
2. Contractor and Subcontractors shall provide and maintain in good repair barricades, overhead protection, guard rails, etc., as required by law or necessary for the protection of the public and personnel engaged in the work from hazards incidental to this contract. Do everything necessary to protect the Owner's employees, the public and workmen from injury or damage to vehicles or other property.
3. Provide barriers to prevent unauthorized entry to construction areas and to protect existing facilities and adjacent properties from damage from construction operations and demolition.
4. Provide barricades and covered walkways required by governing authorities for public rights-of-way.
5. Immediately after the removal of all shoring and forms, the Contractor shall furnish, install, and maintain all necessary temporary guardrails and barricade systems at the building floor perimeters and openings. When temporary protection is disturbed for project work, Contractor for is responsible to reinstall to its original condition the guardrail or barricade system for the protection of the workers and others until final construction of perimeter exterior wall and/or shaft openings is completed. All other protection and safety barricades, devices, covers, etc., including those at all roof areas, shall be provided by the Contractor as it relates to the safe conduct of their work in accordance with all local, state and federal regulations and the requirements of the contract documents and shall be in accordance with the most stringent requirements.
6. Warning Signs, and Lights: Comply with requirements of authorities having jurisdiction for erecting warning signs and lighting.

O. Existing Stair Usage: Use of Owner's existing stairs will be permitted, provided stairs are cleaned and maintained in a condition acceptable to Owner. At Substantial Completion, restore stairs to condition existing before initial use.

1. Provide protective coverings, barriers, devices, signs, or other procedures to protect stairs and to maintain means of egress. If stairs become damaged, restore damaged areas so no evidence remains of correction work.

2. Any stair that may be used within the OSTC portion of the existing SUI Building must receive prior approval from the Owner, the OSTC Administration, and Security and the schedule of use coordinated with those entities.

3.4 PROJECT IDENTIFICATION AND SIGNS INSTALLATION

A. Pick-up, transport, and erect Owner-and Architect-provided Project identification sign within 15 days following Notice-to-Proceed.

B. Erect signs at location designated by the Owner and/or Architect.

C. Erect Owner- and Architect-supplied signs and structures to withstand 75-miles/hour wind velocity.

D. Maintain signs and supports clean, repair deterioration and damages for duration of Contract.

3.5 SECURITY AND PROTECTION FACILITIES INSTALLATION

A. Protection of Existing Facilities: Protect existing vegetation, equipment, structures, utilities, and other improvements at Project site and on adjacent properties, except those indicated to be removed or altered. Repair damage to existing facilities.

B. Environmental Protection: Provide protection, operate temporary facilities, and conduct construction as required to comply with environmental regulations and that minimize possible air, waterway, and subsoil contamination or pollution or other undesirable effects.

1. Comply with work restrictions specified in Section 011000 "Summary."
2. Restrict use of pipe threading activities and use of cutting oils to areas outside building with one or more dedicated sand filled pipe cutting area(s) that are constructed to collect 100 percent of all waste oil and pipe threading debris; clean daily.

3. Approximate size of “sand pit” is 10’-0” wide by 10’-0” long by 8” deep, minimum.

C. Temporary Erosion and Sedimentation Control: Comply with requirements specified in Section 312500 "Erosion and Sediment Control".

1. Verify that flows of water redirected from construction areas or generated by construction activity do not enter or cross tree- or plant- protection zones.
2. Inspect, repair, and maintain erosion- and sedimentation-control measures during construction until permanent vegetation has been established.
3. Clean, repair, and restore adjoining properties and roads affected by erosion and sedimentation from Project site during the course of Project.

4. Remove erosion and sedimentation controls and restore and stabilize areas disturbed during removal.

D. Stormwater Control: Comply with requirements of authorities having jurisdiction. Provide barriers in and around excavations and subgrade construction to prevent flooding by runoff of stormwater from heavy rains.

E. Pest Control: Engage pest-control service to recommend practices to minimize attraction and harboring of rodents, roaches, and other pests and to perform extermination and control procedures at regular intervals so Project will be free of pests and their residues at Substantial Completion. Perform control operations lawfully, using environmentally safe materials.

F. Temporary Site Enclosure Fence:

1. There will be two types of site enclosure conditions required for this project:

a. Contractor provided construction site enclosure fence and gate that separates project site from public way. This fence shall extend primarily along E. Eager Street (from corner of Greenmount Ave. west to junction of complex Security fence) and Greenmount Ave. (from SUI Building north to corner of E. Eager Street). Extent of fence shall be as indicated Drawings.

1) Before construction operations begin, furnish and install site enclosure fence in a manner that will prevent people and animals from easily entering site except by entrance gates.
2) Maintain security by limiting number of keys and restricting distribution to authorized personnel. Furnish one set of keys to Owner.
3) Equip with vehicular and pedestrian gates with locks for required access.
4) The Contractor shall repair or replace fencing damaged as a result of their operation. Contractors shall remove and replace fencing and gates required to provide access for oversized items.

b. Contractor provided Corrections-type Security Fence and Gate that separates project site from Corrections Complex. This fence shall extend primarily within Forrest St. along the west and northwest boundaries of the project site. Extent of fence shall be as indicated Drawings.

1) Before construction operations begin, furnish and install site enclosure fence in a manner that will secure project site from Corrections complex.
2) Equip with motorized Security-type vehicular gate that only the Owner and Corrections Complex Security controls. Contractor will not have authorized access of this gate. Location of gate shall be as indicated on the Drawings.
3) Equip with Security-type pedestrian gate with electronic controlled access that ties back to existing Security Guard Station. Only the Owner and Corrections Complex Security controls. Contractor will not have authorized access of this gate. Location of gate shall be as indicated on the Drawings.
4) The Contractor shall repair or replace fencing damaged as a result of their operation. Contractors shall remove and replace fencing and gates required to provide access for oversized items.

G. Security:

1. Security Enclosure and Lockup: Install temporary enclosure around partially completed areas of construction. Provide lockable entrances to prevent unauthorized entrance, vandalism, theft, and similar violations of security. Lock entrances at end of each work day.
2. Provide security to protect Field Offices, including Contractor's and Owner's offices, from unauthorized entry, vandalism, or theft.
3. The Contractor, at its own expense, shall provide the services of guards, watchmen protective service or other means of site security 24/7.
4. Subcontractors, at their own cost and expense, may provide a watchman, protective service or other means of site security as they deem necessary.
5. Contractor shall advise the Owner of any theft or damage which might delay the execution of the work and furnish the Owner with a copy of any theft report filed with local, county or state agencies.
6. Owner assumes no responsibility for loss, theft or damage to the Contractor's materials or for damage to the in-place work before the completion of the construction. In the instance of any such loss, theft or damage, the Contractor shall be responsible to renew, restore or remedy the work, tools, equipment and construction in accordance with requirements of the contract documents without additional cost to the Owner.
7. The Owner is not responsible for damage, liability, theft, casualty or other hazard to the automobiles or other vehicles, nor to injury including death to occupants of automobiles or other vehicles on the Owner's property.
8. The Contractor may establish additional security policies and procedures. All Subcontractors will be required to cooperate with the Contractor in implementing these procedures.
9. Site-parked equipment, operable machinery and hazardous parts of the new construction subject to mischief and accidental operation shall be inaccessible, locked or otherwise made inoperable when left unattended.
10. Provide security and facilities to protect Work, and existing adjacent facilities, and Owner's operations from unauthorized entry, vandalism, or theft.
11. Coordinate with Owner's security program, especially related to work within, or adjacent to, secure correctional facilities.

H. Temporary Egress: Maintain temporary egress from existing occupied facilities as indicated and as required by authorities having jurisdiction.

I. Temporary Enclosures: Provide temporary enclosures for protection of construction, in progress and completed, from exposure, foul weather, other construction operations, and similar activities. Provide temporary weathertight enclosure for building exterior.

1. Where heating or cooling is needed and permanent enclosure is incomplete, insulate temporary enclosures.

J. Temporary Partitions: Provide floor-to-ceiling dustproof partitions to limit dust and dirt migration and to separate areas within the basement of the SUI Building as indicated on the Drawings..

1. Construct dustproof partitions with gypsum wallboard with joints taped on occupied side, and fire-retardant-treated plywood on construction operations side.
2. Insulate partitions to control noise transmission to occupied areas.
3. Seal joints and perimeter. Equip partitions with gasketed dustproof doors and security locks where openings are required.

K. Temporary Fire Protection: Install and maintain temporary fire-protection facilities of types needed to protect against reasonably predictable and controllable fire losses. Comply with NFPA 241; manage fire-prevention program.

1. Prohibit smoking in construction areas.
2. Supervise welding operations, combustion-type temporary heating units, and similar sources of fire ignition according to requirements of authorities having jurisdiction. Welding, flame cutting, or other operations involving the use of flame, arcs, or sparking devices will not be allowed without adequate protection and shielding without prior permission of the Owner. All combustible and flammable material shall be removed from the immediate area. Material shall be protected with a fire resistant tarpaulin to prevent sparks, flames, or hot metal from reaching materials. The Contractor shall provide the necessary personnel and fire fighting equipment to effectively control incipient fires resulting from welding, flame cutting, or other operations involving the use of flame, arcs or sparking devices. Provide fire extinguishers in the immediate area of the work which involves welding or open flame.
3. Develop and supervise an overall fire-prevention and -protection program for personnel at Project site. Review needs with local fire department and establish procedures to be followed. Instruct personnel in methods and procedures. Post warnings and information.
4. Provide temporary standpipes and hoses for fire protection. Hang hoses with a warning sign stating that hoses are for fire-protection purposes only and are not to be removed. Match hose size with outlet size and equip with suitable nozzles.
5. Contractor and Subcontractors shall assume full responsibility and take all necessary precautions to guard against and eliminate all possible fire hazards and to prevent damage to any construction work, building materials, equipment, temporary field offices, storage sheds, and all other property, both public and private. The location of the nearest corporation or public fire alarm box and the telephone number of the local fire department shall be conspicuously posted by the Contractor throughout the field offices and in the building structure adjacent to their work. Take precautions to prevent fire hazards in accordance with all fire protection and prevention laws and codes.
6. Contractor or his responsible agent will be required to inspect, at the close of daily operations, each area in which work was performed to insure all necessary safeguards regarding fire protection have been taken. Contractor shall review the entire project at least once a week to make certain all conditions and requirements have been adhered to as set forth herein.
7. No open fires shall be permitted. Contractor and Subcontractors shall not be allowed to start fires with gasoline, kerosene or other highly flammable materials.
8. Not more than a one day supply of flammable liquids such as oil, gasoline, paint or paint solvent shall be brought into any building at any one time. All flammable liquids having a flash point of 110 degrees F or below, which must be brought into any building, shall be confined to Underwriter's Laboratories' labeled safety cans. The bulk supply of all flammable liquids shall be detached at least 75 feet from the building and from yard storage of building materials. Spigots on drums containing flammable liquids are prohibited on the project site. Drums are to be equipped with approved vent pumps.
9. Combustible materials shall not be stored or left overnight within the confines of the permanent building. This includes all internal combustion engines using gas or fuel oil. Hoisting of flammable or combustible materials to the roof shall only be in quantities as needed for immediate use.
10. Only fire resistant tarpaulins shall be used on this project.
11. The Contractor will provide and maintain in working order at all times during construction not less than four (4) fire extinguishers conveniently located for each floor area having 50,000 square feet or less. One (1) additional fire extinguisher

will be provided for each additional 15,000 square feet of floor area. In addition, the Contractor may provide water and sand barrels, buckets, shovels, and garden hoses at strategic locations.

12. Fire extinguishers provided by the Contractor shall be "all purpose", and not a water type, to meet the approval of the Fire Underwriter's Laboratory, and will be inspected at regular intervals and recharged if necessary.
13. In areas of flammable liquids, asphalt or electrical hazards, extinguishers of the 15 lb. carbon dioxide type or 20 lb. dry chemical type shall be provided.
14. Contractor agrees that, in the event of fire, all their workmen and all the Subcontractor's workmen anywhere on site will assist in extinguishing the fire.
15. Temporary Fire Standpipe System:

    a. The Fire Protection Contractor shall furnish, install and maintain a temporary fire standpipe system in all parts of building for use of fire department during construction.
    b. Permanent risers shall be installed as floor slabs are cast. If permanent valves are not yet provided, provide temporary capped 2 1/2 inch hose valves on each floor with temporary cap or plug on top.

16. Provide permanent cross connections or provide temporary cross connections.

L. Protection of Building, Material, and Work: The Contractor shall at all times protect and preserve all materials (including stored materials), supplies and equipment, structures of every description (including property furnished or owned by others) and all work performed. All reasonable requests of the Owner to enclose or specially protect such property shall be complied with. If, determined that material, equipment, supplies and work performed are not adequately protected by the Contractor, such property may be protected by the Owner the cost thereof may be charged to the Contractor or deducted from any payment due him.

1. The Contractor shall provide protection for all parts of the building and its contents wherever work under this contract is performed. Contractor shall be responsible for all damage to the project including the existing building and grounds due to their operations under this contract. Repair or replacement of damaged items shall be to the satisfaction of the Owner.
2. Contractor shall provide temporary dustproof enclosures or partitions and ceilings for protection when required, in locations specified in the specifications and/or drawings, as required to separate work areas from other work areas, to prevent penetration of dust and moisture into occupied or other work areas, and to prevent damage to materials and equipment. Temporary enclosures or partitions shall be constructed of framing and sheet materials with closed joints and sealed edges at intersections with adjacent surfaces; maximum Flame Spread Rating of 75 in accordance with ASTM E84.
3. The interior of the building and its content shall be protected and secured from inclement weather, vandalism, and theft during the construction period. The Contractor shall be held liable for all damages attributable to noncompliance with this requirement. Provide temporary weather-tight insulated closure of exterior openings to accommodate acceptable working conditions and protection for products, to allow for temporary heating and maintenance of required ambient temperatures as stated above, and to prevent entry of unauthorized persons. Provide access doors with self-closing hardware and locks.
4. Provide temporary and removable protection for installed products. Control activity in immediate work area to minimize damage.
5. Provide protective coverings at walls, projections, jambs, sills, and soffits of openings.

6. Protect finished floors, stairs, and other surfaces from traffic, dirt, wear, damage, or movement of heavy objects, by protecting with durable sheet materials.
7. Contractor shall not load or permit any part of a structure to be loaded with a weight that will endanger its safety.
8. Prohibit traffic from landscaped areas.
9. Roof Protection:

    a. Contractor, Subcontractors, or any employee under their jurisdiction, shall be responsible for damages to roofing, sheet metal and roof structure while performing work on the roof. Repair work shall be performed at the expense of the contractor responsible for the damage.
    b. Protect roof surfaces while performing work. No construction materials will be allowed to be placed on roof surfaces.
    c. Protect installed Work and provide special protection where specified in individual specification Sections.

10. Prohibit traffic or storage upon waterproofed or roofed surfaces. If traffic or activity is necessary, obtain recommendations for protection from waterproofing or roofing material manufacturer.

M. Protection of Underground Facilities:

1. Contractor shall provide and maintain proper shoring and bracing for existing underground utilities, sewers, and building foundations, encountered during their excavation work, to protect them from collapse or movement, or other type of damage until such time as they are to be removed, incorporated into the new work or can be properly backfilled upon completion of new work. See Paragraph, Interruption of Utilities.
2. Contractor shall consider it imperative that existing utility services such as drains, sewers, water lines, gas lines, electric feeders, telephone wires, etc., or any of their adjuncts be completely safeguarded and he shall conduct his operations accordingly. Should the Contractor damage such utilities they shall be carefully repaired as required by the City of Baltimore, the Baltimore Department of Public Works, and Utility Companies having jurisdiction. All repair work connected with such damages and all City and Utility Company charges shall be done and paid for by the Contractor and for which additional payment will not be allowed.

    a. Pursuant to State Law, the Contractor is advised to contact "MISS UTILITY" at 1-800-257-7777, Toll Free, for utility locations within and adjacent to the limits of this contract at least 48 hours before beginning construction. Failure to do so may subject the Contractor to a fine up to One Thousand Dollars ($1,000.00) or ten (10) times the costs of utility repairs, in the event any utility is interrupted. Contractor is advised that a fee will be charged for this service. All fees are the responsibility of the contractor. Provide documentation to Owner of such contact.
    b. Manhole frames and covers, handboxes, inlet gratings, and the like which must be raised, lowered or in any way adjusted as a result of the work required under this contract, shall be so relocated by the Contractor at his own expense. All such work shall be done under the supervision of the Baltimore City and the Department of Public Works or the Utility Companies having jurisdiction. The Contractor must give at least twenty-four (24) hours notice before the time he proposed to do the work.
    c. Protection of Storm Drains: It shall be the responsibility of the Contractor to see to it that the work under this contract is planned and conducted such that the operations of the Baltimore City's storm water drain system will not be affected. Nothing which could contribute to its stoppage shall

be allowed to enter the system. Should the operation of storm drains be impaired as a result of the Contractor's default of the above stipulations, he shall restore them to proper operation at his own expense to the satisfaction of the Owner.

d. Utilities and/or other services which are shown, or not shown but encountered, shall be protected by the Contractor from any damage caused as a result of work and operations, unless or until they are abandoned. If the utilities or services are damaged from their work or operations the Contractor shall immediately repair any damage and restore the utilities and services to an equal or better condition than that which existed prior to the damage. The Contractor will be responsible for all liabilities or claims resulting from such damage and will defend and hold harmless and indemnify Owner from any claims or law suits.

N. Protection of City Owned Property:

1. All existing City owned equipment within or adjacent to the work area shall be protected by the Contractor from damage caused by construction operations. Existing work damaged by construction operations shall be promptly repaired by the Contractor at his own expense.
2. The Contractor shall take such additional measures as may be directed by the Owner to prevent damage or injury to City property.

3.6 MAINTENANCE OF ACCESS, TRAFFIC REGULATION, AND PARKING

A. Closing Streets and Traffic Controls:

1. Closing Streets: When operations in connection with contract work necessitate the closing of streets and parking lots, it shall be the Contractor's responsibility to give adequate notice to Baltimore City, the Baltimore City Department of Transportation, and the Owner for such street or parking lot closing. Contractor shall submit for approval the procedures and formal plan of all necessary street and parking lot closings.
2. All barricades, warning signs, lights, temporary signals, markers, pavement markings, and other protective devices shall conform to the requirements of the latest edition of the Manual on Uniform Traffic Control Devices for Streets and Highways and all special contract requirements pertaining to such devices in the contract. The Contractor shall take all necessary precautions for the protection of the work and the safety of the public.

B. Parking Requirements: Parking of automobiles of workmen and equipment shall be as directed by the Contractor in coordination with the Owner. At no time are ANY vehicles to be parked, whether attended or not, in the Owner's, or Architect’s parking spaces, entrances or drives. Any material delivery, which will tie up the Owner's, or Architect’s parking spaces, entrances or drives in excess of one (1) hour shall be prescheduled with the Owner.

1. There shall be no parking by the Contractor or Sub-contractors on Forrest Street, Monument Street, Greenmount Avenue, or Eger Street within three blocks surrounding the Baltimore City Corrections Facility.

C. Access to Site and Building:

1. Access to the site for automobiles, equipment, supplies and vehicles of the Contractor shall be over existing paved roads and/or streets.
2. Contractor and construction, material, or equipment delivery access to the worksite shall be as designated by the Contractor in coordination with the Owner. Selected entrances to the construction site will remain open during normal working hours for the use of all Contractors.
3. Construct and maintain temporary roads accessing public thoroughfares to serve construction area. Extend and relocate as Work progress requires. Provide detours necessary for unimpeded traffic flow.
4. Temporary Roads and Paved Areas: Construct and maintain temporary roads and paved areas adequate to support loads and to withstand exposure to traffic during construction period. Locate temporary roads and paved areas in same location as permanent roads and paved areas. Extend temporary roads and paved areas, within construction limits indicated, as necessary for construction operations.

    a. Coordinate elevations of temporary roads and paved areas with permanent roads and paved areas.
    b. Prepare subgrade and install subbase and base for temporary roads and paved areas according to Division 2 Section "Earthwork."
    c. Recondition base after temporary use, including removing contaminated material, regrading, proofrolling, compacting, and testing.
    d. Delay installation of final course of permanent hot-mix asphalt pavement until immediately before Substantial Completion. Repair hot-mix asphalt base-course pavement before installation of final course according to Division 2 Section "Hot-Mix Asphalt Paving."
    e. Provide and maintain access to fire hydrants, free of obstructions.
    f. Provide means of removing mud from vehicle wheels before entering streets.
    g. If required, the Contractor shall at all times maintain a clean and safe passageway for the Owner's operations and personnel in adjacent existing areas and maintain clearances adjacent to and in connection with the work performed. Access to the site for automobiles, equipment, supplies and vehicles of the Contractor shall be over existing paved roads and/or streets.

D. Maintenance of Traffic and Public Safety:

1. In accordance with the Baltimore City Department of Transportation, and the Department of Public Works requirements and specifications, all requirements pertinent to the proper maintenance of vehicular and pedestrian traffic flow shall be compiled with as they apply to and for the life of this contract. The Contractor will contact those Baltimore City Departments having jurisdiction to obtain, when required, consent to do and to arrange for the doing of those things necessary for the public convenience and safety and for the maintenance of traffic.
2. Baltimore City has classed certain roadways as "main arterials." These arterials must be kept open to traffic at all times and no work whatsoever shall be done on them nor shall they be used, when working on areas adjacent to them, during period of rush-hour traffic.
3. The Contractor shall coordinate with the City as to the use and hours of any roadways. Should it become necessary to completely stop the flow of traffic, the Contractor must notify the Baltimore City Departments having jurisdiction sufficiently in advance so that all necessary arrangements can be made.

    a. No work shall be started before 9:30 a.m. which will affect in any way both those one-way and dualized arterials on which the period of rush-hour

traffic occurs in the morning. Correspondingly, no work shall be carried on which will affect in any way such arterials after 4:00 p.m. where the period of rush-hour traffic occurs in the afternoon. The time period during which work will be permitted, which will affect in any way the arterials which are subject to both morning and evening periods of rush-hour traffic, will be limited to 9:30 a.m. to 4:00 p.m. During the periods when rush-hour traffic is not in evidence, at least one-half of each arterial affected by the work must be kept open to traffic. Should it become necessary to completely stop the flow of traffic, the Owner and the City of Baltimore Departments having jurisdiction must be notified sufficiently in advance so that all necessary arrangements can be made.

4. Under no circumstances will the storage of construction equipment and materials be permitted on the above-mentioned arterials. The storage of such equipment and materials on other streets and roadways will not be permitted except by special arrangements with the Owner and the City of Baltimore Departments having jurisdiction. Where permitted, materials and equipment shall be stored in such a manner so that the safety of pedestrian and vehicular traffic will be assured.
5. Earth, fill material, rubble, stones, etc., dropped on the surface of any roadways shall be removed immediately. Equipment such as forms and other items needed to be placed on the roadways as part of the work to be done shall be removed just as soon as feasible. Such placement shall be done in such as way as to obstruct vehicular flow as little as possible.

3.7 PROGRESS CLEANING

A. Snow Removal: Remove snow and ice for the proper protection and execution of work. Keeping public traffic areas and circulation routes free of snow shall be the responsibility of the Contractor.

B. Cleanup and Rubbish Removal

1. All waste and trash shall be properly contained, recycled and/or disposed of full compliance with 013510, Sustainable Project Requirements, and 017419, Construction Waste Management and Disposal
2. The Contractor will provide and maintain the project jobsite and staging area dumpsters for both recycling and trash. Contractor shall be responsible for daily cleanup and removal from the construction area and placement in dumpster of all debris and waste resulting from their operations.
3. Contractor shall include in their base bid the cost for and be responsible for cleanup, transporting and removal from the site of their identifiable debris including but not limited to, bulky debris, packaging, containers, unused materials and equipment, and materials unsuitable for disposal by standard commercial procedures (i.e., masonry and concrete materials, steel, crates, cartons, other packaging, combustible items, etc.). Misuse of dumpsters will result in actual costs applied for clean-up costs for the Contractor(s) at fault. Contractor shall provide one person one day a week for up to eight (8) hours for each five (5) tradesmen employed at the site for the purposes of performing an over-all project clean-up. Trash and debris from the operation shall be placed in dumpsters provided by the Contractor.
4. The Contractor or its Subcontractors shall perform all cleanup on the project. Costs for cleanup shall be borne by the Contractor and the Contractor shall be responsible for all cleanup including identifiable debris. Weekly reports and invoices for clean-up activities will be issued by the Contractor to the Owner.

Delinquent payment of these invoices will be deducted from the payment for the Contractor's next application for payment.

5. The Owner's facilities are not to be used by any Contractor for the disposal of their trash or debris of their work.
6. Contractors are responsible to leave their work in a clean condition. This includes, but is not limited to, removal of all grease, dust, dirt, stains, labels, fingerprints and other foreign matter. Contractors will be responsible for control of dust generated by his work operations and will be responsible for a daily area clean-up.
7. The Contractor shall provide unidentifiable clean-up and prorate the cost among the subcontractors.
8. The Contractor must use all necessary measures to restrict any debris, liquids of any kind, or garbage from entering the navigable water resources. The Contractor will immediately remedy any breach of this clause and charge the responsible contractor.
9. Remove debris and rubbish from mechanical or electrical chases, plenums, shafts, crawl spaces, and other closed or remote spaces, prior to enclosing the space.
10. Broom and vacuum clean interior areas prior to start of surface finishing, and continue cleaning to eliminate dust.

3.8 SPOIL OF WASTE MATERIALS

1. All surplus material or unsuitable material made available or left over from excavation or sitework shall be removed from the site by the Contractor at his expense. The materials shall become the property of the Contractor and shall be disposed of by him in a legal manner in accordance with all federal, state, and municipal regulations.

3.9 MOISTURE AND MOLD CONTROL

A. Contractor's Moisture-Protection Plan: Avoid trapping water in finished work. Document visible signs of mold that may appear during construction.

B. Exposed Construction Phase: Before installation of weather barriers, when materials are subject to wetting and exposure and to airborne mold spores, protect as follows:

1. Protect porous materials from water damage.
2. Protect stored and installed material from flowing or standing water.
3. Keep porous and organic materials from coming into prolonged contact with concrete.
4. Remove standing water from decks.
5. Keep deck openings covered or dammed.

C. Partially Enclosed Construction Phase: After installation of weather barriers but before full enclosure and conditioning of building, when installed materials are still subject to infiltration of moisture and ambient mold spores, protect as follows:

1. Do not load or install drywall or other porous materials or components, or items with high organic content, into partially enclosed building.
2. Keep interior spaces reasonably clean and protected from water damage.
3. Periodically collect and remove waste containing cellulose or other organic matter.
4. Discard or replace water-damaged material.

5. Do not install material that is wet.
6. Discard, replace, or clean stored or installed material that begins to grow mold.
7. Perform work in a sequence that allows any wet materials adequate time to dry before enclosing the material in drywall or other interior finishes.

D. Controlled Construction Phase of Construction: After completing and sealing of the building enclosure but prior to the full operation of permanent HVAC systems, maintain as follows:

1. Control moisture and humidity inside building by maintaining effective dry-in conditions.
2. Use permanent HVAC system to control humidity.
3. Comply with manufacturer's written instructions for temperature, relative humidity, and exposure to water limits.

    a. Hygroscopic materials that may support mold growth, including wood and gypsum-based products, that become wet during the course of construction and remain wet for 48 hours are considered defective.
    b. Measure moisture content of materials that have been exposed to moisture during construction operations or after installation. Record readings beginning at time of exposure and continuing daily for 48 hours. Identify materials containing moisture levels higher than allowed. Report findings in writing to Architect.
    c. Remove materials that cannot be completely restored to their manufactured moisture level within 48 hours.

3.10 OPERATION, TERMINATION, AND REMOVAL

A. Supervision: Enforce strict discipline in use of temporary facilities. To minimize waste and abuse, limit availability of temporary facilities to essential and intended uses.

B. Maintenance: Maintain facilities in good operating condition until removal.

1. Maintain operation of temporary enclosures, heating, cooling, humidity control, ventilation, and similar facilities on a 24-hour basis where required to achieve indicated results and to avoid possibility of damage.
2. Prevent water-filled piping from freezing. Maintain markers for underground lines. Protect from damage during excavation operations.

C. Temporary Facility Changeover: Do not change over from using temporary security and protection facilities to permanent facilities until Substantial Completion.

D. Termination and Removal: Remove each temporary facility when need for its service has ended, when it has been replaced by authorized use of a permanent facility, or no later than Substantial Completion. Complete or, if necessary, restore permanent construction that may have been delayed because of interference with temporary facility. Repair damaged Work, clean exposed surfaces, and replace construction that cannot be satisfactorily repaired.

1. Materials and facilities that constitute temporary facilities are property of Contractor. Owner reserves right to take possession of Project identification signs.
2. Remove temporary roads and paved areas not intended for or acceptable for integration into permanent construction. Where area is intended for landscape

development, remove soil and aggregate fill that do not comply with requirements for fill or subsoil. Remove materials contaminated with road oil, asphalt and other petrochemical compounds, and other substances that might impair growth of plant materials or lawns. Repair or replace street paving, curbs, and sidewalks at temporary entrances, as required by authorities having jurisdiction.

3. At Substantial Completion, repair, renovate, and clean permanent facilities used during construction period. Comply with final cleaning requirements specified in Section 017700 "Closeout Procedures."
4. Remove signs, framing, supports, and foundations at completion of Project, restore the area, and return signage to Owner and Architect.

3.11 SCHEMATIC DIAGRAM OF CONSTRUCTION STAGING AREA

A. As indicated on Civil drawings

END OF SECTION 01 50 00

01 50 60 INDOOR AIR QUALITY PLAN & PROCEDURES DURING CONSTRUCTION

Part 1 General

1.1 Related Documents

A. Drawings and General Provisions of Contract, including General Conditions and other Division 1 Specification Sections, apply to the work of this section.

B. Coordinate Construction IAQ Plan with independent Commissioning Authority's work and schedule.

1.2 Related Work

A. Section 01 10 00 – Summary of Work

B. Section 01 35 00 – Sustainable Project Requirements

C. Section 01 91 13 – General Commissioning Requirements

1.3 Summary

A. Sections include:

1. LEED Submittal Requirements for this section (see paragraph 1.7)
2. Indoor air quality procedures (see paragraph 3.2)
3. Control measures (see paragraph 3.3)
    a. HVAC Protection
    b. Source Control
    c. Pathway Interruption
    d. Housekeeping
    e. Scheduling

1.4 References

A. Reference Standards: In addition to requirements shown or specified, comply with applicable provisions of the following:

1. SMACNA IQA Guidelines for Occupied Buildings Under Construction, First Edition 1995. Sheet Metal and Air Conditioning Contractors' National Association, Inc. 4201 Lafayette Center Drive, Chantilly, VA 20151-1209.

2. USGBC LEED Reference Guide, current edition (Leadership in Energy and Environmental Design) Green Building Rating System. www.usgbc.org

1.5 Definitions

A. Volatile Organic Compounds (VOCs): are any carbon compounds that participate in atmospheric photochemical reactions (excluding carbon monoxide, carbon dioxide, carbonic acid, metallic carbides and carbonates, and ammonium carbonate).

B. Type A Finishes: Materials and finishes with potential for short-term levels of off-gassing from chemicals inherent in their manufacturing process, or which are applied in form requiring vehicles or carriers for spreading which release high levels of particulate matter in the process of installation and/ or curing. Including, but not limited to:

1. Composite wood products, specifically including particleboard from which millwork, doors, or furniture may be fabricated.

2. Adhesives, sealants, and glazing compounds, specifically those with petrochemical vehicles or carriers.

3. Wood preservatives, finishes, and paint.

4. Control and/ or expansion joint fillers.

5. Hard finishes requiring adhesive installation.

6. Gypsum board and associated finish processes.

C. Type B Finishes: Materials and finishes which are woven, fibrous, or porous in nature and tend to absorb chemicals off-gassed by Type A finishes or may be adversely affected by particulates. These materials become “skins” for deleterious substances which may be released much later, or collectors of contaminants that may promote subsequent bacterial growth. Including, but not limited to:

1. Carpet and padding.

2. Insulation exposed to air stream.

3. Acoustic ceiling materials.

4. Tectum acoustic wall panels.

5. Upholstered furnishings.

6. Materials that can be categorized as both Type A and Type B.

1.6 System description

A. Indoor Air Quality: Minimize air concentrations of certain pollutants in completed project at time of Owner Occupancy. Maximum allowable indoor air concentrations of certain pollutants have been established. Concentrations must be at or below these standards prior to building acceptance.

B. Indoor Air Quality: Indoor occupied spaces of facility shall comply with the following standards:

1. Carbon Monoxide: Not to exceed 9 PPM + no greater than 2 PPM above outdoor levels.

2. Carbon Dioxide: Not to exceed 800 PPM.

3. Airborne Mold and Mildew: Simultaneous indoor and outdoor readings.

4. Maximum Air Concentration Standards: Indoor room air concentration levels, emission rates and qualities of contaminants shall not exceed the following limits at time of substantial completion prior to occupancy of facility and installation of office furniture, occupants, and occupant activities.

MAXIMUM INDOOR AIR CONCENTRATION STANDARDS*

Indoor Contaminants	**Maximum Air Concentration Levels**
Formaldehyde	50 parts per billion
Total Volatile Organic Compounds (TVOC)	500 micrograms per cubic meter
4-Phenylcyclohexene (4-PCH)**	6.5 micrograms per cubic meter
Total Particulates (PM 10)	50 micrograms per cubic meter
Carbon Monoxide (CO)	9 parts per million and no greater than 2 parts per million above outdoor levels

*All levels must be achieved prior to acceptance of the building. The levels do not account for contributions from office furniture, occupants, and occupant activities.

** 4-phenylcyclohexene is an odorous contaminant constituent in carpets with styrene-butadienelatex rubber (SBR).

TLV-TWA Threshold Limit Value – Time Weighted Average

MERV- Minimum Efficiency Reporting Value (for filtration media)

Or current indoor contaminant levels allowed by the current LEED Rating program.

1.7 Submittals

A. General: Submit in accordance with Section 013300/ Submittals,

B. Informational Submittals: Submit the following:

1. A materials log book is required that includes MSDS sheets and additional information on chemical content of selected materials, including Volatile Organic Compounds (VOC) in terms of grams per liter (g/L) highlighted showing compliance with specification requirements. This log book shall be maintained by the contractor throughout the life of the project, shall be updated monthly to include any newly approved products, shall be available at all times to the Owner's Representative, and shall be submitted at the conclusion of construction.

2. Indoor Air Quality Plan to outline measures to minimize contamination in the building during construction prior to Owner occupancy.

3. Provide photographs of protected materials, duct sealing and other measures taken at regular intervals throughout the period of construction.

4. Provide Cut Sheets of filtration media used during construction and installed immediately prior to occupancy highlighting MERV values. MERV values shall comply with the current LEED rating system as noted in the applicable LEED for Schools Reference Guide.

5. Coordinate and incorporate all work described herein with construction schedules.

6. Passive Indoor Air Quality Test results.

Based on results of passive indoor air quality testing, Owner reserves the right to require active indoor air quality testing.

C. Qualification Data: Indoor Air Quality Consultant's qualification data.

D. If required, Active Indoor Air Quality Test results.

1.8 Quality Assurance

A. Indoor Air Quality Consultant Qualifications: Owner shall retain services of a recognized independent expert in testing of indoor air quality with access to proper testing equipment, with minimum of five years experience in testing of indoor air quality.

B. Regulatory Requirements: Comply with applicable codes, laws, rules, and regulations of authorities having jurisdiction concerning indoor air quality.

1.9 Low-emitting Materials

A. Adhesives, sealants, and sealant primers shall meet or be within the VOC limits of the current LEED Rating system as noted in the applicable LEED Reference Guide.

B. Paints and coatings shall meet or be within the VOC and chemical component limits of the current LEED Rating system as noted in the applicable LEED Reference Guide.

C. Flooring Systems and adhesives shall meet or be within the limits of the current LEED Rating system as noted in the applicable LEED Reference Guide.

D. Composite Wood- shall meet or be within the limits of the current LEED Rating system as noted in the applicable LEED Reference Guide.

1.10 Project conditions

Environmental Requirements: Comply with requirements of other sections as appropriate.

1.11 Sequence and scheduling

General: Sequence and schedule work in accordance with other sections as appropriate.

1.12 System start up

Starting of Systems: Comply with Sections 019113/ COMMISSIONING REQUIREMENTS

Part 2 PRODUCTS

2.1 Indoor air quality testing equipment

A. Passive Testing Equipment: Passive monitoring test kit to measure formaldehyde levels and total VOC levels, list three primary VOCs detected, and identify mold and other particulates collected. Include analysis and written report of tested air.

1. Acceptable Product: IAQ Test Kit, Air Quality Sciences, Atlanta, GA, 770-933-0638.

B. Active Testing Equipment: As recommended and provided by Air Quality Testing Consultant.

Part 3 EXECUTION

3.1 Preparation

A. Indoor Air Quality Plan: Within 30 days of Notice to Proceed, prepare an Indoor Air Quality Plan tailored to the project, to ensure indoor air quality to comply with specified requirements, including but not limited to the following:

1. Identify Type A and Type B finishes in project.

2. Schedule and sequence installation of Type A and Type B finishes.

3. Provide tracking of submittals and MSDS sheets that relate to VOC compliance.

4. Describe method, rate, and schedule of ventilation during construction operations.

5. Schedule Indoor Air Quality testing conforming to the requirements of LEED credit EQ3.2 (option 2).

6. Schedule baseline IAQ testing after construction ends and prior to occupancy, using testing protocols consistent with the U.S. Environmental Protection Agency Compendium of Methods for the Determination of Air Pollutants in Indoor Air and as additionally detailed in the LEED for Schools Reference Guide credit

EQ3.2 (option 2). Construction Manager's schedule should include this item in project schedule.

3.2 Indoor Air Quality

A. General: Schedule and sequence construction and provide ventilation during construction to maximize indoor air quality after occupancy.

1. Schedule and sequence application of finishes to:

a. Install Type A Finishes that off-gas significant quantities of deleterious material during curing.

b. Ensure dissipation of emissions from Type A finishes before installation of Type B Finishes.

c. Install Type B Finishes (absorptive materials).

d. Avoid absorption of Type A Finish emissions by Type B Finishes.

e. All absorptive materials either stored on site or installed shall be protected from moisture throughout the course of construction.

f. Avoid subsequent release of unwanted substances in indoor spaces and mechanical systems after facility occupancy.

B. Temporary Heating and Ventilating: Comply with Section 015000 Construction Facilities and Temporary Control.

3.3 Control Measures

A. HVAC PROTECTION: All HVAC equipment shall be protected from collecting not only dust but also odors which can "stick" to porous materials in the system and later be released. Specific HVAC protection requirements generally apply to either the return side, central filtration, or supply side of the system. Identify in the Indoor Air Quality plan the methods to be utilized for HVAC protection.

1. Return Side: The return side of an HVAC system is, by definition, under negative pressure and thus capable of drawing in nearby construction dust and odor. HVAC shall not be used by the Contractor during construction period.

a. The entire system shall be shut down during all construction activities unless otherwise agreed to by the Owner's Representative and the Commissioning Agent.

b. The system shall be isolated from the surrounding environment as much as possible (e.g., all tiles in place for a ceiling plenum, duct and air handler leaks repaired) to prevent induction of pollutants.

c. All return system openings in (or immediately adjacent to) the construction area shall be sealed with plastic.

d. The mechanical room shall not be used to store construction or waste materials.

2. Central Filtration: Where major dust loading is expected to impact operating HVAC systems, upgrade filter efficiency. For example, filters with 60 to 80% dust spot efficiency may provide increased protection, if minimum airflow can be maintained. Where other control options for construction related odors are not deemed effective, provide filtration with media such as activated charcoal or potassium permanganate.

3. Supply Side: Diffusers, VAV boxes, and ducts may be adequately protected in most cases where the above measures are implemented. When the system is off for the duration of construction, diffusers and window units shall also be sealed in plastic for further protection. Ducts, diffusers, and window units shall be inspected upon completion of the work for the amount of deposited particulate resent and cleaned. If significant dust deposits are observed in the system during construction, some particulate discharge can be expected during start-up. When such a discharge is only minor, delaying occupancy only long enough to clean up the dust. In more severe cases, install temporary coarse filters on diffusers or clean the ducts. The condition of the main filters shall be checked whenever visible particulates are discharged from the system or as directed by the Owner's Representative.

4. Duct Cleaning: Clean the ducts and associated equipment during construction when the system becomes contaminated due to inadequate protection during the construction process. Provide specialized equipment and professional expertise as needed to ensure that dust is effectively removed and contained to the satisfaction of the Owner's Representative and the Commissioning Agent. The sequence in which duct cleaning occurs in the overall construction process needs to be carefully considered to avoid recontamination.

B. SOURCE CONTROL: The most effective type of pollution control is generally at the source. A variety of options are available depending on the type of products and equipment needed for the construction project. When any of the following control options appear to be feasible, costs should be compared to other measures (pathway interruption, intensified housekeeping, and scheduling changes) during the construction project. Although solvent content is often reduced, air quality advantages may be limited (e.g., most paints and adhesives stop significant off-gassing within a few weeks anyway). Product emission data is available from manufacturers and can be stated either as total VOCs or by specific compound. The time period of the testing is important (emissions should be expected to decline). Identify in the Indoor Air Quality plan source control methods to be utilized.

1. Modifying Equipment Operation: Use of equipment may need to be restricted in order to meet IAQ objectives. This will involve changing operating procedures. Examples of such controls include:

a. Restricting traffic volume or prohibiting idling of motor vehicles where emissions could be drawn into occupied areas.

b. Switching from diesel to bottled gas for equipment such as generators of forklifts (emissions are cleaner but still potentially harmful under some circumstances). Use of electric forklifts and other equipment shall be considered when feasible, since they do not burn fossil fuels, thus eliminating exposure to combustion gas emissions.

c. Switching equipment such as chain saws from gasoline-powered to electric (job may take longer due to reduced performance).

d. Cycling equipment off when not needed.

2. Changing Work Practices:

a. For some tasks (e.g., paint stripping) provide techniques which produce less airborne dust.

b. Provide painting techniques, which release less odor.

c. Provide cleaning practices that raise less dust (see Paragraph 3.3.D.3).

3. Local Exhaust: Pollution sources shall be directly exhausted to the outside. This shall be done through a portable exhaust fan vented to the outside and attached to the work site by flex duct. Depending on the nature of the material and the location of the exhaust, special filtration of the exhaust may or may not be necessary. Any emissions to the outside must be in compliance with applicable regulations and shall be directed well away from intakes.

4. Air cleaning: Where exhaust is not feasible, local recirculation of air through a portable air cleaner shall be provided. The type of filter shall be suitable for the material being controlled (e.g., charcoal or potassium permanganate for many odors, a moderate to high efficiency filter for dust).

5. Cover or Seal: VOC emissions are a result of evaporation from an exposed surface. Reducing the exposed surface reduces emissions. Provide the following measure including but not limited to:

a. An enclosed tanker or closed/ hooded kettle for roofing.

b. Containers of wet products shall be kept closed as much as possible.

c. Waste materials which can release odor or dust shall be covered or sealed.

d. A surface which is a persistent odor source shall be controlled by applying a sealer.

C. PATHWAY INTERUPTION: Provide methods that prevent and interrupt potential contaminant pathways and air movement from the work site. Identify in the Indoor Air Quality plan major pathways for the project. In the Indoor Air Quality Plan utilize the following five different factors to achieve environmental control:

1. *Depressurize the work area.* This shall be accomplished by adjusting the balance of the HVAC and exhaust systems or installing portable exhaust fans. Construction worker comfort may have to be a secondary consideration when cutting off conditioned air to the work site becomes necessary to help establish negative pressure environment. Some ventilation of the construction space will still be needed to dilute contaminants. This may be provided by air drawn into the work site from adjoining areas. Air exhausted to achieve negative pressure may or may not need to be filtered, depending on the nature of the materials, location of exhaust, and any applicable regulations. Care must be taken not to exhaust air where it can be drawn back into the building. When increasing the amount of air supplied to the space, it is imperative that the HVAC system itself remains protected from construction emissions. As a general rule, the work site shall be exhausted at a rate at least 10% greater than the rate of supply in order to maintain an effective negative pressure.

2. *Pressurize occupied space.* Increasing supply air and or reducing return exhaust air in the building during construction will help exclude airborne dust and odors. While HVAC systems generally shut down at night, consideration shall be given to temporarily extending the fan schedule. Overnight pressurization could help prevent dust and odor from migrating into the space. When increasing the amount of air supplied to the occupied space, it is imperative that the HVAC

system itself remains protected from construction emissions. Any temporary rebalancing during construction should be carefully planned with the Commissioning Agent and executed.

3. *Erect barriers to contain construction area.* Barriers can range from simple dust curtains for jobs generating only minor amounts of nuisance dust to a continuous plastic seal around the site, allowing for only the controlled inflow of make-up air. For non-asbestos projects, the extent of the barrier should be based on the materials involved and the implications of dust and odor escaping from the site. Id such a release is not considered a hazard and can be easily corrected by housekeeping, then a partial barrier or sealing of holes may be sufficient. Where no odor or dust can be tolerated outside the work area, a barrier approaching that required for asbestos projects may be needed. Barriers shall be designed in conjunction with favorable pressure differentials. Pressurization can only be achieved with a real partition between areas with pressure differences. In general, full containment of a work site with barriers, capping of return air ducts, and the application of negative pressure may be needed for spaces undergoing significant construction activities, and requirements shall be as directed by the Owner's Representative.

4. *Relocate pollutant sources.* When project equipment of staging area coincide with critical airflow pathways equipment shall be moved to a more favorable location in regard to air quality. For example, in a roofing job, tar tankers shall be located as far away from intakes as possible. Special care shall be taken to protect mechanical rooms with air handling equipment (e.g., store construction products and waste materials elsewhere).

5. *Temporarily seal the building.* Where construction emissions are occurring on the roof or adjacent to a building, contaminants may be drawn in through the outside air intake or (if the building is under negative pressure) other entries or cracks. If contaminant levels are unacceptable then the Owner's Representative or the Commissioning Agent shall direct the Contractor to seal the intake dampers. Special activities in the building that require outside air for dilution shall be temporarily discontinued. Control of the outside source may also necessitate closing or sealing exterior doors, the top of the elevator shaft, etc.

D. HOUSEKEEPING: As dust accumulates at a construction site, it will become airborne when disturbed by nearby activity. Similarly, spills or excess applications of products containing solvents will increase odors at a construction site. Finally, leaving the work site wet or even just damp for more than a day could result in the growth of mold and bacteria. Attention to site cleaning is, therefore, important to maintaining IAQ during construction. In the Indoor Air Quality Plan utilize these specific actions in regard to controlling contaminants at the work site including but not limited to:

1. Suppressing dust with wetting agents or sweeping compounds.

2. Increasing the cleaning frequency for dust.

3. Switching to a more efficient dust collection method (e.g., a damp rag, wet mop, or vacuum equipped with a high efficiency particulate filter or wet scrubber will discharge less material back into the air than conventional vacuuming, sweeping, or dusting).

4. Ensuring that all surfaces (including higher ledges, behind furniture, and inside mechanical equipment) are kept clean.

5. Removing spills or excess applications of solvent-containing products as soon as possible. Care shall be taken as to the selection of spot removers and cleaning agents (in general, products should be low odor emitters or used after hours with sufficient ventilation).

6. Removing accumulated water and keeping work areas as dry as possible (using dehumidification if necessary).

7. Vacuuming with HEPA filtered vacuum cleaners prevents aerolization of settled dust.

8. Protecting porous materials such as insulation from exposure to moisture (note: items which become wet/ damp will be replaced)

E. SCHEDULING: In the Indoor Air Quality Plan utilize construction sequencing to reduce absorption of VOCs by materials that act as sinks or contaminant sources. Complete application of wet and odor-emitting materials such as paints, sealants, and coatings before installing sink materials such as ceiling tiles, carpets, insulation, gypsum products, and fabric covered furnishings are installed. Materials directly exposed to moisture through precipitation, plumbing leaks, or condensation from HVAC system are susceptible to microbial contamination and shall be replaced at no additional cost to the Owner. Contractor shall conduct activities with a high pollution potential during off

hours. For example, if roofing emissions cannot be excluded from the building, the work shall be performed on an evening shift. Similarly, any work which disrupts the HVAC system or introduces odor into the system shall be done during unoccupied hours when possible. Where off-gassing odors are a major concern, work may have to be completed at the beginning of a weekend in order to allow new products time to air out sufficiently. Where occupants cannot be relocated, starting time may need to be delayed until late morning in order to accommodate clean-up of late night construction work.

The above measures assume that construction work is being rescheduled in order to avoid potentially harmful exposure to the general population.

F. At the end of the construction and prior to Owner occupancy, conduct air quality testing in full compliance with the requirements of LEED credit EQ3.2 (option 2).

3.4 Field quality control

A. Indoor Air Quality Testing Conditions: Facility has achieved Substantial Completion except for indoor air quality testing.

1. Final Cleaning: Completed.

2. HVAC Systems: Started, tested, balanced, Commissioned, cleaned, construction filters replaced and systems operating normally as specified.

3. Facility: Not occupied and Owner provided furnishings and equipment not yet installed.

B. Baseline IAQ Testing:

1. HVAC System Verification: To assure compliance with recognized standards for indoor air quality including ASHRAE Standard 62-1999 or latest version, the Owner's independent testing and balancing agency shall verify the performance of each HVAC system including but not limited to space temperature and space humidity uniformity, outside air quantity, filter installation, drain pan operation, and any obvious contamination sources.

2. Indoor Air Quality Testing: Upon verification of HVAC system operation, the independent Air Quality Testing Consultant shall test levels of indoor air contaminants for compliance with specified requirements.

a. A Test plan shall be submitted for the approval of the Owner's representative. The plan shall specify procedures, times, instrumentation, and sampling methods that will be employed.

b. The number of sampling locations will vary depending upon the size of the building. Contaminant levels are to be measured in an area agreed upon by the Contractor and the Owner's Representative.

c. Collect air samples on three consecutive days during normal school hours (between the hours of 8:00 am and 3:00 pm) with building operating at normal HVAC rates. Average the results of each three-day tests cycle to

determine compliance or non-compliance of indoor air quality for each air-handling zone tested.

d. Sample and record outside air levels of formaldehyde and contaminants at outside air intake of each respective air handling unit simultaneously with indoor tests to establish basis of comparison for these contaminant levels. Indoor testing will be done in the breathing zone; between 4' and 7' from the floor.

e. Acceptance of respective portions of buildings by the Owner is subject to compliance with specified limits of indoor air quality contaminant levels.

C. Passive Indoor Air Quality Testing: Provide and install Passive Indoor Air Quality Testing Equipment in space to be occupied as directed by Owner's Representative and in accordance with testing equipment manufacturer's recommendations.

1. Conduct passive test for 7 days with facility operating at specified HVAC rates and conditions.

2. Include analysis and written report of tested air by testing equipment provider.

3. If initial test results do not indicate compliance with specified indoor air quality standards, provide additional ventilation and take additional measures as required and accepted by Owner to achieve compliance.

4. Cost of Subsequent Passive Testing required because of failure to comply with specified standards shall be the responsibility of the Contractor.

D. Active Indoor Air Quality Testing: After results of passive testing have been submitted, Owner retains the right to require active indoor air quality testing by Air Quality Testing Consultant.

1. Testing: As determined by Owner based on recommendations of Air Quality Testing Consultant.

2. Cost of Initial Active Testing: By Owner

3. If initial test results do not indicate compliance with specified indoor air quality standards, provide additional ventilation and take additional measures as required and accepted by Air Quality Testing Consultant to achieve compliance.

4. Cost of Subsequent Active Testing Required Because of Failure to Comply with Specified Standards: By Contractor.

E. Compliance: Indoor air quality shall conform to paragraph 1.6 above.

F. Test Reports: Prepare test reports showing the results and location of each test, a summary of the HVAC operating conditions, a listing of any discrepancies and recommendations for corrective actions, if required.

1. Include certification of test equipment calibration with each test report.

G. If any test fails the standard, the Contractor is responsible to ventilate the building with 100% outside air until the building passes both air quality tests and duct inspections. Retesting shall be performed at no additional expense to the Owner.

SECTION 01 60 00 - PRODUCT REQUIREMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for selection of products for use in Project; product delivery, storage, and handling; manufacturers' standard warranties on products; special warranties; and comparable products.

B. Related Requirements:

1. Section 012100 "Allowances" for products selected under an allowance.
2. Section 012300 "Alternates" for products selected under an alternate.
3. Section 012500 "Substitution Procedures" for requests for substitutions.
4. Section 014200 "References" for applicable industry standards for products specified.

1.3 DEFINITIONS

A. Products: Items obtained for incorporating into the Work, whether purchased for Project or taken from previously purchased stock. The term "product" includes the terms "material," "equipment," "system," and terms of similar intent.

1. Named Products: Items identified by manufacturer's product name, including make or model number or other designation shown or listed in manufacturer's published product literature, that is current as of date of the Contract Documents.
2. New Products: Items that have not previously been incorporated into another project or facility. Products salvaged or recycled from other projects are not considered new products.
3. Comparable Product: Product that is demonstrated and approved through submittal process to have the indicated qualities related to type, function, dimension, in-service performance, physical properties, appearance, and other characteristics that equal or exceed those of specified product.

B. Basis-of-Design Product Specification: A specification in which a specific manufacturer's product is named and accompanied by the words "basis-of-design product," including make or model number or other designation, to establish the significant qualities related to type, function, dimension, in-service performance, physical properties, appearance, and other characteristics for purposes of evaluating comparable products of additional manufacturers named in the specification.

1.4 ACTION SUBMITTALS

A. Comparable Product Requests: Submit request for consideration of each comparable product. Identify product or fabrication or installation method to be replaced. Include Specification Section number and title and Drawing numbers and titles.

1. Include data to indicate compliance with the requirements specified in "Comparable Products" Article.
2. Architect's Action: If necessary, Architect will request additional information or documentation for evaluation within one week of receipt of a comparable product request. Architect will notify Contractor of approval or rejection of proposed comparable product request within 21 days of receipt of request, or seven days of receipt of additional information or documentation, whichever is later.

a. Form of Approval: As specified in Section 013300 "Submittal Procedures."

B. Basis-of-Design Product Specification Submittal: Comply with requirements in Section 013300 "Submittal Procedures." Show compliance with requirements.

1.5 QUALITY ASSURANCE

A. Compatibility of Options: If Contractor is given option of selecting between two or more products for use on Project, select product compatible with products previously selected, even if previously selected products were also options.

1. Each contractor is responsible for providing products and construction methods compatible with products and construction methods of other contractors.
2. If a dispute arises between contractors over concurrently selectable but incompatible products, Architect will determine which products shall be used.

1.6 PRODUCT DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, and handle products using means and methods that will prevent damage, deterioration, and loss, including theft and vandalism. Comply with manufacturer's written instructions.

B. Packaging and Transportation

1. Require supplier to package finished products in boxes or crates for protection during shipment, handling, and storage.
2. Protect sensitive products against exposure to elements and moisture.
3. Protect sensitive equipment and finished against impact, abrasion, and other damage.

C. Delivery and Handling:

1. Schedule delivery to minimize long-term storage at Project site and to prevent overcrowding of construction spaces.
2. Coordinate delivery with installation time to ensure minimum holding time for items that are flammable, hazardous, easily damaged, or sensitive to deterioration, theft, and other losses.

3. Deliver products to Project site in an undamaged condition in manufacturer's original sealed container or other packaging system, complete with labels and instructions for handling, storing, unpacking, protecting, and installing.
4. Inspect products on delivery to determine compliance with the Contract Documents and to determine that products are undamaged and properly protected. Confirm that:

    a. Quantities are correct.
    b. Accessories and installation hardware are correct.
    c. Containers and packages are intact and labels legible.

D. Storage:

1. Store products to allow for inspection and measurement of quantity or counting of units.
2. Store materials in a manner that will not endanger Project structure.
3. Store products that are subject to damage by the elements, under cover in a weathertight enclosure above ground, with ventilation adequate to prevent condensation.
4. Protect foam plastic from exposure to sunlight, except to extent necessary for period of installation and concealment.
5. Comply with product manufacturer's written instructions for temperature, humidity, ventilation, and weather-protection requirements for storage.
6. Protect stored products from damage and liquids from freezing.

.

1.7 PRODUCT WARRANTIES

A. Warranties specified in other Sections shall be in addition to, and run concurrent with, other warranties required by the Contract Documents. Manufacturer's disclaimers and limitations on product warranties do not relieve Contractor of obligations under requirements of the Contract Documents.

1. Manufacturer's Warranty: Written warranty furnished by individual manufacturer for a particular product and specifically endorsed by manufacturer to Owner.
2. Special Warranty: Written warranty required by the Contract Documents to provide specific rights for Owner.

B. Special Warranties: Prepare a written document that contains appropriate terms and identification, ready for execution.

1. Manufacturer's Standard Form: Modified to include Project-specific information and properly executed.
2. Specified Form: When specified forms are included with the Specifications, prepare a written document using indicated form properly executed.
3. See other Sections for specific content requirements and particular requirements for submitting special warranties.

C. Submittal Time: Comply with requirements in Section 017700 "Closeout Procedures."

PART 2 - PRODUCTS

2.1 PRODUCT SELECTION PROCEDURES

A. General Product Requirements: Provide products that comply with the Contract Documents, are undamaged and, unless otherwise indicated, are new at time of installation.

1. Provide products complete with accessories, trim, finish, fasteners, and other items needed for a complete installation and indicated use and effect.
2. Standard Products: If available, and unless custom products or nonstandard options are specified, provide standard products of types that have been produced and used successfully in similar situations on other projects.
3. Owner reserves the right to limit selection to products with warranties not in conflict with requirements of the Contract Documents.
4. Where products are accompanied by the term "as selected," Architect will make selection.
5. Descriptive, performance, and reference standard requirements in the Specifications establish salient characteristics of products.
6. Or Equal: For products specified by name and accompanied by the term "or equal," or "or approved equal," or "or approved," comply with requirements in "Comparable Products" Article to obtain approval for use of an unnamed product.

B. Product Selection Procedures:

1. Product: Where Specifications name a single manufacturer and product, provide the named product that complies with requirements. Comparable products or substitutions for Contractor's convenience will not be considered.
2. Manufacturer/Source: Where Specifications name a single manufacturer or source, provide a product by the named manufacturer or source that complies with requirements. Comparable products or substitutions for Contractor's convenience will not be considered.
3. Products:

    a. Restricted List: Where Specifications include a list of names of both manufacturers and products, provide one of the products listed that complies with requirements. Comparable products or substitutions for Contractor's convenience will not be considered unless otherwise indicated.
    b. Nonrestricted List: Where Specifications include a list of names of both available manufacturers and products, provide one of the products listed, or an unnamed product, that complies with requirements. Comply with requirements in "Comparable Products" Article for consideration of an unnamed product.

4. Manufacturers:

    a. Restricted List: Where Specifications include a list of manufacturers' names, provide a product by one of the manufacturers listed that complies with requirements. Comparable products or substitutions for Contractor's convenience will not be considered unless otherwise indicated.
    b. Nonrestricted List: Where Specifications include a list of available manufacturers, provide a product by one of the manufacturers listed, or a product by an unnamed manufacturer, that complies with requirements.

Comply with requirements in "Comparable Products" Article for consideration of an unnamed manufacturer's product.

5. Basis-of-Design Product: Where Specifications name a product, or refer to a product indicated on Drawings, and include a list of manufacturers, provide the specified or indicated product or a comparable product by one of the other named manufacturers. Drawings and Specifications indicate sizes, profiles, dimensions, and other characteristics that are based on the product named. Comply with requirements in "Comparable Products" Article for consideration of an unnamed product by one of the other named manufacturers.

C. Visual Matching Specification: Where Specifications require "match Architect's sample", provide a product that complies with requirements and matches Architect's sample. Architect's decision will be final on whether a proposed product matches.

1. If no product available within specified category matches and complies with other specified requirements, comply with requirements in Section 012500 "Substitution Procedures" for proposal of product.

D. Visual Selection Specification: Where Specifications include the phrase "as selected by Architect from manufacturer's full range" or similar phrase, select a product that complies with requirements. Architect will select color, gloss, pattern, density, or texture from manufacturer's product line that includes both standard and premium items.

2.2 COMPARABLE PRODUCTS

A. Conditions for Consideration: Architect will consider Contractor's request for comparable product when the following conditions are satisfied. If the following conditions are not satisfied, Architect may return requests without action, except to record noncompliance with these requirements:

1. Evidence that the proposed product does not require revisions to the Contract Documents, that it is consistent with the Contract Documents and will produce the indicated results, and that it is compatible with other portions of the Work.
2. Detailed comparison of significant qualities of proposed product with those named in the Specifications. Significant qualities include attributes such as performance, weight, size, durability, visual effect, and specific features and requirements indicated.
3. Evidence that proposed product provides specified warranty.
4. List of similar installations for completed projects with project names and addresses and names and addresses of architects and owners, if requested.
5. Samples, if requested.

PART 3 - EXECUTION (Not Used)

END OF SECTION 01 60 00

SECTION 01 73 00 - EXECUTION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes general administrative and procedural requirements governing execution of the Work including, but not limited to, the following:

1. Construction layout.
2. Field engineering and surveying.
3. Product engineering as required per technical specifications
4. Installation of the Work.
5. Cutting and patching.
6. Coordination of Owner-installed products.
7. Progress cleaning.
8. Starting and adjusting.
9. Protection of installed construction.

B. Related Requirements:

1. Section 011000 "Summary" for limits on use of Project site.
2. Section 013300 "Submittal Procedures" for submitting surveys.
3. Section 017700 "Closeout Procedures" for submitting final property survey with Project Record Documents, recording of Owner-accepted deviations from indicated lines and levels, and final cleaning.
4. Section 024119 "Selective Demolition" for demolition and removal of selected portions of the building.
5. Section 078413 "Penetration Firestopping" for patching penetrations in fire-rated construction.
6. Section 017419 "Construction Waste Management and Disposal" for cutting and patching materials to be included in construction waste material recycling.

1.3 DEFINITIONS

A. Cutting: Removal of in-place construction necessary to permit installation or performance of other work.

B. Patching: Fitting and repair work required to restore construction to original conditions after installation of other work.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For land surveyor or professional engineer to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of architects and owners, and other information specified herein.

B. Certificates: Submit certificate signed by land surveyor certifying that location and elevation of improvements comply with requirements.

C. Cutting and Patching Plan: Submit plan describing procedures at least 10 days prior to the time cutting and patching will be performed. Include the following information:

1. Extent: Describe reason for and extent of each occurrence of cutting and patching.
2. Changes to In-Place Construction: Describe anticipated results. Include changes to structural elements and operating components as well as changes in building appearance and other significant visual elements.
3. Products: List products to be used for patching and firms or entities that will perform patching work.
4. Dates: Indicate when cutting and patching will be performed.
5. Utilities and Mechanical and Electrical Systems: List services and systems that cutting and patching procedures will disturb or affect. List services and systems that will be relocated and those that will be temporarily out of service. Indicate length of time permanent services and systems will be disrupted.

    a. Include description of provisions for temporary services and systems during interruption of permanent services and systems.

D. Landfill Receipts: Submit copy of receipts issued by a landfill facility, licensed to accept hazardous materials, for hazardous waste disposal.

E. Certified Surveys: Submit three (3) paper copies signed by land surveyor . Also, submit an electronic copy of same in format to be determined.

F. Final Property Survey: Submit three (3) paper copies showing the Work performed and record survey data. Also, submit an electronic copy of same in format to be determined.

1.5 QUALITY ASSURANCE

A. Land Surveyor Qualifications: A professional land surveyor who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing land-surveying services of the kind indicated.

B. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing engineering services of the kind required within the technical specifications.

C. Submit evidence of Surveyor’s or Professional Engineer’s current in force E & O insurance coverage in the form of an Insurance Certificate.

D. Cutting and Patching: Comply with requirements for and limitations on cutting and patching of construction elements.

1. Structural Elements: When cutting and patching structural elements, notify Architect of locations and details of cutting and await directions from Architect before proceeding. Shore, brace, and support structural elements during cutting and patching. Do not cut and patch structural elements in a manner that could change their load-carrying capacity or increase deflection

2. Operational Elements: Do not cut and patch operating elements and related components in a manner that results in reducing their capacity to perform as intended or that results in increased maintenance or decreased operational life or safety. Operational elements include the following:

    a. Primary operational systems and equipment.
    b. Fire separation assemblies.
    c. Air or smoke barriers.
    d. Fire-suppression systems.
    e. Mechanical systems piping and ducts.
    f. Control systems.
    g. Communication systems.
    h. Fire-detection and -alarm systems.
    i. Conveying systems.
    j. Electrical wiring systems.
    k. Operating systems of special construction.

3. Other Construction Elements: Do not cut and patch other construction elements or components in a manner that could change their load-carrying capacity, that results in reducing their capacity to perform as intended, or that results in increased maintenance or decreased operational life or safety. Other construction elements include but are not limited to the following:

    a. Water, moisture, or vapor barriers.
    b. Membranes and flashings.
    c. Exterior curtain-wall construction.
    d. Sprayed fire-resistive material.
    e. Equipment supports.
    f. Piping, ductwork, vessels, and equipment.
    g. Noise- and vibration-control elements and systems.

4. Visual Elements: Do not cut and patch construction in a manner that results in visual evidence of cutting and patching. Do not cut and patch exposed construction in a manner that would, in Architect's opinion, reduce the building's aesthetic qualities. Remove and replace construction that has been cut and patched in a visually unsatisfactory manner.

E. Cutting and Patching Conference: Before proceeding, meet at Project site with parties involved in cutting and patching, including mechanical and electrical trades. Review areas of potential interference and conflict. Coordinate procedures and resolve potential conflicts before proceeding.

F. Manufacturer's Installation Instructions: Obtain and maintain on-site manufacturer's written recommendations and instructions for installation of products and equipment.

1.6 PROJECT RECORD DOCUMENTS

A. Maintain a complete and accurate log of control and survey work as it progresses.

B. On completion of caissons, grade beams, foundation walls, utilities, and major site improvements, prepare a certified survey illustrating dimensions, locations, angles, and elevations of construction and site work.

C. Submit Record Documents under provisions of Section 017839, “Project Record Documents”.

PART 2 - PRODUCTS

2.1 MATERIALS

A. General: Comply with requirements specified in other Sections.

1. For projects requiring compliance with sustainable design and construction practices and procedures, use products for patching that comply with sustainable design requirements.

B. In-Place Materials: Use materials for patching identical to in-place materials. For exposed surfaces, use materials that visually match in-place adjacent surfaces to the fullest extent possible.

1. If identical materials are unavailable or cannot be used, use materials that, when installed, will provide a match acceptable to Architect for the visual and functional performance of in-place materials.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Existing Conditions: The existence and location of underground and other utilities and construction indicated as existing are not guaranteed. Before beginning sitework, investigate and verify the existence and location of underground utilities, mechanical and electrical systems, and other construction affecting the Work.

1. Before construction, verify the location and invert elevation at points of connection of sanitary sewer, storm sewer, and water-service piping; underground electrical services, and other utilities.
2. Furnish location data for work related to Project that must be performed by public utilities serving Project site.

B. Existing Utilities: The existence and location of underground and other utilities and construction indicated as existing are not guaranteed. Before beginning sitework, investigate and verify the existence and location of underground utilities and other construction affecting the Work.

1. Before construction, verify the location and invert elevation at points of connection of sanitary sewer, storm sewer, water, and fire service piping; and underground electrical, gas, and IT/Telecom cabling services.
2. Furnish location data for work related to Project that must be performed by public utilities serving Project site.

3. Contractor shall provide underground utility surveys for all contract work with in Forrest Street and Greenmount Avenue.

C. Examination and Acceptance of Conditions: Before proceeding with each component of the Work, examine substrates, areas, and conditions, with Installer or Applicator present where indicated, for compliance with requirements for installation tolerances and other conditions affecting performance. Record observations.

1. Examine roughing-in for mechanical and electrical systems to verify actual locations of connections before equipment and fixture installation.
2. Examine walls, floors, and roofs for suitable conditions where products and systems are to be installed.
3. Verify compatibility with and suitability of substrates, including compatibility with existing finishes or primers.

D. Written Report: Where a written report listing conditions detrimental to performance of the Work is required by other Sections, include the following:

1. Description of the Work.
2. List of detrimental conditions, including substrates.
3. List of unacceptable installation tolerances.
4. Recommended corrections.

E. Proceed with installation only after unsatisfactory conditions have been corrected. Proceeding with the Work indicates acceptance of surfaces and conditions.

F. Promptly notify Owner, and Architect of any discrepancies discovered. The Contractor shall remedy at his own cost any condition, installation, or product which was provided as a result of a known discrepancy or problem, or as a result of a lack of coordination between trades.

G. Contractor shall be responsible to take such field measurements as may be required to determine the size of ordered material. In the event "guaranteed dimensions" are required, the General Contractor shall advise the applicable Subcontractors by use of drawings, templates or mock-ups of the required conditions.

H. As the work progresses, the Contractor shall lay out the exact locations of work his contract as a guide to all trades. Prior to any installation, the General Contractor shall exchange layout drawings and coordinate the work and be subject to verification.

3.2 PREPARATION

A. Existing Utility Information: Furnish information to Baltimore City Department of Public Works, BGE, Verizon, or other local utility that is necessary to adjust, move, or relocate existing utility structures, utility poles, lines, services, or other utility appurtenances located in or affected by construction. Coordinate with authorities having jurisdiction.

B. Existing Utility Interruptions: Do not interrupt utilities serving facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary utility services according to requirements indicated:

1. Notify Owner and Agency Construction Manager not less than five business days in advance of proposed utility interruptions.
2. Do not proceed with utility interruptions without Owner’s written permission.

C. Field Measurements: Take field measurements as required to fit the Work properly. Recheck measurements before installing each product. Where portions of the Work are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

D. Space Requirements: Verify space requirements and dimensions of items shown diagrammatically on Drawings.

E. Review of Contract Documents and Field Conditions: Immediately on discovery of the need for clarification of the Contract Documents caused by differing field conditions outside the control of Contractor, submit a request for information to Architect according to requirements in Section 013100 "Project Management and Coordination."

3.3 CONSTRUCTION LAYOUT

A. Verification: Before proceeding to lay out the Work, verify layout information shown on Drawings, in relation to the property survey and existing benchmarks. If discrepancies are discovered, notify Architect promptly.

B. As work under contract commences, the condition of preceding work by the General Contractor or its subcontractors, or work by others under separate contract (Owner, Baltimore City, BGE, Verizon, etc.), shall be verified and accepted by the General Contractor. Verification may, at the General Contractor's discretion, include a joint review with the subsequent subcontractors, and/or separate contract entities, and previous subcontractor(s) and/or separate contract entities, to note any corrective work required, damage to previous work, verification of elevations, tolerances, levels and plumbness, critical dimensions, surface conditions, and similar items affecting the work under the contract and particularly items which prevent acceptance by the General Contractor and its subsequent subcontractors. The verification review procedures and findings shall be documented in writing, signed by all parties, and copies provided to the Owner. Any corrective work necessary to satisfy requirements of the contract documents shall be performed promptly by the General Contractor to prevent delay to the work. After corrective work is accomplished the General Contractor shall furnish written acceptance of the work as noted above.

C. General: Engage a land surveyor to lay out the Work using accepted surveying practices.

1. Establish benchmarks and control points to set lines and levels at each story of construction and elsewhere as needed to locate each element of Project.
2. Establish limits on use of Project site.
3. Establish dimensions within tolerances indicated. Do not scale Drawings to obtain required dimensions.
4. Inform installers of lines and levels to which they must comply.
5. Check the location, level and plumb, of every major element as the Work progresses.
6. Notify Owner and Architect when deviations from required lines and levels exceed allowable tolerances.
7. Close site surveys with an error of closure equal to or less than the standard established by authorities having jurisdiction.

D. Site Improvements: Locate and lay out site improvements, including pavements, grading, fill and topsoil placement, utility slopes, and rim and invert elevations.

E. Building Lines and Levels: Locate and lay out control lines and levels for structures, building foundations, column grids, and floor levels, including those required for mechanical and electrical work. Transfer survey markings and elevations for use with control lines and levels. Level foundations and piers from two or more locations.

F. Record Log: Maintain a log of layout control work. Record deviations from required lines and levels. Include beginning and ending dates and times of surveys, weather conditions, name and duty of each survey party member, and types of instruments and tapes used. Make the log available for reference by Architect.

G. All work, and in particular piping, ducts, conduit and similar items, shall be neatly and carefully laid out to provide the most useful space utilization and the most orderly appearance. Except as otherwise indicated or directed, piping and similar work shall be installed as close to above ceiling floor slabs and walls as conditions reasonably permit, located to prevent interference with other work or with the use of the spaces. Valves shall be located in inconspicuous but accessible locations before proceeding with any work where exposed to view. The General Contractor, and its subcontractors, shall carefully plan the layout and review any questionable installations with the Owner and Architect. Access panels in security detention ceilings, gypsum wallboard ceilings, of other type non-removable or secure ceilings are unacceptable unless approved by the Architect or shown specifically on the drawings.

3.4 FIELD ENGINEERING

A. Identification: Owner will identify existing benchmarks, control points, and property corners.

B. Reference Points: Locate existing permanent benchmarks, control points, and similar reference points before beginning the Work. Preserve and protect permanent benchmarks and control points during construction operations.

1. Do not change or relocate existing benchmarks or control points without prior written approval of Architect. Report lost or destroyed permanent benchmarks or control points promptly. Report the need to relocate permanent benchmarks or control points to Architect before proceeding.
2. Replace lost or destroyed permanent benchmarks and control points promptly. Base replacements on the original survey control points.

C. Benchmarks: Establish and maintain a minimum of two permanent benchmarks on Project site, referenced to data established by survey control points. Comply with authorities having jurisdiction for type and size of benchmark.

1. Record benchmark locations, with horizontal and vertical data, on Project Record Documents.
2. Where the actual location or elevation of layout points cannot be marked, provide temporary reference points sufficient to locate the Work.
3. Remove temporary reference points when no longer needed. Restore marked construction to its original condition.

D. Certified Survey: On completion of foundation walls, major site improvements, and other work requiring field-engineering services, prepare a certified survey showing dimensions, locations, angles, and elevations of construction and sitework.

E. Final Property Survey: Engage a land surveyor to prepare a final property survey showing significant features (real property) for Project. Include on the survey a certification, signed by land surveyor , that principal metes, bounds, lines, and levels of Project are accurately positioned as shown on the survey.

1. Show boundary lines, monuments, streets, site improvements and utilities, existing improvements and significant vegetation, adjoining properties, acreage, grade contours, and the distance and bearing from a site corner to a legal point.
2. Recording: At Substantial Completion, have the final property survey recorded by or with authorities having jurisdiction as the official "property survey."

3.5 SURVEYS FOR MEASUREMENT AND PAYMENT

A. Perform surveys to determine quantities of unit cost work, including control surveys to establish measurement reference lines. Notify Owner prior to starting work.

B. The General Contractor shall sign surveyor's field notes or keep duplicate field notes and shall calculate and certify quantities for payment purposes.

C. If a proper survey has not been completed to determine quantities for unit cost work, the Owner shall have full discretion to make a reasonable determination of quantity.

3.6 INSTALLATION

A. General: Locate the Work and components of the Work accurately, in correct alignment and elevation, as indicated.

1. Make vertical work plumb and make horizontal work level.
2. Where space is limited, install components to maximize space available for maintenance and ease of removal for replacement.
3. Conceal pipes, ducts, and wiring in finished areas unless otherwise indicated.
4. Maintain minimum headroom clearance of 96 inches (2440 mm) in occupied spaces and 90 inches (2300 mm) in unoccupied spaces.

B. Comply with manufacturer's written instructions and recommendations for installing products in applications indicated.

C. Install products at the time and under conditions that will ensure the best possible results. Maintain conditions required for product performance until Substantial Completion.

D. Conduct construction operations so no part of the Work is subjected to damaging operations or loading in excess of that expected during normal conditions of occupancy.

E. Sequence the Work and allow adequate clearances to accommodate movement of construction items on site and placement in permanent locations.

F. Tools and Equipment: Do not use tools or equipment that produce harmful noise levels.

G. Templates: Obtain and distribute to the parties involved templates for work specified to be factory prepared and field installed. Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing products to comply with indicated requirements.

H. Attachment: Provide blocking and attachment plates and anchors and fasteners of adequate size and number to securely anchor each component in place, accurately located and aligned with other portions of the Work. Where size and type of attachments are not indicated, verify size and type required for load conditions.

1. Mounting Heights: Where mounting heights are not indicated, mount components at heights directed by Architect.
2. Allow for building movement, including thermal expansion and contraction.
3. Coordinate installation of anchorages. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

I. Joints: Make joints of uniform width. Where joint locations in exposed work are not indicated, arrange joints for the best visual effect. Fit exposed connections together to form hairline joints.

J. Hazardous Materials: Use products, cleaners, and installation materials that are not considered hazardous.

3.7 CUTTING AND PATCHING

A. Cutting and Patching, General: Employ skilled workers to perform cutting and patching. Proceed with cutting and patching at the earliest feasible time, and complete without delay.

1. Cut in-place construction to provide for installation of other components or performance of other construction, and subsequently patch as required to restore surfaces to their original condition.

B. Existing Warranties: Remove, replace, patch, and repair materials and surfaces cut or damaged during installation or cutting and patching operations, by methods and with materials so as not to void existing warranties.

C. Temporary Support: Provide temporary support of work to be cut.

D. Protection: Protect in-place construction during cutting and patching to prevent damage. Provide protection from adverse weather conditions for portions of Project that might be exposed during cutting and patching operations.

E. Adjacent Occupied Areas: Where interference with use of adjoining areas or interruption of free passage to adjoining areas is unavoidable, coordinate cutting and patching according to requirements in Section 011000 "Summary."

F. Existing Utility Services and Mechanical/Electrical Systems: Where existing services/systems are required to be removed, relocated, or abandoned, bypass such services/systems before cutting to minimize interruption to occupied areas.

G. Cutting: Cut in-place construction by sawing, drilling, breaking, chipping, grinding, and similar operations, including excavation, using methods least likely to damage elements retained or adjoining construction. If possible, review proposed procedures with original Installer; comply with original Installer's written recommendations.

1. In general, use hand or small power tools designed for sawing and grinding, not hammering and chopping. Cut holes and slots neatly to minimum size required, and with minimum disturbance of adjacent surfaces. Temporarily cover openings when not in use.
2. Finished Surfaces: Cut or drill from the exposed or finished side into concealed surfaces.
3. Concrete and Masonry: Cut using a cutting machine, such as an abrasive saw or a diamond-core drill.
4. Excavating and Backfilling: Comply with requirements in applicable Sections where required by cutting and patching operations.
5. Mechanical and Electrical Services: Cut off pipe or conduit in walls or partitions to be removed. Cap, valve, or plug and seal remaining portion of pipe or conduit to prevent entrance of moisture or other foreign matter after cutting.
6. Proceed with patching after construction operations requiring cutting are complete.

H. Patching: Patch construction by filling, repairing, refinishing, closing up, and similar operations following performance of other work. Patch with durable seams that are as invisible as practicable. Provide materials and comply with installation requirements specified in other Sections, where applicable.

1. Inspection: Where feasible, test and inspect patched areas after completion to demonstrate physical integrity of installation.
2. Exposed Finishes: Restore exposed finishes of patched areas and extend finish restoration into retained adjoining construction in a manner that will minimize evidence of patching and refinishing.

    a. Clean piping, conduit, and similar features before applying paint or other finishing materials.
    b. Restore damaged pipe covering to its original condition.

3. Floors and Walls: Where walls or partitions that are removed extend one finished area into another, patch and repair floor and wall surfaces in the new space. Provide an even surface of uniform finish, color, texture, and appearance. Remove in-place floor and wall coverings and replace with new materials, if necessary, to achieve uniform color and appearance.

    a. Where patching occurs in a painted surface, prepare substrate and apply primer and intermediate paint coats appropriate for substrate over the patch, and apply final paint coat over entire unbroken surface containing the patch. Provide additional coats until patch blends with adjacent surfaces.

4. Ceilings: Patch, repair, or rehang in-place ceilings as necessary to provide an even-plane surface of uniform appearance.
5. Exterior Building Enclosure: Patch components in a manner that restores enclosure to a weathertight condition and ensures thermal and moisture integrity of building enclosure.

I. Cleaning: Clean areas and spaces where cutting and patching are performed. Remove paint, mortar, oils, putty, and similar materials from adjacent finished surfaces.

3.8 OWNER-INSTALLED PRODUCTS

A. Site Access: Provide access to Project site for Owner's construction personnel.

B. Coordination: Coordinate construction and operations of the Work with work performed by Owner's construction personnel.

1. Construction Schedule: Inform Owner of Contractor's preferred construction schedule for Owner's portion of the Work. Adjust construction schedule based on a mutually agreeable timetable. Notify Owner if changes to schedule are required due to differences in actual construction progress.
2. Preinstallation Conferences: Include Owner's construction personnel at preinstallation conferences covering portions of the Work that are to receive Owner's work. Attend preinstallation conferences conducted by Owner's construction personnel if portions of the Work depend on Owner's construction.

3.9 PROGRESS CLEANING

A. General: Clean Project site and work areas daily, including common areas. Enforce requirements strictly. Dispose of materials lawfully.

1. Comply with requirements in NFPA 241 for removal of combustible waste materials and debris.
2. Do not hold waste materials more than seven days during normal weather or three days if the temperature is expected to rise above 80 deg F (27 deg C).
3. Containerize hazardous and unsanitary waste materials separately from other waste. Mark containers appropriately and dispose of legally, according to regulations.

a. Use containers intended for holding waste materials of type to be stored.

B. Site: Maintain Project site free of waste materials and debris.

C. Work Areas: Clean areas where work is in progress to the level of cleanliness necessary for proper execution of the Work.

1. Remove liquid spills promptly.
2. Where dust would impair proper execution of the Work, broom-clean or vacuum the entire work area, as appropriate.

D. Installed Work: Keep installed work clean. Clean installed surfaces according to written instructions of manufacturer or fabricator of product installed, using only cleaning materials specifically recommended. If specific cleaning materials are not recommended, use cleaning materials that are not hazardous to health or property and that will not damage exposed surfaces.

E. Concealed Spaces: Remove debris from concealed spaces before enclosing the space.

F. Exposed Surfaces in Finished Areas: Clean exposed surfaces and protect as necessary to ensure freedom from damage and deterioration at time of Substantial Completion.

G. Waste Disposal: Do not bury or burn waste materials on-site. Do not wash waste materials down sewers or into waterways. Comply with waste disposal requirements in Section 017419 "Construction Waste Management and Disposal."

H. During handling and installation, clean and protect construction in progress and adjoining materials already in place. Apply protective covering where required to ensure protection from damage or deterioration at Substantial Completion.

I. Clean and provide maintenance on completed construction as frequently as necessary through the remainder of the construction period. Adjust and lubricate operable components to ensure operability without damaging effects.

J. Limiting Exposures: Supervise construction operations to assure that no part of the construction, completed or in progress, is subject to harmful, dangerous, damaging, or otherwise deleterious exposure during the construction period.

1. During the hollow metal grouting activities, block and prevent masonry grout material from entering sanitary sewer building drainage system. As a minimum, maintain protection until all hollow metal grout access holes are permanently welded closed.

K. Cleaning of Field Offices:

1. Collect and dispose of all trash generated by the Contractor and Owner field offices on a daily basis.
2. Broom clean and remove trash from Contractor and Owner field offices on a daily basis at 3:00 PM.
3. Wet mop Contractor and Owner field offices every Friday at 3:00 PM.
4. Remove debris, trash and clean project limits and field offices at the direction of the Owner at no additional cost to the Owner within 24 hours of receiving written direction.

3.10 STARTING AND ADJUSTING

A. Notify Owner fourteen (14) days prior to the start-up of each equipment or system.

B. Coordinate startup and adjusting of equipment and operating components with requirements in Section 019113 "General Commissioning Requirements."

C. Start equipment and operating components to confirm proper operation. Remove malfunctioning units, replace with new units, and retest.

D. Adjust equipment for proper operation. Adjust operating components for proper operation without binding.

E. Test each piece of equipment to verify proper operation. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

F. Manufacturer's Field Service: If a factory-authorized service representative is required to inspect field-assembled components and equipment installation, comply with qualification requirements in Section 014000 "Quality Requirements."

G. Verify that each piece of equipment or system has been checked for proper lubrication, drive rotation, belt tension, control sequence, or other conditions which may cause damage.

H. Verify that tests, meter readings, and specified electrical characteristics agree with those required by the equipment or system manufacturer.

I. Verify wiring and support components for equipment are complete and tested.

J. Execute start-up under supervision of responsible manufacturer's representative, and General Contractors' personnel in accordance with manufacturers' instructions. Owner shall be notified to observe start-up fourteen (14) days prior to start-up.

K. Procedure for testing shall consist of step by step instructions to verify systems parameters, components, and functioning.

L. Provide authorized representative to be present at site to inspect, check and approve equipment or system installation prior to start-up, and to supervise placing equipment or system in operation.

M. Submit a written report in accordance with Section, 014000, “Quality Requirements”. Section 014001, “Quality Control Program”, and Section 014202, “Inspection, Testing and Laboratory Services”, that equipment or system has been properly installed and is functioning correctly.

N. Provide for commissioning in accordance with Section 019113, “General Commissioning Requirements.”

O. Demonstration and Instructions: Provide for demonstration and Instructions as specified in Section 017900 “Demonstration and Training”.

3.11 PROTECTION OF INSTALLED CONSTRUCTION

A. Provide final protection and maintain conditions that ensure installed Work is without damage or deterioration at time of Substantial Completion.

B. Comply with manufacturer's written instructions for temperature and relative humidity.

3.12 CORRECTION OF THE WORK

A. Repair or remove and replace defective construction. Restore damaged substrates and finishes. Comply with requirements in this Section, Article 3.7, herein, "Cutting and Patching."

1. Repairing includes replacing defective parts, refinishing damaged surfaces, touching up with matching materials, and properly adjusting operating equipment.

B. Restore permanent facilities used during construction to their specified condition.

C. Remove and replace damaged surfaces that are exposed to view if surfaces cannot be repaired without visible evidence of repair.

D. Repair components that do not operate properly. Remove and replace operating components that cannot be repaired.

E. Remove and replace chipped, scratched, and broken glass or reflective surfaces.

END OF SECTION 01 73 00

SECTION 01 74 19 - CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

B. LEED Credits: This plan relates to LEED Credits MRc2.1 and 2.2. Exemplary performance for an Innovation & Design Credit equals 95% recycling waste materials rate for one additional point.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for the following:

1. Salvaging nonhazardous demolition and construction waste.
2. Recycling nonhazardous demolition and construction waste.
3. Disposing of nonhazardous demolition and construction waste.

B. Related Requirements:

1. Section 024116 "Structure Demolition" for disposition of waste resulting from demolition of buildings, structures, and site improvements, and for disposition of hazardous waste.
2. Section 024119 "Selective Demolition" for disposition of waste resulting from partial demolition of buildings, structures, and site improvements, and for disposition of hazardous waste.
3. Section 042000 "Unit Masonry" for disposal requirements for masonry waste.
4. Section 047200 “Cast Stone Masonry” for disposal requirements for excess cast stone and cast stone waste.
5. Section 311000 "Site Clearing" for disposition of waste resulting from site clearing and removal of above- and below-grade improvements.

1.3 DEFINITIONS

A. Construction Waste: Building and site improvement materials and other solid waste resulting from construction, remodeling, renovation, or repair operations. Construction waste includes packaging.

B. Demolition Waste: Building and site improvement materials resulting from demolition or selective demolition operations.

C. Disposal: Removal off-site of demolition and construction waste and subsequent sale, recycling, reuse, or deposit in landfill or incinerator acceptable to authorities having jurisdiction.

D. Recycle: Recovery of demolition or construction waste for subsequent processing in preparation for reuse.

E. Salvage: Recovery of demolition or construction waste and subsequent sale or reuse in another facility.

F. Salvage and Reuse: Recovery of demolition or construction waste and subsequent incorporation into the Work.

1.4 PERFORMANCE REQUIREMENTS

A. General: Achieve end-of-Project rates for salvage/recycling of 75 percent by weight of total non-hazardous solid waste generated by the Work. Practice efficient waste management in the use of materials in the course of the Work. Use all reasonable means to divert construction and demolition waste from landfills and incinerators. Facilitate recycling and salvage of materials, including the following:

1. Demolition Waste:

a. Minor Tree Landscaping
b. Asphalt paving.
c. Concrete, including concrete caissons.
d. Concrete reinforcing steel.
e. Brick.
f. Concrete masonry units.
g. Wood studs.
h. Wood joists.
i. Plywood and oriented strand board.
j. Structural and miscellaneous steel.
k. Rough hardware.
l. Roofing.
m. Insulation.
n. Doors and frames.
o. Door hardware.
p. Windows.
q. Glazing.
r. Metal studs.
s. Gypsum board.
t. Acoustical tile and panels.
u. Carpet.
v. Equipment.
w. Cabinets.
x. Plumbing fixtures.
y. Piping, including below grade utility piping.
z. Supports and hangers.
aa. Valves.
bb. Sprinklers.
cc. Mechanical equipment.
dd. Refrigerants.
ee. Electrical conduit.
ff. Copper wiring.
gg. Lighting fixtures.
hh. Lamps.
ii. Ballasts.
jj. Electrical devices.
kk. Switchgear and panelboards.
ll. Transformers.
mm. Exterior light poles

nn. Miscellaneous site amenities, signage, tree grates, fencing, gates, flagpoles, etc.

2. Construction Waste:

a. Masonry and CMU.
b. Concrete reinforcing
c. Concrete
d. Lumber.
e. Wood sheet materials.
f. Metals.
g. Roofing.
h. Insulation.
i. CarpetGypsum board.
j. Piping.
k. Ceiling systems
l. Glazing
m. Tile
n. HVAC ductwork
o. Electrical conduit.
p. Packaging: Regardless of salvage/recycle goal indicated in "General" Paragraph above, salvage or recycle 100 percent of the following uncontaminated packaging materials:

1) Paper.
2) Cardboard.
3) Boxes.
4) Plastic sheet and film.
5) Polystyrene packaging.
6) Wood crates.
7) Plastic pails.

q. .

1.5 ACTION SUBMITTALS

A. Waste Management Plan: Submit plan within 30 days of date established for the Notice to Proceed.

B. Inform construction workers and major sub-contractors of the project's waste recycling goals, process for recycling construction and demolition waste, weight ticket tracking and submittal dates.

C. Discuss CDWR plan at Pre-Bid Meeting, Pre-Construction Meeting and regularly scheduled Construction LEED Coordination Progress Meetings.

1.6 INFORMATIONAL SUBMITTALS

A. Waste Reduction Progress Reports: Concurrent with each Application for Payment, submit report. Use Form CWM-7 for construction waste and Form CWM-8 for demolition waste . Include the following information:

1. Material category.

2. Generation point of waste.
3. Total quantity of waste in tons.
4. Quantity of waste salvaged, both estimated and actual in tons.
5. Quantity of waste recycled, both estimated and actual in tons.
6. Total quantity of waste recovered (salvaged plus recycled) in tons.
7. Total quantity of waste recovered (salvaged plus recycled) as a percentage of total waste.

B. Waste Reduction Calculations: Before request for Substantial Completion, submit calculated end-of-Project rates for salvage, recycling, and disposal as a percentage of total waste generated by the Work.

C. Records of Donations: Indicate receipt and acceptance of salvageable waste donated to individuals and organizations. Indicate whether organization is tax exempt.

D. Records of Sales: Indicate receipt and acceptance of salvageable waste sold to individuals and organizations. Indicate whether organization is tax exempt.

E. Recycling and Processing Facility Records: Indicate receipt and acceptance of recyclable waste by recycling and processing facilities licensed to accept them. Include manifests, weight tickets, receipts, and invoices.

F. Landfill and Incinerator Disposal Records: Indicate receipt and acceptance of waste by landfills and incinerator facilities licensed to accept them. Include manifests, weight tickets, receipts, and invoices.

G. LEED Submittal: Submit documentation to USGBC, signed by Contractor, tabulating total waste material, quantities diverted and means by which it is diverted, and statement that requirements for the credit have been met. Respond to questions and requests from USGBC regarding construction waste management and disposal until the USGBC has made its determination on the project's LEED certification application. Document correspondence with USGBC as informational submittals.

H. Qualification Data: For waste management coordinator and refrigerant recovery technician.

I. Statement of Refrigerant Recovery: Signed by refrigerant recovery technician responsible for recovering refrigerant, stating that all refrigerant that was present was recovered and that recovery was performed according to EPA regulations. Include name and address of technician and date refrigerant was recovered.

1.7 QUALITY ASSURANCE

A. Waste Management Coordinator Qualifications: Experienced firm, with a record of successful waste management coordination of projects with similar requirements.

1. Firm employs a LEED-Accredited Professional, certified by the USGBC, as waste management coordinator.
2. Waste management coordinator may also serve as LEED coordinator.
3. For LEED Waste Management, see Section 018113, “Sustainable Design Requirements”.

B. Refrigerant Recovery Technician Qualifications: Certified by EPA-approved certification program.

C. Regulatory Requirements: Comply with hauling and disposal regulations of authorities having jurisdiction.

D. Waste Management Conference: Conduct conference at Project site to comply with requirements in Section 013100 "Project Management and Coordination." Review methods and procedures related to waste management including, but not limited to, the following:

1. Review and discuss waste management plan including responsibilities of waste management coordinator.
2. Review requirements for documenting quantities of each type of waste and its disposition.
3. Review and finalize procedures for materials separation and verify availability of containers and bins needed to avoid delays.
4. Review procedures for periodic waste collection and transportation to recycling and disposal facilities.
5. Review waste management requirements for each trade.

1.8 WASTE MANAGEMENT PLAN

A. General: Develop a waste management plan according to ASTM E 1609 and requirements in this Section. Plan shall consist of waste identification, waste reduction work plan, and cost/revenue analysis. Distinguish between demolition and construction waste. Indicate quantities by weight or volume, but use same units of measure throughout waste management plan.

B. Waste Identification: Indicate anticipated types and quantities of demolition site-clearing and construction waste generated by the Work. Use Form CWM-1 for construction waste and Form CWM-2 for demolition waste . Include estimated quantities and assumptions for estimates.

C. Waste Reduction Work Plan: List each type of waste and whether it will be salvaged, recycled, or disposed of in landfill or incinerator. Use Form CWM-3 for construction waste and Form CWM-4 for demolition waste . Include points of waste generation, total quantity of each type of waste, quantity for each means of recovery, and handling and transportation procedures.

1. Salvaged Materials for Reuse: For materials that will be salvaged and reused in this Project, describe methods for preparing salvaged materials before incorporation into the Work.
2. Salvaged Materials for Sale: For materials that will be sold to individuals and organizations, include list of their names, addresses, and telephone numbers.
3. Salvaged Materials for Donation: For materials that will be donated to individuals and organizations, include list of their names, addresses, and telephone numbers. (Ex: Chesapeake Habitat for Humanity)
4. Recycled Materials: Include list of local receivers and processors and type of recycled materials each will accept. Include names, addresses, and telephone numbers.
5. Disposed Materials: Indicate how and where materials will be disposed of. Include name, address, and telephone number of each landfill and incinerator facility.
6. Handling and Transportation Procedures: Include method that will be used for separating recyclable waste including sizes of containers, container labeling, and designated location where materials separation will be performed.

D. Cost/Revenue Analysis: Indicate total cost of waste disposal as if there was no waste management plan and net additional cost or net savings resulting from implementing waste management plan. Use Form CWM-5 for construction waste and Form CWM-6 for demolition waste . Include the following:

1. Total quantity of waste.
2. Estimated cost of disposal (cost per unit). Include hauling and tipping fees and cost of collection containers for each type of waste.
3. Total cost of disposal (with no waste management).
4. Revenue from salvaged materials.
5. Revenue from recycled materials.
6. Savings in hauling and tipping fees by donating materials.
7. Savings in hauling and tipping fees that are avoided.
8. Handling and transportation costs. Include cost of collection containers for each type of waste.
9. Net additional cost or net savings from waste management plan.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 PLAN IMPLEMENTATION

A. General: Implement approved waste management plan. Provide handling, containers, storage, signage, transportation, and other items as required to implement waste management plan during the entire duration of the Contract.

1. Comply with operation, termination, and removal requirements in Section 015000 "Temporary Facilities and Controls."

B. Waste Management Coordinator: Engage a waste management coordinator to be responsible for implementing, monitoring, and reporting status of waste management work plan. Coordinator shall be present at Project site full time for duration of Project.

C. Training: Train workers, subcontractors, and suppliers on proper waste management procedures, as appropriate for the Work.

1. Distribute waste management plan to everyone concerned within three days of submittal return.
2. Distribute waste management plan to entities when they first begin work on-site. Review plan procedures and locations established for salvage, recycling, and disposal.

D. Site Access and Temporary Controls: Conduct waste management operations to ensure minimum interference with roads, streets, walks, walkways, and other adjacent occupied and used facilities.

1. Designate and label specific areas on Project site necessary for separating materials that are to be salvaged, recycled, reused, donated, and sold.
2. Comply with Section 015000 "Temporary Facilities and Controls" for controlling dust and dirt, environmental protection, and noise control.

3.2 SALVAGING DEMOLITION WASTE

3.3 RECYCLING DEMOLITION AND CONSTRUCTION WASTE, GENERAL

A. General: Recycle paper and beverage containers used by on-site workers.

B. Recycling Incentives: Revenues, savings, rebates, tax credits, and other incentives received for recycling waste materials shall accrue to Contractor .

C. Preparation of Waste: Prepare and maintain recyclable waste materials according to recycling or reuse facility requirements. Maintain materials free of dirt, adhesives, solvents, petroleum contamination, and other substances deleterious to the recycling process.

D. Procedures: Separate recyclable waste from other waste materials, trash, and debris. Separate recyclable waste by type at Project site to the maximum extent practical according to approved construction waste management plan.

1. Provide appropriately marked containers or bins for controlling recyclable waste until removed from Project site. Include list of acceptable and unacceptable materials at each container and bin.

    a. Inspect containers and bins for contamination and remove contaminated materials if found.

2. Stockpile processed materials on-site without intermixing with other materials. Place, grade, and shape stockpiles to drain surface water. Cover to prevent windblown dust.
3. Stockpile materials away from construction area. Do not store within drip line of remaining trees.
4. Store components off the ground and protect from the weather.
5. Remove recyclable waste from Owner's property and transport to recycling receiver or processor.

3.4 RECYCLING DEMOLITION WASTE

A. Asphalt Paving: Grind asphalt to maximum 1-1/2-inch (38-mm) size.

1. Crush asphaltic concrete paving and screen to comply with requirements in Section 312000 "Earth Moving" for use as general fill.

B. Asphalt Paving: Break up and transport paving to asphalt-recycling facility.

C. Concrete: Remove reinforcement and other metals from concrete and sort with other metals.

1. Pulverize concrete to maximum 1-1/2-inch (38-mm) size.
2. Crush concrete and screen to comply with requirements in Section 312000 "Earth Moving" for use as satisfactory soil for fill or subbase.

D. Masonry: Remove metal reinforcement, anchors, and ties from masonry and sort with other metals.

1. Pulverize masonry to maximum 3/4-inch (19-mm) size.

    a. Crush masonry and screen to comply with requirements in Section 312000 "Earth Moving" for use as general fill .
    b. Crush masonry and screen to comply with requirements in Section 329300 "Plants" for use as mineral mulch.

2. Clean and stack undamaged, whole masonry units on wood pallets.

E. Wood Materials: Sort and stack members according to size, type, and length. Separate lumber, panel products, and treated wood materials.

F. Metals: Separate metals by type.

1. Structural Steel: Stack members according to size, type of member, and length.
2. Remove and dispose of bolts, nuts, washers, and other rough hardware.

G. Gypsum Board: Stack large clean pieces on wood pallets or in container and store in a dry location. Remove edge trim and sort with other metals. Remove and dispose of fasteners.

H. Acoustical Ceiling Panels and Tile: Stack large clean pieces on wood pallets and store in a dry location.

I. Metal Suspension System: Separate metal members including trim, and other metals from acoustical panels and tile and sort with other metals.

J. Carpet: Roll large pieces tightly after removing debris, trash, adhesive, and tack strips.

1. Store clean, dry carpet in a closed container or trailer provided by Carpet Reclamation Agency or carpet recycler.

K. Carpet Tile: Remove debris, trash, and adhesive.

1. Stack tile on pallet and store clean, dry carpet in a closed container or trailer provided by Carpet Reclamation Agency or carpet recycler.

L. Piping and Underground Utilities: Reduce piping to straight lengths and store by type and size. Separate supports, hangers, valves, sprinklers, and other components by type and size.

M. Conduit: Reduce conduit to straight lengths and store by type and size.

3.5 RECYCLING CONSTRUCTION WASTE

A. Packaging:

1. Cardboard and Boxes: Break down packaging into flat sheets. Bundle and store in a dry location.
2. Polystyrene Packaging: Separate and bag materials.
3. Pallets: As much as possible, require deliveries using pallets to remove pallets from Project site. For pallets that remain on-site, break down pallets into component wood pieces and comply with requirements for recycling wood.

4. Crates: Break down crates into component wood pieces and comply with requirements for recycling wood.

B. Wood Materials:

1. Clean Cut-Offs of Lumber: Grind or chip into small pieces.
2. Clean Sawdust: Bag sawdust that does not contain painted or treated wood.

a. Comply with requirements in Section 329300 "Plants" for use of clean sawdust as organic mulch.

C. Gypsum Board: Stack large clean pieces on wood pallets or in container and store in a dry location.

1. Clean Gypsum Board: Grind scraps of clean gypsum board using small mobile chipper or hammer mill. Screen out paper after grinding.

a. Comply with requirements in Section 329300 "Plants" for use of clean ground gypsum board as inorganic soil amendment.

3.6 DISPOSAL OF WASTE

A. General: Except for items or materials to be salvaged, recycled, or otherwise reused, remove waste materials from Project site and legally dispose of them in a landfill or incinerator acceptable to authorities having jurisdiction.

1. Except as otherwise specified, do not allow waste materials that are to be disposed of accumulate on-site.
2. Remove and transport debris in a manner that will prevent spillage on adjacent surfaces and areas.

B. Burning: Do not burn waste materials.

C. Disposal: Remove waste materials from Owner's property and legally dispose of them.

3.7 ATTACHMENTS

A. Form CWM-1 for construction waste identification.

B. Form CWM-2 for demolition waste identification.

C. Form CWM-3 for construction waste reduction work plan.

D. Form CWM-4 for demolition waste reduction work plan.

E. Form CWM-5 cost/revenue analysis of construction waste reduction work plan.

F. Form CWM-6 cost/revenue analysis of demolition waste reduction work plan.

G. Form CWM-7 for construction waste

H. Form CWM-8 for demolition waste.

SECTION 01 77 00 - CLOSEOUT PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for contract closeout, including, but not limited to, the following:

1. Substantial Completion procedures.
2. Final completion procedures.
3. Warranties.
4. Final cleaning.
5. Repair of the Work.

B. Related Requirements:

1. Section 012900 "Payment Procedures" for requirements for Applications for Payment for Substantial and Final Completion.
2. Section 013233 "Photographic Documentation" for submitting final completion construction photographic documentation.
3. Section 017300 "Execution" for progress cleaning of Project site.
4. Section 017823 "Operation and Maintenance Data" for operation and maintenance manual requirements.
5. Section 017839 "Project Record Documents" for submitting record Drawings, record Specifications, and record Product Data.
6. Section 017900 "Demonstration and Training" for requirements for instructing Owner's personnel.
7. Section 019113 “General Commissioning Requirements” for requirements for commissioning.
8. Divisions 02 through 33 Sections for specific closeout and special cleaning requirements for the Work in those Sections.

1.3 ACTION SUBMITTALS

A. Product Data: For cleaning agents.

B. Contractor's List of Incomplete Items: Initial submittal at Substantial Completion.

C. Certified List of Incomplete Items: Final submittal at Final Completion.

1.4 CLOSEOUT SUBMITTALS

A. Certificates of Release: From authorities having jurisdiction.

B. Certificate of Insurance: For continuing coverage.

C. Field Report: For pest control inspection.

1.5 MAINTENANCE MATERIAL SUBMITTALS

A. Schedule of Maintenance Material Items: For maintenance material submittal items specified in other Sections.

B. Green Cleaning Plan: For maintenance of materials specified in other Sections.

1.6 SUBSTANTIAL COMPLETION PROCEDURES

1.7 PRE-COMMISSIONING CONSTRUCTION COMPLETION PROCEDURES

A. Pre-Commissioning Construction Completion: The completion of all construction work as required in preparation for the full facility Commissioning and LEED survey process.

B. Contractor's List of Incomplete Items: Prepare and submit a list of items to be completed and corrected (Contractor's punch list), indicating the value of each item on the list and reasons why the Work is incomplete.

C. Submittals Prior to Pre-Commissioning Construction Completion: Complete the following a minimum of 14 days prior to requesting inspection for determining date of Pre-Commissioning Construction Completion. List items below that are incomplete at time of request.

1. Submit submittals specified in other Division 01 Sections, including operation and maintenance manuals required for Commissioning and LEED Surveys.
2. Submit Pre-Commissioning submittals required in Division 01 Section “General Commissioning Requirements”, and in individual Division 02 through 33 Sections.
3. Submit test/adjust/balance records.
4. Submit LEED submittals required in Division 01 Section “Sustainable Project Requirements” in individual Division 02 through 36 Sections.
5. Submit changeover information related to Owner's occupancy, use, operation, and maintenance.
6. Submit Punch-Lists in compliance with requirements of Division 01 Sections.

D. Procedures Prior to Commissioning and LEED Surveys: Complete the following a minimum of 14 days prior to requesting inspection for determining date of Commissioning start. List items below that are incomplete at time of request.

1. Complete Punch-list work
2. Complete startup and testing of systems and equipment.
3. Perform preventive maintenance on equipment used prior to Commissioning.
4. Participate with Commissioning Agent, Owner, Architect/Engineer and Agency Construction Manager in conducting inspections and walkthrough of all systems and equipment to be commissioned.
5. Participate with Commissioning Agent, Owner, Architect/Engineer and Agency Construction Manager in conducting inspections and walkthrough of all systems

and equipment required to be approved by the State Fire Marshall and local emergency responders.

E. Inspection: Submit a written request for inspection to determine Pre-Commissioning Construction Completion a minimum of 14 days prior to date the work will be completed and ready for Commissioning and LEED Surveys. On receipt of request, Commissioning Agent, Architect and Agency Construction Manager will either proceed with inspection or notify Contractor of unfulfilled requirements.

1. Reinspection: Request reinspection when the Work identified in previous inspections as incomplete is completed or corrected.
2. The Architect/Engineer costs associated with a second Pre-Commissioning Construction Completion Punch-List Work and Inspection Observation, and subsequent observations, shall be deducted from the Contract Sum at the established labor rates of the Architect/Engineer, inclusive all travel and related other direct costs and expenses.

F. Results of Pre-Commissioning Construction Completion will form the basis of requirements for start of Commissioning and LEED Surveys.

1.8 COMMISSIONING

A. Perform Commissioning in accordance with Section 01 91 13 “General Commissioning Requirements” and Division 36 Sections.

B. Submit Schedule of Commissioning activities and estimated date of delivery for Final Commissioning Report.

1.9 SUBSTANTIAL COMPLETION PROCEDURES

A. Contractor's List of Incomplete Items: Prepare and submit a list of items to be completed and corrected (Contractor's punch list), indicating the value of each item on the list and reasons why the Work is incomplete.

B. Submittals Prior to Substantial Completion: Complete the following a minimum of 10 days prior to requesting inspection for determining date of Substantial Completion. List items below that are incomplete at time of request.

1. Certificates of Release: Obtain and submit releases from authorities having jurisdiction permitting Owner unrestricted use of the Work and access to services and utilities. Include occupancy permits, operating certificates, and similar releases.
2. Submit closeout submittals specified in other Division 01 Sections, including project record documents, operation and maintenance manuals, final completion construction photographic documentation, damage or settlement surveys, property surveys, and similar final record information.
3. Submit closeout submittals specified in individual Sections, including specific warranties, workmanship bonds, maintenance service agreements, final certifications, and similar documents.
4. Submit maintenance material submittals specified in individual Sections, including tools, spare parts, extra materials, and similar items, and deliver to location designated by Architect. Label with manufacturer's name and model number where applicable.

a. Schedule of Maintenance Material Items: Prepare and submit schedule of maintenance material submittal items, including name and quantity of each item and name and number of related Specification Section. Obtain Architect's signature for receipt of submittals.

5. Submit test/adjust/balance records.
6. Submit sustainable design submittals not previously submitted.
7. Submit changeover information related to Owner's occupancy, use, operation, and maintenance.

C. Procedures Prior to Substantial Completion: Complete the following a minimum of 10 days prior to requesting inspection for determining date of Substantial Completion. List items below that are incomplete at time of request.

1. Advise Owner of pending insurance changeover requirements.
2. Make final changeover of permanent locks and deliver keys to Owner. Advise Owner's personnel of changeover in security provisions.
3. Complete startup and testing of systems and equipment.
4. Perform preventive maintenance on equipment used prior to Substantial Completion.
5. Instruct Owner's personnel in operation, adjustment, and maintenance of products, equipment, and systems. Submit demonstration and training video recordings specified in Section 017900 "Demonstration and Training."
6. Advise Owner of changeover in heat and other utilities.
7. Participate with Owner in conducting inspection and walkthrough with local emergency responders.
8. Terminate and remove temporary facilities from Project site, along with mockups, construction tools, and similar elements.
9. Complete final cleaning requirements, including touchup painting.
10. Touch up and otherwise repair and restore marred exposed finishes to eliminate visual defects.

D. Inspection: Submit a written request for inspection to determine Substantial Completion a minimum of 10 days prior to date the work will be completed and ready for final inspection and tests. On receipt of request, Architect will either proceed with inspection or notify Contractor of unfulfilled requirements. Architect will prepare the Certificate of Substantial Completion after inspection or will notify Contractor of items, either on Contractor's list or additional items identified by Architect, that must be completed or corrected before certificate will be issued.

1. Reinspection: Request reinspection when the Work identified in previous inspections as incomplete is completed or corrected.
2. Results of completed inspection will form the basis of requirements for final completion.

1.10 FINAL COMPLETION PROCEDURES

A. Submittals Prior to Final Completion: Before requesting final inspection for determining final completion, complete the following:

1. Submit a final Application for Payment according to Section 012900 "Payment Procedures."
2. Certified List of Incomplete Items: Submit certified copy of Architect's Substantial Completion inspection list of items to be completed or corrected (punch list),

endorsed and dated by Architect. Certified copy of the list shall state that each item has been completed or otherwise resolved for acceptance.

3. Certificate of Insurance: Submit evidence of final, continuing insurance coverage complying with insurance requirements.
4. Submit pest-control final inspection report.
5. Submit notification of completion of all assigned LEED credit verification documents and the USGBC LEED Online credit scorecard and template forms to the Architect and the Sustainability Consultant.

B. Inspection: Submit a written request for final inspection to determine acceptance a minimum of 10 days prior to date the work will be completed and ready for final inspection and tests. On receipt of request, Architect will either proceed with inspection or notify Contractor of unfulfilled requirements. Architect will prepare a final Certificate for Payment after inspection or will notify Contractor of construction that must be completed or corrected before certificate will be issued.

1. Reinspection: Request reinspection when the Work identified in previous inspections as incomplete is completed or corrected.

1.11 LIST OF INCOMPLETE ITEMS (PUNCH LIST)

A. Organization of List: Include name and identification of each space and area affected by construction operations for incomplete items and items needing correction including, if necessary, areas disturbed by Contractor that are outside the limits of construction.

1. Organize list of spaces in sequential order, starting with exterior areas first and proceeding from lowest floor to highest floor.
2. Organize items applying to each space by major element, including categories for ceiling, individual walls, floors, equipment, and building systems.
3. Include the following information at the top of each page:

    a. Project name.
    b. Date.
    c. Name of Architect.
    d. Name of Contractor.
    e. Page number.

4. Submit list of incomplete items in the following format:

    a. MS Excel electronic file. Architect will return annotated file.

1.12 SUBMITTAL OF PROJECT WARRANTIES

A. Time of Submittal: Submit written warranties on request of Architect for designated portions of the Work where commencement of warranties other than date of Substantial Completion is indicated, or when delay in submittal of warranties might limit Owner's rights under warranty.

B. Partial Occupancy: Submit properly executed warranties within 15 days of completion of designated portions of the Work that are completed and occupied or used by Owner during construction period by separate agreement with Contractor.

C. Organize warranty documents into an orderly sequence based on the table of contents of Project Manual.

1. Bind warranties and bonds in heavy-duty, three-ring, vinyl-covered, loose-leaf binders, thickness as necessary to accommodate contents, and sized to receive 8-1/2-by-11-inch (215-by-280-mm) paper.
2. Provide heavy paper dividers with plastic-covered tabs for each separate warranty. Mark tab to identify the product or installation. Provide a typed description of the product or installation, including the name of the product and the name, address, and telephone number of Installer.
3. Identify each binder on the front and spine with the typed or printed title "WARRANTIES," Project name, and name of Contractor.
4. Warranty Electronic File: Scan warranties and bonds and assemble complete warranty and bond submittal package into a single indexed electronic PDF file with links enabling navigation to each item. Provide bookmarked table of contents at beginning of document.

D. Provide additional copies of each warranty to include in operation and maintenance manuals.

1.13 REINSPECTION FEES

A. Should status of completion of Work require reinspection by Architect/Engineer due to failure of Work to comply with Contractor's claims on initial, substantial and final completion inspections, Owner will deduct the amount of Architect/Engineer fees and costs for reinspection A/E Services from final payment to Contractor.

1. Contractor shall reimburse Owner for A/E Services at the rate of 2.75 times Direct Personnel Expense (DPE) and Other Direct Costs.

a. Direct Personnel Expense (DPE) is defined as direct salary of Architect and other personnel engaged on Project inclusive of costs of mandatory, and customary contributions and benefits related thereto, including employment taxes and other statutory employee benefits, insurance, sick leave, holidays, vacations, pensions, and similar contributions and benefits.
b. Other Direct Costs (ODCs) is defined as including, but not limited to, travel, meals, telephone, postage, facsimile, overnight delivery, and printing costs.
c. NOTICE: Anticipated cost for a second, and subsequent, Substantial and Final Completion Observation is approximately $35,000 each.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Cleaning Agents: Use cleaning materials and agents recommended by manufacturer or fabricator of the surface to be cleaned. Do not use cleaning agents that are potentially hazardous to health or property or that might damage finished surfaces.

1. Use cleaning products that comply with Green Seal's GS-37, or if GS-37 is not applicable, use products that comply with the California Code of Regulations maximum allowable VOC levels.

PART 3 - EXECUTION

3.1 FINAL CLEANING

A. General: Perform final cleaning. Conduct cleaning and waste-removal operations to comply with local laws and ordinances and Federal and local environmental and antipollution regulations.

B. Cleaning: Employ experienced workers or professional cleaners for final cleaning. Clean each surface or unit to condition expected in an average commercial building cleaning and maintenance program. Comply with manufacturer's written instructions.

1. Complete the following cleaning operations before requesting inspection for certification of Substantial Completion for entire Project or for a designated portion of Project:

a. Clean Project site, yard, and grounds, in areas disturbed by construction activities, including landscape development areas, of rubbish, waste material, litter, and other foreign substances.
b. Sweep paved areas broom clean. Remove petrochemical spills, stains, and other foreign deposits.
c. Rake grounds that are neither planted nor paved to a smooth, even-textured surface.
d. Remove tools, construction equipment, machinery, and surplus material from Project site.
e. Remove snow and ice to provide safe access to building.
f. Clean exposed exterior and interior hard-surfaced finishes to a dirt-free condition, free of stains, films, and similar foreign substances. Avoid disturbing natural weathering of exterior surfaces. Restore reflective surfaces to their original condition.
g. Remove debris and surface dust from limited access spaces, including roofs, plenums, shafts, trenches, equipment vaults, manholes, attics, and similar spaces.
h. Sweep concrete floors broom clean in unoccupied spaces.
i. Vacuum carpet and similar soft surfaces, removing debris and excess nap; clean according to manufacturer's recommendations if visible soil or stains remain.
j. Clean transparent materials, including mirrors and glass in doors and windows. Remove glazing compounds and other noticeable, vision-obscuring materials. Polish mirrors and glass, taking care not to scratch surfaces.
k. Remove labels that are not permanent.
l. Wipe surfaces of mechanical and electrical equipment, elevator equipment, and similar equipment. Remove excess lubrication, paint and mortar droppings, and other foreign substances.
m. Clean plumbing fixtures to a sanitary condition, free of stains, including stains resulting from water exposure.
n. Replace disposable air filters and clean permanent air filters. Clean exposed surfaces of diffusers, registers, and grills.

o. Clean ducts, blowers, and coils if units were operated without filters during construction or that display contamination with particulate matter on inspection.

1) Clean HVAC system in compliance with NADCA Standard 1992-01. Provide written report on completion of cleaning.

p. Clean light fixtures, lamps, globes, and reflectors to function with full efficiency.
q. Leave Project clean and ready for occupancy.

C. Pest Control: Comply with pest control requirements in Section 015000 "Temporary Facilities and Controls." Prepare written report.

D. Construction Waste Disposal: Comply with waste disposal requirements in Section 017419 "Construction Waste Management and Disposal."

3.2 REPAIR OF THE WORK

A. Complete repair and restoration operations before requesting inspection for determination of Substantial Completion.

B. Repair or remove and replace defective construction. Repairing includes replacing defective parts, refinishing damaged surfaces, touching up with matching materials, and properly adjusting operating equipment. Where damaged or worn items cannot be repaired or restored, provide replacements. Remove and replace operating components that cannot be repaired. Restore damaged construction and permanent facilities used during construction to specified condition.

1. Remove and replace chipped, scratched, and broken glass, reflective surfaces, and other damaged transparent materials.
2. Touch up and otherwise repair and restore marred or exposed finishes and surfaces. Replace finishes and surfaces that that already show evidence of repair or restoration.

a. Do not paint over "UL" and other required labels and identification, including mechanical and electrical nameplates. Remove paint applied to required labels and identification.

3. Replace parts subject to operating conditions during construction that may impede operation or reduce longevity.
4. Replace burned-out bulbs, bulbs noticeably dimmed by hours of use, and defective and noisy starters in fluorescent and mercury vapor fixtures to comply with requirements for new fixtures.

END OF SECTION 01 77 00

SECTION 01 78 23 - OPERATION AND MAINTENANCE DATA

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

B. Manuals and training documents prepared by the Commissioning Agent to meet the requirements of the LEED NC credit Energy and Atmosphere c3 (EAc3) "Enhanced Commissioning".

1.2 SUMMARY

A. Section includes administrative and procedural requirements for preparing operation and maintenance manuals, including the following:

1. Operation and maintenance documentation directory.
2. Emergency manuals.
3. Operation manuals for systems, subsystems, and equipment.
4. Product maintenance manuals.
5. Systems and equipment maintenance manuals.

B. Related Requirements:
1. Section 013300 "Submittal Procedures" for submitting copies of submittals for operation and maintenance manuals.
2. Section 019113 "General Commissioning Requirements" for verification and compilation of data into operation and maintenance manuals.
3. Divisions 02 through 33 Sections for specific operation and maintenance manual requirements for the Work in those Sections.

1.3 DEFINITIONS

A. System: An organized collection of parts, equipment, or subsystems united by regular interaction.

B. Subsystem: A portion of a system with characteristics similar to a system.

1.4 CLOSEOUT SUBMITTALS

A. Manual Content: Operations and maintenance manual content is specified in individual Specification Sections to be reviewed at the time of Section submittals. Submit reviewed manual content formatted and organized as required by this Section.

1. Architect and Commissioning Authority will comment on whether content of operations and maintenance submittals are acceptable.
2. Where applicable, clarify and update reviewed manual content to correspond to revisions and field conditions.

B. Format: Submit operations and maintenance manuals in the following format:

1. PDF electronic file. Assemble each manual into a composite electronically indexed file. Submit on digital media acceptable to Architect.

   a. Name each indexed document file in composite electronic index with applicable item name. Include a complete electronically linked operation and maintenance directory.
   b. Enable inserted reviewer comments on draft submittals.

2. Three paper copies. Include a complete operation and maintenance directory. Enclose title pages and directories in clear plastic sleeves. Architect will return two copies.

C. Initial Manual Submittal: Submit draft copy of each manual at least 30 days before commencing demonstration and training. Architect and Commissioning Authority will comment on whether general scope and content of manual are acceptable.

D. Final Manual Submittal: Submit each manual in final form prior to requesting inspection for Substantial Completion and at least 15 days before commencing demonstration and training. Architect and Commissioning Authority will return copy with comments.

1. Correct or revise each manual to comply with Architect's and Commissioning Authority's comments. Submit copies of each corrected manual within 15 days of receipt of Architect's and Commissioning Authority's comments and prior to commencing demonstration and training.

PART 2 - PRODUCTS

2.1 OPERATION AND MAINTENANCE DOCUMENTATION DIRECTORY

A. Directory: Prepare a single, comprehensive directory of emergency, operation, and maintenance data and materials, listing items and their location to facilitate ready access to desired information. Include a section in the directory for each of the following:

1. List of documents.
2. List of systems.
3. List of equipment.
4. Table of contents.

B. List of Systems and Subsystems: List systems alphabetically. Include references to operation and maintenance manuals that contain information about each system.

C. List of Equipment: List equipment for each system, organized alphabetically by system. For pieces of equipment not part of system, list alphabetically in separate list.

D. Tables of Contents: Include a table of contents for each emergency, operation, and maintenance manual.

E. Identification: In the documentation directory and in each operation and maintenance manual, identify each system, subsystem, and piece of equipment with same designation used in the Contract Documents. If no designation exists, assign a

designation according to ASHRAE Guideline 4, "Preparation of Operating and Maintenance Documentation for Building Systems."

2.2 REQUIREMENTS FOR EMERGENCY, OPERATION, AND MAINTENANCE MANUALS

A. Organization: Unless otherwise indicated, organize each manual into a separate section for each system and subsystem, and a separate section for each piece of equipment not part of a system. Each manual shall contain the following materials, in the order listed:

1. Title page.
2. Table of contents.
3. Manual contents.

B. Title Page: Include the following information:

1. Subject matter included in manual.
2. Name and address of Project.
3. Name and address of Owner.
4. Date of submittal.
5. Name and contact information for Contractor.
6. Name and contact information for Construction Manager.
7. Name and contact information for Architect.
8. Name and contact information for Commissioning Authority.
9. Names and contact information for major consultants to the Architect that designed the systems contained in the manuals.
10. Cross-reference to related systems in other operation and maintenance manuals.

C. Table of Contents: List each product included in manual, identified by product name, indexed to the content of the volume, and cross-referenced to Specification Section number in Project Manual.

1. If operation or maintenance documentation requires more than one volume to accommodate data, include comprehensive table of contents for all volumes in each volume of the set.

D. Manual Contents: Organize into sets of manageable size. Arrange contents alphabetically by system, subsystem, and equipment. If possible, assemble instructions for subsystems, equipment, and components of one system into a single binder.

E. Manuals, Electronic Files: Submit manuals in the form of a multiple file composite electronic PDF file for each manual type required.

1. Electronic Files: Use electronic files prepared by manufacturer where available. Where scanning of paper documents is required, configure scanned file for minimum readable file size.
2. File Names and Bookmarks: Enable bookmarking of individual documents based on file names. Name document files to correspond to system, subsystem, and equipment names used in manual directory and table of contents. Group documents for each system and subsystem into individual composite bookmarked files, then create composite manual, so that resulting bookmarks reflect the system, subsystem, and equipment names in a readily navigated file tree. Configure electronic manual to display bookmark panel on opening file.

F. Manuals, Paper Copy: Submit manuals in the form of hard copy, bound and labeled volumes.
   1. Binders: Heavy-duty, three-ring, vinyl-covered, loose-leaf binders, in thickness necessary to accommodate contents, sized to hold 8-1/2-by-11-inch (215-by-280-mm) paper; with clear plastic sleeve on spine to hold label describing contents and with pockets inside covers to hold folded oversize sheets.

      a. If two or more binders are necessary to accommodate data of a system, organize data in each binder into groupings by subsystem and related components. Cross-reference other binders if necessary to provide essential information for proper operation or maintenance of equipment or system.
      b. Identify each binder on front and spine, with printed title "OPERATION AND MAINTENANCE MANUAL," Project title or name, and subject matter of contents, and indicate Specification Section number on bottom of spine. Indicate volume number for multiple-volume sets.

   2. Dividers: Heavy-paper dividers with plastic-covered tabs for each section of the manual. Mark each tab to indicate contents. Include typed list of products and major components of equipment included in the section on each divider, cross-referenced to Specification Section number and title of Project Manual.
   3. Protective Plastic Sleeves: Transparent plastic sleeves designed to enclose diagnostic software storage media for computerized electronic equipment.
   4. Supplementary Text: Prepared on 8-1/2-by-11-inch (215-by-280-mm) white bond paper.
   5. Drawings: Attach reinforced, punched binder tabs on drawings and bind with text.

      a. If oversize drawings are necessary, fold drawings to same size as text pages and use as foldouts.
      b. If drawings are too large to be used as foldouts, fold and place drawings in labeled envelopes and bind envelopes in rear of manual. At appropriate locations in manual, insert typewritten pages indicating drawing titles, descriptions of contents, and drawing locations.

2.3 EMERGENCY MANUALS

A. Content: Organize manual into a separate section for each of the following:

   1. Type of emergency.
   2. Emergency instructions.
   3. Emergency procedures.

B. Type of Emergency: Where applicable for each type of emergency indicated below, include instructions and procedures for each system, subsystem, piece of equipment, and component:

   1. Fire.
   2. Flood.
   3. Gas leak.
   4. Water leak.
   5. Power failure.
   6. Water outage.
   7. System, subsystem, or equipment failure.
   8. Chemical release or spill.

C. Emergency Instructions: Describe and explain warnings, trouble indications, error messages, and similar codes and signals. Include responsibilities of Owner's operating personnel for notification of Installer, supplier, and manufacturer to maintain warranties.

D. Emergency Procedures: Include the following, as applicable:

1. Instructions on stopping.
2. Shutdown instructions for each type of emergency.
3. Operating instructions for conditions outside normal operating limits.
4. Required sequences for electric or electronic systems.
5. Special operating instructions and procedures.

2.4 OPERATION MANUALS

A. Content: In addition to requirements in this Section, include operation data required in individual Specification Sections and the following information:

1. System, subsystem, and equipment descriptions. Use designations for systems and equipment indicated on Contract Documents.
2. Performance and design criteria if Contractor has delegated design responsibility.
3. Operating standards.
4. Operating procedures.
5. Operating logs.
6. Wiring diagrams.
7. Control diagrams.
8. Piped system diagrams.
9. Precautions against improper use.
10. License requirements including inspection and renewal dates.

B. Descriptions: Include the following:

1. Product name and model number. Use designations for products indicated on Contract Documents.
2. Manufacturer's name.
3. Equipment identification with serial number of each component.
4. Equipment function.
5. Operating characteristics.
6. Limiting conditions.
7. Performance curves.
8. Engineering data and tests.
9. Complete nomenclature and number of replacement parts.

C. Operating Procedures: Include the following, as applicable:

1. Startup procedures.
2. Equipment or system break-in procedures.
3. Routine and normal operating instructions.
4. Regulation and control procedures.
5. Instructions on stopping.
6. Normal shutdown instructions.
7. Seasonal and weekend operating instructions.
8. Required sequences for electric or electronic systems.
9. Special operating instructions and procedures.

D. Systems and Equipment Controls: Describe the sequence of operation, and diagram controls as installed.

E. Piped Systems: Diagram piping as installed, and identify color-coding where required for identification.

2.5 PRODUCT MAINTENANCE MANUALS

A. Content: Organize manual into a separate section for each product, material, and finish. Include source information, product information, maintenance procedures, repair materials and sources, and warranties and bonds, as described below.

B. Source Information: List each product included in manual, identified by product name and arranged to match manual's table of contents. For each product, list name, address, and telephone number of Installer or supplier and maintenance service agent, and cross-reference Specification Section number and title in Project Manual and drawing or schedule designation or identifier where applicable.

C. Product Information: Include the following, as applicable:

1. Product name and model number.
2. Manufacturer's name.
3. Color, pattern, and texture.
4. Material and chemical composition.
5. Reordering information for specially manufactured products.

D. Maintenance Procedures: Include manufacturer's written recommendations and the following:

1. Inspection procedures.
2. Types of cleaning agents to be used and methods of cleaning.
3. List of cleaning agents and methods of cleaning detrimental to product.
4. Schedule for routine cleaning and maintenance.
5. Repair instructions.

E. Repair Materials and Sources: Include lists of materials and local sources of materials and related services.

F. Warranties and Bonds: Include copies of warranties and bonds and lists of circumstances and conditions that would affect validity of warranties or bonds.

1. Include procedures to follow and required notifications for warranty claims.

2.6 SYSTEMS AND EQUIPMENT MAINTENANCE MANUALS

A. Content: For each system, subsystem, and piece of equipment not part of a system, include source information, manufacturers' maintenance documentation, maintenance procedures, maintenance and service schedules, spare parts list and source information, maintenance service contracts, and warranty and bond information, as described below.

B. Source Information: List each system, subsystem, and piece of equipment included in manual, identified by product name and arranged to match manual's table of contents.

For each product, list name, address, and telephone number of Installer or supplier and maintenance service agent, and cross-reference Specification Section number and title in Project Manual and drawing or schedule designation or identifier where applicable.

C. Manufacturers' Maintenance Documentation: Manufacturers' maintenance documentation including the following information for each component part or piece of equipment:

1. Standard maintenance instructions and bulletins.
2. Drawings, diagrams, and instructions required for maintenance, including disassembly and component removal, replacement, and assembly.
3. Identification and nomenclature of parts and components.
4. List of items recommended to be stocked as spare parts.

D. Maintenance Procedures: Include the following information and items that detail essential maintenance procedures:

1. Test and inspection instructions.
2. Troubleshooting guide.
3. Precautions against improper maintenance.
4. Disassembly; component removal, repair, and replacement; and reassembly instructions.
5. Aligning, adjusting, and checking instructions.
6. Demonstration and training video recording, if available.

E. Maintenance and Service Schedules: Include service and lubrication requirements, list of required lubricants for equipment, and separate schedules for preventive and routine maintenance and service with standard time allotment.

1. Scheduled Maintenance and Service: Tabulate actions for daily, weekly, monthly, quarterly, semiannual, and annual frequencies.
2. Maintenance and Service Record: Include manufacturers' forms for recording maintenance.

F. Spare Parts List and Source Information: Include lists of replacement and repair parts, with parts identified and cross-referenced to manufacturers' maintenance documentation and local sources of maintenance materials and related services.

G. Maintenance Service Contracts: Include copies of maintenance agreements with name and telephone number of service agent.

H. Warranties and Bonds: Include copies of warranties and bonds and lists of circumstances and conditions that would affect validity of warranties or bonds.

1. Include procedures to follow and required notifications for warranty claims.

PART 3 - EXECUTION

3.1 MANUAL PREPARATION

A. Operation and Maintenance Documentation Directory: Prepare a separate manual that provides an organized reference to emergency, operation, and maintenance manuals.

B. Emergency Manual: Assemble a complete set of emergency information indicating procedures for use by emergency personnel and by Owner's operating personnel for types of emergencies indicated.

C. Product Maintenance Manual: Assemble a complete set of maintenance data indicating care and maintenance of each product, material, and finish incorporated into the Work.

D. Operation and Maintenance Manuals: Assemble a complete set of operation and maintenance data indicating operation and maintenance of each system, subsystem, and piece of equipment not part of a system.

1. Engage a factory-authorized service representative to assemble and prepare information for each system, subsystem, and piece of equipment not part of a system.
2. Prepare a separate manual for each system and subsystem, in the form of an instructional manual for use by Owner's operating personnel.

E. Manufacturers' Data: Where manuals contain manufacturers' standard printed data, include only sheets pertinent to product or component installed. Mark each sheet to identify each product or component incorporated into the Work. If data include more than one item in a tabular format, identify each item using appropriate references from the Contract Documents. Identify data applicable to the Work and delete references to information not applicable.

1. Prepare supplementary text if manufacturers' standard printed data are not available and where the information is necessary for proper operation and maintenance of equipment or systems.

F. Drawings: Prepare drawings supplementing manufacturers' printed data to illustrate the relationship of component parts of equipment and systems and to illustrate control sequence and flow diagrams. Coordinate these drawings with information contained in record Drawings to ensure correct illustration of completed installation.

1. Do not use original project record documents as part of operation and maintenance manuals.
2. Comply with requirements of newly prepared record Drawings in Section 017839 "Project Record Documents."

G. Comply with Section 017700 "Closeout Procedures" for schedule for submitting operation and maintenance documentation.

END OF SECTION 01 78 23

SECTION 01 78 39 - PROJECT RECORD DOCUMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for project record documents, including the following:

1. Record Drawings.
2. Record Specifications.
3. Record Product Data.
4. Miscellaneous record submittals.

B. Related Requirements:

1. Section 017300 "Execution" for final property survey.
2. Section 017700 "Closeout Procedures" for general closeout procedures.
3. Section 017823 "Operation and Maintenance Data" for operation and maintenance manual requirements.

1.3 CLOSEOUT SUBMITTALS

A. Owner shall retain the following dollars amounts until the Contractor provides record and LEED project documents:

1. Record Documents: $10,000.50
2. LEED Documents: $15,000.25

B. Record Drawings: Comply with the following:

1. Number of Copies: Submit copies of record Drawings as follows:

a. Initial Submittal:

1) Submit one paper-copy set(s) of marked-up record prints.
2) Submit PDF electronic files of scanned record prints.
3) Architect will indicate whether general scope of changes, additional information recorded, and quality of drafting are acceptable.

b. Final Submittal:

1) Submit three paper-copy set(s) of marked-up record prints.
2) Submit PDF electronic files of scanned record.

3) Print each drawing, whether or not changes and additional information were recorded.

C. Record Specifications: Submit one paper copy annotated PDF electronic files of Project's Specifications, including addenda and contract modifications.

D. Record Product Data: Submit one paper copy and annotated PDF electronic files and directories of each submittal.

1. Where record Product Data are required as part of operation and maintenance manuals, submit duplicate marked-up Product Data as a component of manual.

E. Miscellaneous Record Submittals: See other Specification Sections for miscellaneous record-keeping requirements and submittals in connection with various construction activities. Submit one paper copy and annotated PDF electronic files and directories of each submittal.

F. Reports: Submit written reportindicating items incorporated into project record documents concurrent with progress of the Work, including revisions, concealed conditions, field changes, product selections, and other notations incorporated.

PART 2 - PRODUCTS

2.1 RECORD DRAWINGS

A. Record Prints: Maintain one set of marked-up paper copies of the Contract Drawings and Shop Drawings, incorporating new and revised drawings as modifications are issued.

1. Preparation: Mark record prints to show the actual installation where installation varies from that shown originally. Require individual or entity who obtained record data, whether individual or entity is Installer, subcontractor, or similar entity, to provide information for preparation of corresponding marked-up record prints.

a. Give particular attention to information on concealed elements that would be difficult to identify or measure and record later.
b. Accurately record information in an acceptable drawing technique.
c. Record data as soon as possible after obtaining it.
d. Record and check the markup before enclosing concealed installations.
e. Cross-reference record prints to corresponding archive photographic documentation.

2. Content: Types of items requiring marking include, but are not limited to, the following:

a. Dimensional changes to Drawings.
b. Revisions to details shown on Drawings.
c. Depths of foundations below first floor.
d. Locations and depths of underground utilities.
e. Revisions to routing of piping and conduits.
f. Revisions to electrical circuitry.
g. Actual equipment locations.
h. Duct size and routing.

i. Locations of concealed internal utilities.
j. Changes made by Change Order or Construction Work Change Directive.
k. Changes made following Architect's written orders.
l. Details not on the original Contract Drawings.
m. Field records for variable and concealed conditions.
n. Record information on the Work that is shown only schematically.

3. Mark the Contract Drawings and Shop Drawings completely and accurately. Use personnel proficient at recording graphic information in production of marked-up record prints.
4. Mark record sets with erasable, red-colored pencil. Use other colors to distinguish between changes for different categories of the Work at same location.
5. Mark important additional information that was either shown schematically or omitted from original Drawings.
6. Note Construction Change Directive numbers, alternate numbers, Change Order numbers, and similar identification, where applicable.

B. Record Digital Data Files: Immediately before inspection for Certificate of Substantial Completion, prepare a full set of corrected digital data files of the Contract Drawings, as follows:

1. Format: Same digital data software program, version, and operating system as the original Contract Drawings.
2. Format: DWG, Version 2015, Microsoft Windows operating system.
3. Format: Annotated PDF electronic file.
4. Incorporate changes and additional information previously marked on record prints. Delete, redraw, and add details and notations where applicable.
5. Refer instances of uncertainty to Architect for resolution.
6. Architect will furnish Contractor one set of digital data files of the Contract Drawings for use in recording information.

a. See Section 013300 "Submittal Procedures" for requirements related to use of Architect's digital data files.
b. Architect will provide data file layer information. Record markups in separate layers.

C. Newly Prepared Record Drawings: Prepare new Drawings instead of preparing record Drawings where Architect determines that neither the original Contract Drawings nor Shop Drawings are suitable to show actual installation.

1. New Drawings may be required when a Change Order is issued as a result of accepting an alternate, substitution, or other modification.
2. Consult Architect for proper scale and scope of detailing and notations required to record the actual physical installation and its relation to other construction. Integrate newly prepared record Drawings into record Drawing sets; comply with procedures for formatting, organizing, copying, binding, and submitting.

D. Format: Identify and date each record Drawing; include the designation "PROJECT RECORD DRAWING" in a prominent location.

1. Record Prints: Organize record prints and newly prepared record Drawings into manageable sets. Bind each set with durable paper cover sheets. Include identification on cover sheets.
2. Format: Annotated PDF electronic file.

3. Record Digital Data Files: Organize digital data information into separate electronic files that correspond to each sheet of the Contract Drawings. Name each file with the sheet identification. Include identification in each digital data file.
4. Identification: As follows:

    a. Project name.
    b. Date.
    c. Designation "PROJECT RECORD DRAWINGS."
    d. Name of Architect.
    e. Name of Contractor.

2.2 RECORD SPECIFICATIONS

A. Preparation: Mark Specifications to indicate the actual product installation where installation varies from that indicated in Specifications, addenda, and contract modifications.

1. Give particular attention to information on concealed products and installations that cannot be readily identified and recorded later.
2. Mark copy with the proprietary name and model number of products, materials, and equipment furnished, including substitutions and product options selected.
3. Record the name of manufacturer, supplier, Installer, and other information necessary to provide a record of selections made.
4. For each principal product, indicate whether record Product Data has been submitted in operation and maintenance manuals instead of submitted as record Product Data.
5. Note related Change Orders, record Product Data, and record Drawings where applicable.

B. Format: Submit record Specifications as scanned PDF electronic file(s) of marked-up paper copy of Specifications.

2.3 RECORD PRODUCT DATA

A. Preparation: Mark Product Data to indicate the actual product installation where installation varies substantially from that indicated in Product Data submittal.

1. Give particular attention to information on concealed products and installations that cannot be readily identified and recorded later.
2. Include significant changes in the product delivered to Project site and changes in manufacturer's written instructions for installation.
3. Note related Change Orders, record Specifications, and record Drawings where applicable.

B. Format: Submit record Product Data as annotated PDF electronic file paper copy scanned PDF electronic file(s) of marked-up paper copy of Product Data.

1. Include record Product Data directory organized by Specification Section number and title, electronically linked to each item of record Product Data.

2.4 MISCELLANEOUS RECORD SUBMITTALS

A. Assemble miscellaneous records required by other Specification Sections for miscellaneous record keeping and submittal in connection with actual performance of the Work. Bind or file miscellaneous records and identify each, ready for continued use and reference.

B. Format: Submit miscellaneous record submittals as scanned PDF electronic file(s) of marked-up miscellaneous record submittals.

1. Include miscellaneous record submittals directory organized by Specification Section number and title, electronically linked to each item of miscellaneous record submittals.

PART 3 - EXECUTION

3.1 RECORDING AND MAINTENANCE

A. Recording: Maintain one copy of each submittal during the construction period for project record document purposes. Post changes and revisions to project record documents as they occur; do not wait until end of Project.

B. Maintenance of Record Documents and Samples: Store record documents and Samples in the field office apart from the Contract Documents used for construction. Do not use project record documents for construction purposes. Maintain record documents in good order and in a clean, dry, legible condition, protected from deterioration and loss. Provide access to project record documents for Architect's reference during normal working hours.

END OF SECTION 01 78 39

SECTION 01 79 00 - DEMONSTRATION AND TRAINING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for instructing Owner's personnel, including the following:

1. Demonstration of operation of systems, subsystems, and equipment.
2. Training in operation and maintenance of systems, subsystems, and equipment.
3. Demonstration and training video recordings.

B. Related Requirements:

1. Divisions 02 through 33 Sections for specific requirements for demonstration and training for products in those Sections.

1.3 INFORMATIONAL SUBMITTALS

A. Instruction Program: Submit outline of instructional program for demonstration and training, including a list of training modules and a schedule of proposed dates, times, length of instruction time, and instructors' names for each training module. Include learning objective and outline for each training module.

1. Indicate proposed training modules using manufacturer-produced demonstration and training video recordings for systems, equipment, and products in lieu of video recording of live instructional module.

B. Qualification Data: For facilitator, instructor, and videographer.

C. Attendance Record: For each training module, submit list of participants and length of instruction time.

D. Evaluations: For each participant and for each training module, submit results and documentation of performance-based test.

1.4 CLOSEOUT SUBMITTALS

A. Demonstration and Training Video Recordings: Submit two copies within seven days of end of each training module.

1. Identification: On each copy, provide an applied label with the following information:

a. Name of Project.
b. Name and address of videographer.
c. Name of Owner
d. Name of Architect.
e. Name of Contractor.
f. Date of video recording.

2. Transcript: Prepared and bound in format matching operation and maintenance manuals. Mark appropriate identification on front and spine of each binder. Include a cover sheet with same label information as the corresponding video recording. Include name of Project and date of video recording on each page.
3. Electronic Copy of Transcript: Prepared in PDF electronic format. Include a cover sheet with same label information as the corresponding video recording and a table of contents with links to corresponding training components. Include name of Project and date of video recording on each page.
4. At completion of training, submit complete training manual(s) for Owner's use prepared and bound in format matching operation and maintenance manuals in PDF electronic file format on compact disc.

1.5 QUALITY ASSURANCE

A. Facilitator Qualifications: A firm or individual experienced in training or educating maintenance personnel in a training program similar in content and extent to that indicated for this Project, and whose work has resulted in training or education with a record of successful learning performance.

B. Instructor Qualifications: A factory-authorized service representative, complying with requirements in Section 014000 "Quality Requirements," experienced in operation and maintenance procedures and training.

C. Videographer Qualifications: A professional videographer who is experienced photographing demonstration and training events similar to those required.

D. Preinstruction Conference: Conduct conference at Project site to comply with requirements in Section 013100 "Project Management and Coordination." Review methods and procedures related to demonstration and training including, but not limited to, the following:

1. Inspect and discuss locations and other facilities required for instruction.
2. Review and finalize instruction schedule and verify availability of educational materials, instructors' personnel, audiovisual equipment, and facilities needed to avoid delays.
3. Review required content of instruction.
4. For instruction that must occur outside, review weather and forecasted weather conditions and procedures to follow if conditions are unfavorable.

1.6 COORDINATION

A. Coordinate instruction schedule with Owner's operations. Adjust schedule as required to minimize disrupting Owner's operations and to ensure availability of Owner's personnel.

B. Coordinate instructors, including providing notification of dates, times, length of instruction time, and course content.

C. Coordinate content of training modules with content of approved emergency, operation, and maintenance manuals. Do not submit instruction program until operation and maintenance data has been reviewed and approved by Architect.

PART 2 - PRODUCTS

2.1 INSTRUCTION PROGRAM

A. Program Structure: Develop an instruction program that includes individual training modules for each system and for equipment not part of a system, as required by individual Specification Sections.

B. Training Modules: Develop a learning objective and teaching outline for each module. Include a description of specific skills and knowledge that participant is expected to master. For each module, include instruction for the following as applicable to the system, equipment, or component:

1. Basis of System Design, Operational Requirements, and Criteria: Include the following:

    a. System, subsystem, and equipment descriptions.
    b. Performance and design criteria if Contractor is delegated design responsibility.
    c. Operating standards.
    d. Regulatory requirements.
    e. Equipment function.
    f. Operating characteristics.
    g. Limiting conditions.
    h. Performance curves.

2. Documentation: Review the following items in detail:

    a. Emergency manuals.
    b. Operations manuals.
    c. Maintenance manuals.
    d. Project record documents.
    e. Identification systems.
    f. Warranties and bonds.
    g. Maintenance service agreements and similar continuing commitments.

3. Emergencies: Include the following, as applicable:

    a. Instructions on meaning of warnings, trouble indications, and error messages.
    b. Instructions on stopping.
    c. Shutdown instructions for each type of emergency.
    d. Operating instructions for conditions outside of normal operating limits.
    e. Sequences for electric or electronic systems.
    f. Special operating instructions and procedures.

4. Operations: Include the following, as applicable:

    a. Startup procedures.
    b. Equipment or system break-in procedures.
    c. Routine and normal operating instructions.
    d. Regulation and control procedures.
    e. Control sequences.
    f. Safety procedures.
    g. Instructions on stopping.
    h. Normal shutdown instructions.
    i. Operating procedures for emergencies.
    j. Operating procedures for system, subsystem, or equipment failure.
    k. Seasonal and weekend operating instructions.
    l. Required sequences for electric or electronic systems.
    m. Special operating instructions and procedures.

5. Adjustments: Include the following:

    a. Alignments.
    b. Checking adjustments.
    c. Noise and vibration adjustments.
    d. Economy and efficiency adjustments.

6. Troubleshooting: Include the following:

    a. Diagnostic instructions.
    b. Test and inspection procedures.

7. Maintenance: Include the following:

    a. Inspection procedures.
    b. Types of cleaning agents to be used and methods of cleaning.
    c. List of cleaning agents and methods of cleaning detrimental to product.
    d. Procedures for routine cleaning
    e. Procedures for preventive maintenance.
    f. Procedures for routine maintenance.
    g. Instruction on use of special tools.

8. Repairs: Include the following:

    a. Diagnosis instructions.
    b. Repair instructions.
    c. Disassembly; component removal, repair, and replacement; and reassembly instructions.
    d. Instructions for identifying parts and components.
    e. Review of spare parts needed for operation and maintenance.

PART 3 - EXECUTION

3.1 PREPARATION

A. Assemble educational materials necessary for instruction, including documentation and training module. Assemble training modules into a training manual organized in coordination with requirements in Section 017823 "Operation and Maintenance Data."

B. Set up instructional equipment at instruction location.

3.2 INSTRUCTION

A. Facilitator: Engage a qualified facilitator to prepare instruction program and training modules, to coordinate instructors, and to coordinate between Contractor and Owner for number of participants, instruction times, and location.

B. Engage qualified instructors to instruct Owner's personnel to adjust, operate, and maintain systems, subsystems, and equipment not part of a system.
   1. Owner will furnish Contractor with names and positions of participants.

C. Scheduling: Demonstration and Training must occur after Substantial Completion and be completed prior to Final Completion. Provide instruction at mutually agreed on times. For equipment that requires seasonal operation, provide similar instruction at start of each season.

   1. Submit preliminary schedule for Owner's approval, listing times and dates for demonstration of each item of equipment and each system, forty-five (45) days prior to proposed dates.
   2. Submit three copies of each pre-evaluation and site report and proposed video filmed demonstration seven days prior to filming, to ensure that the planned demonstrations and instructions are complete and accurate for the intended purpose.

D. Provide time and date of each proposed demonstration, hours devoted to demonstration, and a list of persons to be present to Owner.

E. Training Location and Reference Material: Conduct training on-site in the completed and fully operational facility using the actual equipment in-place. Conduct training using final operation and maintenance data submittals.

F. Evaluation: At conclusion of each training module, assess and document each participant's mastery of module by use of [**an oral**] [**a written**] [**a demonstration**] performance-based test.

G. Cleanup: Collect used and leftover educational materials and give to Owner. Remove instructional equipment. Restore systems and equipment to condition existing before initial training use.

3.3 DEMONSTRATION AND TRAINING VIDEO RECORDINGS

A. General: Engage a qualified commercial videographer to record demonstration and training video recordings. Record each training module separately. Include classroom

instructions and demonstrations, board diagrams, and other visual aids, but not student practice.

1. At beginning of each training module, record each chart containing learning objective and lesson outline.

B. Video: Provide minimum 640 x 480 video resolution converted to format file type acceptable to Owner, on electronic media.

1. Electronic Media: Read-only format compact disc acceptable to Owner, with commercial-grade graphic label.
2. File Hierarchy: Organize folder structure and file locations according to project manual table of contents. Provide complete screen-based menu.
3. File Names: Utilize file names based upon name of equipment generally described in video segment, as identified in Project specifications.
4. Contractor and Installer Contact File: Using appropriate software, create a file for inclusion on the Equipment Demonstration and Training DVD that describes the following for each Contractor involved on the Project, arranged according to Project table of contents:

    a. Name of Contractor/Installer.
    b. Business address.
    c. Business phone number.
    d. Point of contact.
    e. E-mail address.

C. Recording: Mount camera on tripod before starting recording, unless otherwise necessary to adequately cover area of demonstration and training. Display continuous running time.

1. Film training session(s) in segments not to exceed 15 minutes.

    a. Produce segments to present a single significant piece of equipment per segment.
    b. Organize segments with multiple pieces of equipment to follow order of Project Manual table of contents.
    c. Where a training session on a particular piece of equipment exceeds 15 minutes, stop filming and pause training session. Begin training session again upon commencement of new filming segment.

D. Light Levels: Verify light levels are adequate to properly light equipment. Verify equipment markings are clearly visible prior to recording.

1. Furnish additional portable lighting as required.

E. Narration: Describe scenes on video recording by audio narration by microphone while video recording is recorded. Include description of items being viewed.

F. Transcript: Provide a transcript of the narration. Display images and running time captured from videotape opposite the corresponding narration segment.

G. Preproduced Video Recordings: Provide video recordings used as a component of training modules in same format as recordings of live training.

END OF SECTION 01 79 00

SECTION 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS

PART 1 - GENERAL

1.1 DESCRIPTION

A. Commissioning. Commissioning is a systematic process of verifying that all building systems perform interactively according to the design intent and the owner's operational needs. This is achieved by beginning in the design phase and documenting design intent and continuing through construction, acceptance and the warranty period with actual verification of performance. The commissioning process shall encompass and coordinate the traditionally separate functions of system documentation, equipment start-up, control system calibration, testing and balancing, performance testing and training.

Commissioning during the construction phase is intended to achieve the following specific objectives according to the Contract Documents:

1. Verify that applicable equipment and systems are installed according to the manufacturer's recommendations and to industry accepted minimum standards and that they receive adequate operational checkout by installing contractors.
2. Verify and document proper performance of equipment and systems.
3. Verify that O&M documentation left on site is complete.
4. Verify that the Owner's operating personnel are adequately trained.

B. The commissioning process does not take away from or reduce the responsibility of the system designers or installing contractors to provide a finished and fully functioning product.

C. Abbreviations. The following are common abbreviations used in the *Specifications* and in the *Commissioning Plan.* Definitions are found in Section 1.6.

A/E	Architect and Design Engineer	FPT	Functional Performance Test
CA	Commissioning Authority	MC	Mechanical Contractor
CC	Controls Contractor	OE	Owner's Engineer
CT	Contractor	OPM	Owner's Project Manager
Cx	Commissioning	PFC	Pre-functional Checklist
Cx Plan	Commissioning Plan Document	Subs	Subcontractors to General
EC	Electrical Contractor	TAB	Test Adjust & Balance Contractor

1.2 COORDINATION

A. Commissioning Team. The members of the commissioning team consist of the Commissioning Authority (CA), Owner's Project Manager (OPM), Contractor (CT), Owner's Engineer (OE), the architect and design engineers (particularly the mechanical engineer), the Mechanical Contractor (MC), the Electrical Contractor (EC), the TAB representative, the Controls Contractor (CC), any other installing subcontractors or suppliers of equipment. If known, the Owner's building or plant operator/engineer is also a member of the commissioning team.

B. Management. The CA is hired by the Owner directly. The CA directs and coordinates the commissioning activities and reports to the Owner as part of the OPM team. All members work together to fulfill their contracted responsibilities and meet the objectives of the Contract Documents.

C. Scheduling. The CA will work with the CT according to established protocols to schedule the commissioning activities. The CT will provide sufficient notice to the CA for scheduling commissioning activities. The CT will integrate all commissioning activities into the master schedule. All parties will address scheduling problems and make necessary notifications in a timely manner in order to expedite the commissioning process.

The CT will provide the initial schedule of primary commissioning events at the commissioning scoping meeting. The *Commissioning Plan—Construction Phase* provides a format for this schedule. As construction progresses more detailed schedules are developed by the CT. The Commissioning Plan also provides a format for detailed schedules.

A minimum of 5 working days should be provided to schedule the CA for all ductwork leak testing, piping pressure tests, pipe flushing, equipment startups, TAB verifications, PFCs, FPTs, and other commissioning related items.

1.3 COMMISSIONING PROCESS

A. Commissioning Plan. The *Commissioning Plan* is provided by the CA and is binding on the Contractor. The commissioning plan provides guidance in the execution of the commissioning process. Just after the initial commissioning scoping meeting the CA will update the plan which is then considered the “final” plan, though it will continue to evolve and expand as the project progresses. The *Specifications* will take precedence over the *Commissioning Plan*.

B. Commissioning Process. The following narrative provides a brief overview of the typical commissioning tasks during construction and the general order in which they occur.

1. Commissioning during construction begins with a scoping meeting conducted by the CA where the commissioning process is reviewed with the commissioning team members.
2. Additional meetings will be required throughout construction, scheduled by the CA with necessary parties attending, to plan, scope, coordinate, schedule future activities and resolve problems.
3. Equipment documentation is submitted to the CA through formal submittals, including detailed start-up procedures.
4. The CT works with the Subs in developing start-up plans and startup documentation formats, including performing the pre-functional checklists.
5. In general, the checkout and performance verification proceeds from simple to complex; from component level to equipment to systems and intersystem levels with pre-functional checklists being completed before functional testing.
6. The Subs, under their own direction, execute and document the pre-functional checklists and perform start-up and initial checkout. The CA documents that the checklists and start-up were completed according to the approved plans. This may include the CA witnessing start-up of selected equipment.
7. The CA develops specific equipment and system functional performance test procedures. The CT and Subs are to review the procedures and provide comments back to the CA within 5 working days.

8. The procedures are executed by the Subs, under the direction of, and documented by the CA.
9. Items of non-compliance in material, installation or set-up are corrected at the Sub's expense and the system retested.
10. The CA reviews the O&M documentation for completeness.
11. Commissioning is completed before Substantial Completion.
12. The CA reviews, pre-approves and coordinates the training provided by the Subs and verifies that is was completed.
13. Deferred testing is conducted, as specified or required.

1.4 RELATED WORK

A. Specific commissioning requirements are given in the following sections of these specifications. All of the following sections apply to the Work of this section.

Section	Description
23 05 93 Testing Adjusting and Balancing For HVAC	Provides additional requirements for TAB contractor.
23 08 00 Mechanical Systems Commissioning	Provides additional requirements for the mechanical systems including HVAC and plumbing systems.
23 09 00 Automatic Temperature Controls	Provides additional requirements for the controls contractor.
26 08 00 Electrical Systems Commissioning	Provides additional commissioning requirements for electrical systems.
26 51 00 Interior Lighting	Provides additional commissioning requirements for the electrical systems.

1.5 RESPONSIBILITIES

A. The responsibilities of various parties in the commissioning process are provided in this section. The responsibilities of the mechanical contractor, testing, adjusting, and balancing (TAB) contractor, controls contractor, and plumbing contractor are in Division 23 and those of the electrical contractor in Division 26.

B. <u>All Parties</u>

1. Follow the Commissioning Plan.
2. Attend commissioning scoping meeting and commissioning meetings.

C. <u>Owner's Project Manager (OPM)</u>

1. OPM manages the CA contract.
2. Attend the commissioning scoping meeting and selected commissioning team meetings.

Construction and Acceptance Phase

1. Manage the contract of the A/E and of the CT.
2. Arrange for facility operating and maintenance personnel to attend various field commissioning activities and field training sessions according to the *Commissioning Plan—Construction Phase.*

3. Provide final approval for the completion of the commissioning work.

Warranty Period

1. Verify that any seasonal or deferred testing and any deficiency issues are addressed.

D. Architect (of A/E)

Construction and Acceptance Phase

1. Attend the commissioning scoping meeting and selected commissioning team meetings.
2. Perform normal submittal reviews, construction observations, as-built drawing preparation, O&M manual preparation, etc., as contracted.
3. Provide any design narrative for systems, schematic drawings of systems, details, and other information requested by the CA.
4. Coordinate resolution of system deficiencies identified during commissioning, according to the contract documents.
5. Prepare and submit final as-built design intent documentation for inclusion in the O&M manuals. Review and approve the O&M manuals.

Warranty Period

1. Coordinate resolution of design non-conformance and design deficiencies identified during warranty-period commissioning.

E. Mechanical and Electrical Designers/Engineers (of the A/E)

Construction and Acceptance Phase

1. Perform normal submittal review, construction observations, as-built drawing preparation, etc., as contracted. Site observations are to be completed just prior to system startup.
2. Provide any design narrative and sequences documentation requested by the CA. The designers shall assist (along with the contractors) in clarifying the operation and control of commissioned equipment in areas where the specifications, control drawings or equipment documentation is not sufficient for writing detailed testing procedures.
3. Attend commissioning scoping meetings and other selected commissioning team meetings.
4. Participate in the resolution of system deficiencies identified during commissioning, according to the contract documents.
5. Prepare and submit the final as-built design intent and operating parameters documentation for inclusion in the O&M manuals. Review and approve the O&M manuals.
6. From the Contractor's red-line drawings, edit and update one-line diagrams developed as part of the design narrative documentation and those provided by the vendor as shop drawings for the chilled and hot water, condenser water, domestic hot water, supply, return and exhaust air systems and emergency power system.

Warranty Period

1. Participate in the resolution of non-compliance, non-conformance and design deficiencies identified during commissioning during warranty-period commissioning.

F. Commissioning Authority (CA)

The CA is not responsible for design concept, design criteria, compliance with codes, design or general construction scheduling, cost estimating, or construction management. The CA may assist with problem-solving non-conformance or deficiencies, but ultimately that responsibility resides with the Construction Manager and the A/E. The primary role of the CA is to develop and coordinate the execution of a testing plan, observe and document performance that systems are functioning in accordance with the documented design intent and in accordance with the Contract Documents. The Contractors will provide all tools to start, checkout and functionally test equipment and systems.

Construction and Acceptance Phase

1. Coordinate and direct the commissioning activities in a logical, sequential and efficient manner using consistent protocols and forms, centralized documentation, clear and regular communications and consultations with all necessary parties, frequently updated timelines and schedules and technical expertise.
2. Coordinate the commissioning work and, with the CT, Verifies that commissioning activities are being scheduled into the master schedule.
3. Revise, as necessary, the *Commissioning Plan—Construction Phase.*
4. Plan and conduct the commissioning scoping meeting and other commissioning meetings.
5. Request and review additional information required to perform commissioning tasks, including O&M materials, contractor start-up and checkout procedures.
6. Before start-up, gather and review the current control sequences and interlocks and work with contractors and design engineers until sufficient clarity has been obtained, in writing, to be able to write detailed testing procedures.
7. Review selected approved Contractor submittals applicable to systems being commissioned for compliance with commissioning needs, concurrent with the A/E reviews.
8. Write and distribute pre-functional tests and checklists.
9. Assist in developing an enhanced start-up and initial systems checkout plan with Subs.
10. Perform site visits, as necessary, to observe component and system installations. Attend selected planning and job-site meetings to obtain information on construction progress. Review construction meeting minutes for revisions/substitutions relating to the commissioning process. Assist in resolving any discrepancies.
11. May witness the HVAC piping test and flushing procedures, sufficient to be confident that proper procedures were followed. Document this testing and include the documentation in O&M manuals. Notify owner project manager of any deficiencies in results or procedures.
12. May witness ductwork testing and cleaning procedures, sufficient to be confident that proper procedures were followed. Confirm that the testing is being documented and include the documentation in O&M manuals. Notify owner's project manager of any deficiencies in results or procedures.
13. Approve pre-functional tests and checklist completion by reviewing pre-functional checklist reports and by selected site observation and spot checking.
14. Approve systems startup by reviewing start-up reports and by selected site observation.
15. Review TAB execution plan.
16. Verify air and water systems balancing by spot testing, by reviewing completed reports and by selected site observation.
17. With necessary assistance and review from installing contractors, write the functional performance test procedures for equipment and systems. This may include energy management control system trending, stand-alone data logger monitoring or manual functional testing. Submit to CT for review.
18. Analyze any functional performance trend logs and monitoring data to verify performance.

19. Coordinate, witness, and approve manual functional performance tests performed by installing contractors. Coordinate retesting as necessary until satisfactory performance is achieved.
20. Maintain a master deficiency and resolution log and a separate testing record. Provide the Cx Team with written progress reports and test results with recommended actions.
21. Review equipment warranties to verify that the Owner's responsibilities are clearly defined.
22. Oversee the training of the Owner's operating personnel.
23. Compile and maintain a commissioning record.
24. Review of the O&M manuals.
25. Provide a final commissioning report (as described in this section).

Warranty Period

1. Coordinate and supervise required Functional Performance Testing and deficiency corrections.

F. Contractor (CT)

Construction and Acceptance Phase

1. Facilitate the coordination of the commissioning work by the CA, and, with CA, Verify that commissioning activities are being scheduled into the master schedule.
2. Review the final *Commissioning Plan—Construction Phase*.
3. Attend a commissioning scoping meeting and other commissioning team meetings.
4. Perform the normal review of Contractor submittals.
5. Furnish a copy of all construction documents, addenda, change orders and approved submittals and shop drawings related to commissioned equipment to the CA.
6. Review the functional performance test procedures submitted by the CA, prior to testing.
7. Observe and witness completion of pre-functional checklists, start-up and functional testing of selected equipment.
8. Review commissioning progress and deficiency reports.
9. Coordinate the resolution of non-compliance and design deficiencies identified in all phases of commissioning.
10. Sign-off (final approval) on individual commissioning tests and documentation for startup checklist, PFCs, FPTS, TAB Reports, O & Ms, and Training Plan as being completed, ready and passing. Recommend completion of the commissioning process to the Owner's Project Manager.
11. Coordinate the training of owner personnel.
12. In each purchase order or subcontract written, include requirements for submittal data, O&M data, commissioning tasks and training.
13. Verify that all Subs execute their commissioning responsibilities according to the Contract Documents and schedule.
14. A representative shall attend a commissioning scoping meeting and other necessary meetings scheduled by the CA to facilitate the Cx process.
15. Prepare O&M manuals, according to the Contract Documents, including clarifying and updating the original sequences of operation to as-built conditions.
16. Include the cost of commissioning in the total contract price.

Warranty Period

1. Assist the CA as necessary in the seasonal or deferred testing and deficiency corrections required by the specifications.

2. Verify that Subs execute functional performance testing, witnessed by the CA, according to the specifications.
3. Verify that Subs correct deficiencies and make necessary adjustments to O&M manuals and as-built drawings for applicable issues identified in any seasonal testing.

1.6 DEFINITIONS

Acceptance Phase - phase of construction after start-up and initial checkout when functional performance tests, O&M documentation review and training occurs.

Approval - acceptance that a piece of equipment or system has been properly installed and is functioning in the tested modes according to the Contract Documents.

Architect/Engineer (A/E) - the prime consultant (architect) and sub-consultants who comprise the design team, generally the HVAC mechanical designer/engineer and the electrical designer/engineer.

Basis of Design - The basis of design is the documentation of the primary thought processes and assumptions behind design decisions that were made to meet the design intent. The basis of design describes the systems, components, conditions and methods chosen to meet the intent. Some reiterating of the design intent may be included.

Commissioning Authority (CA) - an independent agent, not otherwise associated with the A/E team members or the Contractor, though he/she may be hired as a subcontractor to them. The CA directs and coordinates the day-to-day commissioning activities. The CA does not take an oversight role like the CT. The CA shall report directly to the OPM.

Commissioning Plan - an overall plan, developed before or after bidding, that provides the structure, schedule and coordination planning for the commissioning process.

Contract Documents - the documents binding on parties involved in the construction of this project (drawings, specifications, change orders, amendments, contracts, *Cx Plan*, etc.).

Contractor (CT) - the Contractor responsible in the day-to-day activities of construction. In general, the CT is hired by the Owner and their responsibilities include the overall management of the project including supervising and on-site managing authority over the project's construction and subcontractors. The Contractor (CT) may also be referred to as the Prime Contractor, General Contractor or Construction Manager (CM).

Control system - the central building energy management control system.

Data logging - monitoring flows, currents, status, pressures, etc. of equipment using stand-alone data loggers separate from the control system.

Deferred Functional Tests – FPT's that are performed later, after substantial completion, due to partial occupancy, equipment, seasonal requirements, design or other site conditions that disallow the test from being performed.

Deficiency - a condition in the installation or function of a component, piece of equipment or system that is not in compliance with the Contract Documents (that is, does not perform properly or is not complying with the design intent).

Owner's Project Requirements (OPR) - a dynamic document that provides the explanation of the ideas, concepts and criteria that are considered to be very important to the owner. It is initially the outcome of the programming and conceptual design phases.

Design Narrative or Design Documentation - sections of either the OPR or Basis of Design.

Factory Testing - testing of equipment on-site or at the factory by factory personnel with an Owner's representative present.

Functional Performance Test (FPT) - test of the dynamic function and operation of equipment and systems using manual (direct observation) or monitoring methods. Functional testing is the dynamic testing of systems (rather than just components) under full operation (e.g., the chiller pump is tested interactively with the chiller functions to see if the pump ramps up and down to maintain the differential pressure set point). Systems are tested under various modes, such as during low cooling or heating loads, high loads, component failures, unoccupied, varying outside air temperatures, fire alarm, power failure, etc. The systems are run through all the control system's sequences of operation and components are verified to be responding as the sequences state. Traditional air or water test and balancing (TAB) is not functional testing, in the commissioning sense of the word. TAB's primary work is setting up the system flows and pressures as specified, while functional testing is verifying that which has already been set up. The commissioning authority develops the functional test procedures in a sequential written form, coordinates, oversees and documents the actual testing, which is usually performed by the installing contractor or vendor. FPTs are performed after pre-functional checklists and startup is complete.

Indirect Indicators - indicators of a response or condition, such as a reading from a control system screen reporting a damper to be 100% closed.

Manual Test - using hand-held instruments, immediate control system readouts or direct observation to verify performance (contrasted to analyzing monitored data taken over time to make the "observation").

Monitoring - the recording of parameters (flow, current, status, pressure, etc.) of equipment operation using data loggers or the trending capabilities of control systems.

Non-Compliance - see Deficiency.

Non-Conformance - see Deficiency.

Over-written Value - writing over a sensor value in the control system to see the response of a system (e.g., changing the outside air temperature value from 50F to 75F to verify economizer operation). See also "Simulated Signal."

Owner-Contracted Tests - tests paid for by the Owner outside the CT's contract and for which the CA does not oversee. These tests will not be repeated during functional tests if properly documented.

Owner's Project Manager (OPM) - the contracting and managing authority for the owner over the design and/or construction of the project, a staff position.

Phased Commissioning - commissioning that is completed in phases (by floors, for example) due to the size of the structure or other scheduling issues, in order minimize the total construction time.

Pre-functional Checklist (PFC) - a list of items to inspect, and elementary component tests to conduct, to verify proper installation of equipment, provided by the CA to the Sub. Pre-functional checklists are primarily static inspections and procedures to prepare the equipment or system for initial operation (e.g., belt tension, oil levels OK, labels affixed, gages in place, sensors calibrated, etc.). However, some pre-functional checklist items entail simple testing of the function of a component, a piece of equipment or system (such as measuring the voltage imbalance on a three phase pump motor of a chiller system). The word pre-functional refers to before functional testing. Pre-functional checklists augment and are combined with the manufacturer's start-up checklist. Even without a commissioning process, contractors typically perform some, if not many, of the pre-functional checklist items a commissioning authority will recommend. However, few contractors document in writing the execution of these checklist items. Therefore, for most

equipment, the contractors execute the checklists on their own. The commissioning authority only requires that the procedures be documented in writing, and does not witness much of the pre-functional check listing, except for larger or more critical pieces of equipment.

Sampling - functionally testing only a fraction of the total number of identical or near identical pieces of equipment. Refer to Section 019113, Part 3.6. F.8 for details.

Seasonal Performance Tests - SFT's that are deferred until the system(s) will experience conditions closer to their design conditions.

Simulated Condition - condition that is created for the purpose of testing the response of a system (e.g., applying a hair blower to a space sensor to see the response in a VAV box).

Simulated Signal - disconnecting a sensor and using a signal generator to send an amperage, resistance or pressure to the transducer and DDC system to simulate a sensor value.

Specifications - the construction specifications of the Contract Documents.

Start-up - the initial starting or activating of dynamic equipment, including executing pre-functional checklists.

Subs - the subcontractors to the CT who provide and install building components and systems.

Test Procedures - the step-by-step process which must be executed to fulfill the test requirements. The test procedures are developed by the CA.

Test Requirements - requirements specifying what modes and functions, etc. shall be tested. The test requirements are not the detailed test procedures.

Trending - monitoring using the building control system.

Vendor - supplier of equipment.

Warranty Period - warranty period for entire project, including equipment components. Warranty begins at Substantial Completion and extends for at least one year, unless specifically noted otherwise in the Contract Documents and accepted submittals.

1.7 SYSTEMS TO BE COMMISSIONED

A. The systems to be commissioned in the project include but are not limited to:
   1. Mechanical systems – HVAC equipment
   2. Building automation systems – HVAC control systems
   3. Domestic hot water systems
   4. Lighting and day lighting controls
   5. Electrical distribution – Supporting equipment to be commissioned

B. TAB Verification Sampling Rate- Minimum sampling rates are as follows:
   1. Primary Equipment FPTs (AHUs, RTUs, MAUs, DOAS, Pumps, Chillers, Boilers, Heat Exchangers, etc.-) 25% with a minimum of 2 of each type and/or configuration.
   2. Secondary Equipment (EF/SF Fans, FCUs, VRFs, UHs, terminal equipment, terminal units, split systems, UHs, HPs, etc.)- 10% with a minimum of 3 of each type and/or configuration.

C. FPT Minimum Sampling Rates are as follows:
   1. Primary Equipment (AHUs, RTUs, MAUs, DOAS, Pumps, Chillers, Boilers, Heat Exchangers, etc.-) 50% with a minimum of 2 of each type and/or configuration.

2. FPTs- Secondary Equipment (EF/SF Fans, FCUs, VRFs, UHs, terminal equipment, terminal units, split systems, UHs, HPs, etc.)- 20% with a minimum of 3 of each type and/or configuration.

3. FPTS- Lighting systems and controls- 20% with a minimum of 5 of each type and/or configuration.

4. FPTs- Domestic Water System- 50% sampling with a minimum of 2 of each type and/or configuration.

D. PFC Sampling Rate- 100% to be performed by Contractor

1.8 SUBSTANTIAL COMPLETION

A. The commissioning related activities are to have the following minimum completion levels prior to Substantial Completion being issued:

BCDC Youth Detention Center Requirements for Substantial Completion		
Activity	**Description**	**Status- Minimum Completion Requirements**
Testing, Adjusting and Balancing		
Final TAB Report	Approved by Engineer, CA and Owner	100%
Commissioning		
Equipment Start-Up	Complete and Approved	100%
TAB Validation	Validation Check- Approved	100%
PFTs	Complete and Approved	100%
FPTs	1st Pass Attempt	100%
FPTs	Complete and Approved	75%
Cx Issues Log	Deficiency Resolution	75%
Training		
Training Plan	Submitted and Approved	100%
Training Sessions	Completed with Owner in Attendance	80%
Operation and Maintenance Manuals		
Draft Copy	Submitted and Approved	100%
Final Copy	Status copy forward to Owner	100%

1.9 SUSTAINABLE DESIGN REQUIREMENTS

A. Applicable LEED Credits
1. EAp1 – Fundamental Building Requirements
2. EAc3 – Enhanced Commissioning

B. LEED Requirements
1. Commissioning Plan, schedule, testing, and reporting to follow the current LEED reference Guide instructions, and coordinate Commissioning Activities with the CT and Owner.

2. EAc3 commissioning activities to include the following additional activities:
i. A minimum of one Cx Design Review during CDs
ii. CxA reviews contractor submittals
iii. CxA develops systems manual
iv. CxA verifies training completed
v. CxA reviews the project approximately 10 months after substantial completion of the project or as designated by the owner for a post occupancy meeting and walk through.

3. The Commissioning Agent will assist the LEED Consultant in submitting the credit documentation, final reports and other materials to complete the LEED Online template forms and credit verification for credits EAp1 and EAc3. The Commissioning Agent will assist the LEED Consultant in responding to the US Green Building Councils reviewer's comments for final acceptance of these credits.

PART 2 - PRODUCTS

2.1 TEST EQUIPMENT

A. All testing equipment, materials, and labor required to perform startup and initial checkout, PFCs, FPTs, TAB Verification and all other related functional performance testing shall be provided by the Division Contractor for the equipment being tested. For example, the Mechanical Contractor of Division 23 shall ultimately be responsible for all testing equipment for the HVAC system and controls system in Division 23. Two-way radios shall be provided by the Division Contractor.

B. Special equipment, tools and instruments (only available from vendor, specific to a piece of equipment) required for testing equipment, according to these Contract Documents shall be included in the base bid price of the Contractor and left on site.

C. All testing equipment shall be of sufficient quality and accuracy to test and/or measure system performance with the tolerances specified in the Specifications. If not otherwise noted, the following minimum requirements apply: Temperature sensors and digital thermometers shall have a certified calibration within the past year to an accuracy of 0.5°F and a resolution of + or - 0.1°F. Pressure sensors shall have an accuracy of + or - 1.0% of the value range being measured (not full range of meter), have 1 psi increment scale and have been calibrated within the last year. All equipment shall be calibrated according to the manufacturer's recommended intervals and when dropped or damaged. Calibration tags shall be affixed or certificates readily available.

PART 3 - EXECUTION

3.1 MEETINGS

A. Scoping Meeting. Within 60 days of commencement of construction, the CA will schedule, plan and conduct a commissioning scoping meeting with the entire commissioning team in attendance. Meeting minutes will be distributed to all parties by the CA. Information gathered from this meeting will allow the CA to revise the *Commissioning Plan* to its construction phase version, which will also be distributed to all parties.

B. Miscellaneous Meetings. Other meetings will be planned and conducted by the CA as construction progresses. These meetings will cover coordination, deficiency resolution and planning issues with particular subs. The CA will plan these meetings and will minimize unnecessary time being spent by Subs. The meetings may be held monthly, until the final months of construction when the frequency may be increased to accommodate the project schedule.

3.2 REPORTING

A. The CA will provide commissioning site observation reports with commissioning issues logs of non-conformance items, to the OPM and copy the CT, with increasing frequency as construction and commissioning progresses.

B. The CA will regularly communicate with all members of the commissioning team, keeping them apprised of commissioning progress and scheduling changes through memos, progress reports, etc.

C. Testing or review approvals and non-conformance and deficiency reports are made regularly with the review and testing as described in later sections.

D. The CA will be utilizing a web based information system to document and distribute the commissioning documentation including, but not limited to, Meeting Reports, Site Observation Reports, PFCs, FPTs, Issues Logs, scheduling commissioning activities, etc. The Owner, CT and Subs are required to utilize, receive information, distribute information, fill in testing reports, respond to issues and interact using the web base system on a daily basis from the project site. All team members are to provide their own laptop/computer with internet access for utilization of the web based system.

3.3 SUBMITTALS

A. At minimum, the Submittal Documentation will include the manufacturer and model number, the manufacturer's printed installation and detailed start-up procedures, full sequences of operation, O&M data, performance data, any performance test procedures, control drawings and details of owner contracted tests. In addition, the installation and checkout materials that are actually shipped inside the equipment and the actual field checkout sheet forms to be used by the factory or field technicians shall be submitted to the Commissioning authority. All documentation requested by the CA will be included by the Subs in their O&M manual contributions.

B. The CA will review select submittals related to the commissioned equipment for conformance to the Contract Documents as it relates to the commissioning process, to the functional performance of the equipment, and adequacy for developing test procedures. This review is intended primarily to aid in the development of functional testing procedures and only secondarily to verify compliance with equipment specifications. The CA will notify the CT, OPM or A/E as requested, of items missing or areas that are not in conformance with Contract Documents and which require resubmission.

C. The CA may request additional design narratives, drawings, schematic, details or information from the A/E and Controls Contractor, depending on the completeness of the OPR documentation and sequences provided with the Specifications.

D. These submittals to the CA do not constitute compliance for O&M manual documentation. The O&M manuals are the responsibility of the Contractor, though the CA will review them.

3.4 PRE-FUNCTIONAL CHECKLISTS, START-UP AND INITIAL CHECKOUT

A. The following procedures apply to all equipment to be commissioned, according to Section 1.7, Systems to be Commissioned.

B. General. Pre-functional checklists are important to verify that the equipment and systems are installed and operational. It verifies that functional performance testing (in-depth system checkout) may proceed without unnecessary delays. Each piece of equipment receives full pre-functional checkout. No sampling strategies are used. The pre-functional testing for a given system must be successfully completed prior to formal functional performance testing of equipment or subsystems of the given system.

C. Start-up and Initial Checkout Plan. The primary role of the CA in this process is to verify that there is written documentation that each of the manufacturer-recommended procedures have been completed. Parties responsible for pre-functional checklists and startup are identified in the commissioning scoping meeting and in the checklist forms.

1. The CA drafts the prefunctional checklists to indicate required procedures to be executed as part of startup and initial checkout of the systems and the party responsible for their execution. Sample checklist for mechanical and electrical systems have been provided in Sections 230800 and 260800
2. These checklists and tests are provided by the CA to the Contractor. The Contractor determines which trade is responsible for executing and documenting each of the line item tasks and notes that trade on the form.
3. The subcontractor responsible for the purchase of the equipment develops the full start-up plan by combining (or adding to) the CA's checklists with the manufacturer's detailed start-up and checkout procedures from the O&M manual and the normally used field checkout sheets. The plan will include checklists and procedures with specific boxes or lines for recording and documenting the checking and inspections of each procedure and a summary statement with a signature block at the end of the plan.
4. The subcontractor submits the full start-up plan to the CA for review.
5. The CA reviews the procedures and the format for documenting them, noting any procedures that need to be added.
6. The full start-up procedures, PFCs and the approval form will be provided to the CT for review and approval.

D. Sensors, Valves, Dampers, Actuators and Device Calibration. All sensors (i.e., temperature, relative humidity, CO, CO_2, pressure, water, etc.), gauges, thermometers, airflow measuring stations, flow meters, and actuators, dampers, valves, controllers, level indicators, alarms, and devices shall be calibrated using the methods described below. Alternate methods may be used, if approved by the Owner before-hand. All test instruments shall have had a certified calibration within the last 12 months.

All procedures used shall be fully documented on the pre-functional checklists or other suitable forms, clearly referencing the procedures followed and written documentation of initial, intermediate and final results.

E. Sensor Calibration Methods

1. All Sensors - Verify that all sensor locations are appropriate and away from causes of erratic operation. Verify that sensors with shielded cable are grounded only at one end.
2. Sensors Without Transmitter - Standard Application. Make a reading with a calibrated test instrument within 6 inches of the site sensor. Verify that the sensor reading (via the permanent thermostat, gauge, or building automation system (BAS)) is within the tolerances in the table below of the instrument-measured value. If not, install offset in BAS, calibrate, or replace sensor.
3. Sensors With Transmitters - Standard Application. Disconnect sensor. Connect a signal generator in place of sensor. Connect ammeter in series between transmitter and BAS control panel. Using manufacturer's resistance-temperature data simulate minimum desired temperature. Adjust transmitter potentiometer zero until 4 mA is read by the ammeter. Repeat for the maximum temperature matching 20 mA to the potentiometer span or maximum and verify at the BAS. Record all values and recalibrate controller as necessary to conform with specified control ramps, reset schedules, proportional relationship, reset relationship and P/I reaction. Reconnect sensor. Make a reading with a calibrated test instrument within 6 inches of the site sensor. Verify that the sensor reading (via the permanent thermostat, gauge, or building automation system (BAS)) is within the tolerances in the table below of the instrument-measured value. If not, replace sensor and repeat. For pressure sensors, perform a similar process with a suitable signal generator.

4. Tolerances, Standard Applications - Tolerances for all sensors shall be as specified in section 230900 HVAC Instruments and Controls. If not listed or specified, the tolerance shall be +/- 1% of the readings in the operating range.

F. Valve and Damper Stroke Set-up and Check

1. EMS Readout. For all valve and damper actuator positions checked, verify the actual position against the BAS readout.

   Set pumps or fans to normal operating mode. Command valve or damper closed, visually verify that valve or damper is closed and adjust output zero signal as required. Command valve or damper open, verify position is full open and adjust output signal as required. Verify fail-safe operation. Command valve or damper to a few intermediate positions. If actual valve or damper position doesn't reasonably correspond, replace actuator or add pilot positioner (for pneumatics).
2. Closure for heating coil valves (NO): Set heating set point 20°F above room temperature. Observe valve open. Remove control air or power from the valve and verify that the valve stem and actuator position do not change. Restore to normal. Set heating set point to 20°F below room temperature. Observe the valve close. For pneumatics, by override in the EMS, increase pressure to valve by 3 psi (do not exceed actuator pressure rating) and verify valve stem and actuator position does not change. Verify fail-safe operation. Restore to normal.
3. Closure for cooling coil valves (NC): Set cooling set point 20°F above room temperature. Observe the valve close. Remove control air or power from the valve and verify that the valve stem and actuator position do not change. Restore to normal. Set cooling set point to 20°F below room temperature. Observe valve

open. For pneumatics, by override in the EMS, increase pressure to valve by 3 psi (do not exceed actuator pressure rating) and verify valve stem and actuator position does not change. Verify fail-safe operation. Restore to normal.

G. Execution of Pre-functional Checklists and Start-up.

1. Four weeks prior to startup, the Subs and vendors schedule start-up and check-out with the CT, and CA. The performance of the pre-functional checklists, startup and checkout are directed and executed by the Sub or vendor. When checking off pre-functional checklists, signatures may be required of other Subs for verification of completion of their work.
2. The CA shall observe, at minimum, the procedures for each piece of primary equipment, unless there are multiple units, (in which case a sampling strategy may be used).
3. For lower-level components of equipment, (e.g., VAV boxes, sensors, controllers), the CA shall observe a sampling of the pre-functional and start-up procedures. The sampling procedures are identified in the commissioning plan.
4. The Subs and vendors shall execute startup and provide the CA with a signed and dated copy of the completed start-up and pre-functional tests and checklists.
5. Only individuals that have direct knowledge and witnessed that a line item task on the pre-functional checklist was actually performed shall initial or check that item off. It is not acceptable for non-witnessing personnel to fill out these forms.

H. Deficiencies, Non-Conformance and Approval in Checklists and Start-up.

1. The Subs shall clearly list any outstanding items of the initial start-up and pre-functional procedures that were not completed successfully, at the bottom of the procedures form or on an attached sheet. **The procedures form and any outstanding deficiencies are provided to the CA within two days of test completion.**
2. The CA reviews the report and submits either a non-compliance report or an approval form to the CT and Sub. The CA shall work with the CT, Subs and vendors to correct and retest deficiencies or uncompleted items. The CA will involve the CT and others as necessary. The installing Subs or vendors shall correct all areas that are deficient or incomplete in the checklists and tests in a timely manner, and shall notify the CA as soon as outstanding items have been corrected and resubmit an updated start-up report and a Statement of Correction on the original non-compliance report. When satisfactorily completed, the CT recommends approval of the execution of the checklists and startup of each system to the CA using a standard form provided by the CA.
3. Items left incomplete, which later cause deficiencies or delays during functional testing may result in back charges to the responsible party. Refer to Part 3.7 herein for details.

3.5 PHASED COMMISSIONING

A. The project may require start-up and initial checkout to be executed in phases. This phasing will be planned and scheduled in a coordination meeting of the OPM, CT, CA, MC, TAB, CC, and EC. Results will be added to the master and commissioning schedule.

3.6 FUNCTIONAL PERFORMANCE TESTING

A. This sub-section applies to all commissioning functional testing for all divisions.

B. The general list of equipment and systems to be commissioned is found in Section 019113, Part 1.7. Samples of the equipment and modes to be tested are found in Sections 230800 and 260800.

C. The CA will direct the completion of the FPTs with the parties responsible for the installation of each system to be commissioned.

D. Objectives and Scope. The objective of functional performance testing is to demonstrate that each system is operating according to the documented Owner's Project Requirements and Contract Documents. Functional testing facilitates bringing the systems from a state of substantial completion to full dynamic operation. Additionally, during the testing process, areas of deficient performance are identified and corrected, improving the operation and functioning of the systems.

In general, each system should be operated through all modes of operation (seasonal, occupied, unoccupied, warm-up, cool-down, part- and full-load) where there is a specified system response. Verifying each sequence in the sequences of operation is required. Proper responses to such modes and conditions as power failure, freeze condition, low oil pressure, no flow, equipment failure, etc. shall also be tested. Specific modes required in this project are given in the sequence of operations noted on the drawings and other equipment specification sections where test requirements are found.

Prior to starting the FPTs, the PFCs need to be fully completed and approved, the TAB Report needs to be completed and approved by the engineer and owner, the TAB validation needs to be completed and approved, the deficient commissioning items corrected and the BAS/control system trends are to be provided. The controls systems trends to be provided should indicating a minimum of 14 consecutive days of trends indicating the HVAC systems are properly operational without any deficiencies, alarms or issues. The points to be trended will be provided by the CA and shall represent the proper operation of all of the systems.

E. Development of Test Procedures. Before test procedures are written, the CA shall obtain all requested documentation and a current list of change orders affecting equipment or systems, including an updated points list, program code, control sequences and parameters. The CA shall develop specific test procedures and forms to verify and document proper operation of each piece of equipment and system. Each installing contractor or vendor responsible to execute a test shall provide assistance to the CA in developing the procedures review (answering questions about equipment, operation, sequences, etc.). Prior to execution, the CA shall provide a copy of the test procedures to the installing contractors and vendors, who shall review the tests for feasibility, safety, equipment, and warranty protection. The CA may submit the tests to the A/E for review, if requested.

The purpose of any given specific test is to verify and document compliance with the stated criteria of acceptance given on the test form.

Representative test formats and examples (not designed or detailed for this facility) are found in the Sections 230800 and 260800. The test procedure forms developed by the CA shall include (but not be limited to) the following information:

1. System and equipment or component name(s)
2. Equipment location and ID number
3. Unique test ID number, and reference to unique pre-functional checklist and start-up documentation ID numbers for the piece of equipment.
4. Date

5. Project name
6. Participating parties
7. A copy of the specification section describing the test requirements
8. A copy of the specific sequence of operations or other specified parameters being verified
9. Formulas used in any calculations
10. Required pre-test field measurements
11. Instructions for setting up the test.
12. Special cautions, alarm limits, etc.
13. Specific step-by-step procedures to execute the test, in a clear, sequential and repeatable format.
14. Acceptance criteria of proper performance with a Yes/No check box to allow for clearly marking whether or not proper performance of each part of the test was achieved.
15. A section for comments
16. Signatures and date block for the CA, CT, HVAC Contractor, Electrical Contractor, TAB Contractor, and Controls Contractor
17. List all prerequisite that need to be completed prior to the start of the FPTs (i.e., TB Report Approved, TAB validation complete, PFCs complete and approved, etc.)

F. Test Methods.

1. Functional performance testing and verification may be achieved by manual testing (persons manipulate the equipment and observe performance) or by monitoring the performance and analyzing the results using the control system's trend log capabilities or by stand-alone data loggers. The CA may substitute specified methods or require an additional method to be executed, other than what was specified, with the approval of the OPM. The CA will determine which method is most appropriate for tests that do not have a method specified.
2. Simulated Conditions. Simulating conditions (not by an overwritten value) shall be allowed, though timing the testing to experience actual conditions is encouraged wherever practical.
3. Overwritten Values. Overwriting sensor values to simulate a condition, such as overwriting the outside air temperature reading in a control system to be something other than it really is, shall be allowed, but shall be used with caution and avoided when possible. Such testing methods often can only test a part of a system, as the interactions and responses of other systems will be erroneous or not applicable. Simulating a condition is preferable. e.g., for the above case, by heating the outside air sensor with a hair blower rather than overwriting the value or by altering the appropriate set point to see the desired response. Before simulating conditions or overwriting values, sensors, transducers and devices shall have been calibrated.
4. Simulated Signals. Using a signal generator which creates a simulated signal to test and calibrate transducers and DDC constants is generally recommended over using the sensor to act as the signal generator via simulated conditions or overwritten values.
5. Altering Set points. Rather than overwriting sensor values, and when simulating conditions is difficult, altering set points to test a sequence is acceptable. For example, to see the AC compressor lockout work at an outside air temperature below 55°F, when the outside air temperature is above 55°F, temporarily change the lockout set point to be 2°F above the current outside air temperature.
6. Indirect Indicators. Relying on indirect indicators for responses or performance shall be allowed only after visually and directly verifying and documenting, over the range of the tested parameters, that the indirect readings through the control

system represent actual conditions and responses. Much of this verification is completed during pre-functional testing.

7. Set-up. Each function and test shall be performed under conditions that simulate actual conditions as close as is practically possible. The Sub executing the test shall provide all necessary materials, system modifications, etc. to produce the necessary flows, pressures, temperatures, etc. necessary to execute the test according to the specified conditions. At completion of the test, the Sub shall return all affected building equipment and systems, due to these temporary modifications, to their pre-test condition.
8. Sampling. Multiple identical pieces of non-life-safety or otherwise non-critical equipment may be functionally tested using a sampling strategy. Significant application differences and significant sequence of operation differences in otherwise identical equipment invalidates their common identity. A small size or capacity difference, alone, does not constitute a difference. It is noted that no sampling by Subs is allowed in pre-functional checklist execution.

   A common sampling strategy referenced in the *Specifications* as the "xx% Sampling—yy% Failure Rule" is defined by the following example.

   xx = the percent of the group of identical equipment to be included in each sample.
   yy = the percent of the sample that if failing, will require another sample to be tested.

   The example below describes a 20% Sampling—10% Failure Rule.

   a. Randomly test at least 20% (xx) of each group of identical equipment. In no case test less than three units in each group. This 20%, or three, constitute the "first sample."
   b. If 10% (yy) of the units in the first sample fail the functional performance tests, test another 20% of the group (the second sample).
   c. If 10% of the units in the second sample fail, test all remaining units in the whole group.
   d. If at any point, frequent failures are occurring and testing is becoming more troubleshooting than verification, the CA may stop the testing and require the responsible Sub to perform and document a checkout of the remaining units, prior to continuing with functionally testing the remaining units.

G. Coordination and Scheduling. The Subs shall provide two (2) week notice to the CT and the CA regarding their completion schedule for the pre-functional checklists and startup of all equipment and systems. The CA will schedule functional tests through the CT. The CA shall direct, witness and document the functional testing of all equipment and systems. The Subs shall execute the tests.

   In general, functional testing is conducted after pre-functional testing and startup has been satisfactorily completed. The control system shall be sufficiently tested and approved by the CT before it is used for TAB or to verify performance of other components or systems. The air balancing and water balancing is completed and debugged before functional testing of air-related or water-related equipment or systems. Testing proceeds from components to subsystems to systems. When the proper performance of all interacting individual systems has been achieved, the interface or coordinated responses between systems is checked.

H. Testing Costs. All testing equipment, labor, management, tools, devices, materials, temporary and permeant utilities, equipment, support or similar to successfully complete the PFCs and FPTs shall be provided by the CT and Subs at no additional cost.

I. Problem Solving. The CA will recommend solutions to problems found, however the burden of responsibility to solve, correct, and retest problems is with the CT, Subs, and A/E.

3.7 DOCUMENTATION, NON-CONFORMANCE AND APPROVAL OF TESTS

A. Documentation. The CA shall witness and document the results of all functional performance tests using the specific procedural forms developed for that purpose. Prior to testing, these forms are provided to the CT and to the Subs for review. The CA will include the filled out forms in the O&M manuals.

B. Non-Conformance.

1. The CA will record the results of the functional test on the procedure or test form. All deficiencies or non-conformance issues shall be noted and reported to the CT on the Commissioning Issues Log.
2. Corrections of minor deficiencies identified may be made during the tests at the discretion of the CA. In such cases the deficiency and resolution will be documented on the procedure form and shall not impact the progress of the testing.
3. Every effort will be made to expedite the testing process and minimize unnecessary delays, while not compromising the integrity of the procedures. However, the CA will not be pressured into overlooking deficient work or loosening acceptance criteria to satisfy scheduling or cost issues, unless there is an overriding reason to do so at the request of the OPM.
4. As tests progress and a deficiency is identified, the CA discusses the issue with the CT and the executing contractor.
    a. When there is no dispute on the deficiency and the Sub accepts responsibility to correct it:
        1. The CA documents the deficiency and the Sub's response and intentions and they go on to another test or sequence. After the day's work, the CA reports the deficiency on the Commissioning Issues Log to the CT. A copy is forwarded to the CT and Sub. The Sub corrects the deficiency, signs a statement of correction certifying that the equipment is ready to be retested and sends it back to the CA.
        2. The CA reschedules the test and the test is repeated.

    b. If there is a dispute about a deficiency, regarding whether it is a deficiency or who is responsible:
        1. The deficiency shall be documented on Commissioning Issues Log with the Sub's response and a copy given to the CT and to the Sub representative assumed to be responsible.
        2. Resolutions are made at the lowest management level possible. Other parties are brought into the discussions as needed. Final interpretive authority is with the CA. Final acceptance authority is with the Owner's Project Manager.
        3. The CA documents the resolution process.
        4. Once the interpretation and resolution have been decided, the appropriate party corrects the deficiency, signs the statement of correction on the non-compliance form and provides it to the CA. The CA reschedules the test and the test is repeated until satisfactory performance is achieved.

5. The Contractor shall respond in writing to the CA and OPM at least as often as commissioning meetings are being scheduled concerning the status of each ap-

parent outstanding discrepancy identified during commissioning. Discussion shall cover explanations of any disagreements and proposals for their resolution.

6. If any commissioning test or activity has more than two failed attempts (i.e., original test and 1 retest, etc.), the CA will be entitled to be reimbursed for the time and costs of any additional testing, coordination and/or efforts beyond the second failed attempt. The CA will be paid directly by the Owner and the Owner will back charge the CT or General Contractor for the costs.

C. Failure Due to Manufacturer Defect. If 10%, or three, whichever is greater, of identical pieces (size alone does not constitute a difference) of equipment fail to perform to the Contract Documents (mechanically or substantively) due to manufacturing defect, not allowing it to meet its submitted performance spec, all identical units may be considered unacceptable by the OPM. In such case, the Contractor shall provide the Owner with the following:

1. Within one week of notification from the OPM, the Contractor or manufacturer's representative shall examine all other identical units making a record of the findings. The findings shall be provided to the OPM within two weeks of the original notice.
2. Within two weeks of the original notification, the Contractor or manufacturer shall provide a signed and dated, written explanation of the problem, cause of failures, etc. and all proposed solutions which shall include full equipment submittals. The proposed solutions shall not significantly exceed the specification requirements of the original installation.
3. The OPM will determine whether a replacement of all identical units or a repair is acceptable.
4. Two examples of the proposed solution will be installed by the Contractor and the OPM will be allowed to test the installations for up to one week, upon which the OPM will decide whether to accept the solution.
5. Upon acceptance, the Contractor and/or manufacturer shall replace or repair all identical items, at their expense and extend the warranty accordingly, if the original equipment warranty had begun. The replacement/repair work shall proceed with reasonable speed beginning within one week from when parts can be obtained.

D. Approval. The CA notes each satisfactorily demonstrated function on the test form. Formal approval of the functional test is made later after review by the OPM and CA. The CA recommends acceptance of each test to the OPM using a standard form. The OPM gives final approval on each test using the same form, providing a signed copy to the CA and the Contractor.

3.8 OPERATION AND MAINTENANCE MANUALS

A. Standard O&M Manuals.

1. The specific content, quantity, format, and submission requirements for the standard O&M manuals are detailed in Section 017823 Operating, Maintenance and Data.
2. A/E Contribution. The A/E will include in the beginning of the O&M manuals a separate section describing the systems including:

a. The design intent narrative prepared by the A/E and provided as part of the bid documents, updated to as-built status by the A/E.
b. Simplified professionally drawn single line system diagrams on 8 ½" x 11" or 11" x 17" sheets. These shall include chillers, water system, and condenser water system, heating system, supply air systems, and exhaust systems and heaters. These shall show major pieces of equipment such as

pumps, chillers, boilers, control valves, expansion tanks, coils, service valves, etc.

3. CA Review and Approval. The CA shall briefly review the O&M manuals, documentation and redline as-builds *for systems that were commissioned* and other systems documentation that the CA should review, to verify compliance with the *Specifications.* The CA will communicate deficiencies in the manuals to the CT, OPM or A/E, as requested. Upon a successful review of the corrections, the CA recommends approval and acceptance of these sections of the O&M manuals to the CT, OPM or A/E. This work does not supersede the A/E's review of the O&M manuals according to the A/E's contract.

3.9 TRAINING OF OWNER PERSONNEL

A. The CT shall be responsible for training coordination and scheduling and ultimately for verifying that training is completed. The CT shall provide training and demonstration requirements as specified in each specification section and as noted below for the systems to be commissioned.

B. The CA shall be responsible for overseeing and approving the content and adequacy of the training of Owner personnel for commissioned equipment.

1. The CT shall interview the facility manager and lead engineer to determine the special needs and areas where training will be most valuable. The Owner and CA shall decide how rigorous the training should be for each piece of commissioned equipment. The CA shall communicate the results to the CT, Subs and vendors who have training responsibilities.
2. In addition to these general requirements, the specific training requirements of Owner personnel by Subs and vendors is specified in Division 23 and 26 and other sections where training requirements are found.
3. Each Sub and vendor responsible for training will submit a written training plan to the CA for review and approval prior to training. The plan will cover the following elements:

    a. Equipment (included in training)
    b. Intended audience
    c. Location of training
    d. Objectives
    e. Subjects covered (description, duration of discussion, special methods, etc.)
    f. Duration of training on each subject
    g. Instructor for each subject
    h. Methods (classroom lecture, video, site walk-through, actual operational demonstrations, written handouts, etc.)
    i. Instructor and qualifications
    j. Professional videotaping firm qualifications

4. For the primary HVAC equipment, the Controls Contractor shall provide a short discussion of the control of the equipment during the mechanical or electrical training conducted by others.
5. The CA reviews the overall training plan and coordinates and schedules, with the CT, the overall training for the commissioned systems. The OPM develops criteria for determining that the training was satisfactorily completed, including attending some of the training, etc. The CA recommends approval of the training to the CT using a standard form. The CT also signs the approval form.
6. Videotaping of the training sessions will be provided by the CT with CD's cataloged

by the CT, and added to the O&M manuals. The videotaping is to be by a professional firm that specializes in taping, editing and reproducing professional quality documents.

7. The mechanical design engineer shall at the first training session present the overall facility design concept and the design concept of each equipment section. This presentation shall include a review of all systems and equipment using the simplified system schematics (one-line drawings) including water systems, variable refrigerant systems, dx systems, supply air systems, exhaust system and outside air strategies.

3.10 DEFERRED TESTING

A. Unforeseen Deferred Tests. If any check or test cannot be completed due to the building structure, required occupancy condition or other deficiency, execution of checklists and functional testing may be delayed upon approval of the OPM. These tests will be conducted in the same manner as the seasonal tests as soon as possible. Services of necessary parties will be negotiated.

Bid documents are available only online from eMaryland Marketplace (eMM). Those are the only official documents to be used by Bidders for this Invitation for Bid (IFB). The Bidders shall print on their own stationary the required documents for submitting their bid (as Construction BID Form, Bid Proposal Affidavit, BID Bond, etc.) and submit to the Owner (DPSCS, Division of Capital Construction and Facilities Maintenance) in a sealed envelope which clearly indicates that it contains a sealed bid for this project with the bid due date and the name and address of the Bidder.

Minority Business Enterprises (MBEs) are encouraged to participate and respond to this request for Bid.

CONFORMED DOCUMENT 3 APRIL 2015: This project manual contains sections revised during bidding, and is published for the Contractor's convenience for use during construction. It does not replace the Contract Documents, which comprise the Bid Documents plus revisions issued as Addenda.

TABLE OF CONTENTS

Geotechnical Report

BCDC Youth Detention Center
Baltimore, Maryland

INTRODUCTION

EBA Engineering, Inc. (EBA) was retained by PSA-Dewberry, Inc. / Penza-Bailey Architects, Inc., a Joint Venture, to perform a geotechnical investigation for the proposed Youth Detention Center, which will be owned and operated by the Maryland Department of Public Safety and Correctional Services (DPSCS).

The purpose of the investigation was to determine the stratigraphy and engineering characteristics of the soils at the project site and provide recommendations for the design and construction of the proposed building in consideration of the subsurface conditions. This report presents the findings of the investigation and provides recommendations for the design and construction of the proposed building including foundations, slab support, and below grade walls as well as requirements for excavation, fill and backfill. The report appendices include a project site map, observation well details, soil boring and test hole location plan, typed soil boring and test hole logs and laboratory test results.

PROJECT DESCRIPTION

The proposed Youth Detention Center will be located in downtown Baltimore. The project site is bounded by East Eager Street on the north side, Greenmount Avenue on the east side, OSTC/SUI building on the south side and Forest Street on the west. The location of the project site is shown on the Project Site Map included in Appendix A. The proposed construction will include a new building that will house the 60-bed Youth Detention Center. The proposed structure will be 3 stories and the elevation of the ground floor will match the elevation of the ground floor of the existing SUI Building, noted to be 73.41 (feet) in the historical drawings. Neither a grading plan, a foundation plan nor sections with specific column locations and loads was available at the time this report was prepared.

The site is currently occupied by the 3-story BPRU Dormitory Building, 2-story SUI Building, paved parking lot and paved recreation yard. It is understood that the existing BPRU Building will be demolished to accommodate the new Youth Detention Center. Part of the existing SUI Building will be renovated to accommodate a portion of the new Youth Detention Center. The ground surface elevations at the perimeter of the site vary from approximately 76 (feet) near the northwest corner to 67 (feet) near the southeast corner.

GEOLOGIC SETTING

The project site lies in the Atlantic Coastal Plain physiographic province. According to

the Geologic Map of the Baltimore East Quadrangle, Maryland, published in 1979 by the Maryland Geological Survey, the area in the vicinity of the project site is covered with Coastal Plain sediments deposited during the Cretaceous Age. The Cretaceous Age sediments are identified as the Clay and Sand Facies of the Arundel Formation, which are a division of the Potomac Group. The sediments overlie residual soils, decomposed rock and bedrock. The bedrock is described as the Carroll Gneiss Member of the James Run Formation.

The clay facies of the Arundel Formation consists of gray, brown, black and red kaolinitic and illitic clays with locally interbedded quartz silt or sand lenses and pods. The clays are typically poorly bedded to massive with occasional color mottling. The sand facies consists of well sorted medium to quartz sand with locally abundant wood fragments. Thin sand beds are typically planar bedded with interspersed clay-silt laminae and very thin clay beds.

The residual soils and decomposed rock that overlie the bedrock were formed by the in-place weathering of the bedrock. The residual soil is completely weathered and may not possess relict features of the parent rock. Whereas decomposed rock is generally more coarse and rocky than residual soil and retains relict features of the parent rock such as coloring, discontinuities and bedding planes. Large cobble to boulder-sized fragments of rock are common in the weathered residuum. The residual soils and decomposed rock generally become harder and denser with increasing depth.

The Carroll Gneiss Member is from the Cambro-Ordovician Age and consists of fine- to medium-grained, generally layered biotite-quartz-plagioclase gneiss, locally with muscovite. Mica may be absent and magnetite present in some outcrops. Subordinate, concordant plagioclase-hornblende gneiss (amphibolite) occurs in layers within the Carroll Gneiss. The amphibolite layers are generally a few centimeters to a few decimeters thick, but they may be several meters thick in some localities.

PREVIOUS SUBSURFACE INFORMATION

Previous subsurface explorations were conducted at the site prior to the construction of the SUI Building and BPRU Building in 1964 and 1969, respectively. The previous subsurface information for the SUI Building includes thirteen soil boring logs. The borings were advanced to depths ranging from 25 to 50 feet. The previous boring logs indicate that there was pre-existing fill to depths ranging from 3 to 8 feet. The soils underlying the fill consisted of gravel, sand and clay. Disintegrated rock was encountered in the borings at depth ranging from 22 to 31 feet. Bedrock was not encountered in the borings. Water was observed in the previous borings at depths ranging from about 20 to 27 feet. These depths correspond to elevations ranging from about 45 to 47 (feet).

The previous subsurface information for the BPRU Building includes three soil borings logs. Each boring was advanced to a depth of 25 feet. The previous boring logs indicate that there was pre-existing fill to depths ranging from 7.5 to 8.5 feet. A concrete slab

was encountered in one of the borings at a depth of 6 feet. The soils underlying the fill consisted of gravel, sand and clay. Bedrock was not encountered in these borings.

SUBSURFACE EXPLORATION

The subsurface exploration program consisted of 5 soil borings, designated BP-1 through BP-3, BP-1A and BP-3A, and 1 test hole, designated TH-1. Borings BP-1A, BP-2, and BP-3 were advanced to auger refusal on bedrock at depths of 38.6 feet, 43.6 feet and 45.0 feet respectively. Boring BP-1 was terminated at a depth of 5.0 feet after an obstruction was encountered. Boring BP-3A was performed to collect a thin-walled tube sample and was terminated at a depth of 15.0 feet. Test Hole TH-1 was performed to locate the footing of the SUI Building. The as-drilled boring and test hole locations are shown on the Soil Boring and Test Hole Location Plan presented in Appendix B.

The soil borings were advanced by the hollow-stem auger drilling method using a truck-mounted drilling rig. Standard Penetration Tests (SPT) were generally performed at 2.5-foot intervals in the upper 10 feet of each boring and at 5-foot intervals thereafter. A soil sample was collected with a split-barrel sampler at each SPT location. Bulk soil samples were also obtained from Borings BP-1A and BP-2 and BP-3.

The test hole was performed by Accurate Infrastructure Data, Inc. (AID). The test hole was excavated to a depth of approximately 10 feet.

Groundwater observation wells were installed in Borings BP-1A and BP-2. Each observation well was constructed with 10 feet of one-inch diameter PVC casing and 10 feet of slotted (screen) pipe. A sand filter pack was placed around the screen from the bottom of the boring to approximately 15 or more above the top of the screen. A bentonite seal was placed above the sand filter pack to within about two feet of the surface. A flush-mounted steel cover was installed and grouted at the surface of each observation well. Details of the observation well installation are illustrated on the details included in Appendix C.

The groundwater and cave-in depths were measured in Boring BP-3 upon completion. The water level depths in the observation wells installed in Borings BP-1A and BP-2 were measured at completion and after 24 hours. All the boreholes, except those with observation wells, were backfilled with bentonite-cement grout after completion.

Descriptions of the soils encountered, SPT results, groundwater observations and other information are provided on the boring and test hole logs, which are presented in Appendix D. The ground surface elevations shown on the logs of Borings BP-1 through BP-3, BP-1A and BP-3A are estimated based on topographic information on the drawings provided by PSA-Dewberry. The soil descriptions/classifications provided on the logs were determined in accordance with the procedures as described in ASTM D2488 (ASTM International's version of the Unified Soil Classification System [USCS]).

LABORATORY TESTING

The soil samples collected from the borings were delivered to EBA's laboratory where a geotechnical engineer visually classified them. Selected soil samples were tested to determine the natural moisture content, particle size distribution, liquid limit, plasticity index, undrained shear strength, moisture-density relationship and consolidation properties of the soils. The laboratory test reports and a summary of the laboratory test results are presented in Appendix D.

Corrosivity tests were performed on selected soil samples collected from the soil borings. The tests included resistivity, pH, chloride content, sulfate content, and redox potential. The soil corrosivity test results are presented in Appendix E.

SUBSURFACE CONDITIONS

Asphalt Pavement

An asphalt pavement was encountered at the surface at the locations of all the borings. The thickness of the asphalt pavement at each location was approximately 3 inches. The thickness of the asphalt pavement at each location is noted in the "Remarks" column of the respective boring logs.

The underlying base course encountered in all the borings consisted of gravel. The base course thickness ranged from 3 to 5 inches. The thickness of the base course at each location is noted in the "Remarks" column of the respective boring logs.

Existing Fill

Existing Fill was encountered underlying the Asphalt Pavement in all the borings. The depth to the bottom of the Existing Fill ranged from 5 to 6 feet. The Existing Fill typically consisted of very loose to very dense, poorly graded SAND, silty SAND and stiff CLAY with varying amounts of gravel. The SPT N-values in this layer ranged from 3 to more than 50 blows per foot (bpf) and the average was 22 bpf.

The moisture contents of selected soil samples collected from this layer ranged from 4.0 to 18.7 percent. The liquid limits of selected samples from this layer ranged from NV to 47 and the plasticity indexes ranged from NP to 30. Moisture-density tests, conducted in accordance with ASTM D 1557, were performed on the bulk samples collected from BP-1A, BP-2 and BP-3. The moisture-density test results are presented in Table 1.

Table 1: Results of Moisture-Density Tests

Boring No.	Depth Interval (ft)	Maximum Dry Density (pcf)	Optimum Moisture Content (%)	USCS Soil Classification
BP-1A	1.0 – 8.0	121.1	9.1	SP
BP-2	1.0 – 8.0	136.0	6.1	SP-SM
BP-3	1.0 – 8.0	125.9	10.6	CL

The USCS symbols for the soils in this layer include SP-SM, SM, and CL based on the laboratory test results and visual classifications.

Arundel Formation Sand

Sand was found underlying the Existing Fill in Borings BP-2 and BP-1A. The depth to the bottom of this layer was 15 feet. The soils in the layer generally consisted of medium dense to very dense, poorly graded SAND and silty SAND with varying amounts of gravel. The SPT N-values in the layer ranged from 11 to 58 bpf with an average 36 bpf.

The moisture content of one selected sample collected from this layer was 4.2 percent. The USCS symbols for the soils in this layer were SP and SM based on visual classifications and laboratory test results.

Arundel Formation Clay

Clay was encountered underlying the Existing Fill in Boring BP-3, underlying the Sand layer in BP-1A and BP-2. The depth to the bottom of this layer ranged from 28 feet to 37.5 feet. This layer consisted of stiff to hard, sandy CLAY, and CLAY. The SPT N-values in this layer ranged from 10 to 39 bpf and the average was 23 bpf.

The moisture contents of selected samples collected from this layer ranged from 5.6 to 57.6 percent. The liquid limit of one selected sample from this layer was 55 and the plasticity index was 28. The USCS symbols for the soils in this layer were CL and CH based on visual classifications and laboratory test results.

The unconfined compressive strength of one selected sample from the Clay layer was 1,364 psf. One consolidation test was performed on the tube sample collected from this layer in Boring BP-3A. The compression index (C_c) was 0.27 and recompression index (C_r) was 0.05. The consolidation test results indicate that the Clay layer is over-consolidated and the overconsolidation ratio (OCR) is approximately 2.5.

Residual Soil

Residual soil was encountered underlying the Clay layer in Borings BP-2 and BP-3. The depth to the bottom of this layer ranged from 35 to more than 43.6 feet. The soils

in the layer generally consisted of dense, silty SAND and hard, CLAY. The SPT N-values in the layer ranged from 32 to 55 bpf with an average 46 bpf.

The moisture contents of two selected samples collected from this layer were 37.6 percent and 36.9 percent. The USCS symbols for the soils in this layer were SM and CL based on visual classifications and laboratory test results.

Decomposed Rock

Decomposed rock was encountered underlying the Clay layer in Boring BP-1A and the Residual Soil layer in Boring BP-2. The depth to the bottom of this layer ranged from 38.6 to more than 45 feet (i.e., exceeded the boring depths). The soils in the layer generally consisted of hard, CLAY and very dense, clayey SAND. The SPT N-values in this layer were more than 50 bpf.

The moisture content of one selected sample collected from this layer was 29.6 percent. The USCS symbols for the soils in this layer were SC and CL based on visual classifications and laboratory test results.

Bedrock

Auger refusal occurred in Borings BP-1A, BP-2 and BP-3 at depths of 38.6 feet, 43.6 feet and 45.0 feet respectively. It is believed that the auger refusal in each boring occurred on bedrock. Rock core drilling and sampling were not performed.

Water Level Observations in the Boreholes

The groundwater and cave-in depths were measured in Boring BP-3 upon completion. The water level depths in the observation wells installed in Borings BP-1A and BP-2 were measured at completion and after 24 hours. The measured water level and cave-in depths are recorded on the boring logs and summarized in Table 2.

Table 2 - Water Level and Cave-in Depth Observations

Boring No.	Approx. Ground Surface Elev. (ft)	At completion				After 24 hours			
		Water level Depth (ft)	Water level Elev. (ft)	Cave-in Depth (ft)	Cave-in Depth Elev. (ft)	Water level Depth (ft)	Water level Elev. (ft)	Cave-in Depth (ft)	Cave-in Depth Elev. (ft)
BP-1	76.3	N/A	--	N/A	--	*	--	*	--
BP-1A	76.3	25.0	51.3	**	--	15.1	61.2	**	--
BP-2	76.5	13.0	63.5	**	--	15.7	60.8	**	--
BP-3	73.5	Dry	--	33.5	40.0	*	--	*	--
BP-3A	73.5	N/A	--	N/A	--	*	--	*	--

Note: A water level of dry indicates that the borehole was dry at the cave-in depth.
*Backfilled upon completion.
* *An observation well was installed in Borings BP-1A and BP-2.

The water level depth observations are an indication of the groundwater level at the time of the investigation. Be advised that fluctuations in groundwater levels may occur due to variations in season, rainfall, construction activity, and other site-specific factors.

Soil Corrosivity

Soil corrosivity tests were performed on selected soil samples collected from the soil borings. The soil corrosivity test results are provided in Appendix G. The soil corrosivity test results are summarized in Table 3.

The laboratory soil test results indicate the presence of corrosive conditions for buried ferrous metal. The resistivity data suggests that very corrosive soils are located in the Existing Fill in an area encompassing Borings BP-1 and BP-3 and moderately corrosive soils are located in the Existing Fill in the vicinity of Boring BP-2.

Table 3 – Summary of Laboratory Soil Corrosion Test Results

Description of Test	Resistivity, as received — (Ohm-cm)	Minimum Resistivity AASHTO T 288 (Ohm-cm)	pH AASHTO T 289 —	Chloride AASHTO T 291 (ppm)	Sulfate AASHTO T 290 (ppm)	Redox ASTM D 1498 (mV)
Common Ranges of Corrosion Activity on Ferrous Metals	Extremely Corrosive: Less than 1,000 Very Corrosive: 1,000 to 5,000 Corrosive: 5,001 to 10,000 Moderately Corrosive: 10,001 to 25,000 Mildly Corrosive : Over 25,000		In general, the corrosion rate of ferrous metals increases below pH 5.0	Soils with chloride concentrations greater than 150 ppm will promote aggressive corrosion	Soils with sulfate concentrations greater than 150 ppm will generally contribute to higher rates of corrosion	Very Corrosive: Below 100 Moderately Corrosive:100 to 200 Slightly Corrosive: 200 to 400 Non-corrosive: Over 400
BP-1, S-2@3.5'-5.0'	7700	2100	8.3	12	5	395
BP-1A, S-3@ 6.0'-7.5'	130000	43000	8.3	6	<1	366
BP-2, S-2@ 3.5-5.0'	20000	10400	8.1	47	6	352
BP-3, S-2@3.5'-5.0'	10500	3400	8.5	27	<1	338

CONCLUSIONS AND RECOMMENDATIONS

Demolition

According to the historical drawings of the existing BPRU Building the structure is a three-story building with a partial basement on the north end. The basement floor level shown on the drawings is elevation 66.75 (feet). The structure is founded on spread footings and caissons.

The site preparation should begin by razing and removing the existing structure, pavements and other existing surface features such as sidewalks, curbs, light poles and fences.

The concrete slabs, footings, grade beams and pile caps in the existing building area should be removed. The existing caissons may be cut-off so that the tops are at least 2 feet below any proposed slabs, foundations and piping. The basement walls and floor slabs may remain in place, however it is recommended that the floor slab be broken up and left in place. The floor slab should be broken into pieces that are less than 9 square feet in area. The basement area should be backfilled with a free draining porous fill such as ASTM C33, Size No. 57 stone to approximately 2 feet below the proposed bottoms of the footings. The free draining material should be covered with a nonwoven geosynthetic fabric to serve as a separation layer. The remainder of the excavation should be backfilled with aggregate fill consisting of crusher run (CR-6).

The excavation should be backfilled according to the recommendations detailed in the “Fill and Backfill” section of this report. Backfilling of the building area and basement should be performed by the earthwork contractor, as they are typical more familiar with the means and methods of placing backfill than demolition contractors.

Building Foundations

The column loads of the new building are anticipated to be on the order of 500 kips and wall loads are anticipated to be on the order of 8 kips per linear foot of wall. No grading plans, foundation plans or sections with specific column locations and loads were available at the time this report was prepared.

Our analysis included an evaluation of the soil support for spread footings. Based on the subsurface conditions found in the borings performed in the vicinity of the proposed building, it appears that the footings will bear on the Existing Fill, the natural sand and clay of the Arundel Formation and the aggregate fill placed after demolition. The Existing Fill is not suitable for support of the footings due to its variable consistency and potential for excessive settlement. Therefore, it is recommended that the Existing Fill below the proposed footings be removed and replaced with compacted aggregate fill. The *Footing Subgrade Modification Detail* provided in Appendix F depicts the soil removal/replacement technique. As indicated in the detail, the removal of the Existing Fill should extend on a downward projection of 1H to 2V to the natural sand or clay of the Arundel Formation or a maximum depth equal to two times the least footing width. The bottom of the Existing Fill encountered in the borings ranged from elevation 65 to 70 (feet).

The building may be supported by spread footings founded on subgrades that have been modified as described above. The net allowable bearing capacity will be 4,000 psf after the subgrade has been modified. Footings that bear on the natural sand and clay of the Arundel Formation or the aggregate fill placed after demolition may be designed for an allowable bearing capacity of 4,000 psf. The total settlement of the footing is estimated to be 1.0 inch or less and differential settlement is not expected to exceed 0.5 inch.

It is recommended that the removal of the Existing Fill and existing building foundations, and replacement with compacted aggregate fill be observed by a geotechnical engineer and/or their designated representative during construction. Test pit excavations and penetrometer testing will be needed to assess the extent of the Existing Fill within the area of the building at the time of construction. Thus, it would be prudent to include contingencies in the construction estimate/budget to account for these conditions.

It should be noted that brick debris and concrete obstructions were encountered in some of the borings that may cause difficulty during construction. Field engineering may be required to evaluate issues that arise during construction if obstructions are encountered, that need to be removed and replaced with compacted aggregate fill.

Since the ground floor elevation of the new building is equal to that of the existing SUI Building, it is recommended that the bottoms of the new foundations be lowered to the same elevation as the existing foundations along the edge of the SUI

Building. In addition, the excavations for the new footings and other subsurface features should not extend beneath any existing foundations or extend below a plane extending down from the edge of the existing foundation at a slope of 1 horizontal to 1 vertical unless the existing foundation is underpinned or excavation support is used.

The seismic site class was evaluated by the SPT N-values method in accordance with the *International Building Code (2012)*. It is our opinion that the subsurface conditions at the site should be categorized as Site Class D.

Slabs-On-Grade

It is anticipated that the subgrades for slabs-on-grade will generally consist of soils of the Existing Fill, the sand and clay of the Arundel Formation and aggregate fill placed after demolition. The Arundel Formation contains medium stiff clay. The clay will generally provide fair to poor support for slabs-on-grade. Considering that portions of the subgrade soils have low support and poor drainage characteristics, it is recommended that at least four-inches of coarse aggregate be placed beneath the slabs-on-grade.

Slab subgrades should be proofrolled with a fully loaded tandem axle dump truck or equivalent in the presence of a geotechnical engineer or his designated representative. The purpose of the proof-roll is to locate any soft, wet, "pumping" or otherwise unsuitable pockets of soils.

The concrete slabs-on-grade should be reinforced with steel reinforcing bars or welded wire fabric. A layer of porous fill consisting of at least 4 inches of ASTM C33, Size No. 57 stone should be provided beneath the slabs. A polyethylene vapor barrier should be placed over the porous fill prior to concrete placement. The recommended modulus of subgrade reaction (k_s) for the design of the proposed slabs is 125 pounds per cubic inch (pci).

Below Grade Walls and Retaining Walls

The proposed building may have foundation walls that will also serve as earth retaining walls. These walls should be designed to support the lateral earth pressures imposed by backfill placed against the walls, hydrostatic pressures and appropriate surcharge loads. Recommendations for the design of these walls are detailed below.

At-rest earth pressure values should be used for conditions that do not allow movement of a wall away from the soil mass. An at-rest pressure coefficient, K_o, of 0.5 is recommended.

Active earth pressure values may be used when the conditions allow movement. The active earth pressure coefficient, K_a, should be estimated as $K_a = \tan^2(45 - \varphi/2)$.

Passive earth pressures occur when a buried structural element imposes a horizontal load on the soil mass. Typically, the coefficient of passive earth pressure, K_p, is calculated as $K_p = \tan^2(45 + \varphi/2)$.

The equivalent fluid pressure on the wall, p, may be calculated by the following equation, $p = K\sigma_v$; where, K is the earth pressure coefficient and σ_v is the vertical overburden stress at depth, z (z is the depth below grade behind the wall or the depth below the toe line in front of the wall). When the soil is in the at-rest state, $K = K_0$; when the soil is in the active state, $K = K_a$; and when the soil is in the passive state, $K = K_p$.

Based on the assumption that the fill and backfill recommendations contained in this report are followed during construction, the lateral earth pressures for structural fill and backfill may be calculated using an estimated unit weight of 130 pcf and an angle of internal friction of 32 degrees. The recommended horizontal friction coefficient between the soils and concrete footings is 0.4. Clayey soils should not be used as backfill for the walls due to the potential for expansion and high pressures caused by poor drainage.

Drainage behind foundation walls that will retain earth backfill on one side (i.e., below grade building walls) is recommended to ensure that there will be no hydrostatic pressures on the walls. Foundation drains should consist of a six-inch diameter slotted pipe placed on top of the footings at the bottom of the backfill. The drainage should be facilitated by placing free draining porous fill (i.e., coarse aggregate meeting the gradation requirements of ASTM C 33, Size No. 57) or prefabricated drains directly behind the walls. The porous fill or prefabricated drains should extend to the foundation drains.

Groundwater Control During Construction

It is anticipated that the bottom of the proposed building foundations will be at about elevation 69 (feet) and the excavation of Existing Fill will extend to about elevation 65 (feet). The groundwater elevations at the boring locations were found to range from approximately 60.8 to 61.2 (feet). Thus, groundwater is not anticipated in the excavations and dewatering will likely be limited to removing storm water runoff that flows into the excavation.

Fill and Backfill

All fill and backfill materials should be free of vegetation, topsoil, cobbles, boulders, trash, debris, frozen material, muck, organic matter and other deleterious materials. The fill and backfill should not contain rock, rubble and other non-degradable materials larger than four inches in any dimension.

Aggregate fill, consisting of crusher run aggregate CR-6, should be used to backfill voids created by the demolition work that are located below the proposed building foundations and slabs-on-grade.

Structural fill and backfill should be used adjacent to foundations, below paved areas, and behind walls and within 5 feet of building foundations. Soils considered suitable for use as select fill and backfill include soils classified as GP, GW, GM, GC, SP, SW, SM, and SC in accordance with ASTM D 2487. The liquid limit and plasticity index should not exceed 40 and 10, respectively. The maximum dry density of the soil, determined in accordance with ASTM D 1557, should be no less than 120 pcf.

Common fill and backfill should be used in unpaved areas more than 5 feet from foundations. Soils classified as GW, GP, GM, GC, SW, SP, SM, SC, ML and CL, in accordance with ASTM D 2487, are suitable for use as common fill and backfill. The maximum dry density, determined in accordance with ASTM D 1557, should be no less than 105 pcf.

Based on the information obtained from the borings, the excavated soils are expected to generally consist of poorly graded sand, silty sand, clayey sand, sandy clay, clay and fat clay (i.e., SP, SP-SM, SM, SC, CL, and CH). The silty sand, poorly graded sand, and poorly graded sand with silt will be suitable for backfill, but the clayey sand, sandy clay, clay and fat clay will not. Wet material should be dried and dry material should be moistened to within 2% of their optimum moisture contents prior to compaction. Therefore, some of the onsite soil will need to be moistened and the other onsite soil will require drying or mixing with drier materials prior to use as backfill.

All fill and backfill should be placed in horizontal layers of not more than 8 inches in loose thickness. It is recommended that each layer of common fill and backfill be compacted to no less than 92% of the maximum dry density determined in accordance with ASTM D 1557. Each layer of select fill and backfill should be compacted to no less than 95% of the maximum dry density determined in accordance with ASTM D 1557. Aggregate fill should be compacted to no less than 97% of the maximum dry density determined in accordance with ASTM D 1557. Each layer of fill and backfill should be compacted to the specified dry density prior to the addition of subsequent lifts. Wet material should be dried and dry material should be moisture to within 2% of their optimum moisture contents prior to compaction.

Excavation

The excavations for the proposed building foundations are estimated to range from approximately 8 to 12 feet deep. It is anticipated that soils of the Existing Fill, Sand and Clay strata will be encountered in the excavations. The groundwater elevations at the boring locations were found to range from approximately 13 to 15 feet deep. Thus, groundwater is not anticipated in the excavations and dewatering will likely be limited

to removing storm water runoff that flows into the excavation.

The guidelines for safe excavation using shielded excavations, temporary cut slopes and benching are presented in OSHA Excavations Standard Handbook, 29 CFR Parts 1926.650 through 1926.652 for depths less than 20 feet. It is recommended that the sides of excavations less than 5 feet deep be sloped or stepped back at a slope of 1.5 (horizontal) to 1 (vertical). Excavations greater than 5 feet deep should be supported with sheeting and shoring or some other suitable means of excavation support.

Inspection and Testing

All foundation and earthwork construction should be inspected by a testing agency experienced in similar work. The testing agency should observe the proofrolling of slab-on-grade subgrades, perform field density tests (i.e., compaction tests), and perform laboratory testing of aggregate, fill and backfill materials. All inspections and testing should be performed under the supervision of a registered professional engineer experienced in geotechnical engineering.

LIMITATIONS

The conclusions and recommendations presented in this report are based on the data collected during the geotechnical investigation. Variations in the subsurface conditions may be discovered during construction. EBA will be available to assist in determining a solution to any geotechnical problem that may arise during the construction of this project.

SECTION 02 41 16 - STRUCTURE DEMOLITION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Demolition and removal of the BPRU Dorm building and site improvements.
2. Removing below-grade construction.
3. Disconnecting, capping or sealing, and removing site utilities.

B. Related Requirements:

1. Section 011000 "Summary" for project information, access and use of the premises, and work restrictions.
2. Section 012100 “Specialty Allowances” for removal of Unknown Below-Grade Site Structures.
3. Section 012200 “Unit Prices” for Rock Excavation and replacement with satisfactory soil material
4. Section 012200 “Unit Prices” for Rock Excavation and replacement with satisfactory soil material.
5. Section 012200 “Unit Prices” for Removal of Unsuitable Material (Backfill with Structural Fill Material)
6. Section 012200 “Unit Prices” for Removal of Unsuitable Material (Backfill with Aggregate Fill Material):
7. Section 015000 Temporary Facilities And Controls
8. Section 013200 "Construction Progress Documentation" for preconstruction photographs taken before building demolition.
9. Section 017419 "Construction Waste Management and Disposal."
10. Section 02 20 00 – “Existing Building Drawings” for Owner provided drawings
11. Section 023000 ’Subsurface Investigation’ for geotechnical report and the depth of the caissons
12. Section 024119 "Selective Demolition" for partial demolition of buildings, structures, and site improvements.
13. Section 026400 Aboveground storage tank removal and closure activities
14. Section 026500 Underground storage tank and hydraulic lift removal and closure activities
15. Section 028200 Asbestos abatement
16. Section 028300 Impact to lead painted surfaces, removal and disposal
17. Section 028400 Polychlorinated biphenyl (pcb) equipment removal and disposal
18. Section 028700 Ozone-depleting compounds (odcs) equipment Removal and Disposal
19. Section 311000 "Site Clearing" for site clearing and removal of above- and below-grade site improvements not part of building demolition.

1.3 DEFINITIONS

A. Remove: Detach items from existing construction and dispose of them off-site.

B. Remove and Salvage: Detach items from existing construction, in a manner to prevent damage, and deliver to Owner ready for reuse . Include fasteners or brackets needed for reattachment elsewhere.

1.4 MATERIALS OWNERSHIP

A. Unless otherwise indicated, demolition waste becomes property of Contractor.

1.5 PREINSTALLATION MEETINGS

A. Predemolition Conference: Conduct conference at Project site .

1. Inspect and discuss condition of construction to be demolished.
2. Review structural load limitations of existing structures.
3. Review and finalize building demolition schedule and verify availability of demolition personnel, equipment, and facilities needed to make progress and avoid delays.
4. Review and finalize protection requirements.
5. Review procedures for noise control and dust control.
6. Review procedures for protection of adjacent buildings.
7. Review items to be salvaged and returned to Owner.

1.6 SUSTAINABLE DESIGN REQUIREMENTS

A. Applicable LEED Credits

1. MRc2

B. LEED Requirements

1. MRc2: Construction Waste Management:

No less than the specified portion of all construction waste from the Project shall be diverted from disposal in a landfill and/or incineration in with the Project Requirements for Construction Waste Management and Disposal. Refer to Specification Sections 017419 Construction Waste Management and Disposal and 013510 Sustainable Design Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

1.7 INFORMATIONAL SUBMITTALS

A. Qualification Data: For refrigerant recovery technician.

B. Engineering Survey: Submit engineering survey of condition of building.

C. Proposed Protection Measures: Submit report, including Drawings, that indicates the measures proposed for protecting individuals and property, for environmental protection

, for dust control and , for noise control. Indicate proposed locations and construction of barriers.

1. Adjacent Buildings: Detail special measures proposed to protect adjacent buildings to remain including means of egress from those buildings.

D. Schedule of Building Demolition Activities: Indicate the following:

1. Detailed sequence of demolition work, with starting and ending dates for each activity.
2. Temporary interruption of utility services.
3. Shutoff and capping or re-routing of utility services.

E. Predemolition Photographs or Video: Show existing conditions of adjoining construction and site improvements, including finish surfaces, that might be misconstrued as damage caused by demolition operations. Comply with Section 013233 "Photographic Documentation." Submit before the Work begins.

F. Statement of Refrigerant Recovery: Signed by refrigerant recovery technician responsible for recovering refrigerant, stating that all refrigerant that was present was recovered and that recovery was performed according to EPA regulations. Include name and address of technician and date refrigerant was recovered.

1.8 QUALITY ASSURANCE

A. Refrigerant Recovery Technician Qualifications: Certified by EPA-approved certification program.

1.9 FIELD CONDITIONS

A. Buildings to be demolished will be vacated and their use discontinued before start of the Work.

B. Buildings immediately adjacent to demolition area will be occupied. Conduct building demolition so operations of occupied buildings will not be disrupted.

1. Provide not less than 72 hours' notice of activities that will affect operations of adjacent occupied buildings.
2. Maintain access to existing walkways, exits, and other facilities used by occupants of adjacent buildings.

a. Do not close or obstruct walkways, exits, or other facilities used by occupants of adjacent buildings without written permission from authorities having jurisdiction.

C. Conditions existing at time of inspection for bidding purpose will be maintained by Owner as far as practical.

D. Hazardous Materials: Present in buildings and structures to be demolished. A report on the presence of hazardous materials is on file for review and use. Examine report to become aware of locations where hazardous materials are present.

1. Hazardous material remediation is specified elsewhere in the Contract Documents.
2. Do not disturb hazardous materials or items suspected of containing hazardous materials except under procedures specified elsewhere in the Contract Documents.
3. Owner will provide material safety data sheets for materials that are known to be present in buildings and structures to be demolished because of building operations or processes performed there.

E. On-site storage or sale of removed items or materials is not permitted.

1.10 COORDINATION

A. Arrange demolition schedule so as not to interfere with [Owner's on-site operations] [or] [operations of adjacent occupied buildings].

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements: Comply with governing EPA notification regulations before beginning demolition. Comply with hauling and disposal regulations of authorities having jurisdiction.

B. Standards: Comply with ASSE A10.6 and NFPA 241.

2.2 SOIL MATERIALS

A. Satisfactory Soils: Comply with requirements in Section 312000 "Earth Moving."

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that utilities have been disconnected and capped before starting demolition operations.

B. Review Project Record Documents of existing construction or other existing condition and hazardous material information provided by Owner. Owner does not guarantee that existing conditions are same as those indicated in Project Record Documents.

C. Steel Tendons: Locate tensioned steel tendons and include recommendations for de-tensioning.

D. Verify that hazardous materials have been remediated before proceeding with building demolition operations.

E. Inventory and record the condition of items to be removed and salvaged. Provide photographs or video of conditions that might be misconstrued as damage caused by salvage operations. Comply with Section 013233 "Photographic Documentation.

3.2 PREPARATION

A. Refrigerant: Before starting demolition, remove refrigerant from mechanical equipment according to 40 CFR 82 and regulations of authorities having jurisdiction.

3.3 UTILITY SERVICES AND MECHANICAL/ELECTRICAL SYSTEMS

A. Existing Utilities to be Disconnected: Locate, identify, disconnect, and seal or cap off utilities serving buildings and structures to be demolished.

1. .
2. Arrange to shut off utilities with utility companies.
3. When removal, relocation, or abandonment of utility services will affect adjacent occupied buildings, then provide temporary utilities that bypass buildings and structures to be demolished and that maintain continuity of service to other buildings and structures.
4. Cut off pipe or conduit a minimum of 24 inches (610 mm) below grade. Cap, valve, or plug and seal remaining portion of pipe or conduit after bypassing according to requirements of authorities having jurisdiction.
5. Do not start demolition work until utility disconnecting and sealing have been completed and verified in writing.

3.4 PROTECTION

A. Existing Facilities: Protect adjacent walkways, loading docks, building entries, and other building facilities during demolition operations. Maintain exits from existing buildings.

B. Temporary Shoring: Provide and maintain interior and exterior shoring, bracing, or structural support to preserve stability and prevent unexpected movement or collapse of construction being demolished.

1. Strengthen or add new supports when required during progress of demolition.

C. Existing Utilities to Remain: Maintain utility services to remain and protect from damage during demolition operations.

1. Do not interrupt existing utilities serving adjacent occupied or operating facilities unless authorized in writing by Owner and authorities having jurisdiction.
2. Provide temporary services during interruptions to existing utilities, as acceptable to Owner and authorities having jurisdiction.

a. Provide at least 72 hours' notice to occupants of affected buildings if shutdown of service is required during changeover.

D. Temporary Protection: Erect temporary protection, such as walks, fences, railings, canopies, and covered passageways, where required by authorities having jurisdiction and as indicated. Comply with requirements in Section 015000 "Temporary Facilities and Controls."

1. Protect adjacent buildings and facilities from damage due to demolition activities.
2. Protect existing site improvements, appurtenances, and landscaping to remain.
3. Provide temporary barricades and other protection required to prevent injury to people and damage to adjacent buildings and facilities to remain.
4. Provide protection to ensure safe passage of people around building demolition area and to and from occupied portions of adjacent buildings and structures.
5. Protect walls, windows, roofs, and other adjacent exterior construction that are to remain and that are exposed to building demolition operations.
6. Erect and maintain dustproof partitions and temporary enclosures to limit dust, noise, and dirt migration to occupied portions of adjacent buildings.

E. Remove temporary barriers and protections where hazards no longer exist. Where open excavations or other hazardous conditions remain, leave temporary barriers and protections in place.

3.5 DEMOLITION, GENERAL

A. General: Demolish indicated buildings completely. Use methods required to complete the Work within limitations of governing regulations and as follows:

1. Do not use cutting torches until work area is cleared of flammable materials. Maintain portable fire-suppression devices during flame-cutting operations.
2. Maintain adequate ventilation when using cutting torches.
3. Locate building demolition equipment and remove debris and materials so as not to impose excessive loads on supporting walls, floors, or framing.

B. Site Access and Temporary Controls: Conduct building demolition and debris-removal operations to ensure minimum interference with roads, streets, walks, walkways, and other adjacent occupied and used facilities.

1. Do not close or obstruct streets, walks, walkways, or other adjacent occupied or used facilities without permission from Owner and authorities having jurisdiction. Provide alternate routes around closed or obstructed trafficways if required by authorities having jurisdiction.
2. Use water mist and other suitable methods to limit spread of dust and dirt. Comply with governing environmental-protection regulations. Do not use water when it may damage adjacent construction or create hazardous or objectionable conditions, such as ice, flooding, and pollution.

C. Explosives: Use of explosives is not permitted.

3.6 DEMOLITION BY MECHANICAL MEANS

A. Proceed with demolition of structural framing members systematically, from higher to lower level. Complete building demolition operations above each floor or tier before disturbing supporting members on the next lower level.

B. Remove debris from elevated portions of the building by chute, hoist, or other device that will convey debris to grade level in a controlled descent.

1. Remove structural framing members and lower to ground by method suitable to minimize ground impact and dust generation.

C. Below-Grade Construction: Demolish foundation walls and other below-grade construction.

1. Remove below-grade construction, including basements, foundation walls, and footings, as indicated on Drawings.

D. Existing Utilities: Demolish existing utilities and below-grade utility structures that are within 5 feet (1.5 m) outside footprint indicated for new construction. Abandon utilities outside this area.

3.7 REPAIRS

A. Promptly repair damage to adjacent buildings caused by demolition operations.

3.8 DISPOSAL OF DEMOLISHED MATERIALS

A. Remove demolition waste materials from Project site and recycle or dispose of them in accordance with Section 01 74 19 “Construction Waste Management and Disposal.”

1. Do not allow demolished materials to accumulate on-site.
2. Remove and transport debris in a manner that will prevent spillage on adjacent surfaces and areas.

B. Do not burn demolished materials.

3.9 CLEANING

A. Clean adjacent structures and improvements of dust, dirt, and debris caused by building demolition operations. Return adjacent areas to condition existing before building demolition operations began.

1. Clean roadways of debris caused by debris transport.

END OF SECTION 02 41 16

SECTION 02 41 19 - SELECTIVE DEMOLITION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Demolition and removal of selected portions of the SUI building.

B. Related Requirements:

1. Section 011000 "Summary" for project information, access and use of the premises, and work restrictions.
2. Section 012100 “Specialty Allowances’ for Removal of Hazardous Roof Material
3. Section 012100 “Specialty Allowances” for Removal of Hazardous Material from Existing Fire Suppression System and Fire Alarm/Detection System in the OSTC Portion of SUI Building.
4. Section 012100 “Specialty Allowances’ for Repair of The Existing Concrete Masonry
5. Section 012200 “Unit Prices” for Filling/Patching of Existing Concrete Floor/Roof Slabs
6. Section 015000 Temporary Facilities And Controls
7. Section 013200 "Construction Progress Documentation" for preconstruction photographs taken before building demolition.
8. Section 017419 "Construction Waste Management and Disposal."
9. Section 02 20 00 – “Existing Building Drawings” for Owner provided drawings
10. Section 024116 "Structural Demolition" for demolition of buildings, structures, and site improvements.

1.3 DEFINITIONS

A. Remove: Detach items from existing construction and dispose of them off-site unless indicated to be salvaged or reinstalled.

B. Existing to Remain: Leave existing items that are not to be removed and that are not otherwise indicated to be salvaged or reinstalled.

C. Dismantle: To remove by disassembling or detaching an item from a surface, using gentle methods and equipment to prevent damage to the item and surfaces; disposing of items unless indicated to be salvaged or reinstalled.

1.4 MATERIALS OWNERSHIP

A. Unless otherwise indicated, demolition waste becomes property of Contractor.

1.5 PREINSTALLATION MEETINGS

A. Predemolition Conference: Conduct conference at Project site.

1. Inspect and discuss condition of construction to be selectively demolished.
2. Review structural load limitations of existing structure.
3. Review and finalize selective demolition schedule and verify availability of materials, demolition personnel, equipment, and facilities needed to make progress and avoid delays.
4. Review requirements of work performed by other trades that rely on substrates exposed by selective demolition operations.
5. Review areas where existing construction is to remain and requires protection.

1.6 SUSTAINABLE DESIGN REQUIREMENTS

A. Applicable LEED Credits

1. MRc2

B. LEED Requirements

1. MRc2: Construction Waste Management:

No less than the specified portion of all construction waste from the Project shall be diverted from disposal in a landfill and/or incineration in with the Project Requirements for Construction Waste Management and Disposal. Refer to Specification Sections 017419 Construction Waste Management and Disposal and 013510 Sustainable Design Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

1.7 INFORMATIONAL SUBMITTALS

A. Qualification Data: For refrigerant recovery technician.

B. Engineering Survey: Submit engineering survey of condition of building.

C. Proposed Protection Measures: Submit report, including Drawings, that indicates the measures proposed for protecting individuals and property, for environmental protection , for dust control and , for noise control. Indicate proposed locations and construction of barriers.

D. Schedule of Selective Demolition Activities: Indicate the following:

1. Detailed sequence of selective demolition and removal work, with starting and ending dates for each activity.
2. Interruption of utility services. Indicate how long utility services will be interrupted.
3. Coordination for shutoff, capping, and continuation of utility services.
4. Use of elevator and stairs.

5. Coordination of Owner's continuing occupancy of portions of existing building and of Owner's partial occupancy of completed Work.

E. Predemolition Photographs or Video: Show existing conditions of adjoining construction, including finish surfaces, that might be misconstrued as damage caused by demolition operations. Comply with Section 013233 "Photographic Documentation." Submit before Work begins.

F. Statement of Refrigerant Recovery: Signed by refrigerant recovery technician responsible for recovering refrigerant, stating that all refrigerant that was present was recovered and that recovery was performed according to EPA regulations. Include name and address of technician and date refrigerant was recovered.

G. Warranties: Documentation indicating that existing warranties are still in effect after completion of selective demolition.

1.8 CLOSEOUT SUBMITTALS

A. Inventory: Submit a list of items that have been removed and salvaged.

1.9 QUALITY ASSURANCE

A. Refrigerant Recovery Technician Qualifications: Certified by an EPA-approved certification program.

1.10 FIELD CONDITIONS

A. Owner will occupy portions of building immediately adjacent to selective demolition area. Conduct selective demolition so Owner's operations will not be disrupted.

B. Conditions existing at time of inspection for bidding purpose will be maintained by Owner as far as practical.

C. Notify Architect of discrepancies between existing conditions and Drawings before proceeding with selective demolition.

D. Hazardous Materials: Present in buildings and structures to be selectively demolished. A report on the presence of hazardous materials is on file for review and use. Examine report to become aware of locations where hazardous materials are present.

1. Hazardous material remediation is specified elsewhere in the Contract Documents.
2. Do not disturb hazardous materials or items suspected of containing hazardous materials except under procedures specified elsewhere in the Contract Documents.
3. Owner will provide material safety data sheets for suspected hazardous materials that are known to be present in buildings and structures to be selectively demolished because of building operations or processes performed there.

E. Storage or sale of removed items or materials on-site is not permitted.

F. Utility Service: Maintain existing utilities indicated to remain in service and protect them against damage during selective demolition operations.

1. Maintain fire-protection facilities in service during selective demolition operations.

1.11 COORDINATION

A. Arrange selective demolition schedule so as not to interfere with Owner's operations.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements: Comply with governing EPA notification regulations before beginning selective demolition. Comply with hauling and disposal regulations of authorities having jurisdiction.

B. Standards: Comply with ASSE A10.6 and NFPA 241.

C. Sustainable Design Requirements for Building Reuse:

1. Maintain existing building structure (including structural floor and roof decking) and envelope (exterior skin and framing, excluding window assemblies and nonstructural roofing material) not indicated to be demolished; do not demolish such existing construction beyond indicated limits.
2. Maintain existing interior nonstructural elements (interior walls, doors, floor coverings, and ceiling systems) not indicated to be demolished; do not demolish such existing construction beyond indicated limits.
3. Maintain existing nonshell, nonstructural components (walls, flooring, and ceilings) not indicated to be demolished; do not demolish such existing construction beyond indicated limits.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that utilities have been disconnected and capped before starting selective demolition operations.

B. Review Project Record Documents of existing construction or other existing condition and hazardous material information provided by Owner. Owner does not guarantee that existing conditions are same as those indicated in Project Record Documents.

C. Verify that hazardous materials have been remediated before proceeding with building demolition operations.

D. Survey of Existing Conditions: Record existing conditions by use of preconstruction photographs or video.

1. Comply with requirements specified in Section 013233 "Photographic Documentation."
2. Inventory and record the condition of items to be removed and salvaged. Provide photographs or video of conditions that might be misconstrued as damage caused by salvage operations.
3. Before selective demolition or removal of existing building elements that will be reproduced or duplicated in final Work, make permanent record of measurements, materials, and construction details required to make exact reproduction.

3.2 PREPARATION

A. Refrigerant: Before starting demolition, remove refrigerant from mechanical equipment according to 40 CFR 82 and regulations of authorities having jurisdiction.

3.3 UTILITY SERVICES AND MECHANICAL/ELECTRICAL SYSTEMS

A. Existing Services/Systems to Remain: Maintain services/systems indicated to remain and protect them against damage.

B. Existing Services/Systems to Be Removed, Relocated, or Abandoned: Locate, identify, disconnect, and seal or cap off utility services and mechanical/electrical systems serving areas to be selectively demolished.

1. Owner will arrange to shut off indicated services/systems when requested by Contractor.
2. Arrange to shut off utilities with utility companies.
3. If services/systems are required to be removed, relocated, or abandoned, provide temporary services/systems that bypass area of selective demolition and that maintain continuity of services/systems to other parts of building.
4. Disconnect, demolish, and remove fire-suppression systems, plumbing, and HVAC systems, equipment, and components indicated on Drawings to be removed.

    a. Piping to Be Removed: Remove portion of piping indicated to be removed and cap or plug remaining piping with same or compatible piping material.
    b. Piping to Be Abandoned in Place: Drain piping and cap or plug piping with same or compatible piping material and leave in place.
    c. Equipment to Be Removed: Disconnect and cap services and remove equipment.
    d. Ducts to Be Removed: Remove portion of ducts indicated to be removed and plug remaining ducts with same or compatible ductwork material.
    e. Ducts to Be Abandoned in Place: Cap or plug ducts with same or compatible ductwork material and leave in place.

3.4 PROTECTION

A. Temporary Protection: Provide temporary barricades and other protection required to prevent injury to people and damage to adjacent buildings and facilities to remain.

1. Provide protection to ensure safe passage of people around selective demolition area and to and from occupied portions of building.

2. Provide temporary weather protection, during interval between selective demolition of existing construction on exterior surfaces and new construction, to prevent water leakage and damage to structure and interior areas.
3. Protect walls, ceilings, floors, and other existing finish work that are to remain or that are exposed during selective demolition operations.
4. Cover and protect furniture, furnishings, and equipment that have not been removed.
5. Comply with requirements for temporary enclosures, dust control, heating, and cooling specified in Section 015000 "Temporary Facilities and Controls."

B. Temporary Shoring: Design, provide, and maintain shoring, bracing, and structural supports as required to preserve stability and prevent movement, settlement, or collapse of construction and finishes to remain, and to prevent unexpected or uncontrolled movement or collapse of construction being demolished.

1. Strengthen or add new supports when required during progress of selective demolition.

C. Remove temporary barricades and protections where hazards no longer exist.

3.5 SELECTIVE DEMOLITION, GENERAL

A. General: Demolish and remove existing construction only to the extent required by new construction and as indicated. Use methods required to complete the Work within limitations of governing regulations and as follows:

1. Proceed with selective demolition systematically, from higher to lower level. Complete selective demolition operations above each floor or tier before disturbing supporting members on the next lower level.
2. Neatly cut openings and holes plumb, square, and true to dimensions required. Use cutting methods least likely to damage construction to remain or adjoining construction. Use hand tools or small power tools designed for sawing or grinding, not hammering and chopping. Temporarily cover openings to remain.
3. Cut or drill from the exposed or finished side into concealed surfaces to avoid marring existing finished surfaces.
4. Do not use cutting torches until work area is cleared of flammable materials. At concealed spaces, such as duct and pipe interiors, verify condition and contents of hidden space before starting flame-cutting operations. Maintain portable fire-suppression devices during flame-cutting operations.
5. Maintain adequate ventilation when using cutting torches.
6. Remove decayed, vermin-infested, or otherwise dangerous or unsuitable materials and promptly dispose of off-site.
7. Remove structural framing members and lower to ground by method suitable to avoid free fall and to prevent ground impact or dust generation.
8. Locate selective demolition equipment and remove debris and materials so as not to impose excessive loads on supporting walls, floors, or framing.
9. Dispose of demolished items and materials promptly. Comply with requirements in Section 017419 "Construction Waste Management and Disposal."

B. Site Access and Temporary Controls: Conduct selective demolition and debris-removal operations to ensure minimum interference with roads, streets, walks, walkways, and other adjacent occupied and used facilities.

C. Work in Historic Areas: Selective demolition may be performed only in areas of Project that are not designated as historic. In historic spaces, areas, and rooms, or on historic surfaces, the terms "demolish" or "remove" shall mean historic "removal" or "dismantling" as specified in Section 024296 "Historic Removal and Dismantling."

D. Removed and Reinstalled Items:

1. Clean and repair items to functional condition adequate for intended reuse.
2. Pack or crate items after cleaning and repairing. Identify contents of containers.
3. Protect items from damage during transport and storage.
4. Reinstall items in locations indicated. Comply with installation requirements for new materials and equipment. Provide connections, supports, and miscellaneous materials necessary to make item functional for use indicated.

E. Existing Items to Remain: Protect construction indicated to remain against damage and soiling during selective demolition. When permitted by Architect, items may be removed to a suitable, protected storage location during selective demolition and cleaned and reinstalled in their original locations after selective demolition operations are complete.

3.6 SELECTIVE DEMOLITION PROCEDURES FOR SPECIFIC MATERIALS

A. Concrete: Demolish in small sections. Using power-driven saw, cut concrete to a depth of at least 3/4 inch (19 mm) at junctures with construction to remain. Dislodge concrete from reinforcement at perimeter of areas being demolished, cut reinforcement, and then remove remainder of concrete. Neatly trim openings to dimensions indicated.

B. Concrete: Demolish in sections. Cut concrete full depth at junctures with construction to remain and at regular intervals using power-driven saw, and then remove concrete between saw cuts.

C. Masonry: Demolish in small sections. Cut masonry at junctures with construction to remain, using power-driven saw, and then remove masonry between saw cuts.

D. Concrete Slabs-on-Grade: Saw-cut perimeter of area to be demolished, and then break up and remove.

E. Resilient Floor Coverings: Remove floor coverings and adhesive according to recommendations in RFCI's "Recommended Work Practices for the Removal of Resilient Floor Coverings." Do not use methods requiring solvent-based adhesive strippers.

F. Roofing: Remove no more existing roofing than what can be covered in one day by new roofing and so that building interior remains watertight and weathertight. See Section 075423 Thermoplastic Polyolefin (Tpo) Roofing for new roofing requirements.

1. Remove existing roof membrane, flashings, copings, and roof accessories.
2. Remove existing roofing system down to substrate.

3.7 DISPOSAL OF DEMOLISHED MATERIALS

A. Remove demolition waste materials from Project site and dispose of them in an EPA-approved construction and demolition waste landfill acceptable to authorities having

jurisdiction. and recycle or dispose of them according to Section 017419 "Construction Waste Management and Disposal."

1. Do not allow demolished materials to accumulate on-site.
2. Remove and transport debris in a manner that will prevent spillage on adjacent surfaces and areas.
3. Remove debris from elevated portions of building by chute, hoist, or other device that will convey debris to grade level in a controlled descent.
4. Comply with requirements specified in Section 017419 "Construction Waste Management and Disposal."

B. Burning: Do not burn demolished materials.

3.8 CLEANING

A. Clean adjacent structures and improvements of dust, dirt, and debris caused by selective demolition operations. Return adjacent areas to condition existing before selective demolition operations began.

3.9 SELECTIVE DEMOLITION SCHEDULE

A. As indicated on drawings.

END OF SECTION 02 41 19

SECTION 02 64 00 - ABOVEGROUND STORAGE TANK REMOVAL AND DISPOSAL

PART 1 - GENERAL

1.1 SCOPE

A. Work Includes:

1. The work covered by this Section includes the furnishing of all materials and equipment and the performing of all labor, including obtaining any necessary permits, for the removal and disposal of the aboveground storage tank (AST) and related appurtenances. The location(s) and type(s) of the aboveground storage tank(s) known to be present at the worksite are presented in the specifications.

1.2 RELATED SECTIONS AND DOCUMENTS

A. Related Sections:

1. Section 00 73 19 – Health & Safety Requirements

B. Related Documents:

1. Drawings and general provisions of the Contract, including General Conditions, apply to this Section.

2. Limited Hazardous Materials Survey, Youth Detention Center Project, DPSCS #KT-000-110-C01, 926 Greenmount Avenue, Baltimore, Maryland 21202, dated December 24, 2014, EBA Engineering, Inc.

1.3 REFERENCES AND APPLICABLE STANDARDS AND GUIDELINES

A. The most recent edition of a relevant regulation, standard, or code shall be in effect. Where a conflict exists between the regulations, standards, codes, or these specifications, the more stringent requirements shall be utilized.

B. It shall be the duty and responsibility of the General Contractor and all of its Subcontractors to adhere to all regulations (Federal, State, and local) impacting this work including but not limited to:

1. Federal:

a. U.S. Department of Labor, Occupational Safety and Health Administration (OSHA)

1) 29 CFR 1910 – Occupational Safety and Health Standards (General Industry)

2) 29 CFR 1926 – Safety and Health Regulations for Construction

b. U.S. Environmental Protection Agency (EPA)

1) 40 CFR 280 – Technical Standards and Corrective Action Requirements for Owners and Operators of Underground Storage Tanks (UST)

c. U.S. Department of Transportation (DOT)

1) 49 CFR 130 – Oil Spill Prevention and Response Plans

2. State:

a. Code of Maryland Regulations (COMAR)

1) COMAR 26.10 – Oil Pollution and Tank Management

2) COMAR 09.12.20 – Occupational Safety and Health

3. Standard:

a. American Petroleum Institute (API)

1) API 653 – Tank Inspection, Repair, Alteration, and Reconstruction

4. Code:

a. National Fire Protection Association (NFPA)

1) NFPA 30 – Flammable and Combustible Liquids

2) NFPA 31 – Standard for the Installation of Oil-Burning Equipment

1.4 DEFINITIONS

A. Definitions applicable to this Section are included in COMAR 26.10.

1.5 SUBMITTALS

A. Prior to commencement of work, submit to the Engineer the items listed as follows for review. Work shall not start until these submittals are returned with the Engineer's written approval indicating that the submittal is returned for unrestricted use.

1. Work Plan - Describe work procedures to be used for this portion of this project. The Contractor shall develop, implement, maintain, and supervise as part of the work, a comprehensive plan for AST removal and related operations. The Work Plan shall include but not be limited to:

a. Company, contact name, phone number, and e-mail address of contractor removing AST.

b. Statement that work will be conducted in a manner compliant with the Contractor's Health and Safety Plan.

c. Personal Protective Equipment

d. Certification of the Maryland Department of the Environment (MDE) Underground Storage System Technician(s) that will be performing the work.

e. Company, contact name, phone number, and e-mail address of recycling facility.

f. Company, contact name, phone number, and e-mail address of waste disposal facility to accept petroleum impacted wastes.

g. Identification of wastes and means of disposal or recycling.

h. Plans for the disconnecting and removing of all AST appurtenances.

i. Plans for cleaning and removal of all liquids and sludge from the AST. Plans for purging the AST of all vapors.

j. Plans for preparation of the AST for removal and transport from the site.

k. Spill prevention plan.

l. Spill contingency plan.

m. Hazard Communication Program Plan.

n. Safety Data Sheets (SDSs) for affected petroleum products and for all chemicals to be used.

2. Liability insurance certificate with the statement of coverage that indicates pollution coverage is included. Occurrence type insurance is required. Minimum coverage shall be at least $1,000,000 per occurrence.

B. During work, the Contractor shall submit the following to the Engineer:

1. Copies of all waste manifests on the same day that the waste is picked up.

C. Upon completion of work, the Contractor shall submit the following to the Engineer:

1. Final waste disposal manifests signed by the waste disposal/recycling facility.

2. Certificate of Recycling for the AST.

3. Testing results (if any).

1.6 CONTRACTOR QUALIFICATIONS

A. The on-site tank remover(s) shall be certified through the Maryland Department of Environment as Underground Storage System Technicians.

1.7 SAFETY MONITORING REQUIREMENTS

A. Work conducted on-site will comply with 29 CFR 1910 and 1926, as well as the Contractor's Health and Safety Plan.

B. Atmospheric Monitoring: Combustible Gas Indicator, Oxygen Meter and other equipment as required for confined space entry procedures, if applicable.

PART 2 - PRODUCTS

NOT USED

PART 3 - EXECUTION

3.1 ESTIMATED QUANTITIES OF ABOVEGROUND STORAGE TANK(S)

A. Please refer to the Hazardous Materials Summary Table in the drawings.

3.2 METHODS OF COMPLIANCE

A. The Contractor shall adhere to the Aboveground Storage Tank Work Plan submitted.

3.3 PROJECT COMPLETION

A. The Contractor shall remove all equipment, supplies, and waste from the project site.

B. The project will be considered complete when all required submittals have been received and approved.

END OF SECTION 02 64 00

SECTION 02 65 00 UNDERGROUND STORAGE TANK AND HYDRAULIC LIFT REMOVAL AND DISPOSAL

PART 1 - GENERAL

1.1 SCOPE

A. Work Includes:

1. The work covered by this Section includes the furnishing of all materials and equipment and the performing of all labor, including obtaining any necessary permits, for the removal and disposal of underground storage tanks (USTs), an underground hydraulic lift, and related appurtenances. The location(s) and type(s) of the underground storage tank(s) and hydraulic lift known to be present at the worksite are presented in the specifications.

2. Quantities presented in this Section are estimates only. The Contractor shall field verify quantities prior to submitting a bid or accept the estimates as accurate.

1.2 RELATED DOCUMENTS

A. Related Sections:

1. Section 00 73 19 – Health & Safety Requirements

B. Related Documents:

1. Drawings and general provisions of Contract, including General Conditions, apply to this Section.

2. Limited Hazardous Materials Survey, Youth Detention Center Project, DPSCS #KT-000-110-C01, 926 Greenmount Avenue, Baltimore, Maryland 21202, dated December 24, 2014, EBA Engineering, Inc.

1.3 REFERENCES AND APPLICABLE STANDARDS AND GUIDELINES

A. The most recent edition of a relevant regulation, standard, or code shall be in effect. Where a conflict exists between the regulations, standards, codes, or these specifications, the more stringent requirements shall be utilized.

B. It shall be the duty and responsibility of the General Contractor and all of its Subcontractors to adhere to all regulations (Federal, State, and local) impacting this work including but not limited to:

1. Federal:

a. U.S. Department of Labor, Occupational Safety and Health Administration (OSHA)

1) 29 CFR 1910.12 – Construction Work

2) 29 CFR 1910.132 – General Requirements

3) 29 CFR 1910.134 – Respiratory Protection

4) 29 CFR 1910.147 – Control of Hazardous Energy (lockout/tagout)

5) 29 CFR 1910.1200 – Hazard Communication

6) 29 CFR 1926.59 – Hazard Communication

7) 29 CFR 1926.95-102 – Personal Protective Equipment (PPE)

8) 29 CFR 1926.652 – Requirements for Protective Systems

b. U.S. Environmental Protection Agency (EPA)

1) 40 CFR 117.3 – Determination of Reportable Quantities

2) 40 CFR 260 – Hazardous Waste Management System: General

3) 40 CFR 263 – Standards Applicable to Transporters of Hazardous Waste

4) 40 CFR 264 – Standards for Owners and Operators of Hazardous Waste Treatment Storage, and Disposal Facilities

5) 40 CFR 265 – Interim Status Standards for Owners and Operators of Hazardous Waste Treatment Storage, and Disposal Facilities

6) 40 CFR 280 – Technical Standards and Corrective Action Requirements for Owners and Operators of Underground Storage Tanks (UST)

7) CERCLA – Comprehensive Environmental Response, Compensation, and Liability Act (Superfund)

8) TSCA – Toxic Substance Control Act

c. U. S. Department of Transportation (DOT)

1) 49 CFR 171-180 – General Awareness and Training Requirements for Handlers, Loaders, and Drivers

d. National Institute of Occupational Safety and Health (NIOSH)

1) NIOSH 80-106 – Criteria for a Recommended Standard: Working in Confined Spaces

2. State:

a. Code of Maryland Regulations (COMAR)

1) COMAR 09.12 – Division of Labor and Industry

2) COMAR 09.12.20 – Occupational Safety and Health

3) COMAR 26.10.10 – Out-of-Service UST Systems and Closure

4) COMAR 26.13 – Disposal of Controlled Hazardous Substances

3. Standards:

a. American Petroleum Institute (API)

1) API PUBL 1628 – Guide to the Assessment and Remediation of Underground Petroleum Releases

2) API PUBL 1663E – Underground Storage Tank Removal

3) API PUBL 2217A – Guidelines for Work in Inert Confined Spaces in the Petroleum Industry

4) API PUBL 2219 – Safe Operation of Vacuum Trucks in Petroleum Service

5) API RP 1604 – Closure of Underground Petroleum Storage Tanks

6) API RP 2003 – Protection Against Ignitions Arising out of Static, Lightning, and Stray Currents

7) API RP 2009 – Safe Welding, Cutting, and Other Hot Work Practices in the Petroleum and Petrochemical Industries

8) API STD 650 – Welded Steel Tanks for Oil Storage

9) API STD 653 – Tank Inspection, Repair, Alteration, and Reconstruction

10) API STD 2015 – Requirements for Safe Entry and Cleaning of Petroleum Storage Tanks

b. American National Standards Institute (ANSI)

1) ANSI Z117.1-2009 – Safety Requirements for Confined Spaces

1.4 DEFINITIONS

A. Terms defined by EPA Regulation 40 CFR 280 and by Code of Maryland Regulation 26.10 have the same meaning when used in this Section.

1.5 SUBMITTALS

A. Prior to commencement of work, submit to the Engineer the items listed as follows for review. Work shall not start until these submittals are returned with the Engineer's written approval indicating that the submittal is returned for unrestricted use.

1. Work Plan: Describe work procedures to be used for this portion of this project. The Contractor shall develop, implement, maintain, and supervise as part of the work, a comprehensive plan for tank(s) and hydraulic lift removal and related operations. The Work Plan shall include but not be limited to:

a. Company, contact name, phone number, and e-mail address of contractor removing UST(s) and hydraulic lift.

b. Statement that work will be conducted in a manner compliant with the Contractor's Health and Safety Plan.

c. Personal Protective Equipment

d. Certification of the Maryland Department of the Environment (MDE) Underground Storage System Technician(s) that will be performing the work.

e. Plan for exploratory excavation of one suspect UST.

f. Plan for characterizing UST(s) and hydraulic lift contents, including sampling and analyses, prior to removal. Means of disposal or recycling.

g. Plan for the disconnecting and removing of all UST(s) and hydraulic lift appurtenances.

h. Plan for cleaning and removal of all liquids and sludge from the UST(s) and hydraulic lift(s).

i. Plan for purging the UST(s) of all vapors.

j. Plan for preparation of the UST(s) and hydraulic lift for removal and transport from the site. Include cleaning of exterior UST surfaces.

k. Plan for temporary storage of excavated material onsite. Soils shall be placed on an impermeable geomembrane a minimum of 30 mil thick and covered with an impermeable geomembrane a minimum of 10 mil thick.

l. Plan for maintaining excavations in a dewatered condition.

m. Plan for backfilling.

n. Company, contact name, phone number, and e-mail address of recycling facility.

o. Company, contact name, phone number, and e-mail address of waste disposal facility to accept petroleum impacted wastes.

p. Spill prevention plan.

q. Spill contingency plan.

r. Hazard communication plan.

s. Confined space plan.

t. Safety Data Sheets (SDSs) for affected petroleum products and for all chemicals to be used.

u. Description of sampling procedures.

2. Liability insurance certificate with the statement of coverage that indicates pollution coverage is included. Occurrence type insurance is required. Minimum coverage shall be at least $1,000,000 per occurrence.

B. During work, the Contractor shall submit the following to the Engineer:

1. Copies of all waste manifests on the same day that the waste is picked up.

C. Upon completion of work, the Contractor shall submit the following to the Engineer:

1. Final waste disposal manifests signed by the waste disposal/recycling facility.

2. Certificate of recycling for the UST(s) and hydraulic lift.

3. Testing results (if any).

4. UST Closure Report submitted to the MDE which includes; statement of work, soil and groundwater sampling procedures and analytical results, conclusions and recommendations, site sketches, photographic documentation, disposal manifest(s), certificate(s) of recycling, and other MDE required forms (e.g., registration, MDE UST closure notification letter, and closure forms).

1.6 CONTRACTOR QUALIFICATIONS

A. The on-site tank remover(s) shall be certified through the Maryland Department of Environment as an Underground Storage System Technician(s).

B. The Contractor shall have a minimum of five (5) years of tank removal experience.

1.7 SAFETY AND ENVIRONMENTAL REQUIREMENTS

A. Work conducted on-site will comply with 29 CFR 1910 and 1926, as well as Contractor's Health & Safety Plan.

B. Environmental Monitoring – Photoionization Detector for field screening soils.

C. Atmospheric Monitoring – Combustible Gas Indicator, Oxygen Meter and other equipment as required for confined space entry procedures.

D. Use of explosives or burning will not be allowed.

1.8 PROJECT NOTIFICATION AND PERMITS

A. The Contractor shall notify the Owner seven (7) days prior to beginning removal activities.

B. The Contractor shall be responsible for notifying the MDE by completing the required 30-Day Written Notification Form and confirming by telephone 48 hours prior to beginning removal activities.

C. The Contractor shall obtain all necessary permits for this work prior to start of removal activities.

PART 2 - PRODUCTS

NOT USED

PART 3 - EXECUTION

3.1 ESTIMATED QUANTITIES OF UNDERGROUND STORAGE TANK(S) AND A HYDRAULIC LIFT

A. Please refer to the Hazardous Materials Summary Table in the drawings.

B. Work Includes:

1. Removal and disposal of one UST system. An operational underground fuel storage tank was identified.

2. Perform exploratory excavation of a suspect UST in the northwest corner of the subject property to include a 20' x 20' area to a depth of 15' below grade.

3. Removal and disposal of one hydraulic lift system. An underground two-point lift system was identified.

3.2 SPECIFIC EXCAVATION REQUIREMENTS

A. At all times the Contractor shall comply with 29 CFR 1926.652 Subpart P, Excavations.

B. The estimated location of utility installations, such as sewer, telephone, fuel, electric, water lines, or any other underground installations that reasonably may be expected to be encountered during excavation work, shall be determined prior to opening an excavation. When excavation operations approach the estimated location of underground installations, the exact location of the installations shall be determined by safe and acceptable means.

C. Where the stability of adjoining buildings, walls, or other structures is endangered by excavation operations, support systems such as shoring, bracing, or underpinning shall be provided to ensure the stability of such structures for the protection of employees.

D. Excavations shall be limited to the width and depth necessary for the removal of tank(s) and hydraulic lift.

E. Adequate protection shall be provided to protect employees from loose rock or soil that could pose a hazard by falling or rolling from an excavation face. Such protection shall consist of scaling to remove loose material; installation of protective barricades at intervals as necessary on the face to stop and contain falling material; or other means that provide equivalent protection.

F. Daily inspections of excavations, the adjacent areas, and protective systems shall be made by a competent person for evidence of a situation that could result in possible cave-ins, indications of failure of protective systems, hazardous atmospheres, or other hazardous conditions. An inspection shall be conducted by the competent person prior to the start of work and as needed throughout the shift. Inspections shall also be made after every rainstorm or other hazard increasing occurrence.

3.3 TANK CLOSURE REPORT

A. For each tank removed, a Tank Closure Report shall be prepared in a standard three ring binder and submitted to the MDE with two hard copies and two electronic copies to the Owner. Tank Closure Reports shall include the following information as a minimum:

1. A cover letter signed by a responsible company official certifying that all services involved have been performed in accordance with the terms and conditions of this specification.

2. A narrative report describing what was encountered at each site, including:

a. Condition of the tank;

b. Any visible evidence of leaks or stained soils;

c. Results of vapor monitoring readings;

d. Actions taken including quantities of materials treated or removed;

e. Reasons for selecting sample locations;

f. Sample locations;

g. Collection data such as time of collection and method of preservation;

h. Reasons for backfilling site, and,

i. Whether or not groundwater was encountered.

3. Copies of all analyses performed for disposal.

4. Copies of all waste analyses or waste profile sheets.

5. Copies of all certifications of final disposal signed by the responsible disposal facility official.

6. Information on who sampled, analyzed, transported, and accepted all wastes encountered and copies of manifests.

7. Copies of all analysis performed for verification that underlying soil is not contaminated, with copies of chain-of-custody for each sample. All analysis shall give the identification number of the sample used. Sample identification numbers shall correspond to those provided on the one-line drawings.

8. Scaled one-line drawings (for Administration approval) showing tank locations, size of tank, limits of excavation, limits of contamination, underground utilities encountered, sample locations, and sample identification numbers, date of abandonment, methods used for abandonment and name of controller in accordance with COMAR 26.10. Drawings shall locate the horizontal and vertical extent of the tank removal areas by dimensions from existing building features.

3.4 METHODS OF COMPLIANCE

A. The Contractor shall adhere to the Underground Storage Tank & Hydraulic Lift Work Plan submitted.

3.5 PROJECT COMPLETION

A. The Contractor shall remove all equipment, supplies, and waste from the project site.

B. The project will be considered complete when all required submittals have been received and approved.

END OF SECTION 02 65 00

SECTION 02 82 00 - ASBESTOS ABATEMENT

PART 1 - GENERAL

1.1 SCOPE

A. Work Includes:

1. The work covered by this Section includes the furnishing of all materials and equipment and the performing of all labor for the removal and disposal of asbestos-containing materials as reported in the Limited Hazardous Materials Survey, Youth Detention Center Project, DPSCS #KT-000-110-C01, 926 Greenmount Avenue, Baltimore, Maryland 21202, dated December 24, 2014. The location(s) and type(s) of asbestos-containing building material known, assumed, and presumed to be present at the worksite are presented in the specifications.

2. Quantities presented in this Section are estimates only. The Contractor shall field verify quantities prior to submitting a bid or accept the estimates as accurate.

3. Requirements of this Section are designed for the safe removal and disposal of Asbestos-Containing Materials (ACM) and/or Assumed Asbestos-Containing Materials. Regulatory standards and best industry practices may contain other requirements that must be followed.

4. The Contractor must adhere to the requirements of the Maryland Department of the Environment (MDE) and view MDE's determinations as final.

1.2 RELATED SECTIONS AND DOCUMENTS

A. Related Sections:

1. Section 00 73 19 – Health and Safety Requirements

2. Section 02 89 00 – Abatement Monitoring

B. Related Documents:

1. Drawings and general provisions of the Contract, including General Conditions, apply to this Section.

2. Limited Hazardous Materials Survey, Youth Detention Center Project, DPSCS #KT-000-110-C01, 926 Greenmount Avenue, Baltimore, Maryland 21202, dated December 24, 2014, EBA Engineering, Inc.

1.3 REFERENCES AND APPLICABLE STANDARDS AND GUIDELINES

A. The most recent edition of a relevant regulation, standard, or code shall be in effect. Where a conflict exists between the regulations, standards, codes, or these specifications, the more stringent requirements shall be utilized.

B. It shall be the duty and responsibility of the General Contractor and all of its Subcontractors to adhere to all regulations (Federal, State, and local) impacting this work including but not limited to:

1. Federal:

a. U.S. Department of Labor, Occupational Safety and Health Administration (OSHA)

1) 29 CFR 1910.134 – Respiratory Protection

2) 29 CFR 1910.1200 – Hazard Communication

3) 29 CFR 1926.1101 – Asbestos in Construction

4) 29 CFR 1926.95-102 – Personal Protective Equipment (PPE)

b. U.S. Environmental Protection Agency (EPA)

1) 40 CFR 61, Subpart M – National Emission Standards for Hazardous Air Pollutants (NESHAP), National Emission Standards for Asbestos

2) 40 CFR 763 – Asbestos Hazard Emergency Response Act (AHERA)

c. U.S. Department of Transportation (DOT)

1) 49 CFR 170-180 – Hazardous Waste Transportation

2. State:

a. Code of Maryland Regulations (COMAR)

1) COMAR 26.11.21 – Control of Asbestos

2) COMAR 26.11.23 – Asbestos Accreditation of Individuals

3) COMAR 26.13 – Disposal of Controlled Hazardous Substances

1.4 DEFINITIONS

A. Terms defined by OSHA Regulation 29 CFR 1926.1101 and by EPA Regulation 40 CFR 61, Subpart M have the same meaning when used in this Section.

1.5 SUBMITTALS

A. Prior to commencement of work, submit to the Engineer the items listed as follows for review. Work shall not start until these submittals are returned with the Engineer's written approval indicating that the submittal is returned for unrestricted use.

1. Qualifications

a. Project contact sheet for key personnel including names, cell phone numbers, and e-mail addresses for:

1) General Contractor.

2) Abatement Contractor.

b. Abatement Contractor

1) Asbestos Abatement License.

2) Liability insurance certificate with the statement that coverage includes asbestos. Occurrence type insurance is required. Minimum coverage shall be at least $3,000,000 per occurrence.

3) Certification signed by an officer of the abatement contracting firm that exposure measurements, medical surveillance, and worker training records are being kept in conformance with 29 CFR 1926.

4) Certification signed by an officer of the abatement contracting firm that the respiratory protection program is being kept in conformance with 29 CFR 1910.134.

5) Record(s) of any citation(s) issued by Federal, State, and local regulatory agencies relating to asbestos abatement activity by the Contractor within the past 5 years. Contractor must include projects, dates, and resolutions.

c. Abatement Supervisor(s) and Workers

1) Resume of abatement supervisor(s).

2) Training certification, medical approval certification, and fit test certification of supervisor(s) and all workers.

d. Waste Disposal

1) Company, contact name, phone number, e-mail address, and license of transporter to haul asbestos waste.

2) Company, contact name, phone number, e-mail address, and license or permit of landfill to accept asbestos waste.

3) If non-regulated ACM will be disposed of in a construction and

demolition (C&D) landfill, submit a letter from the landfill indicating that they will accept the waste.

2. Abatement Work Plan – The Abatement Work Plan shall be prepared by an AHERA Project Designer. The Work Plan shall include but not be limited to:

   a. Notification - Copy of notification submitted to EPA and MDE.

   b. Signs – Identify the number of 3-day signs required (as required by COMAR 26.11.21), identify the locations of 3-day signs, and schedule for posting 3-day signs.

   c. For each regulated area, describe the location, signs to be posted, means to control access, and means to capture debris from the work.

   d. Describe engineering controls.

   e. List all required personal protection equipment (PPE). For respirator, describe respirator and cartridge type.

   f. Describe work procedures including the method that will be used to remove each type of asbestos-containing material.

   g. Describe procedures for bagging and removal of wastes. Include how any waste will be moved from the roof to the ground, if applicable.

   h. Describe temporary storage facility for waste prior to removal from site. Include description of signs on storage facility.

3. Equipment and Supplies

   a. Safety Data Sheets (SDSs) for all chemicals to be used.

   b. Manufacturer's certification that HEPA vacuums, pressure differential ventilation units and other local exhaust ventilation systems to be used on the project conform to ANSI Z9.2-2006.

4. Emergency Plans

   a. An emergency plan that meets the requirements of 29 CFR 1926.35.

B. During abatement activities, the Contractor shall submit the following to the Engineer:

1. Copies of all waste shipment records on the same day that the waste is picked up.

2. The Contractor shall maintain on-site daily job progress reports detailing abatement activities including a review of the estimated percentage of completion, major problems or delays and taken or planned corrective action, injury reports, equipment breakdowns, etc. A compiled copy shall be submitted after work is completed.

3. The Contractor shall maintain on-site daily worksite entry logbooks with information on worker and visitor access. A compiled copy shall be submitted after the work is completed.

4. The Contractor shall maintain on-site air monitoring records that shall be made available to the Engineer upon request. A compiled copy shall be submitted after work is completed.

C. Upon completion of abatement activities, the Contractor shall submit the following to the Engineer:

1. Statement of completion of compliance with specifications.

2. Compiled set of daily job progress reports.

3. Compiled set of worksite entry logs.

4. Final waste disposal manifests signed by the waste disposal facility.

5. Air monitoring data/records and IH daily logs, including clearance sampling.

1.6 ASBESTOS HEALTH RISK

A. Where in the performance of the work, workers, supervisory personnel, subcontractors, or consultants may encounter, disturb, or otherwise function in the immediate vicinity of any identified ACM, take appropriate continuous measures as necessary to protect all building occupants from the risk of exposure to airborne asbestos. Such measures shall include the procedures and methods described herein, and compliance with regulations of applicable Federal, State, and local agencies.

1.7 WORKER TRAINING REQUIREMENTS

A. AHERA Supervisor Accreditation: All Supervisors are to be accredited by MDE as Abatement Supervisors as required by the EPA Model Accreditation Plan (MAP) asbestos abatement worker training (40 CFR Part 763, Subpart E, Appendix C).

B. AHERA Worker Accreditation: All workers are to be accredited by MDE as Abatement Workers as required by the EPA Model Accreditation Plan (MAP) asbestos abatement worker training (40 CFR Part 763, Subpart E, Appendix C).

C. Additional worker licenses, certifications, training, and documentation shall be in accordance with Contractor’s submittals in Section 1.5.

1.8 MEDICAL SURVEILLANCE REQUIREMENTS

A. All employees who will perform asbestos work and/or wear a respirator shall participate in a medical surveillance program meeting the requirements of 29 CFR 1926.1101 and 29 CFR 1910.134 as applicable.

1.9 STOP ACTION LEVELS

A. Inside Work Area

1. The Contractor shall stop work and re-evaluate engineering controls if any one sample in the work area or any personal sample exceeds a fiber concentration of 0.5 fibers per cubic centimeter (f/cc).

B. Outside Work Area

1. If any air sample taken outside of the work area exceeds 0.01 f/cc, the Contractor shall immediately and automatically stop all work except corrective action.

1.10 AUTHORITY TO STOP WORK

A. The Owner, Industrial Hygiene Contractor (third party), or the Engineer have the authority to issue a work stoppage at any time during the abatement work if the Owner, Industrial Hygiene Contractor, or Engineer deems that conditions are in violation of these specifications or any Federal, State, and local regulations.

B. Once a work stoppage has been issued, the Contractor shall take corrective steps including but not limited to the following:

1. Cease all asbestos removal activities, or any activities that disturb ACM.

2. Repair any fallen, ripped or otherwise failed work area isolation measures.

3. Maintain in operation work area isolation measures.

4. Maintain all worker protection.

5. Fog the air in the work area with a mist of amended water to reduce airborne fiber levels.

C. The Contractor shall not recommence work until conditions have been corrected and authorized in writing by the Engineer.

D. Delays, stand-by time, and expenses necessary for Contractor to take corrective action, resolve any violations of these specifications or applicable laws shall be at the Contractor's expense.

PART 2 - PRODUCTS

2.1 MATERIALS AND EQUIPMENT

A. Provide in quantities necessary to accomplish work of this Section.

1. Amended Water

a. Provide water to which a surfactant has been added.

b. Use a mixture of surfactant and water which results in adequately wetting the ACM by use of one ounce of a surfactant consisting of 50% polyoxyethylene ester and 50% polyoxyethylene ether mixed with five gallons of water.

2. Encapsulants

a. Encapsulants (sealants) shall meet the latest requirements of the EPA.

3. Polyethylene Sheet

a. Polyethylene film designed for asbestos abatement with a minimum 6-mil thickness.

b. Polyethylene film shall be designated as fire resistant by the manufacturer.

4. Disposal Bags

a. Disposal bags shall include required OSHA, EPA, and DOT asbestos labels.

b. Disposal bags shall be a minimum of 6-mil thick, leak tight, and made of polyethylene.

5. Other Materials

a. Duct tape in 2” or 3” widths, with an adhesive which is formulated to aggressively stick to polyethylene sheeting.

b. Spray adhesive, which is specifically formulated to stick tenaciously to polyethylene sheeting.

2.2 PERSONAL PROTECTIVE EQUIPMENT

A. Provide disposable full-body coveralls and disposable head covers, and require that they be worn by all workers in the work area. For all workers in the work area, provide a sufficient number of disposable coveralls and head covers for all required changes.

B. Provide each worker with the additional protective clothing as required by the site specific Health and Safety Plan. This may include, but is not necessarily limited to:

1. Hardhats

2. Gloves

3. Steel-toed boots

4. Eye protection (i.e., face shield, safety glasses, and/or goggles)

5. Hearing protection

6. Cold weather gear

C. In addition, disposable full-body coveralls and disposable head covers shall be provided by the Contractor for the Engineer, Emergency Personnel, and other authorized representatives who may enter the job site.

2.3 RESPIRATORY PROTECTION

A. The Contractor shall provide at no cost to the employee respiratory protection against airborne concentrations of asbestos during this abatement project.

B. The Contractor's respiratory protection program shall be in place in accordance with the Contractor's submittal as detailed in Section 1.5 and in compliance with 29 CFR 1910.134.

C. Respirators are required to be used for all asbestos work.

PART 3 - EXECUTION

3.1 ASBESTOS-CONTAINING MATERIAL TYPE(S) AND ESTIMATED QUANTITIES

A. Please refer to the Hazardous Materials Summary Table in the drawings.

3.2 ENGINEERING AND WORK PRACTICE CONTROLS

A. The Contractor shall implement engineering and work practice controls to reduce and maintain employee exposure below the Permissible Exposure Limit (PEL of 0.1 f/cc) to the extent that such controls are feasible. Engineering and work practices shall be reviewed and approved by the Engineer. Respirators are required for all asbestos abatement even if engineering controls maintain exposures below the PEL.

B. All abatement work shall be done using wet methods. Water shall be sprayed on all materials to be removed during this procedure and shall continue to be sprayed on the material until placed in a waste container or roll-off.

C. A HEPA vacuum shall be used as an engineering control to pre-clean before abatement begins, during abatement activities, and as part of final cleanup activities.

D. Perform prompt cleanup of debris as it is generated during abatement activities and perform daily cleanup of work areas.

3.3 SIGNAGE AND WARNINGS

A. The Contractor shall display 3-Day Notice sign as required by MDE at all entrances into the building.

B. The Contractor may use signs required by other statutes, regulations or ordinances in addition to, or in combination with, signs required by this specification. The Contractor shall assure that no statement appears on or near any sign required by this specification, which contradicts or detracts from the meaning of the required sign.

C. Warning signs that demarcate the regulated area shall be provided and displayed by the Contractor. A regulated area is defined as an area where an employee's exposure may be above the PEL.

D. Warning signs shall also be required outside the work area at the proposed and secured waste storage.

E. Warning signs shall be posted at such a distance from such a location that an employee or other authorized personnel may read the signs and take necessary protective steps before entering the area marked by the signs.

F. Warning signs are required by 29 CFR 1926.1101.Z.(k).(7).(ii).[A] and shall bear the following information:

DANGER
ASBESTOS
MAY CAUSE CANCER
CAUSES DAMAGE TO LUNGS
AUTHORIZED PERSONNEL ONLY

G. Warning signs are required by 29 CFR 1926.1101.Z.(k).(7).(ii).[B] and shall bear the following information where the use of respirators and protective clothing are required in the regulated area:

DANGER
ASBESTOS
MAY CAUSE CANCER
CAUSES DAMAGE TO LUNGS
AUTHORIZED PERSONNEL ONLY
WEAR RESPIRATORY PROTECTION AND PROTECTIVE
CLOTHING IN THIS AREA

H. The Contractor shall ensure that all signs required in Section 3.3 are illuminated and cleaned as necessary so that the text is readily visible.

3.4 LABELING OF ASBESTOS-CONTAINING MATERIAL WASTE

A. The Contractor shall affix label(s) to all products and containers containing asbestos waste, including disposal bags, containers, and drums.

1. The label(s) shall be clearly visible printed in large, bold letters on a contrasting background. The label(s) are required by 29 CFR 1926.1101.Z.(k).(8).(iii) and shall bear the following information:

DANGER
CONTAINS ASBESTOS FIBERS
MAY CAUSE CANCER
CAUSES DAMAGE TO LUNGS
DO NOT BREATHE DUST
AVOID CREATING DUST

3.5 SITE PREPARATION

A. Site preparation prior to abatement consists of the following steps:

1. Posting signs on all entrances into the building 3 days prior to abatement.

2. Posting warning signs at entrances and exits to work areas and secured waste storage areas.

3. Removing or protecting all furnishings.

4. Set up containment necessary to protect surfaces and contain dust and debris.

5. Pre-clean all surfaces in the work areas.

6. Provide a wash area for the crew at the site. All members of the abatement crew must wash after removing and properly disposing of their protective clothing.

3.6 ABATING OF ASBESTOS-CONTAINING MATERIAL

A. Removal of ACM shall be performed according to the Contractor's Abatement Work Plan and applicable regulations.

3.7 DAILY CLEANUP

A. All asbestos waste must be bagged at the end of each day and any asbestos debris on the floor must be vacuumed at the end of each day.

B. All supplies and equipment must be maintained in a neat and orderly condition.

C. Under no circumstances shall active abatement be proceeding while the daily cleanup is in progress.

3.8 FINAL CLEARANCE PROCEDURES

A. All waste must be bagged and all bags removed from the work area.

B. All dust and debris must be removed from all surfaces.

C. The Industrial Hygienist Contractor (third party) shall perform a final visual inspection.

D. Perform any additional cleaning required by the Industrial Hygienist Contractor.

E. Encapsulate area.

F. The Industrial Hygienist Contractor shall perform final clearance air sampling.

3.9 STORAGE OF ACM WASTE

A. The Contractor shall make provisions for the safe storage of waste on-site prior to disposal. For security reasons, waste storage areas must be treated as regulated areas and access shall be restricted.

3.10 DISPOSAL OF ASBESTOS-CONTAINING MATERIAL WASTE

A. Execution

1. All waste shall be maintained in an adequately wet condition and sealed in leak tight containers.

2. Prior to removing waste from the work area, each bag of waste shall be sealed and placed entirely within a second bag, which shall also be sealed in a manner to prevent leakage.

3. All waste is to be hauled by a waste hauler with all required licenses from all Federal, State, and local authorities.

4. Load all ACM waste material in disposal bags, leak-tight drums, or other containers as described in Contractor's submittal.

5. Post "Danger Asbestos” signs on vehicle while loading.

6. Protect interior of truck or dumpster with a double layer of 6-mil poly sheeting.

7. Carefully load containerized waste in fully enclosed dumpsters, trucks or other appropriate vehicles for transport. Exercise care before and during transport, to ensure that no unauthorized persons have access to the material.

8. Ensure asbestos waste storage and disposal complies with all applicable aspects of Federal, State, and local asbestos regulations, including time periods for removing waste from project site and temporary storage.

9. Complete a waste disposal record at the time of shipment. Contractor's competent person shall sign the "Generator's Certification" unless directed otherwise. Submit copy of pickup receipt to Engineer on the same day that waste is shipped.

B. Disposal

1. All asbestos waste shall be disposed of at an approved landfill. Specifically, regulated ACM waste shall be disposed at a licensed asbestos landfill. ACM that

is not regulated may be disposed at a Construction and Demolition (C&D) landfill that has agreed to accept the material.

2. Sealed plastic bags shall be carefully unloaded from the truck. If bags are broken or damaged, return to work site for re-bagging within a containment area; the entire truck and contents must be cleaned using damp cleaning methods and mopping or with a HEPA vacuum.

3. After completion of delivery, truck must be cleaned using damp cleaning methods and mopping or with a HEPA vacuum.

4. The Contractor shall retain receipts from landfill for material disposed.

5. The Contractor shall, no later than 45 days after shipment of each load, submit copy(s) of waste manifest, chain of custody or cradle to grave form, and landfill receipt to the Engineer.

3.11 PROJECT COMPLETION

A. The Abatement Contractor shall remove all equipment, supplies, and waste from the project site.

B. The project will be considered complete when all required submittals have been received and approved.

END OF SECTION 02 82 00

SECTION 02 83 00 - IMPACT TO LEAD PAINTED SURFACES, REMOVAL AND DISPOSAL

PART 1 - GENERAL

1.1 SCOPE

A. Work Includes:

1. The work covered by this Section includes the furnishing of all materials and equipment and the performing of all labor for lead-safe work practices and the proper disposal of waste materials containing lead paint as reported in the Limited Hazardous Materials Survey, Youth Detention Center Project, DPSCS #KT-000-110-C01, 926 Greenmount Avenue, Baltimore, Maryland 21202, dated December 24, 2014.

2. The Contractor and Subcontractors shall comply with OSHA's Lead in Construction Standard, 29 CFR 1926.62.

3. Components with surface coatings not otherwise reported in the Limited Hazardous Materials Survey, Youth Detention Center Project, DPSCS #KT-000-110-C01, 926 Greenmount Avenue, Baltimore, Maryland 21202, dated December 24, 2014 shall be presumed to contain lead in paint.

1.2 RELATED SECTIONS AND DOCUMENTS

A. Related Sections:

1. Section 00 73 19 – Health and Safety Requirements

2. Section 02 89 00 – Abatement Monitoring

B. Related Documents:

1. Drawings and general provisions of the Contract, including General Conditions, apply to this Section.

2. Limited Hazardous Materials Survey, Youth Detention Center Project, DPSCS #KT-000-110-C01, 926 Greenmount Avenue, Baltimore, Maryland 21202, dated December 24, 2014, EBA Engineering, Inc.

1.3 REFERENCES AND APPLICABLE STANDARDS AND GUIDELINES

A. The most recent edition of a relevant regulation, standard, or code shall be in effect. Where a conflict exists between the regulations, standards, codes, or these specifications, the more stringent requirements shall be utilized.

B. It shall be the duty and responsibility of the General Contractor and all of its Subcontractors to adhere to all regulations (Federal, State, and local) impacting this work including but not limited to:

1. Federal:

a. U.S. Department of Labor, Occupational Safety and Health Administration (OSHA)

1) 29 CFR 1910.134 – Respiratory Protection

2) 29 CFR 1910.1200 – Hazard Communication

3) 29 CFR 1926.62 – Lead

4) 29 CFR 1926.95-102 – Personal Protective Equipment (PPE)

b. U.S. Environmental Protection Agency (EPA)

1) 40 CFR 117.3 – Determination of Reportable Quantities

2) 40 CFR 260 – Hazardous Waste Management System: General

3) 40 CFR 268 – Land Disposal Restrictions: General

4) 40 CFR 302 – Reportable Quantities, and Notification

5) EPA Guidance Document SW-846 Test Methods for Evaluating Solid Waste, Physical/Chemical Methods

c. U.S. Department of Transportation (DOT)

1) 49 CFR 171-180 – General Awareness and Training Requirements for Handlers, Loaders, and Drivers

2. State:

a. Code of Maryland Regulations (COMAR)

1) COMAR 26.13 – Disposal of Controlled Hazardous Substances

2) COMAR 26.16 – Lead

1.4 DEFINITIONS

A. Terms defined by OSHA Regulation 29 CFR 1926.62 and COMAR Regulation 26.16 have the same meaning when used in this Section.

1.5 SUBMITTALS

A. Prior to commencement of work, submit to the Engineer the items listed as follows for review. Work shall not start until these submittals are returned with the Engineer's written approval indicating that the submittal is returned for unrestricted use.

1. Lead Compliance Program meeting the requirements of 29 CFR 1926.62 (e) for the Contractor and each Subcontractor who will disturb lead in paint. Elements include but are not limited to:

a. A description of each activity in which lead is emitted.

b. A description of the means to be used to achieve compliance, and where engineering controls are required engineering plans and studies used to determine the methods selected for controlling exposure to lead.

c. Information on the technology considered to comply with the permissible exposure limit (PEL).

d. Air monitoring data that document the source of lead emissions.

e. A detailed schedule for implementing the program.

f. A work practice program which includes items required under paragraphs (g), (h), and (i) of 29 CFR 1926.62.

g. An administrative control schedule required by paragraph (e)(4) of 29 CFR 1926.62, if applicable.

h. A description of arrangements made among contractors on multi-contractor sites to inform affected employees of potential lead exposures.

2. Lead Waste Management Plan. This plan must identify each waste stream impacted by lead in paint and state how each such waste stream will be handled for waste disposal. Examples of potential waste streams include but are not limited to disposable PPE, plastic drop cloths, paint stripping waste, dust and paint chips from paint, and construction and demolition debris coated with lead-based paint. For each waste stream, the plan shall indicate:

a. Training certificate for contractor personnel who will handle or ship hazardous waste as required by 49 CFR 172 Subpart H, the hazardous waste shipping regulation of the Department of Transportation.

b. Packaging and labeling of waste.

c. A copy of the shipping manifest that will accompany hazardous waste. State the generator's ID number that will be used, the proper shipping name of the waste, and indicate how the Owner's signature will be obtained for the manifest.

d. Means of secure on-site storage of waste while it is accumulated.

e. Testing protocol. The Plan must indicate how the contractor will determine if the waste is hazardous for lead and if the paint contains PCBs which are known to have been an additive for some lead-based paint. The Plan must indicate who will collect samples, how samples will be collected, the laboratory that will analyze the samples, the analytical method, and the standard to which results will be compared.

f. Hazardous waste shipping company, their contact information, and their hazardous waste shipping identification number.

g. Transfer facility (if any), their contact information, and their Resource Conservation and Recovery Act (RCRA) identification number.

h. Final disposal site, their contact information, and their RCRA identification number.

i. All metal waste coated with lead-based paint shall be recycled at an appropriately certified and permitted facility.

3. Record(s) of any citation(s) issued by Federal, State, and local regulatory agencies relating to LBP abatement activity by the Contractor within the past 5 years. Contractor must include projects, dates, and resolutions.

4. Liability insurance certificate with the statement of coverage that indicates pollution coverage is included. Occurrence type insurance is required. Minimum coverage shall be at least $1,000,000 per occurrence.

1.6 LEAD HEALTH RISK

A. Where in the performance of the work, workers, supervisory personnel, subcontractors, or consultants may encounter, disturb, or otherwise function in the immediate vicinity of any identified lead in paint, take appropriate continuous measures as necessary to protect all building occupants from the risk of exposure to lead. Such measures shall include the procedures and methods described herein, and compliance with regulations of applicable Federal, State, and local agencies.

PART 2 - PRODUCTS

NOT USED

PART 3 - EXECUTION

3.1 METHODS OF COMPLIANCE

A. The Contractor shall adhere to the Lead Compliance Program and Lead Waste Management Plan submitted.

3.2 PROJECT COMPLETION

A. The Abatement Contractor shall remove all equipment, supplies, and waste from the project site.

B. The project will be considered complete when all required submittals have been received and approved.

END OF SECTION 02 83 00

SECTION 02 84 00 - POLYCHLORINATED BIPHENYL (PCB) EQUIPMENT REMOVAL AND DISPOSAL

PART 1 - GENERAL

1.1 SCOPE

A. Work Includes:

1. The work covered by this Section includes the furnishing of all materials and equipment and the performing of all labor for the removal and disposal of Polychlorinated Biphenyl (PCB) equipment as reported in the Limited Hazardous Materials Survey, Youth Detention Center Project, DPSCS #KT-000-110-C01, 926 Greenmount Avenue, Baltimore, Maryland 21202, dated December 24, 2014. The location(s) and type(s) of PCB equipment known to be present at the worksite are presented in the specifications.

2. Quantities presented in this Section are estimates only. The Contractor shall field verify quantities prior to submitting a bid or accept the estimates as accurate.

1.2 RELATED SECTIONS AND DOCUMENTS

A. Related Sections:

1. Section 00 73 19 – Health and Safety Requirements

2. Section 02 76 00 – Abatement Monitoring

B. Related Documents:

1. Drawings and general provisions of the Contract, including General Conditions, apply to this Section.

2. Limited Hazardous Materials Survey, Youth Detention Center Project, DPSCS #KT-000-110-C01, 926 Greenmount Avenue, Baltimore, Maryland 21202, dated December 24, 2014, EBA Engineering, Inc.

1.3 REFERENCES AND APPLICABLE STANDARDS AND GUIDELINES

A. The most recent edition of a relevant regulation, standard, or code shall be in effect. Where a conflict exists between the regulations, standards, codes, or these specifications, the more stringent requirements shall be utilized.

B. It shall be the duty and responsibility of the General Contractor and all of its Subcontractors to adhere to all regulations (Federal, State, and local) impacting this work including but not limited to:

1. Federal:

    a. U.S. Department of Labor, Occupational Safety and Health Administration (OSHA)

        1) 29 CFR 1910.12 – Construction Work

        2) 29 CFR 1910.132 – General Requirements

        3) 29 CFR 1910.147 – Control of Hazardous Energy (lockout/tagout)

        4) 29 CFR 1910.1200 – Hazard Communication

        5) 29 CFR 1926.59 – Hazard Communication

        6) 29 CFR 1926.95-102 – Personal Protective Equipment (PPE)

    b. U.S. Environmental Protection Agency (EPA)

        1) 40 CFR 260 – Hazardous Waste Management System: General

        2) 40 CFR 261 – Identification and Listing of Hazardous Waste

        3) 40 CFR 263 – Standards Applicable to Transporters of Hazardous Waste

        4) 40 CFR 271 – Requirements For Authorization of State Hazardous Waste Programs

        5) 40 CFR 761 – Polychlorinated Biphenyls (PCBs) Manufacturing, Processing, Distribution in Commerce, and Use Prohibitions

    c. U. S. Department of Transportation (DOT)

        1) 49 CFR 171-180 – General Awareness and Training Requirements for Handlers, Loaders, and Drivers

2. State:

    a. Code of Maryland Regulations (COMAR)

        1) COMAR 09.12 – Division of Labor and Industry

        2) COMAR 26.13 – Disposal of Controlled Hazardous Substances

1.4 DEFINITIONS

A. Terms defined by EPA Regulation 40 CFR 761 have the same meaning when used in this Section.

1.5 SUBMITTALS

A. Prior to commencement of work, submit to the Engineer the items listed as follows for review. Work shall not start until these submittals are returned with the Engineer's written approval indicating that the submittal is returned for unrestricted use.

1. Work Plan – Describe work procedures to be used for this portion of this project. The Work Plan shall include but not be limited to:

a. EPA Identification Number of waste hauler, if required.

b. Name and address of waste disposal facility where hazardous waste materials are to be disposed including:

1) Contact person, cell phone number, and e-mail address.

2) Copy of state license and permit.

3) Disposal facility permits.

c. Copy of forms required by state and local agencies.

d. Sample of disposal label to be used.

e. Documentation estimating the quantity of waste to be generated over the duration of the project and the Contractor's plan to store that waste.

f. Contractor statement indicating final disposition of equipment will be recycling.

g. Describe spill response procedures.

2. Liability insurance certificate with the statement of coverage that indicates pollution coverage is included. Occurrence type insurance is required. Minimum coverage shall be at least $1,000,000 per occurrence.

B. During work, the Contractor shall submit the following to the Engineer:

1. Copies of all waste manifests on the same day that the waste is picked up.

C. Upon completion of work, the Contractor shall submit the following to the Engineer:

1. Final waste disposal manifests signed by the waste disposal/recycling facility.

2. Transporter certification of notification to EPA of their PCB waste and stored chemical activities and EPA Identification Numbers if required.

3. Certificate of Decontamination, if required.

4. Certificate of Disposal and/or Recycling.

5. Testing results (if any).

1.6 PCB HEALTH RISKS

A. Where in the performance of the work, workers, supervisory personnel, subcontractors, or consultants may encounter, disturb, or otherwise function in the immediate vicinity of any identified PCBs, take appropriate continuous measures as necessary to protect all building occupants from the risk of exposure to PCBs. Such measures shall include the procedures and methods described herein, and compliance with regulations of applicable Federal, State, and local agencies.

PART 2 - PRODUCTS

2.1 MATERIALS AND EQUIPMENT

A. Provide in quantities necessary to accomplish work of this Section.

1. Disposal Bags: 6-mil thick leak tight polyethylene bags.

2. Small Quantity Storage Containers: Five (5) gallon or less capacity for small quantity waste segregation, manufactured with structurally durable materials compatible with the hazardous waste type(s) used.

3. DOT Hazardous Waste Disposal Drums: In accordance with 49 CFR 173, 178, and 179.

4. DOT Hazardous Waste Labels: In accordance with 49 CFR.

2.2 PERSONAL PROTECTIVE EQUIPMENT

A. Person(s) conducting the removal of equipment known to contain or presumed to contain PCBs are required to be aware of the possible health hazards present and wear appropriate personal protective equipment (PPE) that includes but is not limited to:

1. Chemical resistant eye goggles.

2. Disposable fully-body coveralls.

3. Rubber boots.

4. Neoprene gloves (Note: gloves made of natural rubber latex and polyethylene materials are not acceptable).

PART 3 - EXECUTION

3.1 PCB EQUIPMENT TYPE(S) AND ESTIMATED QUANTITIES

A. Please refer to the Hazardous Materials Summary Table in the drawings.

3.2 PROCEDURES FOR REMOVAL OF PCB EQUIPMENT

A. Light Ballast

1. Power, if applicable, to the PCB equipment shall be discontinued before any work is started. Follow 29 CFR 1910.147, Control of Hazardous Energy (lockout/tagout) after electrical power is disabled.

2. After terminating the power, the ballast shall be removed from service as follows:

a. All wires connecting the ballast to the fixture shall be disconnected.

b. After the connecting wires have been disconnected, the bolts or screws that hold the ballast in position are to be loosened.

c. While loosening the bolts or screws, the person removing the ballast is to maintain a firm grip on the ballast in order to prevent the ballast from falling and creating a spill situation.

d. When the bolts or screws have been removed and the ballast has been dislodged from the light fixture, it must be placed into a storage/disposal container/drum immediately.

e. Proceed to the next light fixture, and repeat the removal procedure.

3.3 STORAGE AND TRANSPORTATION OF PCB EQUIPMENT

A. Storage and disposal of PCB equipment shall be conducted in accordance with all applicable requirements listed in 40 CFR 761 Subpart D (Storage and Disposal), specifically Section 761.65 (Storage for disposal); 40 CFR 260, 261, et al. (Hazardous Waste Management, including but not limited to General, Identification, Listing, Standards, etc.); 40 CFR 271 (Requirements For Authorization of State Hazardous Waste Programs); and DOT regulations 49 CFR Subchapter C Part 171, 173, 178, and 179 (Hazardous Materials Regulations).

B. Before shipment of the waste materials, an EPA Uniform Hazardous Waste Manifest must be filled out as required by the EPA 40 CFR 260, 261, et al. This manifest will contain information regarding the type and quantity of waste, the Generator/Owner, the Transporter, and the ultimate destination of the waste. Copies of this manifest are available from landfills and other hazardous material disposal sites.

1. The Transporter of the materials must be a licensed hazardous waste carrier capable of handling this specific material.

2. Each party involved in any part of the generation, transportation, and disposal of the waste material must be given and keep available a copy of the shipping manifest. Copies are to be kept at least three years after receipt of disposal certificate.

3.4 DISPOSAL OF PCB EQUIPMENT

A. The PCB equipment referenced in this specification must be disposed in accordance with 40 CFR 761.

3.5 LABELING OF WASTE CONTAINERS

A. Label waste containers with the following:

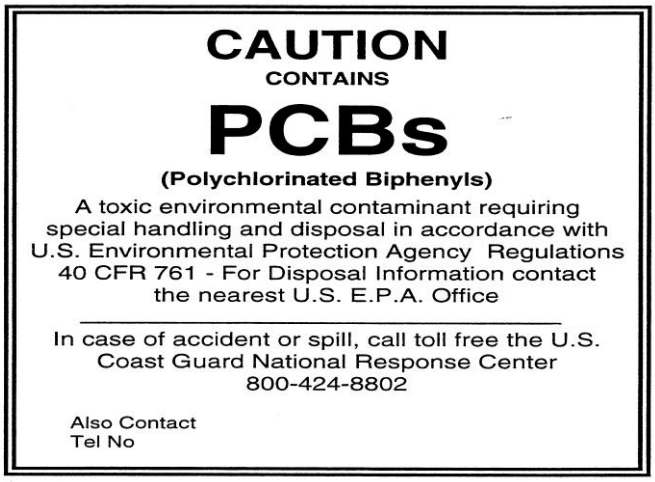
1. Date the item was placed in storage and the name of the cognizant activity/building.

2. A Non-RCRA Hazardous Waste Label with the Shipper's name, address, and contents should be affixed to container prior to shipment.

3. Marking Formats

a. Two formats shall be used for marking. These marks are known in the environmental regulations as the large PCB mark (ML) and the small PCB mark (Ms). A description of each mark is as follows:

1) Large PCB Mark: The ML mark consists of letters and striping on a white or yellow background and shall be sufficiently durable to equal or exceed the life (including storage for disposal) of the PCB article, PCB equipment, or PCB container. The mark is square and must measure at least 6 inches on each side. If the PCB article or PCB equipment is too small to accommodate this size, the mark may be reduced in size to a minimum of 2 inches on each side.

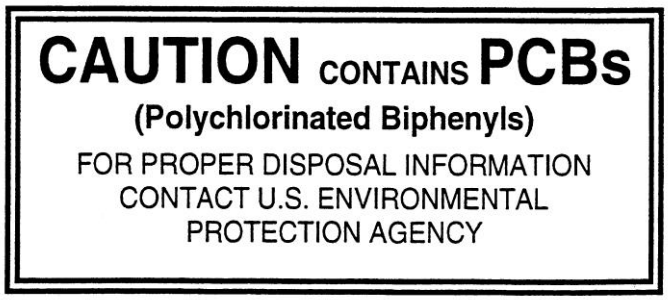


2) Small PCB Mark: The Ms mark consists of letters and striping on a white or yellow background, and shall be sufficiently durable to equal or exceed the life (including storage for disposal) of the PCB article, PCB equipment, or PCB container. The mark is rectangular and measures 1 inch by 2 inches. If the PCB article or PCB equipment is too small to accommodate this size, the mark may be reduced in size to a minimum of 0.4 inch by 0.8 inch.

b. All PCB transformers (transformers containing 500 ppm or greater PCBs) must be marked. Marking of PCB-contaminated transformers (transformers containing between 50 and less than 500 ppm PCBs) is not required.

c. All marks must be placed in a position on the exterior of the transformer so that the marks can be easily read by persons inspecting.

d. If the PCB transformer is too small to accommodate the smallest allowable of the ML mark, then the Ms mark may be used.



3.6 IDENTIFICATION NUMBER

A. Federal regulations 40 CFR 761 and 40 CFR 263 require that Generators, Transporters, Commercial Stores, and Disposers of PCBs and hazardous waste possess EPA Identification Numbers. The Contractor shall verify whether the Owner has an EPA Identification Number for the work to be performed as part of this specification. The Contractor shall also insure that the Owner has an EPA Identification Number for waste before shipment. If not, the Contractor shall assist the Owner in obtaining an EPA Identification Number from MDE prior to commencement of removal work.

3.7 TRANSPORTER CERTIFICATION

A. Comply with disposal and transportation requirements outlined in 40 CFR 761 and 40 CFR 263. Before transporting the waste, the Transporter shall sign and date the manifest acknowledging acceptance of the waste from the Owner and/or Owner's representative. Return a Transporter and Generator signed copy of the manifest to the Owner and/or Owner's representative before leaving the job site. Ensure that the manifest accompanies the waste at all times.

3.8 RECORD KEEPING

A. All record keeping shall be done in accordance with all applicable requirements listed in 40 CFR 761.180, General Records and Monitoring and 40 CFR 761 Subpart J, Records and Reports.

B. All paperwork associated with the removal, transportation, and disposal of the PCB equipment is required to be kept by the generator/owner for a period of no less than three (3) years after the removal and include the following:

1. Generator/Owner Information.

2. Equipment Information (Make, Model, ID number, & total number of each type).

3. Waste Transportation Company Information.

4. Copy of the Uniform Hazardous Waste Manifest.

5. Waste Disposal Site/Facility Information.

6. Reports of Analysis (if applicable).

7. Additional information as required by 40 CFR 761, Subpart J Records and Reports, Section 761.180 General Records and monitoring.

3.9 PROJECT COMPLETION

A. The Abatement Contractor shall remove all equipment, supplies, and waste from the project site.

B. The project will be considered complete when all required submittals have been received and approved.

END OF SECTION 02 84 00

SECTION 028700 - OZONE-DEPLETING COMPOUNDS (ODCS) EQUIPMENT REMOVAL AND DISPOSAL

PART 1 - GENERAL

1.1 SCOPE

A. Work Includes:

1. The work covered by this Section includes the furnishing of all materials and equipment and the performing of all labor for the removal and disposal of equipment containing Ozone-Depleting Compounds (ODCs) as reported in the Limited Hazardous Materials Survey, Youth Detention Center Project, DPSCS #KT-000-110-C01, 926 Greenmount Avenue, Baltimore, Maryland 21202, dated December 24, 2014. The location(s) and type(s) of equipment containing ODCs known to be present at the worksite are presented in the specifications.

2. Quantities presented in this Section are estimates only. The Contractor shall field verify quantities prior to submitting a bid or accept the estimates as accurate.

1.2 RELATED SECTIONS AND DOCUMENTS

A. Related Section:

1. Section 00 73 19 – Health and Safety Requirements

B. Related Documents:

1. Drawings and general provisions of the Contract, including General Conditions, apply to this Section.

2. Limited Hazardous Materials Survey, Youth Detention Center Project, DPSCS #KT-000-110-C01, 926 Greenmount Avenue, Baltimore, Maryland 21202, dated December 24, 2014, EBA Engineering, Inc.

1.3 REFERENCES AND APPLICABLE STANDARDS AND GUIDELINES

A. The most recent edition of a relevant regulation, standard, or code shall be in effect. Where a conflict exists between the regulations, standards, codes, or these specifications, the more stringent requirements shall be utilized.

B. It shall be the duty and responsibility of the General Contractor and all of its Subcontractors to adhere to all regulations (Federal, State, and local) impacting this work including but not limited to:

1. Federal:

   a. U.S. Department of Labor, Occupational Safety and Health Administration (OSHA)

      1) 29 CFR 1910.12 – Construction Work

      2) 29 CFR 1910.132 – General Requirements

      3) 29 CFR 1910.147 – Control of Hazardous Energy (lockout/tagout)

      4) 29 CFR 1910.1200 – Hazard Communication

      5) 29 CFR 1926.59 – Hazard Communication

      6) 29 CFR 1926.95-102 – Personal Protective Equipment (PPE)

   b. U.S. Environmental Protection Agency (EPA)

      1) 40 CFR 82 – Protection of Stratospheric Ozone

1.4 DEFINITIONS

A. Ozone-Depleting Compounds mean a group of chemicals that include chlorofluorocarbons-CFC, hydrochlorofluorocarbons-HCFC, and other halogenated chemicals such as halons that are found to contribute stratospheric ozone layer depletion.

B. Appliance means any device, which contains and uses a Class I (CFC) or Class II (HCFC) substance as a refrigerant and which is used for household or commercial purposes, including any air conditioner, refrigerator, chiller, or freezer.

C. Opening an appliance means any service, maintenance, repair, or disposal of an appliance that would release refrigerant from the appliance to the atmosphere unless the refrigerant was recovered previously from the appliance. Connecting and disconnecting hoses and gauges to and from the appliance to measure pressures within the appliance and to add refrigerant to or recover refrigerant from the appliance shall not be considered "opening."

D. Technician means any person who performs maintenance, service, or repair that could reasonably be expected to release Class I (CFC) or Class II (HCFC) substances from appliances, except for motor vehicle air conditioners (MVACs), into the atmosphere. Technician also means any person performing disposal of appliances, except for small appliances, MVACs, and MVAC-like appliances that could be reasonably expected to release Class I or Class II refrigerants from appliances into the atmosphere.

E. Reclaim means to reprocess refrigerant to all of the specifications in Appendix A of 40 CFR Part 82, Subpart F (based on Air-Conditioning, Heating, and Refrigeration Institute (AHRI) Standard 700-1993, Specification for Fluorocarbons and Other Refrigerants) that are applicable to that refrigerant and to verify that the refrigerant meets these specifications using the analytical methodology prescribed in Section 5 of Appendix A of 40 CFR Part 82, Subpart F. Reclamation requires specialized machinery. The

technician will recover the refrigerant and then send it either to a general reclaimer or back to the refrigerant manufacturer.

1.5 SUBMITTALS

A. Prior to commencement of work, submit to the Engineer the items listed as follows for review. Work shall not start until these submittals are returned with the Engineer's written approval indicating that the submittal is returned for unrestricted use.

1. Work Plan – Describe work procedures to be used for this portion of this project. The Work Plan shall include the method that will be used to remove Ozone-Depleting Compounds from each type of appliance. Also, include the name and address of the facility where the equipment will be recycled.

2. Certifications – Provide copies of Technician Certifications.

3. Liability insurance certificate with the statement of coverage that indicates pollution coverage is included. Occurrence type insurance is required. Minimum coverage shall be at least $1,000,000 per occurrence.

B. Upon completion of work, the Contractor shall submit the following to the Engineer:

1. Documentation of all equipment from which ODCs were reclaimed onsite.

2. Documentation of all equipment from which ODCs were reclaimed offsite.

1.6 PROHIBITION ON VENTING

A. Under EPA Regulation 40 Part 82, individuals are prohibited from knowingly venting Ozone-Depleting Compounds into the atmosphere while maintaining, servicing, repairing, or disposing of appliances.

1.7 SERVICE PRACTICE REQUIREMENTS

A. Evacuation Requirements

1. Air-conditioning and refrigeration equipment must be evacuated to EPA-required vacuum level prior to opening. If the technician's recovery or recycling equipment was manufactured on or after November 15, 1993, then an EPA-approved equipment testing organization must certify the equipment. Refrigerant recovery and recycling equipment manufactured before November 15, 1993, may be grandfathered if it meets the standard detailed in 40 CFR 82.158.

B. Reclamation Requirement

1. EPA has established that refrigerant recovered and/or recycled can be returned to the same system or other systems owned by the same person without restriction. If refrigerant changes ownership, however, that refrigerant must be reclaimed.

C. Equipment Certification

1. EPA has established a certification program for refrigerant recovery and recycling equipment. EPA requires that persons servicing or disposing of air-conditioning and refrigeration equipment certify to the EPA Region I Office that they have acquired (built, bought, or leased) recovery or recycling equipment and that they are complying with the applicable requirements of this rule. Owners do not have to send in a new form each time they add recycling or recovery equipment to their inventory. Certification of refrigerant recovery and recycling equipment manufactured on or after November 15, 1993 can be identified by a label reading "This equipment has been certified by AHRI and Underwriters Laboratories, Inc. (UL) to meet EPA's minimum requirements for recycling and/ or recovery equipment intended for use." Lists of certified equipment might be obtained by contacting AHRI at 703-524-8800 and UL at 708-272-8800 ext. 42371.

D. Technician Certification

1. EPA has established a technician certification program for technicians who perform maintenance, service, repair, or disposal that could be reasonably expected to release refrigerants into the atmosphere. All technicians must be certified through the EPA-approved training program.

1.8 DISPOSAL OF EQUIPMENT CONTAINING OZONE-DEPLETING COMPOUNDS

A. All major equipment containing Ozone-Depleting Compounds (e.g., chillers) must have their Ozone-Depleting Compounds recovered prior to dismantling. Small units that will enter the waste stream intact, such as freezers and window air conditioners, shall have their refrigerant recovered prior to the final disposal of the equipment.

B. If refrigerants are recycled or reclaimed, they are not considered hazardous under federal law. In addition, used oils contaminated with CFCs are not hazardous on the condition that:

1. They are not mixed with other waste.

2. They are subject to CFC recycling or reclamation.

3. They are not mixed with used oils from other sources.

4. Used oils that contain CFCs after the CFC reclamation procedure, however, are subject to specific limits for used oil fuels if these oils are destined for burning.

C. After refrigerants have been recovered, evacuated equipment shall be recycled.

1.9 RECORD KEEPING

A. All records must be kept at least 3 years.

B. Contractors disposing of small appliances must maintain a copy of signed statements from the appliance supplier (e.g., the original owner or disposal contractor) if the supplier indicates that he has removed the refrigerant from the appliance.

PART 2 - PRODUCTS

NOT USED

PART 3 - EXECUTION

3.1 EQUIPMENT TYPE(S) CONTAINING OZONE-DEPLETING COMPOUNDS AND ESTIMATED QUANTITIES

A. Please refer to the Hazardous Materials Summary Table in the drawings.

3.2 METHODS OF COMPLIANCE

A. The Contractor shall adhere to the Ozone-Depleting Compounds Work Plan submitted.

3.3 PROJECT COMPLETION

A. The Abatement Contractor shall remove all equipment, supplies, and waste from the project site.

B. The project will be considered complete when all required submittals have been received and approved.

END OF SECTION 02 87 00

SECTION 02 88 00 - UNIVERSAL WASTE REMOVAL AND DISPOSAL

PART 1 - GENERAL

1.1 SCOPE

A. Work Includes:

1. The work covered by this Section includes the furnishing of all materials and equipment and the performing of all labor for the removal and disposal of Universal Wastes (UWs) as reported in the Limited Hazardous Materials Survey, Youth Detention Center Project, DPSCS #KT-000-110-C01, 926 Greenmount Avenue, Baltimore, Maryland 21202, dated December 24, 2014. The location(s) and type(s) of UW known to be present at the worksite are presented in the specifications.

2. Quantities presented in this Section are estimates only. The Contractor shall field verify quantities prior to submitting a bid or accept the estimates as accurate.

1.2 RELATED SECTIONS AND DOCUMENTS

A. Related Sections:

1. Section 00 73 19 – Health and Safety Requirements

2. Section 02 89 00 – Abatement Monitoring

B. Related Documents:

1. Drawings and general provisions of the Contract, including General Conditions, apply to this Section.

2. Limited Hazardous Materials Survey, Youth Detention Center Project, DPSCS #KT-000-110-C01, 926 Greenmount Avenue, Baltimore, Maryland 21202, dated December 24, 2014, EBA Engineering, Inc.

1.3 REFERENCES AND APPLICABLE STANDARDS AND GUIDELINES

A. The most recent edition of a relevant regulation, standard, or code shall be in effect. Where a conflict exists between the regulations, standards, codes, or these specifications, the more stringent requirements shall be utilized.

B. It shall be the duty and responsibility of the General Contractor and all of its Subcontractors to adhere to all regulations (Federal, State, and local) impacting this work including but not limited to:

1. Federal:

    a. U.S. Department of Labor, Occupational Safety and Health Administration (OSHA)

        1) 29 CFR 1910.12 – Construction Work

        2) 29 CFR 1910.132 – General Requirements

        3) 29 CFR 1910.134 – Respiratory Protection

        4) 29 CFR 1910.147 – Control of Hazardous Energy (lockout/tagout)

        5) 29 CFR 1910.1200 – Hazard Communication

        6) 29 CFR 1926.59 – Hazard Communication

        7) 29 CFR 1926.95-102 – Personal Protective Equipment (PPE)

    b. U.S. Environmental Protection Agency (EPA)

        1) 40 CFR 260 – Hazardous Waste Management System: General

        2) 40 CFR 268 – Land Disposal Restrictions: General

        3) 40 CFR 273 – Universal Waste Regulations

    c. U.S. Department of Transportation (DOT)

        1) 49 CFR 171-180 – General Awareness and Training Requirements for Handlers, Loaders, and Drivers

2. State:

    a. Code of Maryland Regulations (COMAR)

        1) COMAR 26.13 – Disposal of Controlled Hazardous Substances

1.4 DEFINITIONS

A. Terms defined by EPA Regulation 40 CFR 273 and by Code of Maryland Regulation 26.13 have the same meaning when used in this Section.

1.5 SUBMITTALS

A. Prior to commencement of work, submit to the Engineer the items listed as follows for review. Work shall not start until these submittals are returned with the Engineer's written approval indicating that the submittal is returned for unrestricted use.

1. Work Plan – Describe work procedures to be used for this portion of this project. The Work Plan shall include but not be limited to:

a. Project contact sheet for key personnel including names, cell phone numbers, and e-mail addresses for:

1) General Contractor.

2) Abatement Contractor.

b. Describe work practices for removal of each type of universal waste.

c. List all required personal protective equipment (PPE).

d. Describe lockout/tagout procedures.

e. Describe temporary waste storage procedures. Include labeling of containers and where the containers will be stored.

f. Describe transportation and disposal procedures. Include the following:

1) A sample of the disposal label that will be used.

2) The name and address of the waste disposal facility where waste materials are to be recycled/disposed.

3) Documentation estimating the quantity of waste (drums, containers, etc.) to be generated over the duration of the project.

4) Contractor statement indicating final disposition of universal wastes will be recycling.

g. Describe spill response procedures.

2. Liability insurance certificate with the statement of coverage that indicates pollution coverage is included. Occurrence type insurance is required. Minimum coverage shall be at least $1,000,000 per occurrence.

B. During work, the Contractor shall submit the following to the Engineer:

1. Copies of all waste manifests on the same day that waste is picked up.

C. Upon completion of work, the Contractor shall submit the following to the Engineer:

1. Final waste disposal manifests signed by the waste disposal/recycling facility.

1.6 UNIVERSAL WASTE HEALTH RISKS

A. Where in the performance of the work, workers, supervisory personnel, subcontractors, or consultants may encounter, disturb, or otherwise function in the immediate vicinity of any identified UW, take appropriate continuous measures as necessary to protect all building occupants from the risk of exposure to UW. Such measures shall include the procedures and methods described herein, and compliance with regulations of applicable Federal, State, and local agencies.

PART 2 - PRODUCTS

2.1 MATERIALS AND EQUIPMENT

A. Provide in quantities necessary to accomplish work in this Section.

1. Disposal Bags: 6-mil thick leak tight polyethylene bags

2. Small Quantity Storage Containers: Five (5) gallon or less capacity for small quantity waste segregation, manufactured with structurally durable materials compatible with the hazardous waste type(s) used

3. DOT Waste Disposal Drums

4. Small Mercury Spill Cleanup Kit: Items needed for a small mercury cleanup kit include the following (Note: Small Mercury Spill Cleanup Kits are available for purchase):

a. 1 box of ziplock-type bags;

b. Trash bags (2 to 6 mil thick);

c. Neoprene gloves (Note: gloves made of natural rubber latex and polyethylene materials are not acceptable.);

d. Paper towels;

e. Cardboard or squeegee;

f. Eyedropper;

g. Duct tape, or shaving cream and small paint brush;

h. Flashlight; and

i. Powdered sulfur or zinc.

5. Acid Waste Cleanup Kit

2.2 PERSONAL PROTECTIVE EQUIPMENT

A. Person(s) conducting the removal of universal wastes are required to be aware of the possible health hazards present and wear appropriate personal protective equipment (PPE) that includes but is not limited to:

1. Chemical resistant eye goggles

2. Disposable coveralls

3. Rubber boots

4. Neoprene gloves (Note: gloves made of natural rubber latex and polyethylene materials are not acceptable)

PART 3 - EXECUTION

3.1 UNIVERSAL WASTE TYPE(S) AND ESTIMATED QUANTITIES

A. Please refer to the Hazardous Materials Summary Table in the drawings.

3.2 METHODS OF COMPLIANCE

A. The Contractor shall adhere to the Universal Waste Work Plan submitted.

3.3 PROJECT COMPLETION

A. The Abatement Contractor shall remove all equipment, supplies, and waste from the project site.

B. The project will be considered complete when all required submittals have been received and approved.

END OF SECTION 02 88 00

SECTION 02 89 00 - ABATEMENT MONITORING

PART 1 - GENERAL

1.1 SCOPE

A. The General Contractor shall retain an independent Industrial Hygiene Contractor to perform the work of this Section.

B. Work Includes:

1. Monitoring asbestos abatement and verifying that all asbestos has been removed prior to demolition.

2. Monitoring lead-safe work practices and impact of work to lead coatings.

3. Monitoring universal waste abatement and verifying that all universal waste has been removed prior to demolition.

4. Monitoring PCB abatement and verifying that all PCBs have been removed prior to demolition.

5. Monitoring dust emissions during demolition.

1.2 RELATED SECTIONS AND DOCUMENTS

A. Related Sections:

1. Section 00 73 19 – Health and Safety Requirements

2. Section 02 82 00 – Asbestos Abatement

3. Section 02 83 00 – Impact to Lead Painted Surfaces, Removal and Disposal

4. Section 02 88 00 – Universal Waste Removal and Disposal

5. Section 028400 – Polychlorinated Biphenyl (PCB) Equipment Removal and Disposal

B. Related Documents:

1. Drawings and general provisions of the Contract, including General Conditions, apply to this Section.

2. Limited Hazardous Materials Survey, Youth Detention Center Project, DPSCS #KT-000-110-C01, 926 Greenmount Avenue, Baltimore, Maryland 21202, dated December 24, 2014, EBA Engineering, Inc.

1.3 REFERENCES AND APPLICABLE STANDARDS AND GUIDELINES

A. The most recent edition of a relevant regulation, standard, or code shall be in effect. Where a conflict exists between the regulations, standards, codes, or these specifications, the more stringent requirements shall be utilized.

B. It shall be the duty and responsibility of the General Contractor and all of its Subcontractors to adhere to all regulations (Federal, State, and local) impacting this work including but not limited to:

1. Federal:

a. U.S. Department of Labor, Occupational Safety and Health Administration (OSHA)

1) 29 CFR 1910.12 – Construction Work

2) 29 CFR 1910.132 – General Requirements

3) 29 CFR 1910.134 – Respiratory Protection

4) 29 CFR 1910.147 – Control of Hazardous Energy (lockout/tagout)

5) 29 CFR 1910.1001 – Asbestos General Industry Standard

6) 29 CFR 1926.33 – Access to Employee Exposure and Medical Records

7) 29 CFR 1926.59 – Hazard Communication

8) 29 CFR 1926.62 – Lead

9) 29 CFR 1926.95-102 – Personal Protective Equipment (PPE)

10) 29 CFR 1926.103 – Respiratory Protection

4) 40 CFR 260 – Hazardous Waste Management System: General

5) 40 CFR 268 – Land Disposal Restrictions: General

6) 40 CFR 271 – Requirements For Authorization of State Hazardous Waste Programs

7) 40 CFR 273 – Universal Waste Regulations

8) 40 CFR 302 – Designation, Reportable Quantities, and Notification

9) EPA Guidance Document SW-846 Test Methods for Evaluating Solid Waste, Physical/Chemical Methods

c. U.S. Department of Transportation (DOT)

1) 49 CFR 170-180 – Hazardous Waste Transportation

2) 49 CFR 171-180 – General Awareness and Training Requirements for Handlers, Loaders, and Drivers

d. National Institute of Occupational Safety and Health (NIOSH)

1) NIOSH Manual of Analytical Methods (NMAM)

2. State:

a. Code of Maryland Regulations (COMAR)

1) COMAR 09.12 – Division of Labor and Industry

2) COMAR 26.11.21 – Control of Asbestos

3) COMAR 26.11.23 – Asbestos Accreditation of Individuals

4) COMAR 26.13 – Disposal of Controlled Hazardous Substances

5) COMAR 26.16 – Lead

1.4 INDUSTRIAL HYGIENE CONTRACTOR REQUIREMENTS

A. The Industrial Hygiene Contractor shall demonstrate prior experience with performing similar monitoring projects. Requirements for prior experience are as follows:

1. Industrial Hygiene Contractor must have a minimum of three years of experience monitoring abatement projects.

2. Industrial Hygiene Contractor must have monitored abatement projects for asbestos, lead, universal waste, and PCBs.

3. Industrial Hygiene Contractor must have monitored abatement on two or more projects of similar size and scope during the past three years.

4. Industrial Hygiene Contractor must provide three project references including at least two of similar size and scope.

B. The Industrial Hygiene Contractor shall have a written Quality Assurance / Quality Control Program (QA/QC Program) with standard operating procedures for the work of this Section. The QA/QC Program shall detail procedures for performing all quality

control required by the methods selected for sampling and analysis and a means to verify that the quality control procedures are being executed.

C. The Industrial Hygiene Contractor shall have a Certified Industrial Hygienist responsible for quality control on this project. In addition the Certified Industrial Hygienist will be responsible for approving any plans and revised work procedures developed to address exceedances of control and action levels, respectively.

D. The Industrial Hygiene Contractor shall have an On-site Industrial Hygienist during all abatement activities. The On-site Industrial Hygienist shall have a minimum of 2 years of experience performing similar monitoring.

E. The On-site Industrial Hygienist shall be accredited in Maryland as an asbestos supervisor and an asbestos inspector and shall have training in asbestos monitoring in a course that is equivalent to NIOSH 582.

F. The On-site Industrial Hygienist shall be accredited in Maryland as a Lead Paint Inspector Technician or Risk Assessor.

G. The on-site Industrial Hygienist shall adhere to the General Contractor's Health and Safety Plan.

1.5 DEFINITIONS

A. Industrial Hygiene Contractor – Third party industrial hygiene consulting firm retained by the General Contractor to perform the duties described in this Section.

B. Certified Industrial Hygienist – A person certified by the American Board of Industrial Hygiene in the comprehensive practice of industrial hygiene.

C. On-Site Industrial Hygienist – The representative of the Industrial Hygiene Contractor who is present on site daily and has the primary responsibility for executing the work of this Section.

D. Control Level – The level of airborne contaminant that results in a Stop Work order being required.

E. Action Level – The level of airborne contaminant that results in a requirement that abatement contractor develop a plan of action to reduce the level of contaminant.

1.6 SUBMITTALS

A. Prior to commencement of work, submit to the Engineer the items listed as follows for review. Work shall not start until these submittals are returned with the Engineer's written approval indicating that the submittal is returned for unrestricted use.

1. A list including the names, cell phone numbers, and e-mail addresses for the Certified Industrial Hygienist and On-Site Industrial Hygienist. For each individual submit resumes, certificates of training, MDE accreditations, medical approval to wear a respirator, and fit test for a respirator.

2. A statement of qualification providing evidence that Industrial Hygiene Contractor has the experience required by Paragraph 1.4A of this Section. The statement shall include a point of contact, phone number, and e-mail address for each project referenced.

3. The Industrial Hygiene Contractor's written quality control program with a statement signed and sealed by the Certified Industrial Hygienist that the QA/QC Program has been reviewed and includes procedures for performing all quality control required by the methods selected for sampling and analysis and a means to verify that the quality control procedures are being executed.

B. During abatement activities, the Industrial Hygiene Contractor shall:

1. Immediately notify the General Contractor and Owner's Representative by telephone with a follow up e-mail if any of the following conditions occur:

a. Breach of containment.

b. Applicable control level is exceeded for contaminants in air.

c. Accident resulting in personal injury requiring medical attention.

d. Property damages of over $500.00.

C. Project Closeout Submittal shall include:

1. Copies of daily logs.

2. Containment inspection check list.

3. Final clearance check list for days when a final clearance inspection is performed.

4. Air sampling log for all samples collected.

5. Analytical report for all samples analyzed on-site and all certificates of analysis for samples analyzed at a contract laboratory.

6. Spreadsheet recording information on waste shipments including date, type and quantity of material shipped, and waste manifest number.

7. Incident investigation reports.

8. A statement issued by the Industrial Hygiene Contractor that all hazardous materials included in the specification have been removed, that wall penetrations and pipe chases have been inspected using destructive techniques and all asbestos in these locations has been removed, and the Industrial Hygiene Contractor is not aware of any hazardous materials remaining in the work area(s) with the exception of lead-based paint that will be left in place during abatement.

1.7 CONTROL LEVELS AND ACTION LEVELS

A. Inside Work Area:

1. The Control Level shall be 50% of the Maximum Use Concentration as defined by OSHA in 29 CFR 1910.134. If airborne concentrations for any one sample exceed this Control Level, work shall be stopped and a plan developed to address the exceedance. The plan must be approved by the Certified Industrial Hygienist. Do not recommence work until authorized in writing by the Certified Industrial Hygienist and the Owner's Representative.

2. The Action Level for any sample taken shall be 25% of the Maximum Use Concentration as defined by OSHA in 29 CFR 1910.134. If airborne concentrations for any one sample exceed the Action Level, the abatement contractor shall revise work procedures to lower airborne contaminant levels. If the Time Weighted Average (TWA) contaminant level for any work shift or 8-hour period exceeds the Action Level, contractor shall stop all work except corrective action. Do not recommence work until authorized, in writing, by the Certified Industrial Hygienist and the Owner's Representative.

B. Outside Work Area:

1. The Control Level shall be 50% of the Permissible Exposure Limit for the applicable contaminant. If airborne concentrations for any one sample exceed this Control Level, work shall be stopped and a plan developed to address the exceedance. The plan must be approved by the Certified Industrial Hygienist. Do not recommence work until authorized in writing by the Certified Industrial Hygienist and the Owner's Representative. If the high reading was the result of a failure of Work Area isolation measures, initiate the following actions:

   a. Immediately stop all abatement work.

   b. Contact project Certified Industrial Hygienist for direction.

   c. Notify Owner's Representative.

   d. Evaluate possible sources of contamination.

   e. Repair damaged containment.

   f. As directed by project Certified Industrial Hygienist, decontaminate surfaces outside of the containment that may have been contaminated.

   g. Collect outside sample.

   h. If outside sample passes, re-start abatement. If outside sample fails, repeat steps d. through g.

2. The Action Level shall be 25% of the Permissible Exposure Limit. If airborne concentrations for any one sample exceed the Action Level, the abatement contractor shall revise work procedures to lower airborne contaminant levels. If the Time Weighted Average (TWA) contaminant level for any work shift or 8 hour period exceeds the Action Level, contractor shall stop all work except corrective

action. Do not recommence work until authorized, in writing, by the Certified Industrial Hygienist and the Owner's Representative.

C. Fence Line:

1. The Control Level shall be 10% of the Permissible Exposure Limit for the applicable contaminant. If airborne concentrations for any one sample exceed this Control Level, work shall be stopped and a plan developed to address the exceedance. The plan must be approved by the Certified Industrial Hygienist. Do not recommence work until authorized in writing by the Certified Industrial Hygienist and the Owner's Representative. If the high reading was the result of a failure of Work Area isolation measures, initiate the following actions:

   a. Immediately stop all demolition work and abatement work.

   b. Contact project Certified Industrial Hygienist for direction.

   c. Notify Owner's Representative.

   d. Project Certified Industrial Hygienist to identify potential causes and prepare a plan for how to eliminate this condition.

   e. Execute Certified Industrial Hygienist prepared plan.

2. The Action Level shall be 5% of the Permissible Exposure Limit. If airborne concentrations for any one sample exceed the Action Level, the abatement contractor shall revise work procedures to lower airborne contaminant levels. If the Time Weighted Average (TWA) contaminant level for any work shift or 8 hour period exceeds the Action Level, contractor shall stop all work except corrective action. Do not recommence work until authorized, in writing, by the Certified Industrial Hygienist and the Owner's Representative.

1.8 AUTHORITY TO STOP WORK

A. The Owner, Industrial Hygiene Contractor, or the Engineer have the authority to issue a work stoppage at any time during the abatement work if the Owner, Industrial Hygiene Contractor, or Engineer deems that conditions are in violation of these specifications or any Federal, State, or local regulations.

B. Delays, stand-by time, and expenses necessary for the General Contractor to take corrective action, resolve any violations of these specifications or applicable laws shall be at the General Contractor's expense.

PART 2 - PRODUCTS

2.1 SAMPLING

A. Flow Measurement Devices shall have had the flow rate checked within the past 3 months and at least every 3 months during the project against a primary standard that is traceable to a standard at the National Institute of Standards and Technology (NIST).

B. Pumps shall be capable of maintaining the required flow rate +/- 10% for the duration of the sampling period.

C. Asbestos Cassettes

1. PCM cassettes shall be 28 mm cassettes with 0.8 micron MCEF filters.

2. TEM cassettes shall be 28 mm cassettes with 0.45 micron MCEF filters.

D. Lead cassettes shall be 37 mm cassettes with 0.8 micron MCEF filters.

E. Other parameters shall use sampling systems specified by the method.

F. A watch or cell phone to determine start and stop times of each sample.

2.2 DIRECT READING METERS

A. Direct reading meters shall have been calibrated as recommended by the manufacturer.

B. Daily Check:

1. A daily bump check for all meters used to measure gas concentrations shall be performed at the start and end of the day for all gases monitored.

2. An XRF shall have the calibration verified with check samples every 4 hours.

3. Other meters shall be field checked, if recommended by the manufacturer.

2.3 PCM ANALYSIS ON SITE

A. Microscope shall be equipped with a phase contrast diaphragm, a Walton-Becket graticule, and a telescope ocular.

B. An HSE/NPL slide shall be available for regular checking of the resolution of the scope.

C. An acetone vaporizer shall be used to dissolve filter membrane.

D. Blind quality control slides shall be included for analysis each day.

2.4 PERSONAL PROTECTIVE EQUIPMENT

A. Respirator and cartridge combination as required by abatement contractor’s respiratory protection plan.

B. Steel-toed boots.

C. Hard-hat.

D. Safety glasses.

E. Tyvek Suits/Gloves.

F. Other PPE required by the General Contractor.

PART 3 - EXECUTION

3.1 HAZARDOUS MATERIALS INSPECTIONS

A. The Industrial Hygiene Contractor shall be familiar with the hazardous materials identified within the Limited Hazardous Materials Survey, any addendum letters, and the Project Plans & Specifications.

B. The Industrial Hygiene Contractor shall be responsible for verifying that all materials identified in the Project Plans & Specifications are abated.

C. The Industrial Hygiene Contractor shall be responsible for identifying suspect hazardous materials not reported in the Project Plans & Specifications. Areas of particular importance are through wall penetrations, pipe chases behind walls, and unsampled exterior and roofing materials. Inclusion of 10 bulk samples for asbestos shall be required. A spreadsheet shall be developed that reports all suspect hazardous materials identified, results of sampling, and removal date.

D. At the conclusion of the abatement, the Industrial Hygiene Contractor shall issue a statement that all hazardous materials included in the Specifications have been removed, that wall penetrations and pipe chases have been inspected using destructive techniques and all asbestos in these locations has been removed, and that Industrial Hygiene Contractor is not aware of any hazardous materials remaining in the work area(s) with the exception of lead-based paint that will be left in place during demolition.

3.2 WORK PRACTICE INSPECTIONS

A. Asbestos:

The On-Site Industrial Hygienist shall be on-site during all asbestos abatement activities and perform the following duties:

1. Review Work Plan submitted by General Contractor and accepted by the Owner’s Representative.

2. Report any observations of failure of the asbestos abatement contractor to comply with the accepted Work Plan or any Federal or State regulations to the abatement contractor supervisor. If they are not immediately corrected, report the observation to the General Contractor and to the Owner’s Representative with a recommendation that a stop work order be issued.

3. Issue a stop work order whenever asbestos concentrations in air exceed a Control Limit or whenever there is an immediate threat to the health or safety of a worker, the public, or the environment.

4. Verify that each asbestos worker and asbestos supervisor has a valid asbestos photo identification card with them each day that asbestos abatement is performed. Maintain a checklist of workers present each day with a mark indicating that their card was verified that day.

5. Complete a pre-abatement checklist for each containment indicating that all required elements are appropriately installed.

6. Complete a daily checklist for each containment indicating that all required elements are appropriately installed. This checklist shall include verifying negative pressure at a minimum of every 2 hours during the day.

7. Maintain a daily log of abatement contractor's activities. A log of the On-Site Industrial Hygienist's activities is not required. Log must include:

    a. Start and stop time.

    b. Number of abatement workers and supervisors on site.

    c. A separate section for each containment in progress with a description of work accomplished that day.

    d. A report on any incidents including but not limited to: loss of power, breach of containment, accidents, visit by MDE or MOSH inspector.

    e. A section for waste removal indicating quantity of waste removed and waste shipping record number.

8. Complete a post-abatement checklist to include visual inspection, verification of encapsulation, and whether final clearance samples pass or fail.

B. Impact to Lead-Containing Painted Surfaces:

1. Review Lead Compliance Program and Lead Waste Management Plans submitted by General Contractor and accepted by the Owner.

2. Report any observations of failure to comply with the accepted Plans or any Federal or State regulations to the worker's supervisor. If they are not immediately corrected, report the observation to the General Contractor and to the Owner's Representative with a recommendation that a stop work order be issued.

3. Issue a stop work order whenever lead concentrations in air exceed a Control Limit or whenever there is an immediate threat to the health or safety of a worker, the public, or the environment.

4. Verify that each worker and supervisor has a valid lead paint worker or supervisor photo identification card with them each day of work. Maintain a checklist of workers present each day with a mark indicating that their card was verified that day.

5. Inspect abatement contractor work practices for conformance with specification and Federal and State regulations.

6. Maintain a record of hazardous waste shipments including date shipped, quantity shipped, and shipping record number.

C. Universal Waste:

1. Review Work Plan submitted by the General Contractor and accepted by the Owner.

2. Verify that workers have received training in the hazards associated with the wastes.

3. Report any observations of failure of abatement contractor to comply with the submitted Work Plan or any Federal or State regulations to the supervisor of the abatement contractor. If they are not immediately corrected, report the observation to the General Contractor and to the Owner's Representative with a recommendation that a stop work order be issued.

4. Maintain a record of universal waste shipments including date shipped, quantity shipped, and shipping record number.

5. Verify that all universal wastes identified in this specification have been removed.

D. PCBs:

1. Review Work Plan submitted by the General Contractor and accepted by the Owner.

2. Verify that workers have received training in the hazards associated with PCBs.

3. Report any observations of failure of PCB contractor to comply with the submitted work plan or any Federal, State, or local regulations to the supervisor. If they are not immediately corrected, report the observation to the General Contractor and to the Owner with a recommendation that a stop work order be issued.

4. Collect samples, if requested, of any suspect PCB materials and have them analyzed at a contract laboratory.

5. Maintain a record of PCB waste shipments including date shipped, quantity shipped, and shipping record number.

6. Verify that all PCB equipment identified in this specification has been removed.

3.3 WORKER EXPOSURE MONITORING

A. Asbestos:

1. Collect daily exposure monitoring samples representative of the worker exposure for each class of worker performing Class I or Class II asbestos work.

2. Record all information required by 29 CFR 1926.1101 (n)(2).

3. Post results at the job site as soon as practical but at the latest 24 hours after receipt of results.

B. Lead:

1. Perform an initial exposure assessment for each task being performed.

2. Repeat exposure assessment at a minimum of once every three months.

3. Record all information required by 29 CFR 1926.62 (n)(1).

4. Post results at the job site as soon as practical but at the latest 24 hours after receipt of results.

3.4 AREA MONITORING TO EVALUATE CONTAINMENT EFFECTIVENESS

A. During asbestos abatement collect area samples from inside of the containment, near the exit from the decon, near the exit from a bagout (if used), and at the outlet from the negative air machine if accessible. The target volume for samples inside of the containment is 120 liters. The target volume for samples outside of the containment is 1200 liters. If the level of dust results in overloaded samples at these volumes, the target volume shall be decreased to a volume resulting in a dust loading that can be analyzed. Samples shall be analyzed on site and a file with all results shall be maintained on site.

3.5 FENCELINE MONITORING

A. During building demolition collect fence line samples at the four fence lines for the following parameters:

1. Respirable dust using a direct reading, real-time monitor. Data shall be collected at 1 minute intervals and downloaded daily.

2. Sample for asbestos and analyze on site during the first week and once per week thereafter.

3. Sample for crystalline silica and lead daily during the first week and once per week thereafter. Submit samples to a contract laboratory for analysis with a 72-hour turnaround time.

END OF SECTION 02 89 00

SECTION 03 30 00 - CAST-IN-PLACE CONCRETE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes cast-in-place concrete, including formwork, reinforcement, concrete materials, mixture design, placement procedures, and finishes, for the following:

1. Footings.
2. Foundation walls.
3. Slabs-on-grade.
4. Suspended slabs.
5. Concrete toppings.
6. Building frame members.
7. Building walls.

B. Related Sections:
1. Section 31 20 00 "Earth Moving" for drainage fill under slabs-on-grade.
2. Section 32 16 00 "Curbs, Gutters, Sidewalks, and Driveways" for concrete pavement and walks.

1.3 DEFINITIONS

A. Cementitious Materials: Portland cement alone or in combination with one or more of the following: blended hydraulic cement, fly ash and other pozzolans, ground granulated blast-furnace slag, and silica fume; subject to compliance with requirements.

1.4 SUSTAINABLE DESIGN REQUIREMENTS

A. Applicable LEED Credits

1. MRc2
2. MRc4
3. MRc5
4. MRc7
5. IEQc4.1

B. LEED Requirements

1. MRc2: Construction Waste Management:

No less than the specified portion of all construction waste from the Project shall be diverted from disposal in a landfill and/or incineration in with the Project Requirements

for Construction Waste Management and Disposal. Refer to Specification Sections 017419 Construction Waste Management and Disposal and 013510 Sustainable Design Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

2. MRc4: Recycled Content Material:

No less than the specified minimum proportion of the building materials shall contain post-consumer and pre-consumer waste materials in accordance with the Project Requirements for Recycled Content Materials. All materials counted towards the computations of the proportion of the Recycled Content Materials shall comply with the standard minimum percentages of post-consumer waste materials and for the minimum percentages of pre-consumer waste materials. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

3. MRc5: Regionally Manufactured and/or Harvested Materials:

No less than the specified minimum proportion of the building materials shall be extracted, processed, and manufactured within 500 miles of the Project Site in accordance with the Project Requirements for Regionally Manufactured and/or Harvested Materials. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

4. MRc7: Certified Wood:

No less than the specified proportion of the building (permanently installed wood-based materials and products and all wood-based materials and products in construction) shall be certified by the Forest Stewardship Council (FSC) in accordance with the Project Requirements. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

5. IEQc4.1: Low Emitting Materials – Sealant and Adhesives:

All sealants, adhesives, and sealant primers used on the interior of the building shall comply with the Project Requirements for Low Emitting Materials – Sealants and Adhesives. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. Design Mixtures: For each concrete mixture. Submit alternate design mixtures when characteristics of materials, Project conditions, weather, test results, or other circumstances warrant adjustments. Submitted mix designs shall clearly indicate where mix is to be used on the Project.

1. Indicate amounts of mixing water to be withheld for later addition at Project site.

2. Provide certification from the admixture manufacturer that chloride content complies with or exceeds specified requirements.

3. Provide certification from admixture manufacturer hat all admixtures are compatible with other required or proposed admixtures.

C. Steel Reinforcement Shop Drawings: Placing drawings that detail fabrication, bending, and placement. Include bar sizes, lengths, material, grade, bar schedules, stirrup spacing, bent bar diagrams, bar arrangement, splices and laps, mechanical connections, tie spacing, hoop spacing, and supports for concrete reinforcement.

D. Post-Installed Anchor Product Data: Submit data for proprietary materials, ICC-ES reports, manufacturer's specifications (including finishes and/or materials), Material Safety Data Sheets (MSDS) and installation procedures.
1. Submittals shall clearly indicate where each anchor type and diameter is intended to be used.
2. ICC-ES listings and performance data shall include recommended loading for each application.
3. Only products with an ICC-ES listing will be considered for substitution requests. Contractor shall submit for Engineer's review, calculations that are prepared by a registered Professional showing substituted product can achieve an equivalent holding capacity using the appropriate building procedure as required by the Building Code. The calculations shall indicate diameter and embedment depth, with consideration of all applicable load adjustment factors, for substituted product to achieve equivalent performance to that illustrated on the drawings. Any increase in material costs for such submittal shall be the responsibility of the contractor.

E. Formwork Shop Drawings: Prepared by or under the supervision of a qualified professional. Formwork shop drawings shall be signed and sealed by a registered professional engineer in the state of the project.
1. Shoring and reshoring: Indicate proposed schedule and sequence of stripping formwork shoring removal, and installing and removing reshoring.
2. Design loads: Indicate applicable dead, live, and other loads for which the formwork has been designed on the submittal.

F. Sleeve Locations: Submit plan showing dimensioned locations and sizes for review by Architect and Engineer prior to concrete placement.

G. Construction Joint Locations: Submit plan showing dimensioned location of proposed construction joints for concrete slabs and walls for review by Architect and Engineer prior to concrete placement.

H. Crack Control Joint Locations in Slabs-on-Grade: Submit plan showing dimensioned location of proposed construction joints and control joints for review by Architect and Engineer prior to concrete slab-on-grade placement. Include proposed time frame for installation of control joints if by sawcutting methods as specified herein.

I. Samples: For waterstop and vapor retarder.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer, manufacturer, and testing agency.

B. Welding certificates.

C. Material Certificates: For each of the following, signed by manufacturers, certifying that each material item complies with or exceeds the specified requirements.

1. Cementitious materials.
2. Admixtures.
3. Form materials and form-release agents.
4. Steel reinforcement and accessories.
5. Waterstops.
6. Floor and slab treatments.
7. Bonding agents.
8. Adhesives.
9. Vapor retarders.
10. Semirigid joint filler.
11. Joint-filler strips.
12. Repair materials.

D. Material Test Reports: For the following, from a qualified testing agency, indicating compliance with requirements:

1. Aggregates. Include service record data indicating absence of deleterious expansion of concrete due to alkali aggregate reactivity.

E. Floor surface flatness and levelness measurements indicating compliance with specified tolerances.

F. Field quality-control reports.

G. Minutes of preinstallation conference.

1.7 QUALITY ASSURANCE

A. Concrete Installer Qualifications: A qualified installer who employs on Project personnel qualified as ACI-certified Flatwork Technician and Finisher and a supervisor who is an ACI-certified Concrete Flatwork Technician.

B. Concrete Manufacturer Qualifications: A firm experienced in manufacturing ready-mixed concrete products and that complies with ASTM C 94/C 94M requirements for production facilities and equipment.

1. Manufacturer certified according to NRMCA's "Certification of Ready Mixed Concrete Production Facilities."

C. Testing Agency Qualifications: An independent agency, acceptable to authorities having jurisdiction, qualified according to ASTM C 1077 and ASTM E 329 for testing indicated.

1. Personnel conducting field tests shall be qualified as ACI Concrete Field Testing Technician, Grade 1, according to ACI CP-1 or an equivalent certification program.
2. Personnel performing laboratory tests shall be ACI-certified Concrete Strength Testing Technician and Concrete Laboratory Testing Technician - Grade I.

Testing Agency laboratory supervisor shall be an ACI-certified Concrete Laboratory Testing Technician - Grade II.

D. Post-Installed Anchor Installer Qualifications: Post-installed anchors shall be installed by a qualified contractor/installer with at least three years of experience performing similar installations and undergo training as follows:
   1. Installer training: Conduct a through training with the manufacturer or the manufacturer's representative for the contractor/installer. Training to consist of a review of the complete installation process for drilled-in anchors, to include but not limited to:
      a. Hole drilling procedure
      b. Hole preparation and cleaning technique
      c. Adhesive Injection & dispenser training and maintenance
      d. Rebar dowel preparation and installation
      e. Proof loading/torquing

E. Source Limitations: Obtain each type or class of cementitious material of the same brand from the same manufacturer's plant, obtain aggregate from single source, and obtain admixtures from single source from single manufacturer.

F. Welding Qualifications: Qualify procedures and personnel according to AWS D1.4/D 1.4M, "Structural Welding Code - Reinforcing Steel."

G. ACI Publications: Comply with the following unless modified by requirements in the Contract Documents:

   1. ACI 301, "Specifications for Structural Concrete."
      a. Apply Sections 1 through 5 for normal weight concrete applications.
      b. Apply Section 7, "Lightweight Concrete," where lightweight concrete is used.
   2. ACI 117, "Specifications for Tolerances for Concrete Construction and Materials."

H. Concrete Testing Service: Engage a qualified independent testing agency to perform material evaluation tests and to design concrete mixtures.

I. Mockups: Cast concrete slab-on-grade and formed-surface panels to demonstrate typical joints, surface finish, texture, tolerances, floor treatments, and standard of workmanship.

   1. Build panel approximately 200 sq. ft. (18.6 sq. m) for slab-on-grade and 100 sq. ft. (9.3 sq. m) for formed surface in the location indicated or, if not indicated, as directed by Architect.
   2. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

J. Preinstallation Conference: Conduct conference at Project site.

   1. Before submitting design mixtures, review concrete design mixture and examine procedures for ensuring quality of concrete materials. Require representatives of each entity directly concerned with cast-in-place concrete to attend, including the following:

      a. Contractor's superintendent.
      b. Independent testing agency responsible for concrete design mixtures.
      c. Ready-mix concrete manufacturer.

d. Concrete subcontractor.

2. Review special inspection and testing and inspecting agency procedures for field quality control, concrete finishes and finishing, cold- and hot-weather concreting procedures, curing procedures, construction contraction and isolation joints, and joint-filler strips, semirigid joint fillers, forms and form removal limitations, shoring and reshoring procedures, vapor-retarder installation, anchor rod and anchorage device installation tolerances, steel reinforcement installation, floor and slab flatness and levelness measurement, concrete repair procedures, and concrete protection.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Steel Reinforcement: Deliver, store, and handle steel reinforcement to prevent bending and damage. Avoid damaging coatings on steel reinforcement.

B. Waterstops: Store waterstops under cover to protect from moisture, sunlight, dirt, oil, and other contaminants.

C. Post-installed concrete anchors: Deliver to job site in manufacturer's or distributor's packing undamaged, complete with installation instructions. Store anchors and adhesives in accordance with manufacturer's recommendations. Protect and handle materials in accordance with manufacturer's recommendations to prevent damage or deterioration.

PART 2 - PRODUCTS

2.1 FORM-FACING MATERIALS

A. Smooth-Formed Finished Concrete: Form-facing panels that will provide continuous, true, and smooth concrete surfaces. Furnish in largest practicable sizes to minimize number of joints.

1. Plywood, metal, or other approved panel materials.

B. Rough-Formed Finished Concrete: Plywood, lumber, metal, or another approved material. Provide lumber dressed on at least two edges and one side for tight fit.

C. Chamfer Strips: Wood, metal, PVC, or rubber strips, 3/4 by 3/4 inch (19 by 19 mm), minimum.

D. Form-Release Agent: Commercially formulated form-release agent that will not bond with, stain, or adversely affect concrete surfaces and will not impair subsequent treatments of concrete surfaces.

1. Formulate form-release agent with rust inhibitor for steel form-facing materials.

E. Form Ties: Factory-fabricated, removable or snap-off metal or glass-fiber-reinforced plastic form ties designed to resist lateral pressure of fresh concrete on forms and to prevent spalling of concrete on removal.

1. Furnish units that will leave no corrodible metal closer than 1 inch (25 mm) to the plane of exposed concrete surface.
2. Furnish ties that, when removed, will leave holes no larger than 1 inch (25 mm) in diameter in concrete surface.
3. Furnish ties with integral water-barrier plates to walls indicated to receive dampproofing or waterproofing.

2.2 STEEL REINFORCEMENT

A. Reinforcing Bars: ASTM A 615/A 615M, Grade 60 (Grade 420), deformed.

B. Low-Alloy-Steel Reinforcing Bars: ASTM A 706/A 706M, deformed.

C. Plain Steel Wire: ASTM A 82/A 82M, as drawn.

D. Plain Steel Welded Wire Reinforcement: ASTM A 185/A 185M, plain, fabricated from as-drawn steel wire into flat sheets.

E. Epoxy-Coated Reinforcing Bars: ASTM A 615/A 615M, Grade 60 (Grade 420), deformed bars, ASTM A 775/A 775M or ASTM A 934/A 934M, epoxy coated, with less than 2 percent damaged coating in each 12-inch (300-mm) bar length.

F. Deformed-Steel Wire: ASTM A 496/A 496M.

G. Deformed-Steel Welded Wire Reinforcement: ASTM A 497/A 497M, flat sheet.

H. Epoxy-Coated Welded Wire Reinforcement: ASTM A 884/A 884M, Class A coated, Type 1, deformed steel.

2.3 REINFORCEMENT ACCESSORIES

A. Joint Dowel Bars: ASTM A 615/A 615M, Grade 60 (Grade 420), plain-steel bars, cut true to length with ends square and free of burrs.

B. Epoxy-Coated Joint Dowel Bars: ASTM A 615/A 615M, Grade 60 (Grade 420), plain-steel bars, ASTM A 775/A 775M epoxy coated.

C. Epoxy Repair Coating: Liquid, two-part, epoxy repair coating; compatible with epoxy coating on reinforcement and complying with ASTM A 775/A 775M.

D. Zinc Repair Material: ASTM A 780, zinc-based solder, paint containing zinc dust, or sprayed zinc.

E. Bar Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars and welded wire reinforcement in place. Manufacture bar supports from steel wire, plastic, or precast concrete according to CRSI's "Manual of Standard Practice," of greater compressive strength than concrete and as follows:

1. For concrete surfaces exposed to view where legs of wire bar supports contact forms, use CRSI Class 1 plastic-protected steel wire or CRSI Class 2 stainless-steel bar supports.
2. For epoxy-coated reinforcement, use epoxy-coated or other dielectric-polymer-coated wire bar supports.

3. For zinc-coated reinforcement, use galvanized wire or dielectric-polymer-coated wire bar supports.

2.4 CONCRETE MATERIALS

A. Cementitious Material: Use the following cementitious materials, of the same type, brand, and source, throughout Project:

1. Portland Cement: ASTM C 150, Type I or Type III, gray. Supplement with the following:

a. Fly Ash: ASTM C 618, Class F or C.
b. Ground Granulated Blast-Furnace Slag: ASTM C 989, Grade 100 or 120.

2. Blended Hydraulic Cement: ASTM C 595, Type IS, portland blast-furnace slag or Type IP, portland-pozzolan cement.

B. Silica Fume: ASTM C 1240, amorphous silica.

C. Normal-Weight Aggregates: ASTM C 33, Class 3S for concrete subject to severe exposure and Class 1N for interior concrete coarse aggregate or better, graded. Provide aggregates from a single source with documented service record data of at least 10 years' satisfactory service in similar applications and service conditions using similar aggregates and cementitious materials.

1. Maximum Coarse-Aggregate Size: Varies per “Concrete Mixtures for Building Elements.”
2. Fine Aggregate: Free of materials with deleterious reactivity to alkali in cement.

D. Lightweight Aggregate: ASTM C 330. See “Concrete Mixtures for Building Elements” for maximum nominal coarse aggregate size. Aggregates shall be suitably processed, washed, and screened, and shall consist of durable particles without adherent coatings.

E. Water: ASTM C 94/C 94M and potable.
1. Free of foreign matter that may be harmful to concrete, reinforcement, or concrete accessories, including but not limited to oils, acids, alkalies, salts, and organic materials.
2. Free of deleterious amounts of chloride ions.

2.5 ADMIXTURES

A. General:
1. Calcium chloride or admixtures with more than 0.06 percent chloride ions are not permitted.
2. Specific admixtures, or manufacturers listed within this section, are acceptable only if manufacturer can submit evidence of product compatibility with other products within same concrete mix.

B. Air-Entraining Admixture: ASTM C 260.

C. Chemical Admixtures: Provide admixtures certified by manufacturer to be compatible with other admixtures and that will not contribute water-soluble chloride ions exceeding

those permitted in hardened concrete. Do not use calcium chloride or admixtures containing calcium chloride.

1. Water-Reducing Admixture: ASTM C 494/C 494M, Type A.
2. Retarding Admixture: ASTM C 494/C 494M, Type B.
3. Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type D.
4. High-Range, Water-Reducing Admixture: ASTM C 494/C 494M, Type F.
5. High-Range, Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type G.
6. Plasticizing and Retarding Admixture: ASTM C 1017/C 1017M, Type II.

D. Non-Set-Accelerating Corrosion-Inhibiting Admixture: Commercially formulated, non-set-accelerating, anodic inhibitor or mixed cathodic and anodic inhibitor; capable of forming a protective barrier and minimizing chloride reactions with steel reinforcement in concrete.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

   a. BASF Construction Chemicals - Building Systems; Rheocrete 222+.
   b. Cortec Corporation; MCI- [2000] [2005NS].
   c. Grace Construction Products, W. R. Grace & Co.; DCI-S.
   d. Sika Corporation; FerroGard 901.

E. Chloride Ion Content: Maximum water soluble chloride ion concentrations in hardened concrete at ages 28 to 42 days contributed from the ingredients, including water, aggregates, cementitious materials, and admixtures shall be limited by ACI 318, Table 4.4.1.
1. Concrete on metal deck shall be considered to be in the same category as prestressed concrete when determining maximum chloride ion content for corrosion protection of reinforcement.

2.6 VAPOR RETARDERS

A. Sheet Vapor Retarder: ASTM E 1745, Class A. Include manufacturer's recommended adhesive or pressure-sensitive tape.

1. Products: Subject to compliance with requirements, provide one of the following :
   a. Fortifiber Building Systems Group; Moistop Ultra 15 .
   b. Grace Construction Products, W. R. Grace & Co.; Florprufe 120.
   c. Insulation Solutions, Inc.; Viper VaporCheck 16 .
   d. Meadows, W. R., Inc.; Perminator 15 mil .
   e. Raven Industries Inc.; Vapor Block 15 .
   f. Reef Industries, Inc.; Griffolyn Type-105 15 mil Green .
   g. Stego Industries, LLC; Stego Wrap 15 mil Class A .

2.7 LIQUID FLOOR TREATMENTS

A. VOC Content: Liquid floor treatments shall have a VOC content of 200 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

B. Penetrating Liquid Floor Treatment: Clear, chemically reactive, waterborne solution of inorganic silicate or siliconate materials and proprietary components; odorless; that penetrates, hardens, densifies and seals concrete surfaces.

1. Products: Subject to compliance with requirements, provide one of the following:

a. ChemMasters; Chemisil Plus.
b. Dayton Superior Corporation; Day-Chem Sure Hard (J-17).
c. Euclid Chemical Company (The), an RPM company; UltraSil Li+.
d. Kaufman Products, Inc.; SureHard LS.
e. L&M Construction Chemicals, Inc.; Seal Hard.

2.8 CURING MATERIALS

A. Absorptive Cover: AASHTO M 182, Class 2, burlap cloth made from jute or kenaf, weighing approximately 9 oz./sq. yd. (305 g/sq. m) when dry.

B. Moisture-Retaining Cover: ASTM C 171, polyethylene film or white burlap-polyethylene sheet.

C. Water: Potable.

2.9 RELATED MATERIALS

A. Expansion- and Isolation-Joint-Filler Strips: ASTM D 1751, asphalt-saturated cellulosic fiber or ASTM D 1752, cork or self-expanding cork.

B. Semirigid Joint Filler: Two-component, semirigid, 100 percent solids, aromatic polyurea with a Type A shore durometer hardness range of 90 to 95 per ASTM D 2240.

C. Bonding Compounds: Use in strict conformance with the manufacturer's written recommended application limitations, precautions, directions for use, including, but not limited to, surface preparation, mixing, placing, curing, and compatibility with substrate conditions.
1. Latex Bonding Agent: ASTM C 1059/C 1059M, Type II, non-redispersible, acrylic emulsion or styrene butadiene.
2. Epoxy Bonding Adhesive: ASTM C 881, two-component epoxy resin, capable of humid curing and bonding to damp surfaces, of class suitable for application temperature and of grade to suit requirements, and as follows:
a. Types I and II: Acceptable at non-load bearing applications for bonding hardened or freshly mixed concrete to hardened concrete.
b. Types IV and V: Acceptable at load bearing applications for bonding hardened or freshly mixed concrete to hardened concrete.

D. Dovetail Anchor Slots: Hot-dip galvanized-steel sheet, not less than 0.034 inch (0.85 mm) thick, with bent tab anchors. Temporarily fill or cover face opening of slots to prevent intrusion of concrete or debris.

2.10 POST INSTALLED ANCHORS

A. The anchor designated on the Drawings has been selected based on the required design load capacity as compared to the Manufacturer's specific allowable load

capacity for that specific product. Drawings indicate type of anchor, size and length of embedment based on the specific product indicated. Refer to Division 01 "Product Requirements." Comparable products shall be submitted for review and approval by the engineer prior to installation.

B. Anchors selected shall be ICC-ES approved for cracked concrete. Only anchors with ICBO/ICC approval are approved for use.
   1. Acceptable anchorage systems listed for uncracked concrete are NOT acceptable for use in cracked concrete.
   2. Acceptable anchorage systems listed for cracked concrete are acceptable in both a cracked and uncracked application.

C. Expansion Anchors for Bolted Connections to Concrete (Mechanical Anchor)

   1. Only expansion anchors with ICBO/ICC approval are approved for use.
   2. Anchors shall be stud type threaded bolts with single piece multi-section wedges, with hex head nut, and washer and meet description in Federal Specification A-A 1923A, Type 4.
   3. Size and embedment: As indicated in Drawings. Where embedment is not indicated, submit proposed embedment prior to installation to Engineer for approval.
   4. Drawing Reference: Unless noted otherwise, drawing reference to "expansion anchor(s)" shall indicate the use of anchors specified by this paragraph. Sleeve, adhesive, and other type anchors shall only be provided if specifically referenced.
   5. Material for Bolts, Nuts, and Washers:

      a. Carbon Steel with Zinc-Plating in accordance with ASTM B 633, Type III, Fe/Zn 5: Use at interior environments free of moisture.
      b. ASTM A 276 or ASTM A 493, Type 316 Stainless Steel: Use at potentially corrosive environments, including but not limited to following:

         1) Exterior exposed conditions.
         2) Potentially wet environments.
         3) Attachment of exterior cladding materials.

   6. Following products are considered acceptable for use in uncracked concrete. Other products will be acceptable only if approved by ICBO and Engineer. Submit ICBO Report for Engineer's review.

      a. HILTI Corporation - "Kwik Bolt 3 Expansion Anchor"
      b. SIMPSON Strong-Tie Anchor Systems – "Wedge-All"
      c. ITW Redhead – "Trubolt Wedge Anchors"

   7. Following products are considered acceptable for use in cracked concrete. Other products will be acceptable only if approved by ICBO and Engineer. Submit ICBO Report for Engineer's review.

      a. HILTI Corporation - "Kwik Bolt TZ Expansion Anchor"
      b. SIMPSON Strong-Tie Anchor Systems – "Strong-Bolt Wedge Anchor"

D. Adhesive Anchors for Rebar Doweling

   1. Only adhesive anchor systems with ICBO/ICC approval are approved for use.
   2. Shall consist of deformed Grade 60 reinforcing bar and two component epoxy adhesive meeting ASTM C 881, Type IV, Grade 3, Classes B and C.

3. Size, length, and embedment of dowel as indicated in Drawings. Where embedment depth is not indicated, use embedment of 12 x rebar diameter, or submit proposed embedment prior to installation to Engineer for review.
4. Following products are considered acceptable for use in uncracked concrete. Other products will be acceptable only if approved by ICBO and Engineer. Submit ICBO Report for Engineer's review.

    a. HILTI Corporation – “HIT RE 500 Adhesive System” for typical applications. “HIT HY-200” is permissible only with Engineer’s written approval.
    b. SIMPSON Strong-Tie Anchor Systems – “ET Adhesive System”
    c. ITW Ramset/Redhead - "Epcon C6 Adhesive System"

5. Following products are considered acceptable for use in cracked concrete. Other products will be acceptable only if approved by ICBO and Engineer. Submit ICBO Report for Engineer's review.
    a. HILTI Corporation – “HIT RE 500-SD Adhesive System” (typical applications). “HIT HY-200” permissible only with Engineer’s written approval.
    b. SIMPSON Strong-Tie Anchor Systems – “SET-XP Epoxy Adhesive Anchors”

6. Above epoxy adhesive systems require special attention to ambient conditions and cure time prior to loading. Where ambient or other project conditions require alternate product, such as acrylic based adhesive, other product(s) of listed manufacturers may be considered by Engineer. Consult with product manufacturer and submit proposal for review/approval by Engineer prior to use.

E. Adhesive Anchors for Bolted Connections to Concrete:

1. Only adhesive anchor systems with ICBO/ICC approval are approved for use.
2. Shall consist of threaded steel rod, nut, washer, and two component epoxy adhesive meeting ASTM C 881, Type IV, Grade 3, Classes B and C.
3. Material for Bolts, Nuts, and Washers:

    a. Carbon steel conforming to ASTM A36, or better, except as noted below.
    b. ASTM F 593, Type 316 Stainless Steel: Use at potentially corrosive environments, including but not limited to following:

        1) Exterior exposed conditions.
        2) Potentially wet environments.
        3) Attachment of exterior cladding materials.

4. Size and Embedment: As indicated in Drawings. Where embedment is not indicated, submit proposed embedment prior to installation to Engineer for review.
5. Following products are considered acceptable for use in uncracked concrete. Other products will be acceptable only if approved by ICBO and Engineer. Submit ICBO Report for Engineer's review.

    a. HILTI Corporation – “HIT RE 500 Adhesive System or HIT HY-200 w/ HIT TZ rods.” Assume RE 500 system if adhesive is not noted on the drawings.
    b. SIMPSON Strong-Tie Anchor Systems – “ET Epoxy-Tie Adhesive System” or “SET Epoxy-Tie Adhesive System.” Assume ET system if adhesive is not noted on the drawings.

c. ITW Ramset/Redhead - "Epcon C6 Adhesive System"

6. Following products are considered acceptable for use in cracked concrete. Other products will be acceptable only if approved by ICBO and Engineer. Submit ICBO Report for Engineer's review.

   a. HILTI Corporation – “HIT RE 500-SD Adhesive System”
   b. SIMPSON Strong-Tie Anchor Systems – “SET-XP Epoxy Adhesive Anchors”

7. Above epoxy adhesive systems require special attention to ambient conditions and cure time prior to loading. Where ambient or other project conditions require alternate product, such as acrylic based adhesive, other product(s) of listed manufacturers may be considered by Engineer. Consult with product manufacturer and submit proposal for review/approval by Engineer prior to use.

2.11 REPAIR MATERIALS

A. Repair Underlayment: Cement-based, polymer-modified, self-leveling product that can be applied in thicknesses from 1/8 inch (3.2 mm) and that can be feathered at edges to match adjacent floor elevations.

1. Cement Binder: ASTM C 150, portland cement or hydraulic or blended hydraulic cement as defined in ASTM C 219.
2. Primer: Product of underlayment manufacturer recommended for substrate, conditions, and application.
3. Aggregate: Well-graded, washed gravel, 1/8 to 1/4 inch (3.2 to 6 mm) or coarse sand as recommended by underlayment manufacturer.
4. Compressive Strength: Not less than 4100 psi (29 MPa) at 28 days when tested according to ASTM C 109/C 109M.

B. Repair Overlayment: Cement-based, polymer-modified, self-leveling product that can be applied in thicknesses from 1/4 inch (6.4 mm) and that can be filled in over a scarified surface to match adjacent floor elevations.

1. Cement Binder: ASTM C 150, portland cement or hydraulic or blended hydraulic cement as defined in ASTM C 219.
2. Primer: Product of topping manufacturer recommended for substrate, conditions, and application.
3. Aggregate: Well-graded, washed gravel, 1/8 to 1/4 inch (3.2 to 6 mm) or coarse sand as recommended by topping manufacturer.
4. Compressive Strength: Not less than 5000 psi (34.5 MPa) at 28 days when tested according to ASTM C 109/C 109M.

2.12 CONCRETE MIXTURES, GENERAL

A. Prepare design mixtures for each type and strength of concrete, proportioned on the basis of laboratory trial mixture or field test data, or both, according to ACI 301.

1. Use a qualified independent testing agency for preparing and reporting proposed mixture designs based on laboratory trial mixtures.

B. Cementitious Materials: Use fly ash, pozzolan, ground granulated blast-furnace slag, and silica fume as needed to reduce the total amount of portland cement, which would otherwise be used, by not less than 40 percent.

C. Limit water-soluble, chloride-ion content in hardened concrete to 0.06 percent by weight of cement.

D. Admixtures: Use admixtures according to manufacturer's written instructions.

1. Use water-reducing high-range water-reducing or plasticizing admixture in concrete, as required, for placement and workability.
2. Use water-reducing and retarding admixture when required by high temperatures, low humidity, or other adverse placement conditions.
3. Use water-reducing admixture in pumped concrete, concrete for heavy-use industrial slabs and parking structure slabs, concrete required to be watertight, and concrete with a water-cementitious materials ratio below 0.50.
4. Use corrosion-inhibiting admixture in concrete mixtures where indicated.

2.13 CONCRETE MIXTURES FOR BUILDING ELEMENTS

A. Minimum compressive strengths: See Contract Documents

B. Nominal Maximum Coarse Aggregate Sizes: See Contract Documents. Where nominal maximum coarse aggregate size is not noted on the documents:
1. Foundations, grade beams, basement walls: 1.5 inch maximum nominal coarse aggregate size.
2. Concrete Superstructure in a concrete frame system (includes columns, slabs, shear walls): 3/4 inch maximum nominal coarse aggregate size.
3. Slabs on Metal Deck: 1/2 inch maximum nominal coarse aggregate size.
4. All other concrete: 3/4 inch maximum nominal coarse aggregate size.

C. Water-to-Cement (W/C) Ratio
1. Water content and W/C ratio shall be lowest possible value consistent with maximum consolidation, workability, and density. Where multiple exposure classes apply, lowest W/C ratio shall be used.

2. Exposure classes F0, S0, P0, C0, C1: Maximum W/C ratios for normal weight concrete in the classes listed shall be as follows:

F'c at 28 days (psi)	Air-entrained concrete	Non-Air-entrained concrete
4000 and below	0.48	0.57
4500	0.45	0.53
5000 and above	0.40	0.48

3. All other exposure classes F1, F2, F3, S2, S3: Maximum W/C ratio for normal weight concrete shall be 0.45.

Exposure class	All normal weight concrete
C2	0.40
F1, F2, F3, S2, S3	0.45
S1, P1	0.50

4. Maximum W/C ratios for building retaining walls with habitable space below grade (basement walls) shall conform to C.2 and C.3 above, but in no case shall be greater than 0.45.
5. Maximum W/C ratios for the following conditions shall conform to C.2 and C.3 above, but in no case shall be greater than 0.40.
   a. Garage Cast in place slabs or topping slabs.
   b. Truck dock slabs
   c. Exterior concrete (roof concrete excluded, unless otherwise noted) exposed to weather.

D. Slump Limits: Proportion and design mixes to limit concrete slump at point of deposit as follows:

1.	Reinforced foundation walls and footings	4” plus or minus 1”
2.	Elevated Slabs, slabs-on-grade, columns, reinforced above grade walls, NWC slabs on metal deck	4” plus or minus 1”
3.	Pier or Caisson Concrete	Flowable concrete req’d
4.	Lightweight Concrete	4” plus or minus 1”

5. Flowable Concrete: 8” max. slump after addition of high-range water reducing admixture or plasticizing admixture, 3” max slump prior to addition

E. Air Content: Proportion and design mixes using approved air-entrained admixture as follows:
1. Normal Weight Concrete: Provide air content percentage per ACI 318-08, Table 4.4.1, unless otherwise noted herein. See General Notes for Exposure Classes.
2. Lightweight concrete: Air content shall be as recommended by concrete supplier, but in no case shall not be less than 4 percent or greater than 6 percent.
3. Reduce air content percentage for normal weight concrete for surfaces to receive troweled finish or dry-shake hardeners to a maximum of 3 percent. Do not allow air content of trowel finished floors to exceed 3 percent.

2.14 FABRICATING REINFORCEMENT

A. Fabricate steel reinforcement according to CRSI's "Manual of Standard Practice."

2.15 CONCRETE MIXING

A. Ready-Mixed Concrete: Measure, batch, mix, and deliver concrete according to ASTM C 94/C 94M, and furnish batch ticket information.

1. When air temperature is between 85 and 90 deg F (30 and 32 deg C), reduce mixing and delivery time from 1-1/2 hours to 75 minutes; when air temperature is above 90 deg F (32 deg C), reduce mixing and delivery time to 60 minutes.

B. Project-Site Mixing: Measure, batch, and mix concrete materials and concrete according to ASTM C 94/C 94M. Mix concrete materials in appropriate drum-type batch machine mixer.

1. For mixer capacity of 1 cu. yd. (0.76 cu. m) or smaller, continue mixing at least 1-1/2 minutes, but not more than 5 minutes after ingredients are in mixer, before any part of batch is released.
2. For mixer capacity larger than 1 cu. yd. (0.76 cu. m), increase mixing time by 15 seconds for each additional 1 cu. yd. (0.76 cu. m).

3. Provide batch ticket for each batch discharged and used in the Work, indicating Project identification name and number, date, mixture type, mixture time, quantity, and amount of water added. Record approximate location of final deposit in structure.

PART 3 - EXECUTION

3.1 FORMWORK

A. Design, erect, shore, brace, and maintain formwork, according to ACI 301, to support vertical, lateral, static, and dynamic loads, and construction loads that might be applied, until structure can support such loads.

B. Construct formwork so concrete members and structures are of size, shape, alignment, elevation, and position indicated, within tolerance limits of ACI 117.

C. Limit concrete surface irregularities, designated by ACI 347 as abrupt or gradual, as follows:

1. Class A, 1/8 inch (3.2 mm) for smooth-formed finished surfaces.

D. Construct forms tight enough to prevent loss of concrete mortar.

E. Fabricate forms for easy removal without hammering or prying against concrete surfaces. Provide crush or wrecking plates where stripping may damage cast concrete surfaces. Provide top forms for inclined surfaces steeper than 1.5 horizontal to 1 vertical.

1. Install keyways, reglets, recesses, and the like, for easy removal.
2. Do not use rust-stained steel form-facing material.

F. Set edge forms, bulkheads, and intermediate screed strips for slabs to achieve required elevations and slopes in finished concrete surfaces. Provide and secure units to support screed strips; use strike-off templates or compacting-type screeds.

G. Provide temporary openings for cleanouts and inspection ports where interior area of formwork is inaccessible. Close openings with panels tightly fitted to forms and securely braced to prevent loss of concrete mortar. Locate temporary openings in forms at inconspicuous locations.

H. Chamfer exterior corners and edges of permanently exposed concrete as indicated in the architectural drawings.

I. Form openings, chases, offsets, sinkages, keyways, reglets, blocking, screeds, and bulkheads required in the Work. Determine sizes and locations from trades providing such items.

J. Clean forms and adjacent surfaces to receive concrete. Remove chips, wood, sawdust, dirt, and other debris just before placing concrete.

K. Retighten forms and bracing before placing concrete, as required, to prevent mortar leaks and maintain proper alignment.

L. Coat contact surfaces of forms with form-release agent, according to manufacturer's written instructions, before placing reinforcement.

3.2 EMBEDDED ITEMS

A. Place and secure anchorage devices and other embedded items required for adjoining work that is attached to or supported by cast-in-place concrete. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded. All embedded items shall be installed perpendicular to substrate surface unless otherwise indicated.

1. Install anchor rods, accurately located, to elevations required and complying with tolerances in Section 7.5 of AISC's "Code of Standard Practice for Steel Buildings and Bridges."
2. Install reglets to receive waterproofing and to receive through-wall flashings in outer face of concrete frame at exterior walls, where flashing is shown at lintels, shelf angles, and other conditions.
3. Install dovetail anchor slots in concrete structures as indicated.
4. Install mechanical anchors according to the manufacturer’s written instructions, including drill bit size, hole cleaning, bolt insertion into the hole, and nut tightening to proper torque.
    a. Drill to specified depth of embedment with carbide tipped drill bit. Use of core drill for installation of mechanical anchors is not permitted.
5. Install adhesive anchors according to the manufacuturer’s written instructions, including drill bit size, hole cleaning, adhesive installation, threaded rod or dowel installation, nut tightening to proper torque, and ambient temperature limitations of the adhesive system.
    a. Drill to specified depth of embedment with carbide tipped drill bit. Use of core drill for installation of mechanical anchors is not permitted unless written approval is obtained from the Engineer.
    b. Do not disturb or load anchor before manufacturer’s specified curing time.

3.3 REMOVING AND REUSING FORMS

A. General: Formwork for sides of beams, walls, columns, and similar parts of the Work that does not support weight of concrete may be removed after cumulatively curing at not less than 50 deg F (10 deg C) for 24 hours after placing concrete. Concrete has to be hard enough to not be damaged by form-removal operations and curing and protection operations need to be maintained.

1. Leave formwork for beam soffits, joists, slabs, and other structural elements that supports weight of concrete in place until concrete has achieved at least 70 percent of its 28-day design compressive strength.
2. Remove forms only if shores have been arranged to permit removal of forms without loosening or disturbing shores.

B. Clean and repair surfaces of forms to be reused in the Work. Split, frayed, delaminated, or otherwise damaged form-facing material will not be acceptable for exposed surfaces. Apply new form-release agent.

C. When forms are reused, clean surfaces, remove fins and laitance, and tighten to close joints. Align and secure joints to avoid offsets. Do not use patched forms for exposed concrete surfaces unless approved by Architect.

3.4 SHORES AND RESHORES

A. Comply with ACI 318 (ACI 318M), ACI 301, and ACI 347 for design, installation, and removal of shoring, reshoring, and backshoring.

B. Shoring, reshoring, and backshoring operations are the responsibility of the Contractor. Shoring plans shall be overseen by a qualified registered professional engineer in the state of the project and shall be submitted to the Engineer for review prior to work.

C. Do not remove shoring or reshoring until the measurement of slab tolerances is complete.

D. In multistory construction, extend shoring or reshoring over a sufficient number of stories to distribute loads in such a manner that no floor or member will be excessively loaded or will induce tensile stress in concrete members without sufficient steel reinforcement.

E. Reshoring, backshoring, or combination thereof is required for concrete slabs, joists, beams, girders, or other elevated concrete framing, when construction loads will be placed on new concrete prior to attainment of specified 28-day strength.

F. During reshoring or backshoring operations, no construction loads shall be permitted on newly stripped concrete.

G. Plan sequence of removal of shores and reshore to avoid damage to concrete. Locate and provide adequate reshoring to support construction without excessive stress or deflection.

3.5 VAPOR RETARDERS

A. Sheet Vapor Retarders: Place, protect, and repair sheet vapor retarder according to ASTM E 1643 and manufacturer's written instructions.

1. Lap joints 6 inches (150 mm) and seal with manufacturer's recommended tape.

3.6 STEEL REINFORCEMENT

A. General: Comply with CRSI's "Manual of Standard Practice" for placing reinforcement.

1. Do not cut or puncture vapor retarder. Repair damage and reseal vapor retarder before placing concrete.

B. Clean reinforcement of loose rust and mill scale, earth, ice, and other foreign materials that would reduce bond to concrete.

C. Accurately position, support, and secure reinforcement against displacement. Locate and support reinforcement with bar supports to maintain minimum concrete cover. Do not tack weld crossing reinforcing bars.

1. Weld reinforcing bars according to AWS D1.4/D 1.4M, where indicated.

D. Set wire ties with ends directed into concrete, not toward exposed concrete surfaces.

E. Install welded wire reinforcement in longest practicable lengths on bar supports spaced to minimize sagging. Lap edges and ends of adjoining sheets at least one mesh spacing. Offset laps of adjoining sheet widths to prevent continuous laps in either direction. Lace overlaps with wire.

F. Epoxy-Coated Reinforcement: Repair cut and damaged epoxy coatings with epoxy repair coating according to ASTM D 3963/D 3963M. Use epoxy-coated steel wire ties to fasten epoxy-coated steel reinforcement.

G. Zinc-Coated Reinforcement: Repair cut and damaged zinc coatings with zinc repair material according to ASTM A 780. Use galvanized steel wire ties to fasten zinc-coated steel reinforcement.

3.7 JOINTS

A. General: Construct joints true to line with faces perpendicular to surface plane of concrete.

B. Construction Joints: Install so strength and appearance of concrete are not impaired, at locations indicated or as approved by Architect.

1. Place joints perpendicular to main reinforcement. Continue reinforcement across construction joints unless otherwise indicated. Do not continue reinforcement through sides of strip placements of floors and slabs.
2. Provide dowels across construction joints as indicated by Drawings. Dowels shall be supported during concrete operations so as to remain parallel with slab or wall surface and perpendicular to joint.
3. Form keyed joints as indicated. Keyways shall be 1-1/2”x d/3 x continuous in walls, slabs, and between walls and footings, unless noted otherwise on the drawings. “d” denotes specified wall or slab thickness.
4. Structural slabs, beams, and girders: Horizontal unit of placement shall not exceed 90 feet in each direction. Locate joints for beams, slabs, joists, and girders in the middle third of spans. Offset joints in girders a minimum distance of twice the beam width from a beam-girder intersection.
5. Slabs on metal deck: Horizontal unit of placement shall not exceed 90 feet in each direction.
6. Locate horizontal joints in walls and columns at underside of floors, slabs, beams, and girders and at the top of footings or floor slabs.
7. Space vertical joints in foundation walls at 30’-0” on center maximum or as indicated in the documents, whichever is more stringent. Locate joints beside piers integral with walls, near corners, and in concealed locations where possible.
8. Shear walls with a length less than 30’-0” do not require vertical construction joints. Shear walls with a length longer than 30’-0” shall have a construction joint in the middle third of the wall length. Contractor shall submit proposed location of joint for Engineer’s review and approval.
9. Use a bonding agent at locations where fresh concrete is placed against hardened or partially hardened concrete surfaces.
10. Use epoxy-bonding adhesive at locations where fresh concrete is placed against hardened or partially hardened concrete surfaces.

11. Avoid construction joints at areas specified to receive thin-set tile, terrazzo, or resilent floor finish materials. If unavoidable, Contractor shall coordinate joint location with the architect. Slab grinding, chipping, and filling at such occurrences to achieve specified floor tolerances will be at Contractor's expense.

C. Contraction Joints (also referred to as "Crack Control Joints") in Slabs-on-Grade: Form weakened-plane contraction joints, sectioning concrete into areas as indicated. Joints shall be placed at a maximum of 15 feet on center in any direction, unless otherwise indicated by the documents or approval is given by the Engineer in writing. Construct contraction joints for a depth equal to at least one-fourth of concrete thickness as follows:

1. Grooved Joints: Form contraction joints after initial floating by grooving and finishing each edge of joint to a radius of 1/8 inch (3.2 mm). Repeat grooving of contraction joints after applying surface finishes. Eliminate groover tool marks on concrete surfaces.
2. Sawed Joints: Form contraction joints with power saws equipped with shatterproof abrasive or diamond-rimmed blades. Cut 1/8-inch- (3.2-mm-) wide joints into concrete when cutting action will not tear, abrade, or otherwise damage surface and before concrete develops random contraction cracks.
    a. Initial sawcuts shall be performed no more than 3 hours after final surface finishing of the slab with equipment specifically suited and designed for early concrete sawcutting (dry cut saw) without dislodging aggregate. Perform final sawcuts as soon as possible to achieve specified joint size.

D. Isolation Joints in Slabs-on-Grade: After removing formwork, install joint-filler strips at slab junctions with vertical surfaces, such as column pedestals, foundation walls, grade beams, and other locations, as indicated.

1. Extend joint-filler strips full width and depth of joint, terminating flush with finished concrete surface unless otherwise indicated.
2. Terminate full-width joint-filler strips not less than 1/2 inch (13 mm) or more than 1 inch (25 mm) below finished concrete surface where joint sealants, specified in Section 079200 "Joint Sealants," are indicated.
3. Install joint-filler strips in lengths as long as practicable. Where more than one length is required, lace or clip sections together.

E. Doweled Joints: Install dowel bars and support assemblies at joints where indicated. Lubricate or asphalt coat one-half of dowel length to prevent concrete bonding to one side of joint.

3.8 CONCRETE PLACEMENT

A. Before placing concrete, verify that installation of formwork, reinforcement, and embedded items is complete and that required inspections have been performed.

B. Do not add water to concrete during delivery, at Project site, or during placement unless approved by Architect.

C. Before test sampling and placing concrete, water may be added at Project site, subject to limitations of ACI 301.

1. Do not add water to concrete after adding high-range water-reducing admixtures to mixture.

D. Deposit concrete continuously in one layer or in horizontal layers of such thickness that no new concrete will be placed on concrete that has hardened enough to cause seams or planes of weakness. If a section cannot be placed continuously, provide construction joints as indicated. Deposit concrete to avoid segregation.

1. Deposit concrete in horizontal layers of depth to not exceed formwork design pressures and in a manner to avoid inclined construction joints.
2. Consolidate placed concrete with mechanical vibrating equipment according to ACI 301.
3. Do not use vibrators to transport concrete inside forms. Insert and withdraw vibrators vertically at uniformly spaced locations to rapidly penetrate placed layer and at least 6 inches (150 mm) into preceding layer. Do not insert vibrators into lower layers of concrete that have begun to lose plasticity. At each insertion, limit duration of vibration to time necessary to consolidate concrete and complete embedment of reinforcement and other embedded items without causing mixture constituents to segregate.

E. Deposit and consolidate concrete for floors and slabs in a continuous operation, within limits of construction joints, until placement of a panel or section is complete.

1. Consolidate concrete during placement operations so concrete is thoroughly worked around reinforcement and other embedded items and into corners.
2. Maintain reinforcement in position on chairs during concrete placement.
3. Screed slab surfaces with a straightedge and strike off to correct elevations.
4. Slope surfaces uniformly to drains where required.
5. Begin initial floating using bull floats or darbies to form a uniform and open-textured surface plane, before excess bleedwater appears on the surface. Do not further disturb slab surfaces before starting finishing operations.

F. Cold-Weather Placement: Comply with ACI 306.1 and as follows. Protect concrete work from physical damage or reduced strength that could be caused by frost, freezing actions, or low temperatures.

1. When average high and low temperature is expected to fall below 40 deg F (4.4 deg C) for three successive days, maintain delivered concrete mixture temperature within the temperature range required by ACI 301.
2. Do not use frozen materials or materials containing ice or snow. Do not place concrete on frozen subgrade or on subgrade containing frozen materials.
3. Do not use calcium chloride, salt, or other materials containing antifreeze agents or chemical accelerators unless otherwise specified and approved in mixture designs.

G. Hot-Weather Placement: Comply with ACI 301 and as follows:

1. Maintain concrete temperature below 90 deg F (32 deg C) at time of placement. Chilled mixing water or chopped ice may be used to control temperature, provided water equivalent of ice is calculated to total amount of mixing water. Using liquid nitrogen to cool concrete is Contractor's option.
2. Fog-spray forms, steel reinforcement, and subgrade just before placing concrete. Keep subgrade uniformly moist without standing water, soft spots, or dry areas.

3.9 FINISHING FORMED SURFACES

A. Rough-Formed Finish: As-cast concrete texture imparted by form-facing material with tie holes and defects repaired and patched. Remove fins and other projections that exceed specified limits on formed-surface irregularities.

1. Apply to concrete surfaces not exposed to public view.

B. Smooth-Formed Finish: As-cast concrete texture imparted by form-facing material, arranged in an orderly and symmetrical manner with a minimum of seams. Repair and patch tie holes and defects. Remove fins and other projections that exceed specified limits on formed-surface irregularities.

1. Apply to concrete surfaces exposed to public view, to receive a rubbed finish, or surfaces to be covered with a coating or covering material applied directly to concrete.

C. Rubbed Finish: Apply the following to smooth-formed finished as-cast concrete where indicated:

1. Smooth-Rubbed Finish: Not later than one day after form removal, moisten concrete surfaces and rub with carborundum brick or another abrasive until producing a uniform color and texture. Do not apply cement grout other than that created by the rubbing process.

D. Related Unformed Surfaces: At tops of walls, horizontal offsets, and similar unformed surfaces adjacent to formed surfaces, strike off smooth and finish with a texture matching adjacent formed surfaces. Continue final surface treatment of formed surfaces uniformly across adjacent unformed surfaces unless otherwise indicated.

3.10 FINISHING FLOORS AND SLABS

A. General: Comply with ACI 302.1R recommendations for screeding, restraightening, and finishing operations for concrete surfaces. Do not wet concrete surfaces.

B. Scratch Finish: While still plastic, texture concrete surface that has been screeded and bull-floated or darbied. Use stiff brushes, brooms, or rakes to produce a profile amplitude of 1/4 inch (6 mm) in one direction.

1. Apply scratch finish to surfaces indicated, surfaces to receive concrete floor toppings, and surfaces to receive mortar setting beds for bonded cementitious floor finishes.

C. Float Finish: Consolidate surface with power-driven floats or by hand floating if area is small or inaccessible to power driven floats. Restraighten, cut down high spots, and fill low spots. Repeat float passes and restraightening until surface is left with a uniform, smooth, granular texture.

1. Apply float finish to surfaces indicated, surfaces to receive trowel finish, and surfaces to be covered with fluid-applied or sheet waterproofing, built-up or membrane roofing, or sand-bed terrazzo.

D. Trowel Finish: After applying float finish, apply first troweling and consolidate concrete by hand or power-driven trowel. Continue troweling passes and restraighten until

surface is free of trowel marks and uniform in texture and appearance. Grind smooth any surface defects that would telegraph through applied coatings or floor coverings.

1. Apply a trowel finish to surfaces indicated, exposed to view, or to be covered with resilient flooring, carpet, ceramic or quarry tile set over a cleavage membrane, paint, or another thin-film-finish coating system .
2. Finish surfaces to the following tolerances, according to ASTM E 1155 (ASTM E 1155M), for a randomly trafficked floor surface:
   a. Specified overall values of flatness, F(F) 30; and of levelness, F(L) 20; with minimum local values of flatness, F(F) 24; and of levelness, F(L) 15; for suspended slabs.

E. Trowel and Fine-Broom Finish: Apply a first trowel finish to surfaces indicated and where ceramic or quarry tile is to be installed by either thickset or thin-set method. While concrete is still plastic, slightly scarify surface with a fine broom.

1. Comply with flatness and levelness tolerances for trowel-finished floor surfaces.

F. Broom Finish: Apply a broom finish to exterior concrete platforms, steps, ramps, and elsewhere as indicated.

1. Immediately after float finishing, slightly roughen trafficked surface by brooming with fiber-bristle broom perpendicular to main traffic route. Coordinate required final finish with Architect before application.

3.11 MISCELLANEOUS CONCRETE ITEMS

A. Filling In: Fill in holes and openings left in concrete structures after work of other trades is in place unless otherwise indicated. Mix, place, and cure concrete, as specified, to blend with in-place construction. Provide other miscellaneous concrete filling indicated or required to complete the Work.

B. Curbs: Provide monolithic finish to interior curbs by stripping forms while concrete is still green and by steel-troweling surfaces to a hard, dense finish with corners, intersections, and terminations slightly rounded.

C. Equipment Bases and Foundations: Provide machine and equipment bases and foundations as shown on Drawings. Set anchor bolts for machines and equipment at correct elevations, complying with diagrams or templates from manufacturer furnishing machines and equipment.

D. Steel Pan Stairs: Provide concrete fill for steel pan stair treads, landings, and associated items. Cast-in inserts and accessories as shown on Drawings. Screed, tamp, and trowel finish concrete surfaces.

3.12 CONCRETE PROTECTING AND CURING

A. General: Protect freshly placed concrete from premature drying and excessive cold or hot temperatures. Comply with ACI 306.1 for cold-weather protection and ACI 301 for hot-weather protection during curing.

B. Formed Surfaces: Cure formed concrete surfaces, including underside of beams, supported slabs, and other similar surfaces. If forms remain during curing period, moist

cure after loosening forms. If removing forms before end of curing period, continue curing for the remainder of the curing period.

C. Unformed Surfaces: Begin curing immediately after finishing concrete. Cure unformed surfaces, including floors and slabs, concrete floor toppings, and other surfaces.

D. Cure concrete according to ACI 308.1, by one or a combination of the following methods:

1. Moisture Curing: Keep surfaces continuously moist for not less than seven days with the following materials:

   a. Water.
   b. Continuous water-fog spray.
   c. Absorptive cover, water saturated, and kept continuously wet. Cover concrete surfaces and edges with 12-inch (300-mm) lap over adjacent absorptive covers.

2. Moisture-Retaining-Cover Curing: Cover concrete surfaces with moisture-retaining cover for curing concrete, placed in widest practicable width, with sides and ends lapped at least 12 inches (300 mm), and sealed by waterproof tape or adhesive. Cure for not less than seven days. Immediately repair any holes or tears during curing period using cover material and waterproof tape.

   a. Moisture cure or use moisture-retaining covers to cure concrete surfaces to receive floor coverings.
   b. Moisture cure or use moisture-retaining covers to cure concrete surfaces to receive penetrating liquid floor treatments.
   c. Cure concrete surfaces to receive floor coverings with either a moisture-retaining cover or a curing compound that the manufacturer certifies will not interfere with bonding of floor covering used on Project.

3.13 LIQUID FLOOR TREATMENTS

A. Penetrating Liquid Floor Treatment: Prepare, apply, and finish penetrating liquid floor treatment according to manufacturer's written instructions.

1. Remove curing compounds, sealers, oil, dirt, laitance, and other contaminants and complete surface repairs.
2. Do not apply to concrete that is less than 28 days' old.
3. Apply liquid until surface is saturated, scrubbing into surface until a gel forms; rewet; and repeat brooming or scrubbing. Rinse with water; remove excess material until surface is dry. Apply a second coat in a similar manner if surface is rough or porous.

3.14 JOINT FILLING

A. Prepare, clean, and install joint filler according to manufacturer's written instructions.

1. Defer joint filling until concrete has aged at least six month(s). Do not fill joints until construction traffic has permanently ceased.

B. Remove dirt, debris, saw cuttings, curing compounds, and sealers from joints; leave contact faces of joint clean and dry.

C. Install semirigid joint filler full depth in saw-cut joints and at least 2 inches (50 mm) deep in formed joints. Overfill joint and trim joint filler flush with top of joint after hardening.

3.15 CONCRETE SURFACE REPAIRS

A. Defective Concrete: Repair and patch defective areas when approved by Architect. Remove and replace concrete that cannot be repaired and patched to Architect's approval.

B. Patching Mortar: Mix dry-pack patching mortar, consisting of one part portland cement to two and one-half parts fine aggregate passing a No. 16 (1.18-mm) sieve, using only enough water for handling and placing.

C. Repairing Formed Surfaces: Surface defects include color and texture irregularities, cracks, spalls, air bubbles, honeycombs, rock pockets, fins and other projections on the surface, and stains and other discolorations that cannot be removed by cleaning.

1. Immediately after form removal, cut out honeycombs, rock pockets, and voids more than 1/2 inch (13 mm) in any dimension to solid concrete. Limit cut depth to 3/4 inch (19 mm). Make edges of cuts perpendicular to concrete surface. Clean, dampen with water, and brush-coat holes and voids with bonding agent. Fill and compact with patching mortar before bonding agent has dried. Fill form-tie voids with patching mortar or cone plugs secured in place with bonding agent.
2. Repair defects on surfaces exposed to view by blending white portland cement and standard portland cement so that, when dry, patching mortar will match surrounding color. Patch a test area at inconspicuous locations to verify mixture and color match before proceeding with patching. Compact mortar in place and strike off slightly higher than surrounding surface.
3. Repair defects on concealed formed surfaces that affect concrete's durability and structural performance as determined by Architect.

D. Repairing Unformed Surfaces: Test unformed surfaces, such as floors and slabs, for finish and verify surface tolerances specified for each surface. Correct low and high areas. Test surfaces sloped to drain for trueness of slope and smoothness; use a sloped template.

1. Repair finished surfaces containing defects. Surface defects include spalls, popouts, honeycombs, rock pockets, crazing and cracks in excess of 0.01 inch (0.25 mm) wide or that penetrate to reinforcement or completely through unreinforced sections regardless of width, and other objectionable conditions.
2. After concrete has cured at least 14 days, correct high areas by grinding.
3. Correct localized low areas during or immediately after completing surface finishing operations by cutting out low areas and replacing with patching mortar. Finish repaired areas to blend into adjacent concrete.
4. Correct other low areas scheduled to receive floor coverings with a repair underlayment. Prepare, mix, and apply repair underlayment and primer according to manufacturer's written instructions to produce a smooth, uniform, plane, and level surface. Feather edges to match adjacent floor elevations.
5. Correct other low areas scheduled to remain exposed with a repair topping. Cut out low areas to ensure a minimum repair topping depth of 1/4 inch (6 mm) to match adjacent floor elevations. Prepare, mix, and apply repair topping and

primer according to manufacturer's written instructions to produce a smooth, uniform, plane, and level surface.

6. Repair defective areas, except random cracks and single holes 1 inch (25 mm) or less in diameter, by cutting out and replacing with fresh concrete. Remove defective areas with clean, square cuts and expose steel reinforcement with at least a 3/4-inch (19-mm) clearance all around. Dampen concrete surfaces in contact with patching concrete and apply bonding agent. Mix patching concrete of same materials and mixture as original concrete except without coarse aggregate. Place, compact, and finish to blend with adjacent finished concrete. Cure in same manner as adjacent concrete.
7. Repair random cracks and single holes 1 inch (25 mm) or less in diameter with patching mortar. Groove top of cracks and cut out holes to sound concrete and clean off dust, dirt, and loose particles. Dampen cleaned concrete surfaces and apply bonding agent. Place patching mortar before bonding agent has dried. Compact patching mortar and finish to match adjacent concrete. Keep patched area continuously moist for at least 72 hours.

E. Perform structural repairs of concrete, subject to Architect's approval, using epoxy adhesive and patching mortar.

F. Repair materials and installation not specified above may be used, subject to Architect's approval.

3.16 FIELD QUALITY CONTROL

A. Testing and Inspecting: Engage a qualified testing and inspecting agency to perform tests and inspections and to submit reports.

B. Inspections:

1. Steel reinforcement placement.
2. Steel reinforcement welding.
3. Headed bolts and studs.
4. Verification of use of required design mixture.
5. Concrete placement, including conveying and depositing.
6. Curing procedures and maintenance of curing temperature.
7. Verification of concrete strength before removal of shores and forms from beams and slabs.

C. Concrete Tests: Testing of composite samples of fresh concrete obtained according to ASTM C 172 shall be performed according to the following requirements:

1. Testing Frequency: Obtain one composite sample for each day's pour of each concrete mixture exceeding 5 cu. yd. (4 cu. m), but less than 25 cu. yd. (19 cu. m), plus one set for each additional 50 cu. yd. (38 cu. m) or fraction thereof.
2. Testing Frequency: Obtain at least one composite sample for each 100 cu. yd. (76 cu. m) or fraction thereof of each concrete mixture placed each day.

    a. When frequency of testing will provide fewer than five compressive-strength tests for each concrete mixture, testing shall be conducted from at least five randomly selected batches or from each batch if fewer than five are used.

3. Slump: ASTM C 143/C 143M; one test at point of placement for each composite sample, but not less than one test for each day's pour of each concrete mixture. Perform additional tests when concrete consistency appears to change.
4. Air Content: ASTM C 231, pressure method, for normal-weight concrete; ASTM C 173/C 173M, volumetric method, for structural lightweight concrete; one test for each composite sample, but not less than one test for each day's pour of each concrete mixture.
5. Concrete Temperature: ASTM C 1064/C 1064M; one test hourly when air temperature is 40 deg F (4.4 deg C) and below and when 80 deg F (27 deg C) and above, and one test for each composite sample.
6. Unit Weight: ASTM C 567, fresh unit weight of structural lightweight concrete; one test for each composite sample, but not less than one test for each day's pour of each concrete mixture.
7. Compression Test Specimens: ASTM C 31/C 31M.

    a. Cast and laboratory cure two sets of two standard cylinder specimens for each composite sample.
    b. Cast and field cure two sets of two standard cylinder specimens for each composite sample.

8. Compressive-Strength Tests: ASTM C 39/C 39M; test one set of two laboratory-cured specimens at 7 days and one set of two specimens at 28 days.

    a. Test one set of two field-cured specimens at 7 days and one set of two specimens at 28 days.
    b. A compressive-strength test shall be the average compressive strength from a set of two specimens obtained from same composite sample and tested at age indicated.

9. When strength of field-cured cylinders is less than 85 percent of companion laboratory-cured cylinders, Contractor shall evaluate operations and provide corrective procedures for protecting and curing in-place concrete.
10. Strength of each concrete mixture will be satisfactory if every average of any three consecutive compressive-strength tests equals or exceeds specified compressive strength and no compressive-strength test value falls below specified compressive strength by more than 500 psi (3.4 MPa).
11. Test results shall be reported in writing to Architect, concrete manufacturer, and Contractor within 48 hours of testing. Reports of compressive-strength tests shall contain Project identification name and number, date of concrete placement, name of concrete testing and inspecting agency, location of concrete batch in Work, design compressive strength at 28 days, concrete mixture proportions and materials, compressive breaking strength, and type of break for both 7- and 28-day tests.
12. Nondestructive Testing: Impact hammer, sonoscope, or other nondestructive device may be permitted by Architect but will not be used as sole basis for approval or rejection of concrete.
13. Additional Tests: Testing and inspecting agency shall make additional tests of concrete when test results indicate that slump, air entrainment, compressive strengths, or other requirements have not been met, as directed by Architect. Testing and inspecting agency may conduct tests to determine adequacy of concrete by cored cylinders complying with ASTM C 42/C 42M or by other methods as directed by Architect.
14. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.
15. Correct deficiencies in the Work that test reports and inspections indicate do not comply with the Contract Documents.

D. Measure floor and slab flatness and levelness according to ASTM E 1155 (ASTM E 1155M) within 48 hours of finishing.

3.17 PROTECTION OF LIQUID FLOOR TREATMENTS

A. Protect liquid floor treatment from damage and wear during the remainder of construction period. Use protective methods and materials, including temporary covering, recommended in writing by liquid floor treatments installer.

END OF SECTION 03 30 00

SECTION 04 20 00 - UNIT MASONRY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Concrete masonry units.
2. Decorative concrete masonry units.
3. Structural-clay facing tile.
4. Face brick
5. Mortar and grout.
6. Steel reinforcing bars.
7. Masonry joint reinforcement.
8. Ties and anchors.
9. Embedded flashing.
10. Miscellaneous masonry accessories.
11. Cavity-wall insulation.

B. Related Sections:

1. Division 03 Section "Cast-in-Place Concrete" for dovetail slots for masonry anchors.
2. Division 05 Section "Metal Fabrications" for furnishing steel lintels and shelf angles for unit masonry.
3. Division 07 Section “Fluid-Applied Membrane Air Barriers” for air barriers applied to unit masonry.
4. Division 07 Section "Sheet Metal Flashing and Trim" for exposed sheet metal flashing and for furnishing manufactured reglets installed in masonry joints.

1.3 DEFINITIONS

A. CMU(s): Concrete masonry unit(s).

B. Reinforced Masonry: Masonry containing reinforcing steel in grouted cells.

1.4 PERFORMANCE REQUIREMENTS

A. Provide structural unit masonry that develops indicated net-area compressive strengths at 28 days.

1. Determine net-area compressive strength of masonry from average net-area compressive strengths of masonry units and mortar types (unit-strength method) according to Tables 1 and 2 in ACI 530.1/ASCE 6/TMS 602.

1.5 PRECONSTRUCTION TESTING

A. Preconstruction Testing Service: Owner will engage a qualified independent testing agency to perform preconstruction testing indicated below. Retesting of materials that fail to comply with specified requirements shall be done at Contractor's expense.

1. Clay Masonry Unit Test: For each type of unit required, according to ASTM C 67 for compressive strength.
2. Concrete Masonry Unit Test: For each type of unit required, according to ASTM C 140 for compressive strength.
3. Mortar Test (Property Specification): For each mix required, according to ASTM C 109/C 109M for compressive strength, ASTM C 1506 for water retention, and ASTM C 91 for air content.
4. Mortar Test (Property Specification): For each mix required, according to ASTM C 780 for compressive strength.
5. Grout Test (Compressive Strength): For each mix required, according to ASTM C 1019.
6. Prism Test: For each type of construction required, according to ASTM C 1314.

1.6 SUSTAINABLE DESIGN REQUIREMENTS

A. Applicable LEED Credits

1. MRc2
2. MRc4
3. MRc5

B. LEED Requirements

1. MRc2: Construction Waste Management

No less than the specified portion of all construction waste from the Project shall be diverted from disposal in a landfill and/or incineration in with the Project Requirements for Construction Waste Management and Disposal. Refer to Specification Sections 017419 Construction Waste Management and Disposal and 013510 Sustainable Design Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

2. MRc4: Recycled Content Material

No less than the specified minimum proportion of the building materials shall contain post-consumer and pre-consumer waste materials in accordance with the Project Requirements for Recycled Content Materials. All materials counted towards the computations of the proportion of the Recycled Content Materials shall comply with the standard minimum percentages of post-consumer waste materials and for the minimum percentages of pre-consumer waste materials. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

Contractor shall provide LEED credit verification as per Section 013300 Submittal Procedures.

3. MRc5: Regionally Manufactured Harvested Materials

   No less than the specified proportion of the building materials shall be extracted, processed, and manufactured within 500 miles of the project site in accordance with the project requirements for Regionally Manufactured and/or Harvested Materials. See Section 018113 Sustainable Design Requirements.

   Contractor shall provide LEED credit verification as per Section 013300 Submittal Procedures.

1.7 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings: For the following:

1. Masonry Units: Show sizes, profiles, coursing, and locations of special shapes.
2. Reinforcing Steel: Detail bending and placement of unit masonry reinforcing bars. Comply with ACI 315, "Details and Detailing of Concrete Reinforcement." Show elevations of reinforced walls.
3. Fabricated Flashing: Detail corner units, end-dam units, and other special applications.

C. Samples for Initial Selection:

1. Decorative CMUs, in the form of small-scale units.
2. Glazed structural-clay tile.
3. Colored mortar.
4. Weep holes/vents.

D. Samples for Verification: For each type and color of the following:

1. Decorative CMUs.
2. Glazed structural-clay tile.
3. Pigmented and colored-aggregate mortar. Make Samples using same sand and mortar ingredients to be used on Project. Label Samples to indicate types and amounts of pigments used.
4. Weep holes and vents.
5. Accessories embedded in masonry.

E. List of Materials Used in Constructing Mockups: List generic product names together with manufacturers, manufacturers' product names, model numbers, lot numbers, batch numbers, source of supply, and other information as required to identify materials used. Include mix proportions for mortar and grout and source of aggregates.

1. Submittal is for information only. Neither receipt of list nor approval of mockup constitutes approval of deviations from the Contract Documents unless such deviations are specifically brought to the attention of Architect and approved in writing.

F. Qualification Data: For testing agency.

G. Qualification Data: For qualified Installer.

H. Material Certificates: For each type and size of the following:

1. Masonry units.

a. Include material test reports substantiating compliance with requirements.
b. For masonry units used in structural masonry, include data and calculations establishing average net-area compressive strength of units.

2. Cementitious materials. Include brand, type, and name of manufacturer.
3. Preblended, dry mortar mixes. Include description of type and proportions of ingredients.
4. Grout mixes. Include description of type and proportions of ingredients.
5. Reinforcing bars.
6. Joint reinforcement.
7. Anchors, ties, and metal accessories.

I. Mix Designs: For each type of mortar and grout. Include description of type and proportions of ingredients.

1. Include test reports for mortar mixes required to comply with property specification. Test according to ASTM C 109/C 109M for compressive strength, ASTM C 1506 for water retention, and ASTM C 91 for air content.
2. Include test reports, according to ASTM C 1019, for grout mixes required to comply with compressive strength requirement.

J. Statement of Compressive Strength of Masonry: For each combination of masonry unit type and mortar type, provide statement of average net-area compressive strength of masonry units, mortar type, and resulting net-area compressive strength of masonry determined according to Tables 1 and 2 in ACI 530.1/ASCE 6/TMS 602.

K. Cold-Weather and Hot-Weather Procedures: Detailed description of methods, materials, and equipment to be used to comply with requirements.

L. Delegated-Design Submittal: For installed products indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.8 QUALITY ASSURANCE

A. Testing Agency Qualifications: Qualified according to ASTM C 1093 for testing indicated.

B. Source Limitations for Masonry Units: Obtain exposed masonry units of a uniform texture and color, or a uniform blend within the ranges accepted for these characteristics, from single source from single manufacturer for each product required.

C. Source Limitations for Mortar Materials: Obtain mortar ingredients of a uniform quality, including color for exposed masonry, from single manufacturer for each cementitious component and from single source or producer for each aggregate.

D. Masonry Standard: Comply with ACI 530.1/ASCE 6/TMS 602 unless modified by requirements in the Contract Documents.

E. Mockups: Requirements for mockups of unit masonry with cast stone masonry are specified in Division 04 Section “Cast Stone Masonry.”

F. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 01 Section "Project Management and Coordination."

1.9 DELIVERY, STORAGE, AND HANDLING

A. Store masonry units on elevated platforms in a dry location. If units are not stored in an enclosed location, cover tops and sides of stacks with waterproof sheeting, securely tied. If units become wet, do not install until they are dry.

B. Store cementitious materials on elevated platforms, under cover, and in a dry location. Do not use cementitious materials that have become damp.

C. Store aggregates where grading and other required characteristics can be maintained and contamination avoided.

D. Deliver preblended, dry mortar mix in moisture-resistant containers designed for use with dispensing silos. Store preblended, dry mortar mix in delivery containers on elevated platforms, under cover, and in a dry location or in covered weatherproof dispensing silos.

E. Store masonry accessories, including metal items, to prevent corrosion and accumulation of dirt and oil.

1.10 PROJECT CONDITIONS

A. Protection of Masonry: During construction, cover tops of walls, projections, and sills with waterproof sheeting at end of each day's work. Cover partially completed masonry when construction is not in progress.

1. Extend cover a minimum of 24 inches down both sides of walls and hold cover securely in place.
2. Where one wythe of multiwythe masonry walls is completed in advance of other wythes, secure cover a minimum of 24 inches down face next to unconstructed wythe and hold cover in place.

B. Do not apply uniform floor or roof loads for at least 12 hours and concentrated loads for at least three days after building masonry walls or columns.

C. Stain Prevention: Prevent grout, mortar, and soil from staining the face of masonry to be left exposed or painted. Immediately remove grout, mortar, and soil that come in contact with such masonry.

1. Protect base of walls from rain-splashed mud and from mortar splatter by spreading coverings on ground and over wall surface.
2. Protect sills, ledges, and projections from mortar droppings.
3. Protect surfaces of window and door frames, as well as similar products with painted and integral finishes, from mortar droppings.
4. Turn scaffold boards near the wall on edge at the end of each day to prevent rain from splashing mortar and dirt onto completed masonry.

D. Cold-Weather Requirements: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen substrates. Remove and replace unit masonry damaged by frost or by freezing conditions. Comply with cold-weather construction requirements contained in ACI 530.1/ASCE 6/TMS 602.

1. Cold-Weather Cleaning: Use liquid cleaning methods only when air temperature is 40 deg F and higher and will remain so until masonry has dried, but not less than seven days after completing cleaning.

E. Hot-Weather Requirements: Comply with hot-weather construction requirements contained in ACI 530.1/ASCE 6/TMS 602.

1.11 COORDINATION

A. Advise installers of other work about specific requirements for placement of reinforcement, veneer anchors, flashing, and similar items to be built into stone masonry.

PART 2 - PRODUCTS

2.1 MASONRY UNITS, GENERAL

A. Defective Units: Referenced masonry unit standards may allow a certain percentage of units to contain chips, cracks, or other defects exceeding limits stated in the standard. Do not use units where such defects will be exposed in the completed Work.

B. Fire-Resistance Ratings: Where indicated, provide units that comply with requirements for fire-resistance ratings indicated as determined by testing according to ASTM E 119, by equivalent masonry thickness, or by other means, as acceptable to authorities having jurisdiction.

2.2 CONCRETE MASONRY UNITS

A. Regional Materials: Provide CMUs that have been manufactured within 500 miles of Project site from aggregates and cement that have been extracted, harvested, or recovered, as well as manufactured, within 500 miles of Project site.

B. Shapes: Provide shapes indicated and as follows, with exposed surfaces matching exposed faces of adjacent units unless otherwise indicated.

1. Provide special shapes for lintels, corners, jambs, sashes, movement joints, headers, bonding, and other special conditions.
2. Provide bullnose units for outside corners unless otherwise indicated.

C. Integral Water Repellent: Provide units made with integral water repellent for exposed units and where indicated.

1. Integral Water Repellent: Liquid polymeric, integral water-repellent admixture that does not reduce flexural bond strength. Units made with integral water repellent, when tested according to ASTM E 514 as a wall assembly made with mortar containing integral water-repellent manufacturer's mortar additive, with

test period extended to 24 hours, shall show no visible water or leaks on the back of test specimen.

a. Products: Subject to compliance with requirements, provide one of the following :

1) ACM Chemistries; RainBloc.
2) BASF Aktiengesellschaft; Rheopel Plus.
3) Grace Construction Products, W. R. Grace & Co. - Conn.; Dry-Block.

D. CMUs: ASTM C 90.

1. Density Classification: Normal weight.
2. Size (Width): Manufactured to dimensions 3/8 inch less than nominal dimensions.
3. Exposed Faces: Provide color and texture matching the range represented by Architect's sample.
4. Faces to Receive Plaster: Where units are indicated to receive a direct application of plaster, provide textured-face units made with gap-graded aggregates.

E. Decorative CMUs: ASTM C 90.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

a. York Building Products, Gemstone series ground face masonry units.

2. Density Classification: Normal weight.
3. Size (Width): Manufactured to dimensions specified in "CMUs" Paragraph.
4. Pattern and Texture:

a. Standard pattern, ground-face finish.

5. Colors: #Putty.

2.3 CONCRETE AND MASONRY LINTELS

A. General: Provide one of the following:

B. Concrete Lintels: Precast or formed-in-place concrete lintels complying with requirements in Division 03 Section "Cast-in-Place Concrete," and with reinforcing bars indicated.

C. Masonry Lintels: Prefabricated or built-in-place masonry lintels made from bond beam CMUs with reinforcing bars placed as indicated and filled with coarse grout. Cure precast lintels before handling and installing. Temporarily support built-in-place lintels until cured.

2.4 STRUCTURAL-CLAY FACING TILE

A. General:

1. Provide solid, multicored, or hollow units, with shape and direction of cores optional unless otherwise indicated.
2. Where reinforced masonry is indicated, provide multicored units designed for use in reinforced, grouted masonry; either with vertical cores and with webs notched to receive horizontal reinforcement, or with horizontal cores and with holes in bed shells for placement of grout and to receive vertical reinforcement.
3. Where indicated for exterior applications, provide units recommended by manufacturer for exterior use in Project's location.
4. Provide special shapes where required for corners, jambs, coved bases, sills, and other special conditions indicated, including applications that cannot be produced by sawing standard units.

    a. Provide bullnose units for outside corners unless otherwise indicated.
    b. Provide coved internal corners.
    c. Provide recessed, coved base units unless otherwise indicated..

5. Where direct application of plaster is indicated or where bonded to backup masonry, provide units with rough, combed, or scored faces.

B. Glazed Structural-Clay Facing Tile: ASTM C 126, Grade S (select) .

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

    a. Elgin Butler Company, Structural Glazed Tile.

2. Density Classification: Normal weight
3. Sizes: 8W Series with actual face dimensions of 7-3/4 inches high by 15-3/4 inches long by widths indicated.
4. Width: Manufactured to dimensions 1/4 inch less than nominal dimensions.
5. Provide Type I (single-faced units) where only one finished face is exposed when units are installed, and Type II (double-faced units) where two opposite finished faces are exposed when units are installed.
6. Provide special units glazed on ends and tops, as well as faces for corners, jambs, sills, pilasters, columns, and other applications indicated, where glazed units are exposed on other surfaces and faces.
7. Colors and Patterns: #7450 ‘Slate’.

2.5 BRICK

A. General: Provide shapes indicated and as follows:

1. For ends of sills and caps and for similar applications that would otherwise expose unfinished brick surfaces, provide units without cores or frogs and with exposed surfaces finished.

2. Provide special shapes for applications where stretcher units cannot accommodate special conditions, including those at corners, movement joints, bond beams, sashes, and lintels.

3. Provide special shapes for applications requiring brick of size, form, color, and texture on exposed surfaces that cannot be produced by sawing.

4. Provide special shapes for applications where shapes produced by sawing would result in sawed surfaces being exposed to view.

B. Face Brick: ASTM C 216, Grade MW or SW, Type FBX.

1. Initial Rate of Absorption: Less than 30 g/30 sq. in. per minute when tested per ASTM C 67.

2. Efflorescence: Provide brick that has been tested according to ASTM C 67 and is rated "not effloresced."

3. Face Brick: McAvoy Brick “Havertown”. Match size, coursing and joint treatment of existing brick at SUI Building

2.6 MORTAR AND GROUT MATERIALS

A. Regional Materials: Provide aggregate for mortar and grout, cement, and lime that have been extracted, harvested, or recovered, as well as manufactured, within 500 miles of Project site.

B. Portland Cement: ASTM C 150, Type I or II, except Type III may be used for cold-weather construction. Provide natural color or white cement as required to produce mortar color indicated.

C. Hydrated Lime: ASTM C 207, Type S.

D. Portland Cement-Lime Mix: Packaged blend of portland cement and hydrated lime containing no other ingredients.

E. Colored Cement Product: Packaged blend made from portland cement and hydrated lime and mortar pigments, all complying with specified requirements, and containing no other ingredients.

1. Products: Subject to compliance with requirements, provide one of the following:

a. Colored Portland Cement-Lime Mix:

1) Capital Materials Corporation; Riverton Portland Cement Lime Custom Color.
2) Holcim (US) Inc.; Rainbow Mortamix Custom Color Cement/Lime.
3) Lafarge North America Inc.; Eaglebond Portland & Lime.
4) Lehigh Cement Company; Lehigh Custom Color Portland/Lime Cement.

2. Formulate blend as required to produce color indicated or, if not indicated, as selected from manufacturer's standard colors.
3. Pigments shall not exceed 10 percent of portland cement by weight.

F. Aggregate for Mortar: ASTM C 144.

1. For mortar that is exposed to view, use washed aggregate consisting of natural sand or crushed stone.
2. For joints less than 1/4-inch thick, use aggregate graded with 100 percent passing the No. 16 sieve.

3. White-Mortar Aggregates: Natural white sand or crushed white stone.
4. Colored-Mortar Aggregates: Natural sand or crushed stone of color necessary to produce required mortar color.

G. Aggregate for Grout: ASTM C 404.

H. Cold-Weather Admixture: Nonchloride, noncorrosive, accelerating admixture complying with ASTM C 494/C 494M, Type C, and recommended by manufacturer for use in masonry mortar of composition indicated.

1. Products: Subject to compliance with requirements, provide one of the following:

a. Euclid Chemical Company (The); Accelguard 80.
b. Grace Construction Products, W. R. Grace & Co. - Conn.; Morset.
c. Sonneborn Products, BASF Aktiengesellschaft; Trimix-NCA.

I. Water-Repellent Admixture: Liquid water-repellent mortar admixture intended for use with CMUs containing integral water repellent by same manufacturer.

1. Products: Subject to compliance with requirements, provide one of the following:

a. ACM Chemistries; RainBloc for Mortar.
b. BASF Aktiengesellschaft; Rheopel Mortar Admixture.
c. Grace Construction Products, W. R. Grace & Co. - Conn.; Dry-Block Mortar Admixture.

J. Water: Potable.

2.7 REINFORCEMENT

A. Uncoated Steel Reinforcing Bars: ASTM A 615/A 615M or ASTM A 996/A 996M, Grade 60.

B. Masonry Joint Reinforcement, General: ASTM A 951/A 951M.

1. Interior Walls: Hot-dip galvanized, carbon steel.
2. Exterior Walls: Stainless steel.
3. Wire Size for Side Rods: 0.187-inch diameter.
4. Wire Size for Cross Rods: 0.148-inch diameter.
5. Wire Size for Veneer Ties: 0.187-inch diameter.
6. Spacing of Cross Rods, Tabs, and Cross Ties: Not more than 16 inches o.c.
7. Provide in lengths of not less than 10 feet, with prefabricated corner and tee units.

C. Masonry Joint Reinforcement for Single-Wythe Masonry: Ladder type with single pair of side rods.

D. Masonry Joint Reinforcement for Multiwythe Masonry:

1. Adjustable (two-piece) type, ladder design, with one side rod at each face shell of backing wythe and with separate adjustable ties with pintle-and-eye connections having a maximum adjustment of 1-1/4 inches. Size ties to extend at least halfway through facing wythe but with at least 5/8-inch cover on outside

face. Ties have hooks or clips to engage a continuous horizontal wire in the facing wythe.

2.8 TIES AND ANCHORS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 40 00 "Quality Requirements," to design ties and anchors.

B. Structural Performance of ties and anchors: Ties and anchors shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:

C. Materials: Provide ties and anchors specified in this article that are made from materials that comply with the following unless otherwise indicated.

1. Hot-Dip Galvanized, Carbon-Steel Wire: ASTM A 82/A 82M; with ASTM A 153/A 153M, Class B-2 coating.
2. Stainless-Steel Wire: ASTM A 580/A 580M, Type 304 .
3. Steel Sheet, Galvanized after Fabrication: ASTM A 1008/A 1008M, Commercial Steel, with ASTM A 153/A 153M, Class B coating.
4. Stainless-Steel Sheet: ASTM A 666, Type 304 .
5. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.
6. Stainless-Steel Bars: ASTM A 276 or ASTM a 666, Type 304.

D. Wire Ties, General: Unless otherwise indicated, size wire ties to extend at least halfway through veneer but with at least 5/8-inch cover on outside face. Outer ends of wires are bent 90 degrees and extend 2 inches parallel to face of veneer.

E. Adjustable Anchors for Connecting to Concrete: Provide anchors that allow vertical or horizontal adjustment but resist tension and compression forces perpendicular to plane of wall.

1. Connector Section: Dovetail tabs for inserting into and compatible with dovetail slots in concrete, and attached to tie section; formed from 0.109-inch- thick, stainless-steel sheet.

a. 0.108-inch- thick, hot-dip galvanized sheet may be used at interior walls unless otherwise indicated.

2. Tie Section: Triangular-shaped wire tie, sized to extend within 1 inch of masonry face, made from 0.187-inch- diameter, stainless-steel wire. Hot-dip-galvanized wire may be used at interior walls unless otherwise indicated.

2.9 MISCELLANEOUS ANCHORS

A. Anchor Bolts: Headed or L-shaped steel bolts complying with ASTM A 307, Grade A; with ASTM A 563 hex nuts and, where indicated, flat washers; hot-dip galvanized to comply with ASTM A 153/A 153M, Class C; of dimensions indicated.

2.10 EMBEDDED FLASHING MATERIALS

A. Metal Flashing: Provide metal flashing complying with Division 07 Section "Sheet Metal Flashing and Trim"" and as follows:

1. Stainless Steel: ASTM A 240/A 240M, Type 304, 0.016 inch thick.
2. Fabricate continuous flashings in sections 96 inches long minimum, but not exceeding 12 feet. Provide splice plates at joints of formed, smooth metal flashing.
3. Fabricate through-wall metal flashing embedded in masonry from stainless steel , with ribs at 3-inch intervals along length of flashing to provide an integral mortar bond.

    a. Products: Subject to compliance with requirements, provide one of the following :

        1) Cheney Flashing Company; Cheney Flashing (Dovetail) or Cheney 3-Way Flashing (Sawtooth).
        2) Keystone Flashing Company, Inc.; Keystone 3-Way Interlocking Thruwall Flashing.
        3) Sandell Manufacturing Co., Inc.; Mechanically Keyed Flashing.

4. Fabricate through-wall flashing with snaplock receiver on exterior face where indicated to receive counterflashing.
5. Fabricate through-wall flashing with drip edge where indicated. Fabricate by extending flashing 1/2 inch out from wall, with outer edge bent down 30 degrees and hemmed.
6. Fabricate through-wall flashing with sealant stop unless otherwise indicated. Fabricate by bending metal back on itself 3/4 inch at exterior face of wall and down into joint 1/4 inch to form a stop for retaining sealant backer rod.
7. Fabricate metal drip edges and sealant stops for ribbed metal flashing from plain metal flashing of same metal as ribbed flashing and extending at least 3 inches into wall with hemmed inner edge to receive ribbed flashing and form a hooked seam. Form hem on upper surface of metal so that completed seam will shed water.
8. Metal Drip Edge: Fabricate from stainless steel. Extend at least 3 inches into wall and 1/2 inch out from wall, with outer edge bent down 30 degrees and hemmed.
9. Metal Sealant Stop: Fabricate from stainless steel. Extend at least 3 inches into wall and out to exterior face of wall. At exterior face of wall, bend metal back on itself for 3/4 inch and down into joint 1/4 inch to form a stop for retaining sealant backer rod.
10. Metal Expansion-Joint Strips: Fabricate from stainless steel to shapes indicated.

B. Application: Unless otherwise indicated, use the following:

1. Where flashing is indicated to receive counterflashing, use metal flashing.
2. Where flashing is indicated to be turned down at or beyond the wall face, use metal flashing.
3. Where flashing is partly exposed and is indicated to terminate at the wall face, use metal flashing with a drip edge .
4. Where flashing is fully concealed, use metal flashing .

C. Solder and Sealants for Sheet Metal Flashings:

1. Solder for Stainless Steel: ASTM B 32, Grade Sn60, with acid flux of type recommended by stainless-steel sheet manufacturer.
2. Elastomeric Sealant: ASTM C 920, chemically curing silicone sealant; of type, grade, class, and use classifications required to seal joints in sheet metal flashing and trim and remain watertight.

D. Adhesives, Primers, and Seam Tapes for Flashings: Flashing manufacturer's standard products or products recommended by flashing manufacturer for bonding flashing sheets to each other and to substrates.

2.11 MISCELLANEOUS MASONRY ACCESSORIES

A. Compressible Filler: Premolded filler strips complying with ASTM D 1056, Grade 2A1; compressible up to 35 percent; of width and thickness indicated; formulated from neoprene urethane or PVC.

B. Preformed Control-Joint Gaskets: Made from styrene-butadiene-rubber compound, complying with ASTM D 2000, Designation M2AA-805 and designed to fit standard sash block and to maintain lateral stability in masonry wall; size and configuration as indicated.

C. Bond-Breaker Strips: Asphalt-saturated, organic roofing felt complying with ASTM D 226, Type I (No. 15 asphalt felt).

D. Weep/Vent Products: Use the following unless otherwise indicated:

1. Mesh Weep/Vent: Free-draining mesh; made from polyethylene strands, full height and width of head joint and depth 1/8 inch less than depth of outer wythe; in color selected from manufacturer's standard.

a. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

1) Mortar Net USA, Ltd.; Mortar Net Weep Vents.

E. Cavity Drainage Material: Free-draining mesh, made from polymer strands that will not degrade within the wall cavity.

1. Products: Subject to compliance with requirements, provide the following:

a. Archovations, Inc.; CavClear Masonry Mat.

2. Provide one the following configurations:

a. Sheets or strips full depth of cavity and installed to full height of cavity.

F. Reinforcing Bar Positioners: Wire units designed to fit into mortar bed joints spanning masonry unit cells and hold reinforcing bars in center of cells. Units are formed from 0.148-inch steel wire, hot-dip galvanized after fabrication. Provide units designed for number of bars indicated.

1. Products: Subject to compliance with requirements, provide one of the following:

a. Dayton Superior Corporation, Dur-O-Wal Division; D/A 810, D/A 812 or D/A 817.
b. Heckmann Building Products Inc.; No. 376 Rebar Positioner.
c. Hohmann & Barnard, Inc.; #RB or #RB-Twin Rebar Positioner.
d. Wire-Bond; O-Ring or Double O-Ring Rebar Positioner.

2.12 CAVITY-WALL INSULATION

A. Mineral Wool Fibre Insulation

B. Basis-of-Design Product: Subject to compliance with requirements, provide CavityRock MD, by Roxul.

2.13 MASONRY CLEANERS

A. Proprietary Acidic Cleaner: Manufacturer's standard-strength cleaner designed for removing mortar/grout stains, efflorescence, and other new construction stains from new masonry without discoloring or damaging masonry surfaces. Use product expressly approved for intended use by cleaner manufacturer and manufacturer of masonry units being cleaned.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following :

a. Diedrich Technologies, Inc.
b. EaCo Chem, Inc.
c. ProSoCo, Inc.

2.14 MORTAR AND GROUT MIXES

A. General: Do not use admixtures, including pigments, air-entraining agents, accelerators, retarders, water-repellent agents, antifreeze compounds, or other admixtures, unless otherwise indicated.

1. Do not use calcium chloride in mortar or grout.
2. Use portland cement-lime mortar unless otherwise indicated.
3. Add cold-weather admixture (if used) at same rate for all mortar that will be exposed to view, regardless of weather conditions, to ensure that mortar color is consistent.

B. Preblended, Dry Mortar Mix: Furnish dry mortar ingredients in form of a preblended mix. Measure quantities by weight to ensure accurate proportions, and thoroughly blend ingredients before delivering to Project site.

C. Mortar for Unit Masonry: Comply with ASTM C 270, Property Specification. Provide the following types of mortar for applications stated unless another type is indicated or needed to provide required compressive strength of masonry.

1. For masonry below grade or in contact with earth, use Type M .
2. For reinforced masonry, use Type S .
3. For mortar parge coats, use Type S .

4. For exterior, above-grade, load-bearing and non-load-bearing walls and parapet walls; for interior load-bearing walls; for interior non-load-bearing partitions; and for other applications where another type is not indicated, use Type S.

D. Pigmented Mortar: Use colored cement product.

1. Application: Use pigmented mortar for exposed mortar joints with the following units:

a. Decorative CMUs.
b. Glazed structural-clay facing tile.

E. Colored-Aggregate Mortar: Produce required mortar color by using colored aggregates and natural color or white cement as necessary to produce required mortar color.

1. Mix to match Architect's sample.
2. Application: Use colored aggregate mortar for exposed mortar joints with the following units:

a. Decorative CMUs.
b. Glazed structural-clay facing tile.

F. Grout for Unit Masonry: Comply with ASTM C 476.

1. Use grout of type indicated or, if not otherwise indicated, of type (fine or coarse) that will comply with Table 1.15.1 in ACI 530.1/ASCE 6/TMS 602 for dimensions of grout spaces and pour height.
2. Proportion grout in accordance with ASTM C 476, Table 1 or paragraph 4.2.2 for specified 28-day compressive strength indicated, but not less than 3000 psi.
3. Provide grout with a slump of 8 to 11 inches as measured according to ASTM C 143/C 143M.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

1. For the record, prepare written report, endorsed by Installer, listing conditions detrimental to performance of work.
2. Verify that foundations are within tolerances specified.
3. Verify that reinforcing dowels are properly placed.
4. Verify that dovetail slots and other items installed in substrates and require for extending into masonry are correctly installed.

B. Before installation, examine rough-in and built-in construction for piping systems to verify actual locations of piping connections.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

A. Thickness: Build cavity and composite walls and other masonry construction to full thickness shown. Build single-wythe walls to actual widths of masonry units, using units of widths indicated.

B. Build chases and recesses to accommodate items specified in this and other Sections.

C. Leave openings for equipment to be installed before completing masonry. After installing equipment, complete masonry to match the construction immediately adjacent to opening.

D. Use full-size units without cutting if possible. If cutting is required to provide a continuous pattern or to fit adjoining construction, cut units with motor-driven saws; provide clean, sharp, unchipped edges. Allow units to dry before laying unless wetting of units is specified. Install cut units with cut surfaces and, where possible, cut edges concealed.

E. Select and arrange units for exposed unit masonry to produce a uniform blend of colors and textures.

1. Mix units from several pallets or cubes as they are placed.

3.3 TOLERANCES

A. Dimensions and Locations of Elements:

1. For dimensions in cross section or elevation do not vary by more than plus 1/2 inch or minus 1/4 inch.
2. For location of elements in plan do not vary from that indicated by more than plus or minus 1/2 inch.
3. For location of elements in elevation do not vary from that indicated by more than plus or minus 1/4 inch in a story height or 1/2 inch total.

B. Lines and Levels:

1. For bed joints and top surfaces of bearing walls do not vary from level by more than 1/4 inch in 10 feet, or 1/2 inch maximum.
2. For conspicuous horizontal lines, such as lintels, sills, parapets, and reveals, do not vary from level by more than 1/8 inch in 10 feet, 1/4 inch in 20 feet, or 1/2 inch maximum.
3. For vertical lines and surfaces do not vary from plumb by more than 1/4 inch in 10 feet, 3/8 inch in 20 feet, or 1/2 inch maximum.
4. For conspicuous vertical lines, such as external corners, door jambs, reveals, and expansion and control joints, do not vary from plumb by more than 1/8 inch in 10 feet, 1/4 inch in 20 feet, or 1/2 inch maximum.
5. For lines and surfaces do not vary from straight by more than 1/4 inch in 10 feet, 3/8 inch in 20 feet, or 1/2 inch maximum.
6. For vertical alignment of exposed head joints, do not vary from plumb by more than 1/4 inch in 10 feet, or 1/2 inch maximum.
7. For faces of adjacent exposed masonry units, do not vary from flush alignment by more than 1/16 inch except due to warpage of masonry units within tolerances specified for warpage of units.

C. Joints:

1. For bed joints, do not vary from thickness indicated by more than plus or minus 1/8 inch, with a maximum thickness limited to 1/2 inch.
2. For exposed bed joints, do not vary from bed-joint thickness of adjacent courses by more than 1/8 inch.
3. For head and collar joints, do not vary from thickness indicated by more than plus 3/8 inch or minus 1/4 inch.
4. For exposed head joints, do not vary from thickness indicated by more than plus or minus 1/8 inch. Do not vary from adjacent bed-joint and head-joint thicknesses by more than 1/8 inch.
5. For exposed bed joints and head joints of stacked bond, do not vary from a straight line by more than 1/16 inch from one masonry unit to the next.

3.4 LAYING MASONRY WALLS

A. Lay out walls in advance for accurate spacing of surface bond patterns with uniform joint thicknesses and for accurate location of openings, movement-type joints, returns, and offsets. Avoid using less-than-half-size units, particularly at corners, jambs, and, where possible, at other locations.

B. Bond Pattern for Exposed Masonry: Unless otherwise indicated, lay exposed masonry in running bond ; do not use units with less than nominal 4-inch horizontal face dimensions at corners or jambs.

C. Lay concealed masonry with all units in a wythe in running bond or bonded by lapping not less than 4-inches. Bond and interlock each course of each wythe at corners. Do not use units with less than nominal 4-inch horizontal face dimensions at corners or jambs.

D. Stopping and Resuming Work: Stop work by racking back units in each course from those in course below; do not tooth. When resuming work, clean masonry surfaces that are to receive mortar, remove loose masonry units and mortar, and wet brick if required before laying fresh masonry.

E. Built-in Work: As construction progresses, build in items specified in this and other Sections. Fill in solidly with masonry around built-in items.

F. Fill space between steel frames and masonry solidly with mortar unless otherwise indicated.

G. Where built-in items are to be embedded in cores of hollow masonry units, place a layer of metal lath, wire mesh, or plastic mesh in the joint below and rod mortar or grout into core.

H. Fill cores in hollow CMUs with grout 24 inches under bearing plates, beams, lintels, posts, and similar items unless otherwise indicated.

I. Build non-load-bearing interior partitions full height of story to underside of solid floor or roof structure above unless otherwise indicated.

1. Install compressible filler in joint between top of partition and underside of structure above.

2. Fasten partition top anchors to structure above and build into top of partition. Grout cells of CMUs solidly around plastic tubes of anchors and push tubes down into grout to provide 1/2-inch clearance between end of anchor rod and end of tube. Space anchors 48 inches o.c. unless otherwise indicated.
3. Wedge non-load-bearing partitions against structure above with small pieces of tile, slate, or metal. Fill joint with mortar after dead-load deflection of structure above approaches final position.
4. At fire-rated partitions, treat joint between top of partition and underside of structure above to comply with Division 07 Section "Fire-Resistive Joint Systems."

3.5 MORTAR BEDDING AND JOINTING

A. Lay CMUs as follows:

1. With face shells fully bedded in mortar and with head joints of depth equal to bed joints.
2. With webs fully bedded in mortar in all courses of piers, columns, and pilasters.
3. With webs fully bedded in mortar in grouted masonry, including starting course on footings.
4. With entire units, including areas under cells, fully bedded in mortar at starting course on footings where cells are not grouted.

B. Lay solid masonry units with completely filled bed and head joints; butter ends with sufficient mortar to fill head joints and shove into place. Do not deeply furrow bed joints or slush head joints.

C. Lay structural-clay tile as follows:

1. Lay vertical-cell units with full head joints unless otherwise indicated. Provide bed joints with full mortar coverage on face shells and webs.
2. Lay horizontal-cell units with full bed joints unless otherwise indicated. Keep drainage channels, if any, free of mortar. Form head joints with sufficient mortar so excess will be squeezed out as units are placed in position. Butter both sides of units to be placed, or butter one side of unit already in place and one side of unit to be placed.
3. Maintain joint thicknesses indicated except for minor variations required to maintain bond alignment. If not indicated, lay walls with 1/4- to 3/8-inch- thick joints.

D. Tool exposed joints slightly concave when thumbprint hard, using a jointer larger than joint thickness unless otherwise indicated.

1. For glazed masonry units, use a nonmetallic jointer 3/4 inch or more in width.

E. Cut joints flush for masonry walls to receive plaster or other direct-applied finishes (other than paint) unless otherwise indicated.

3.6 COMPOSITE MASONRY

A. Bond wythes of composite masonry together using one of the following methods:

1. Masonry Joint Reinforcement: Installed in horizontal mortar joints.

a. Where bed joints of both wythes align, use tab-type reinforcement.
b. Where bed joints of wythes do not align, use adjustable (two-piece) type reinforcement.

B. Bond wythes of composite masonry together using bonding system indicated on Drawings.

C. Collar Joints: Solidly fill collar joints by parging face of first wythe that is laid and shoving units of other wythe into place.

D. Collar Joints in Clay Tile Masonry: After each course is laid, fill the vertical, longitudinal joint between wythes solidly with mortar at interior walls and partitions.

E. Corners: Provide interlocking masonry unit bond in each wythe and course at corners unless otherwise indicated.

1. Provide continuity with masonry joint reinforcement at corners by using prefabricated L-shaped units as well as masonry bonding.

F. Intersecting and Abutting Walls: Unless vertical expansion or control joints are shown at juncture, bond walls together as follows:

1. Provide continuity with masonry joint reinforcement by using prefabricated T-shaped units.

3.7 CAVITY WALLS

A. Bond wythes of cavity walls together using one of the following methods:

1. Masonry Joint Reinforcement: Installed in horizontal mortar joints.

a. Where bed joints of both wythes align, use tab-type reinforcement.
b. Where bed joints of wythes do not align, use adjustable (two-piece) type reinforcement
c. Where one wythe is of clay masonry and the other of concrete masonry, use adjustable (two-piece) type reinforcement to allow for differential movement regardless of whether bed joints align.

2. Masonry Veneer Anchors: Comply with requirements for anchoring masonry veneers.

B. Bond wythes of cavity walls together using bonding system indicated on Drawings.

C. Keep cavities clean of mortar droppings and other materials during construction. Bevel beds away from cavity, to minimize mortar protrusions into cavity. Do not attempt to trowel or remove mortar fins protruding into cavity.

D. Apply air barrier to face of backup wythe to comply with Division 07 Section " Fluid-Applied Membrane Air Barriers."

E. Installing Cavity-Wall Insulation: Fit courses of insulation between wall ties and other confining obstructions in cavity, with edges butted tightly both ways. Press units firmly against inside wythe of masonry or other construction as shown. Install wedges or clips over masonry ties to hold insulation in place at board edges.

3.8 MASONRY JOINT REINFORCEMENT

A. General: Install entire length of longitudinal side rods in mortar with a minimum cover of 5/8 inch on exterior side of walls, 1/2 inch elsewhere. Lap reinforcement a minimum of 6 inches.

1. Space reinforcement not more than 16 inches o.c.
2. Space reinforcement not more than 8 inches o.c. in foundation walls and parapet walls.
3. Provide reinforcement not more than 8 inches above and below wall openings and extending 12 inches beyond openings in addition to continuous reinforcement.

B. Interrupt joint reinforcement at control and expansion joints unless otherwise indicated.

C. Provide continuity at wall intersections by using prefabricated T-shaped units.

D. Provide continuity at corners by using prefabricated L-shaped units.

3.9 ANCHORING MASONRY TO STRUCTURAL STEEL AND CONCRETE

A. Anchor masonry to structural steel and concrete where masonry abuts or faces structural steel or concrete to comply with the following:

1. Provide an open space not less than 1/2 inch wide between masonry and structural steel or concrete unless otherwise indicated. Keep open space free of mortar and other rigid materials.
2. Anchor masonry with anchors embedded in masonry joints and attached to structure.
3. Space anchors as indicated, but not more than 24 inches o.c. vertically and 36 inches o.c. horizontally.

3.10 ANCHORING MASONRY VENEERS

A. Anchor masonry veneers to concrete and masonry backup with masonry-veneer anchors to comply with the following requirements:

1. Fasten anchors to concrete and masonry backup with metal fasteners of type indicated. Use two fasteners unless anchor design only uses one fastener.
2. Embed connector sections and continuous wire in masonry joints. Provide not less than 2 inches of air space between back of masonry veneer and face of sheathing.
3. Locate anchor sections to allow maximum vertical differential movement of ties up and down.
4. Space anchors as indicated, but not more than 16 inches o.c. vertically and 24 inches o.c. horizontally with not less than 1 anchor for each 2.67 sq. ft. of wall area. Install additional anchors within 12 inches of openings and at intervals, not exceeding 36 inches, around perimeter.

3.11 CONTROL AND EXPANSION JOINTS

A. General: Install control and expansion joint materials in unit masonry as masonry progresses. Do not allow materials to span control and expansion joints without provision to allow for in-plane wall or partition movement.

B. Form control joints in concrete masonry using one of the following methods:

1. Fit bond-breaker strips into hollow contour in ends of CMUs on one side of control joint. Fill resultant core with grout and rake out joints in exposed faces for application of sealant.
2. Install preformed control-joint gaskets designed to fit standard sash block.
3. Install interlocking units designed for control joints. Install bond-breaker strips at joint. Keep head joints free and clear of mortar or rake out joint for application of sealant.
4. Install temporary foam-plastic filler in head joints and remove filler when unit masonry is complete for application of sealant.

C. Provide horizontal, pressure-relieving joints by either leaving an air space or inserting a compressible filler of width required for installing sealant and backer rod specified in Division 07 Section "Joint Sealants," but not less than 3/8 inch .

1. Locate horizontal, pressure-relieving joints beneath shelf angles supporting masonry.

3.12 LINTELS

A. Install steel lintels where indicated.

B. Provide concrete or masonry lintels where shown and where openings of more than 12 inches for brick-size units and 24 inches for block-size units are shown without structural steel or other supporting lintels.

C. Provide minimum bearing of 8 inches at each jamb unless otherwise indicated.

3.13 FLASHING, WEEP HOLES, CAVITY DRAINAGE, AND VENTS

A. General: Install embedded flashing and weep holes in masonry at shelf angles, lintels, ledges, other obstructions to downward flow of water in wall, and where indicated. Install vents at shelf angles, ledges, and other obstructions to upward flow of air in cavities, and where indicated.

B. Install flashing as follows unless otherwise indicated:

1. Prepare masonry surfaces so they are smooth and free from projections that could puncture flashing. Where flashing is within mortar joint, place through-wall flashing on sloping bed of mortar and cover with mortar. Before covering with mortar, seal penetrations in flashing with adhesive, sealant, or tape as recommended by flashing manufacturer.
2. At masonry-veneer walls, extend flashing through veneer, across air space behind veneer, and up face of sheathing at least 8 inches; with upper edge tucked under building paper or building wrap, lapping at least 4 inches.

3. At lintels and shelf angles, extend flashing a minimum of 6 inches into masonry at each end. At heads and sills, extend flashing 6 inches at ends and turn up not less than 2 inches to form end dams.
4. Interlock end joints of ribbed sheet metal flashing by overlapping ribs not less than 1-1/2 inches or as recommended by flashing manufacturer, and seal lap with elastomeric sealant complying with requirements in Division 07 Section "Joint Sealants" for application indicated.
5. Install metal drip edges and sealant stops with ribbed sheet metal flashing by interlocking hemmed edges to form hooked seam. Seal seam with elastomeric sealant complying with requirements in Division 07 Section "Joint Sealants" for application indicated.

C. Install reglets and nailers for flashing and other related construction where they are shown to be built into masonry.

D. Install weep holes in head joints in exterior wythes of first course of masonry immediately above embedded flashing and as follows:

1. Use specified weep/vent products to form weep holes.
2. Use wicking material to form weep holes above flashing under brick sills. Turn wicking down at lip of sill to be as inconspicuous as possible.
3. Space weep holes 24 inches o.c. unless otherwise indicated.
4. Space weep holes formed from plastic tubing or wicking material 16 inches o.c.
5. Cover cavity side of weep holes with plastic insect screening at cavities insulated with loose-fill insulation.
6. Trim wicking material flush with outside face of wall after mortar has set.

E. Place cavity drainage material in cavities to comply with configuration requirements for cavity drainage material in "Miscellaneous Masonry Accessories" Article.

F. Install vents in head joints in exterior wythes at spacing indicated. Use specified weep/vent products to form vents.

1. Close cavities off vertically and horizontally with blocking in manner indicated. Install through-wall flashing and weep holes above horizontal blocking.

3.14 REINFORCED UNIT MASONRY INSTALLATION

A. Temporary Formwork and Shores: Construct formwork and shores as needed to support reinforced masonry elements during construction.

1. Construct formwork to provide shape, line, and dimensions of completed masonry as indicated. Make forms sufficiently tight to prevent leakage of mortar and grout. Brace, tie, and support forms to maintain position and shape during construction and curing of reinforced masonry.
2. Do not remove forms and shores until reinforced masonry members have hardened sufficiently to carry their own weight and other loads that may be placed on them during construction.

B. Placing Reinforcement: Comply with requirements in ACI 530.1/ASCE 6/TMS 602.

C. Grouting: Do not place grout until entire height of masonry to be grouted has attained enough strength to resist grout pressure.

1. Comply with requirements in ACI 530.1/ASCE 6/TMS 602 for cleanouts and for grout placement, including minimum grout space and maximum pour height.
2. Limit height of vertical grout pours to not more than 60 inches.

3.15 FIELD QUALITY CONTROL

A. Testing and Inspecting: Engage special inspectors to perform tests and inspections and prepare reports. Allow inspectors access to scaffolding and work areas, as needed to perform tests and inspections. Retesting of materials that fail to comply with specified requirements shall be done at Contractor's expense.

B. Inspections: Level 1 special inspections according to the "International Building Code."

1. Begin masonry construction only after inspectors have verified proportions of site-prepared mortar.
2. Place grout only after inspectors have verified compliance of grout spaces and of grades, sizes, and locations of reinforcement.
3. Place grout only after inspectors have verified proportions of site-prepared grout.

C. Testing Prior to Construction: One set of tests.

D. Clay Masonry Unit Test: For each type of unit provided, according to ASTM C 67 for compressive strength.

E. Concrete Masonry Unit Test: For each type of unit provided, according to ASTM C 140 for compressive strength.

F. Mortar Test (Property Specification): For each mix provided, according to ASTM C 780. Test mortar for mortar air content and compressive strength.

G. Grout Test (Compressive Strength): For each mix provided, according to ASTM C 1019.

3.16 REPAIRING, POINTING, AND CLEANING

A. Remove and replace masonry units that are loose, chipped, broken, stained, or otherwise damaged or that do not match adjoining units. Install new units to match adjoining units; install in fresh mortar, pointed to eliminate evidence of replacement.

B. Pointing: During the tooling of joints, enlarge voids and holes, except weep holes, and completely fill with mortar. Point up joints, including corners, openings, and adjacent construction, to provide a neat, uniform appearance. Prepare joints for sealant application, where indicated.

C. In-Progress Cleaning: Clean unit masonry as work progresses by dry brushing to remove mortar fins and smears before tooling joints.

D. Final Cleaning: After mortar is thoroughly set and cured, clean exposed masonry as follows:

1. Remove large mortar particles by hand with wooden paddles and nonmetallic scrape hoes or chisels.

2. Test cleaning methods on sample wall panel; leave one-half of panel uncleaned for comparison purposes. Obtain Architect's approval of sample cleaning before proceeding with cleaning of masonry.
3. Protect adjacent stone and nonmasonry surfaces from contact with cleaner by covering them with liquid strippable masking agent or polyethylene film and waterproof masking tape.
4. Wet wall surfaces with water before applying cleaners; remove cleaners promptly by rinsing surfaces thoroughly with clear water.
5. Clean masonry with a proprietary acidic cleaner applied according to manufacturer's written instructions.
6. Clean concrete masonry by cleaning method indicated in NCMA TEK 8-2A applicable to type of stain on exposed surfaces.

3.17 MASONRY WASTE DISPOSAL

A. Salvageable Materials: Unless otherwise indicated, excess masonry materials are Contractor's property. At completion of unit masonry work, remove from Project site.

B. Waste Disposal as Fill Material: Dispose of clean masonry waste, including excess or soil-contaminated sand, waste mortar, and broken masonry units, by crushing and mixing with fill material as fill is placed.

1. Crush masonry waste to less than 4 inches in each dimension.
2. Mix masonry waste with at least two parts of specified fill material for each part of masonry waste. Fill material is specified in Division 31 Section "Earth Moving."
3. Do not dispose of masonry waste as fill within 18 inches of finished grade.

C. Excess Masonry Waste: Remove excess clean masonry waste that cannot be used as fill, as described above, and other masonry waste, and legally dispose of off Owner's property.

END OF SECTION 042000

SECTION 04 72 00 - CAST STONE MASONRY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Cast-stone including the following**:**

a. Cast stone veneer

B. Related Sections:

1. Section 042000 "Unit Masonry" for installing cast-stone units in unit masonry.

1.3 DEFINITION

A. Cast stone veneer: A highly refined architectural concrete stone product manufactured to simulate fine grain texture of natural stone

1.4 SUSTAINABLE DESIGN REQUIREMENTS

A. Applicable LEED Credits

1. MRc2
2. MRc4
3. MRc5

B. LEED Requirements

1. MRc2: Construction Waste Management

No less than the specified portion of all construction waste from the Project shall be diverted from disposal in a landfill and/or incineration in with the Project Requirements for Construction Waste Management and Disposal. Refer to Specification Sections 017419 Construction Waste Management and Disposal and 013510 Sustainable Design Project Requirements.

Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

2. MRc4: Recycled Content Material

No less than the specified minimum proportion of the building materials shall contain post-consumer and pre-consumer waste materials in accordance with the Project Requirements for Recycled Content Materials. All materials counted towards the computations of the proportion of the Recycled Content Materials shall comply with the standard minimum percentages of post-consumer waste materials and for the minimum percentages of pre-consumer waste materials. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

Contractor shall provide LEED credit verification as per Section 013300 Submittal Procedures.

3. MRc5: Regionally Manufactured Harvested Materials

No less than the specified proportion of the building materials shall be extracted, processed, and manufactured within 500 miles of the project site in accordance with the project requirements for Regionally Manufactured and/or Harvested Materials. See Section 018113 Sustainable Design Requirements.

Contractor shall provide LEED credit verification as per Section 013300 Submittal Procedures.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. For cast-stone units, include construction details, material descriptions, dimensions of individual components and profiles, and finishes.

B. Delegated-Design Submittal: For fabrication and installation details for cast-stone units. Include dimensions, profiles, cross sections, arrangement of joints, control joints details of reinforcement and anchorages, and indication of finished faces.

1. Include building elevations showing layout of units and locations of joints and anchors. Control joints shall match configuration of stone units.

C. Samples for Initial Selection: Actual mortar samples for colored mortar.

D. Samples for Verification:

1. For each color and texture of cast stone required, 20 inches (250 mm) square in size. Provide one sample to the Owner and two samples to the Architect.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer and testing agency.

1. Include copies of material test reports for completed projects, indicating compliance of cast stone with ASTM C 1364.

B. Material Test Reports: For each mix required to produce cast stone, based on testing according to ASTM C 1364.

1. Provide test reports based on testing within previous two years.

1.7 QUALITY ASSURANCE

A. Engineering Responsibility: Preparation of Shop Drawings, design calculations, and other structural data by a qualified professional engineer.

B. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in State of Maryland and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of cast stone masonry assemblies that are similar to those indicated for this Project in material, design, and extent. The Professional Engineer shall prepare and seal design calculations, Shop drawings, and other structural data related to the work of this Section.

C. Manufacturer and Installer Qualifications: A qualified manufacturer and installer of cast-stone units similar to those indicated for this Project, that has sufficient production capacity to manufacture required units, and is a plant certified by the Cast Stone Institute. Manufacturer and installer shall have not less than five years of experience in the cast stone industry.

D. Testing Agency Qualifications: Qualified according to ASTM E 329 for testing indicated.

E. Mockups: Build mockups to demonstrate aesthetic effects and set quality standards for materials and execution.

a. Mockups shall be built as complete wall assembly using full size unit components
b. Include typical window opening including head, jamb and sill conditions, at one end of exterior wall mockup. Make opening approximately 12 inches wide by 16 inches high.
c. Include a sealant-filled joint at least 16 inches long in mockup.
d. Include staggered control joints.
e. Include through-wall flashing installed for a 24-inch length in corner of mockup approximately 16 inches down from top of mockup, with a 12-inch length of flashing left exposed to view (omit stone masonry above half of flashing).
f. Include air barrier, insulation, veneer anchors, flashing, cavity drainage material, and weep holes in exterior masonry-veneer wall mockup.

2. Protect accepted mockups from the elements with weather-resistant membrane.
3. Approval of mockups is for color, texture, and blending of stone; relationship of mortar and sealant colors to stone colors; tooling of joints; and aesthetic qualities of workmanship.

a. Approval of mockups is also for other material and construction qualities Architect specifically approves in writing.
b. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.

F. Standards: Comply with requirements of the Cast Stone Institute Technical Manual.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Coordinate delivery of cast stone with unit masonry work to avoid delaying the Work and to minimize the need for on-site storage.

B. Pack, handle, and ship cast-stone units in suitable packs or pallets.

1. Lift with wide-belt slings; do not use wire rope or ropes that might cause staining. Move cast-stone units if required, using dollies with wood supports.
2. Store cast-stone units on wood skids or pallets with nonstaining, waterproof covers, securely tied. Arrange to distribute weight evenly and to prevent damage to units. Ventilate under covers to prevent condensation.

C. Store cementitious materials on elevated platforms, under cover, and in a dry location. Do not use cementitious materials that have become damp.

D. Store mortar aggregates where grading and other required characteristics can be maintained and contamination can be avoided.

1.9 PROJECT CONDITIONS

A. Cold-Weather Requirements: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen substrates. Comply with cold-weather construction requirements in TMS 602/ACI 530.1/ASCE 6.

1. Cold-Weather Cleaning: Use liquid cleaning methods only when air temperature is 40 deg F (4 deg C) and above and will remain so until cast stone has dried, but no fewer than seven days after completing cleaning.

B. Hot-Weather Requirements: Comply with hot-weather construction requirements in TMS 602/ACI 530.1/ASCE 6.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations for Cast Stone: Obtain cast-stone units from single source from single manufacturer.

B. Source Limitations for Mortar Materials: Obtain mortar ingredients of a uniform quality, including color, from one manufacturer for each cementitious component and from one source or producer for each aggregate.

C. Basis-of-Design Product: Subject to compliance with requirements, provide Continental Cast Stone; Designer Collection, or a comparable product by one of the following:

a. Custom Cast Stone
b. Corinthian Cast Stone Inc
c. David Kucera, Inc

D. Color and finish: 1101E Greystone; Smooth.

2.2 CAST-STONE MATERIALS

A. General: Comply with ASTM C 1364.

B. Portland Cement: ASTM C 150/C 150M, Type I or Type III, containing not more than 0.60 percent total alkali when tested according to ASTM C 114. Provide natural color or white cement as required to produce cast-stone color indicated.

C. Coarse Aggregates: Granite, quartz, or limestone complying with ASTM C 33/C 33M; gradation and colors as needed to produce required cast-stone textures and colors.

D. Fine Aggregates: Natural sand or crushed stone complying with ASTM C 33/C 33M, gradation and colors as needed to produce required cast-stone textures and colors.

E. Color Pigment: ASTM C 979/C 979M, synthetic mineral-oxide pigments or colored water-reducing admixtures; color stable, free of carbon black, nonfading, and resistant to lime and other alkalis.

F. Admixtures: Use only admixtures specified or approved in writing by Architect.

1. Do not use admixtures that contain more than 0.1 percent water-soluble chloride ions by mass of cementitious materials. Do not use admixtures containing calcium chloride.
2. Use only admixtures that are certified by manufacturer to be compatible with cement and other admixtures used.
3. Air-Entraining Admixture: ASTM C 260/C 260M.
4. Water-Reducing Admixture: ASTM C 494/C 494M, Type A.
5. Water-Reducing, Retarding Admixture: ASTM C 494/C 494M, Type D.
6. Water-Reducing, Accelerating Admixture: ASTM C 494/C 494M, Type E.

G. Reinforcement: Deformed steel bars complying with ASTM A 615/A 615M, Grade 60 (Grade 420). Use galvanized or epoxy-coated reinforcement.

1. Epoxy Coating: ASTM A 775/A 775M.
2. Galvanized Coating: ASTM A 767/A 767M.

H. Embedded Anchors and Other Inserts: Fabricated from stainless steel complying with ASTM A 240/A 240M, ASTM A 276, or ASTM A 666, Type 304.

I. Water: Potable.

2.3 CAST-STONE UNITS

A. Cast-Stone Units:

1. Units shall be manufactured using the vibrant dry tamp method.
2. Units shall be resistant to freezing and thawing as determined by laboratory testing according to ASTM C 666/C 666M, Procedure A, as modified by ASTM C 1364.
3. Compressive Strength ASTM C 1194: 6,500 psi, minimal at 28 days.
4. Absorption ASTM C 1195: 6% maximum at 28 days

B. Fabricate units with sharp arris and accurately reproduced details, with indicated texture on all exposed surfaces unless otherwise indicated.

1. Slope exposed horizontal surfaces 1:12 to drain unless otherwise indicated.
2. Provide raised fillets at backs of sills and at ends indicated to be built into jambs.
3. Provide drips on projecting elements unless otherwise indicated.

C. Fabrication Tolerances:

1. Variation in Cross Section: Do not vary from indicated dimensions by more than 1/8 inch (3 mm).
2. Variation in Length: Do not vary from indicated dimensions by more than 1/360 of the length of unit or 1/8 inch (3 mm), whichever is greater, but in no case by more than 1/4 inch (6 mm).
3. Warp, Bow, and Twist: Not to exceed 1/360 of the length of unit or 1/8 inch (3 mm), whichever is greater.
4. Location of Grooves, False Joints, Holes, Anchorages, and Similar Features: Do not vary from indicated position by more than 1/8 inch (3 mm) on formed surfaces of units and 3/8 inch (10 mm) on unformed surfaces.

D. Cure Units as Follows:

1. Cure units in enclosed, moist curing room at 95 to 100 percent relative humidity and temperature of 100 deg F (38 deg C) for 12 hours or 70 deg F (21 deg C) for 16 hours.
2. Keep units damp and continue curing to comply with one of the following:

    a. No fewer than five days at mean daily temperature of 70 deg F (21 deg C) or above.
    b. No fewer than six days at mean daily temperature of 60 deg F (16 deg C) or above.
    c. No fewer than seven days at mean daily temperature of 50 deg F (10 deg C) or above.
    d. No fewer than eight days at mean daily temperature of 45 deg F (7 deg C) or above.

E. Acid etch units after curing to remove cement film from surfaces to be exposed to view.

2.4 MORTAR MATERIALS

A. Provide mortar materials that comply with Section 042000 "Unit Masonry."

B. Portland Cement: ASTM C 150/C 150M, Type I or II, except Type III may be used for cold-weather construction. Provide natural color or white cement as required to produce mortar color indicated.

C. Hydrated Lime: ASTM C 207, Type S.

D. Portland Cement-Lime Mix: Packaged blend of portland cement and hydrated lime containing no other ingredients.

E. Masonry Cement: ASTM C 91/C 91M.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Cemex S.A.B. de C.V.

b. Essroc.
c. Holcim (US) Inc.
d. Lafarge North America Inc.
e. Lehigh Hanson; Heidelberg Cement Group.

F. Mortar Pigments: Natural and synthetic iron oxides and chromium oxides, compounded for use in mortar mixes and complying with ASTM C 979/C 979M. Use only pigments with a record of satisfactory performance in masonry mortar.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Davis Colors.
b. Lanxess Corporation.
c. Solomon Colors, Inc.

G. Colored Cement Product: Packaged blend made from portland cement and hydrated lime masonry cement or mortar cement and mortar pigments, all complying with specified requirements, and containing no other ingredients.

1. Formulate blend as required to produce color indicated or, if not indicated, as selected from manufacturer's standard colors.
2. Pigments shall not exceed 10 percent of portland cement by weight.
3. Pigments shall not exceed 5 percent of masonry cement or mortar cement by weight.

H. Aggregate for Mortar: ASTM C 144.

1. For mortar that is exposed to view, use washed aggregate consisting of natural sand or crushed stone.
2. For joints less than 1/4 inch (6 mm) thick, use aggregate graded with 100 percent passing the No. 16 (1.18-mm) sieve.
3. White-Mortar Aggregates: Natural white sand or crushed white stone.
4. Colored Aggregates: Natural sand or crushed stone of color necessary to produce required mortar color.

I. Water: Potable.

2.5 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design attachment and anchorage of cast stone to masonry substrate.

2.6 ACCESSORIES

A. Anchors: 304 stainless steel complying with ASTM A 240/A 240M, ASTM A 276, or ASTM A 666.

B. Dowels: fabricated from Type 304 stainless steel complying with ASTM A 240/A 240M, ASTM A 276, or ASTM A 666.

C. Proprietary Acidic Cleaner: Manufacturer's standard-strength cleaner designed for removing mortar/grout stains, efflorescence, and other new construction stains from new masonry without discoloring or damaging masonry surfaces. Use product expressly approved for intended use by cast-stone manufacturer and expressly approved by cleaner manufacturer for use on cast stone and adjacent masonry materials.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Diedrich Technologies, Inc.; a division of Sandell Construction Solutions.
b. EaCo Chem, Inc.
c. PROSOCO, Inc.

2.7 MORTAR MIXES

A. Comply with requirements in Section 042000 "Unit Masonry" for mortar mixes.

2.8 SOURCE QUALITY CONTROL

A. Engage a qualified independent testing agency to sample and test cast-stone units according to ASTM C 1364.

1. Include one test for resistance to freezing and thawing.
2. Test for compressive strength and absorption of specimens selected at random from plant production.
3. Select samples at a rate of 3 per 500 cubic feet, with a minimum of 3 per production week.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SETTING CAST STONE IN MORTAR

A. Install cast-stone units to comply with requirements in Section 042000 "Unit Masonry."

B. Set cast stone as indicated on Drawings. Set units accurately in locations indicated, with edges and faces aligned according to established relationships and indicated tolerances.

1. Install anchors, supports, fasteners, and other attachments indicated or necessary to secure units in place.

2. Coordinate installation of cast stone with installation of flashing specified in other Sections.

C. Wet joint surfaces thoroughly before applying mortar or setting in mortar.

D. Set units in full bed of mortar with full head joints unless otherwise indicated.

1. Build anchors and ties into mortar joints as units are set.
2. Fill dowel holes and anchor slots with mortar.
3. Fill collar joints solid as units are set.
4. Build concealed flashing into mortar joints as units are set.
5. Keep head joints in copings and between other units with exposed horizontal surfaces open to receive sealant.
6. Keep joints at shelf angles open to receive sealant.

E. Rake out joints for pointing with mortar to depths of not less than 3/4 inch (19 mm). Rake joints to uniform depths with square bottoms and clean sides. Scrub faces of units to remove excess mortar as joints are raked.

F. Point mortar joints by placing and compacting mortar in layers not greater than 3/8 inch (10 mm). Compact each layer thoroughly and allow it to become thumbprint hard before applying next layer.

G. Tool exposed joints slightly concave when thumbprint hard. Use a smooth plastic jointer larger than joint thickness.

H. Rake out joints for pointing with sealant to depths of not less than 3/4 inch (19 mm). Scrub faces of units to remove excess mortar as joints are raked.

I. Point joints with sealant to comply with applicable requirements in Section 079200 "Joint Sealants."

1. Prime cast-stone surfaces to receive sealant and install compressible backer rod in joints before applying sealant unless otherwise indicated.

J. Provide sealant joints at head joints of copings and other horizontal surfaces; at expansion, control, and pressure-relieving joints; and at locations indicated.

1. Keep joints free of mortar and other rigid materials.
2. Build in compressible foam-plastic joint fillers where indicated.
3. Prime cast-stone surfaces to receive sealant and install compressible backer rod in joints before applying sealant unless otherwise indicated.
4. Prepare and apply sealant of type and at locations indicated to comply with applicable requirements in Section 079200 "Joint Sealants."

3.3 SETTING ANCHORED CAST STONE WITH SEALANT-FILLED JOINTS

A. Set cast stone as indicated on Drawings. Set units accurately in locations indicated, with edges and faces aligned according to established relationships and indicated tolerances.

1. Install anchors, supports, fasteners, and other attachments indicated or necessary to secure units in place.

2. Shim and adjust anchors, supports, and accessories to set cast stone in locations indicated with uniform joints.

B. Keep cavities open where unfilled space is indicated between back of cast-stone units and backup wall; do not fill cavities with mortar or grout.

C. Fill anchor holes with sealant.

1. Where dowel holes occur at pressure-relieving joints, provide compressible material at ends of dowels.

D. Set cast stone supported on clip or continuous angles on resilient setting shims. Use material of thickness required to maintain uniform joint widths. Hold shims back from face of cast stone a distance at least equal to width of joint.

E. Keep joints free of mortar and other rigid materials. Remove temporary shims and spacers from joints after anchors and supports are secured in place and cast-stone units are anchored. Do not begin sealant installation until temporary shims and spacers are removed.

F. Prime cast-stone surfaces to receive sealant and install compressible backer rod in joints before applying sealant unless otherwise indicated.

G. Prepare and apply sealant of type and at locations indicated to comply with applicable requirements in Section 079200 "Joint Sealants."

3.4 INSTALLATION TOLERANCES

A. Variation from Plumb: Do not exceed 1/8 inch in 10 feet (3 mm in 3 m) or 1/4 inch in 20 feet (6 mm in 6 m).

B. Variation from Level: Do not exceed 1/8 inch in 10 feet (3 mm in 3 m), 1/4 inch in 20 feet (6 mm in 6 m), or 3/8 inch maximum.

C. Variation in Joint Width: Do not vary joint thickness more than 1/8 inch in 36 inches (3 mm in 900 mm) or one-fourth of nominal joint width, whichever is less.

D. Variation in Plane between Adjacent Surfaces (Lipping): Do not vary from flush alignment with adjacent units or adjacent surfaces indicated to be flush with units by more than 1/16 inch.

3.5 ADJUSTING AND CLEANING

A. Remove and replace stained and otherwise damaged units and units not matching approved Samples. Cast stone may be repaired if methods and results are approved by Architect.

B. Replace units in a manner that results in cast stone matching approved Samples, complying with other requirements, and showing no evidence of replacement.

C. In-Progress Cleaning: Clean cast stone as work progresses.

1. Remove mortar fins and smears before tooling joints.

2. Remove excess sealant immediately, including spills, smears, and spatter.

D. Final Cleaning: After mortar is thoroughly set and cured, clean exposed cast stone as follows:

1. Remove large mortar particles by hand with wooden paddles and nonmetallic scrape hoes or chisels.
2. Test cleaning methods on sample; leave one sample uncleaned for comparison purposes. Obtain Architect's approval of sample cleaning before proceeding with cleaning of cast stone.
3. Protect adjacent surfaces from contact with cleaner by covering them with liquid strippable masking agent or polyethylene film and waterproof masking tape.
4. Wet surfaces with water before applying cleaners; remove cleaners promptly by rinsing thoroughly with clear water.
5. Clean cast stone by bucket-and-brush hand-cleaning method described in BIA Technical Notes 20.
6. Clean cast stone with proprietary acidic cleaner applied according to manufacturer's written instructions.

END OF SECTION 04 72 00

SECTION 05 12 00 - STRUCTURAL STEEL FRAMING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Structural steel.
2. Grout.

B. Related Sections:

1. Section 01 40 00 "Quality Requirements" for independent testing agency procedures and administrative requirements.
2. Section 05 12 13 "Architecturally Exposed Structural Steel Framing" for additional requirements for architecturally exposed structural steel.
3. Section 05 31 00 "Steel Decking" for field installation of shear connectors through deck.
4. Section 05 50 00 "Metal Fabrications" for steel lintels and shelf angles not attached to structural-steel frame, miscellaneous steel fabrications, and other metal items not defined as structural steel.
5. Section 05 51 00 "Metal Stairs."
6. Section 09 91 23 "Interior Painting" and Section 09 96 00 "High-Performance Coatings" for surface-preparation and priming requirements.
7. Division 03 30 00 for epoxy and adhesive anchor attachments.

1.3 SUSTAINABLE DESIGN REQUIREMENTS

A. Applicable LEED Credits

1. MRc2
2. MRc4
3. MRc5

B. LEED Requirements

1. MRc2: Construction Waste Management:

No less than the specified portion of all construction waste from the Project shall be diverted from disposal in a landfill and/or incineration in with the Project Requirements for Construction Waste Management and Disposal. Refer to Specification Sections 017419 Construction Waste Management and Disposal and 013510 Sustainable Design Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

2. MRc4: Recycled Content Material:

No less than the specified minimum proportion of the building materials shall contain post-consumer and pre-consumer waste materials in accordance with the Project Requirements for Recycled Content Materials. All materials counted towards the computations of the proportion of the Recycled Content Materials shall comply with the standard minimum percentages of post-consumer waste materials and for the minimum percentages of pre-consumer waste materials. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

3. MRc5: Regionally Manufactured and/or Harvested Materials:

No less than the specified minimum proportion of the building materials shall be extracted, processed, and manufactured within 500 miles of the Project Site in accordance with the Project Requirements for Regionally Manufactured and/or Harvested Materials. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

1.4 DEFINITIONS

A. Structural Steel: Elements of structural-steel frame, as classified by AISC 303, "Code of Standard Practice for Steel Buildings and Bridges."

1.5 PERFORMANCE REQUIREMENTS

A. Connections: Provide details of connections required by the Contract Documents to be selected or completed by structural-steel fabricator, including comprehensive engineering analysis by a qualified professional engineer in the state of the Project, to withstand loads indicated and comply with other information and restrictions indicated.

1. Select and complete connections using typical details indicated and AISC's "Manual of Steel Construction, 13th Edition".
2. Use ASD; data are given at service-load level.

B. Moment Connections: Type FR, fully restrained.

C. Lateral Force Resisting System Construction: See Contract Drawings.

1.6 ACTION SUBMITTALS

A. General:
1. Submittals and shop drawings shall not be made by using reproductions of Contract Drawings.
2. Submittals and shop drawings shall be submitted through General Contractor to Architect. Any fabrication of material before approval of drawings will be at the risk of Contractor.
   a. Fabricated material and connections shall fit within architectural constraints.

a. Fabricator alone shall be responsible for errors of detailing and fabrication.

3. Contractor shall provide a proposed submittal schedule showing anticipated steel shop drawing submission dates a minimum of two (2) weeks prior to the first steel shop drawing submittal.
4. Steel submissions shall be submitted such that each individual construction sequence is a separate stand alone submittal package with an Erection Plan, Assembly Drawings, and Piece Mark Drawings. Typical Details, Connections, Calculations and Sections may be submitted as one submittal package at Contractors option, but must be received prior to the first sequence submission. Sequence submittals shall be submitted in the order that they will be Fabricated and Erected. Processing time for review of each sequence shall be allowed and shall not be assumed to be concurrent.
5. Sequences larger than the floor area of the largest single floor of the building will require additional review and processing time. Additional review and processing time shall not be assumed to be concurrent. Any sequence anticipated to be larger than the maximum single floor area shall be clearly indicated in the submittal schedule and brought to the Architect's/Engineer's attention for discussion of review times prior to submission of said sequence.

B. Product Data: For each type of product indicated.

C. LEED Submittals:

1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Laboratory Test Reports for Credit IEQ 4: For primers, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

D. Connection Drawings and Calculations:
1. Proposed variations in typical details shown on drawings will be considered and such variations must have preliminary approval prior to preparation of detailed shop drawings.
2. Connection drawings and details shall be prepared under supervision and sealed by a professional Engineer Registered in State of the project. Fabricator shall submit certification by professional Engineer that connection design is in accordance with applicable codes and specifications.
3. Fabricator's engineer shall submit complete design calculations for each connection. Such calculations shall show details of assembled joint with bolts and welds required. Where predesigned connections are taken directly from tables in AISC Manual, calculations need not be submitted provided job design conditions precisely match those assumed in tables, data taken from tables is clearly identified with table number, and such connections are so indicated in calculations submitted. Design calculations shall be sealed by fabricator's registered professional engineer. Shop drawings submitted without complete design calculations will not be approved.

E. Shop Drawings: Show fabrication of structural-steel components. Submit in advance of fabrication complete shop drawings prepared under the supervision of fabricator's registered professional Engineer for fabrication of each component part of structural steel framing.

1. Include details of cuts, connections, splices, camber, holes, and other pertinent data.
2. Include member size, length, and camber.
3. Include embedment drawings.
4. Indicate welds by standard AWS symbols, distinguishing between shop and field welds, and show size, length, and type of each weld. Show backing bars that are to be removed and supplemental fillet welds where backing bars are to remain.
5. Indicate type, size, and length of bolts, distinguishing between shop and field bolts. Identify pretensioned and slip-critical high-strength bolted connections.
6. Include material specifications.
7. Indicate piece marks for field assembly.

F. Erection Drawings: Submit erection drawings (“E” Sheets) as part of shop drawings, showing complete information necessary for erection of each component part of structural steel framing.

1. Indicate setting drawings, templates and directions for installation of anchor rods and other anchorage devices embedded in concrete or masonry work.
2. Indicate dimensions for alignment and elevation of each member.
3. Indicate location of members and attachments by match-marking of piece members.
4. Indicate piece marks for field assembly.
5. Include type and location of each field connection, including splices.
6. Indicate required number and location of shear connectors on each member.
7. Indicate details of each field connection or typical connection.
8. Indicate size, length and type of bolts required in each field connection.

G. Welding Procedure Specifications (WPSs) and Procedure Qualification Records (PQRs): Provide according to AWS D1.1/D1.1M, "Structural Welding Code - Steel," for each welded joint whether prequalified or qualified by testing, including the following:

1. Power source (constant current or constant voltage).
2. Electrode manufacturer and trade name, for demand critical welds.

H. Certificate of Conformance: Submit manufacturer’s certificate of conformance and/or supporting Charpy V-Notch test reports for complete-joint-penetration weld filler metal where steel backer bars for CJP groove welded T and corner joints are elected by the Contractor to remain in place. Certificate of Conformance or test reports shall show filler metal has a specified Charpy V-Notch toughness of 20 ft-lbs at 40 degrees F.

1.7 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified Installer, fabricator, professional engineer, and testing agency.

B. Welding certificates.

C. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers, certifying that shop primers are compatible with topcoats.

D. Mill test reports for structural steel, including chemical and physical properties.

E. Product Test Reports: For the following:

1. Bolts, nuts, and washers including mechanical properties and chemical analysis.
2. Direct-tension indicators.
3. Tension-control, high-strength bolt-nut-washer assemblies.
4. Shear stud connectors.
5. Shop primers.
6. Nonshrink grout.

F. Source quality-control reports.

1.8 QUALITY ASSURANCE

A. Fabricator Qualifications: A qualified fabricator that participates in the AISC Quality Certification Program and is designated an AISC-Certified Plant, Category STD.

B. Installer Qualifications: A qualified installer who participates in the AISC Quality Certification Program and is designated an AISC-Certified Erector, Category CSE.

C. Shop-Painting Applicators: Qualified according to SSPC-QP 3, "Standard Procedure for Evaluating Qualifications of Shop Painting Applicators."

D. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

1. Welders and welding operators performing work on bottom-flange, demand-critical welds shall pass the supplemental welder qualification testing, as required by AWS D1.8. FCAW-S and FCAW-G shall be considered separate processes for welding personnel qualification.

E. Comply with applicable provisions of the following specifications and documents:
1. AISC 303 - "Code of Standard Practice for Steel Buildings and Bridges,"
   a. Section 3.1.2 and Section 3.3 is hereby modified by deletion of the “Commentary.”
   b. Section 3.3 is hereby modified by deletion as follows: “When discrepancies exist between structural Design Drawings and the architectural, electrical, or mechanical Design Drawings or Design Drawings for other trades, the structural Design Drawings shall govern.”
   c. Section 4.4 is hereby modified by deletion of the following: “These drawings shall be returned to the Fabricator within 14 calendar days.” Also delete “Commentary” in same section.
2. AISC 360 - "Specification for Structural Steel Buildings” dated March 9, 2005.
3. RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts."

F. Preinstallation Conference: Conduct conference at Project site.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to the site at such intervals to ensure uninterrupted progress of work.

B. Store materials to permit easy access for inspection and identification. Keep steel members off ground and spaced by using pallets, dunnage, or other supports and spacers. Protect steel members and packaged materials from corrosion and deterioration.

1. Do not store materials on structure in a manner that might cause distortion, damage, or overload to members or supporting structures. Repair or replace damaged materials or structures as directed.

C. Store fasteners in a protected place in sealed containers with manufacturer's labels intact.

1. Fasteners may be repackaged provided Owner's testing and inspecting agency observes repackaging and seals containers.
2. Clean and relubricate bolts and nuts that become dry or rusty before use.
3. Comply with manufacturers' written recommendations for cleaning and lubricating ASTM F 1852 fasteners and for retesting fasteners after lubrication.

1.10 COORDINATION

A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' recommendations to ensure that shop primers and topcoats are compatible with one another.

B. Coordinate installation of anchorage items to be embedded in or attached to other construction without delaying the Work. Provide setting diagrams, sheet metal templates, instructions, and directions for installation.

PART 2 - PRODUCTS

2.1 STRUCTURAL-STEEL MATERIALS

A. General: All structural steel materials to be domestically manufactured in the United States of America.

B. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 50 percent.

C. See General Notes for Structural Steel ASTM designations and grades, u.n.o.

D. Steel Castings: ASTM A 216/A 216M, Grade WCB with supplementary requirement S11.

E. Steel Forgings: ASTM A 668/A 668M.

F. Welding Electrodes: Comply with AWS requirements.

2.2 BOLTS, CONNECTORS, AND ANCHORS

A. General:
1. Bolts, connectors, and anchors shall be new and not be reused.

B. High-Strength Bolts, Nuts, and Washers: ASTM A 325 (ASTM A 325M), Type 1, heavy-hex steel structural bolts; ASTM A 563, Grade C, (ASTM A 563M, Class 8S) heavy-hex carbon-steel nuts; and ASTM F 436 (ASTM F 436M), Type 1, hardened carbon-steel washers; all with plain finish.

1. Direct-Tension Indicators: ASTM F 959, Type 325 (ASTM F 959M, Type 8.8), compressible-washer type with plain finish.

C. Shear Connectors: ASTM A 108, Grades 1015 through 1020, headed-stud type, cold-finished carbon steel; AWS D1.1/D1.1M, Type B.

D. Headed Anchor Rods: See general notes for grades. Headed anchor rods shall be straight.

1. Nuts: ASTM A 563 (ASTM A 563M) heavy-hex carbon steel.
2. Plate Washers: ASTM A 36/A 36M carbon steel.
3. Washers: ASTM F 436 (ASTM F 436M), Type 1, hardened carbon steel.
4. Finish: Plain at interior conditions, Hot-dip zinc coating, ASTM A 153/A 153M, Class C.

E. Sleeve Nuts: Made from cold-finished carbon steel bars, ASTM A 108, Grade 1018.

2.3 PRIMER

A. Low-Emitting Materials: Paints and coatings shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

B. Primer: Comply with Section 09 91 23 "Interior Painting" and Section 09 96 00 "High-Performance Coatings."

C. Primer: SSPC-Paint 25, Type II, iron oxide, zinc oxide, raw linseed oil, and alkyd.

D. Primer: SSPC-Paint 23, latex primer.

E. Primer: Fabricator's standard lead- and chromate-free, nonasphaltic, rust-inhibiting primer complying with MPI#79 and compatible with topcoat.

F. Galvanizing Repair Paint: ASTM A 780.

2.4 GROUT

A. Nonmetallic, Shrinkage-Resistant Grout: ASTM C 1107, factory-packaged, ready-to-use nonmetallic aggregate grout, noncorrosive and nonstaining, mixed with water to consistency suitable for application and a 30-minute working time. Grout shall have no drying shrinkage at any age.
1. Non-metallic grout shall be used in all conditions unless noted otherwise.
2. Compressive strength at 7 days: 6000 psi minimum.
3. Compressive strength at 28 days: 8000 psi minimum.

2.5 FABRICATION

A. Structural Steel: Fabricate and assemble in shop to greatest extent possible. Fabricate according to AISC's "Code of Standard Practice for Steel Buildings and Bridges" and AISC 360.

1. Camber structural-steel members where indicated.
2. Identify high-strength structural steel according to ASTM A 6/A 6M and maintain markings until structural steel has been erected.
3. Mark and match-mark materials for field assembly.
4. Complete structural-steel assemblies, including welding of units, before starting shop-priming operations.

B. Thermal Cutting: Perform thermal cutting by machine to greatest extent possible.

1. Plane thermally cut edges to be welded to comply with requirements in AWS D1.1/D1.1M.

C. Bolt Holes: Cut, drill, punch, or mechanically thermally cut standard bolt holes perpendicular to metal surfaces.

D. Finishing: Accurately finish ends of columns and other members transmitting bearing loads.

E. Cleaning: Clean and prepare steel surfaces that are to remain unpainted according to SSPC-SP 3, "Power Tool Cleaning."

F. Shear Connectors: Prepare steel surfaces as recommended by manufacturer of shear connectors. Use automatic end welding of headed-stud shear connectors according to AWS D1.1/D1.1M and manufacturer's written instructions.

G. Holes: Provide holes required for securing other work to structural steel and for other work to pass through steel framing members.

1. Cut, drill, or punch holes perpendicular to steel surfaces. Do not thermally cut bolt holes or enlarge holes by burning.
2. Baseplate Holes: Cut, drill, mechanically thermal cut, or punch holes perpendicular to steel surfaces.
3. Weld threaded nuts to framing and other specialty items indicated to receive other work.

2.6 SHOP CONNECTIONS

A. High-Strength Bolts: Shop install high-strength bolts according to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts" for type of bolt and type of joint specified.

1. Joint Type: Snug tightened.

B. Weld Connections: Comply with AWS D1.1/D1.1M for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work.

1. Assemble and weld built-up sections by methods that will maintain true alignment of axes without exceeding tolerances in AISC 303 for mill material.

2.7 SHOP PRIMING

A. Shop prime steel surfaces except the following:

1. Surfaces embedded in concrete or mortar. Extend priming of partially embedded members to a depth of 2 inches (50 mm).
2. Surfaces to be field welded.
3. Surfaces to be high-strength bolted with slip-critical connections.
4. Surfaces to receive sprayed fire-resistive materials (applied fireproofing).
5. Galvanized surfaces.

B. Surface Preparation: Clean surfaces to be painted. Remove loose rust and mill scale and spatter, slag, or flux deposits. Prepare surfaces according to the following specifications and standards:

1. SSPC-SP 2, "Hand Tool Cleaning."
2. SSPC-SP 3, "Power Tool Cleaning."

C. Priming: Immediately after surface preparation, apply primer according to manufacturer's written instructions and at rate recommended by SSPC to provide a minimum dry film thickness of 1.5 mils (0.038 mm). Use priming methods that result in full coverage of joints, corners, edges, and exposed surfaces.

1. Stripe paint corners, crevices, bolts, welds, and sharp edges.
2. Apply two coats of shop paint to surfaces that are inaccessible after assembly or erection. Change color of second coat to distinguish it from first.

D. Painting: Prepare steel and apply a one-coat, nonasphaltic primer complying with SSPC-PS Guide 7.00, "Painting System Guide 7.00: Guide for Selecting One-Coat Shop Painting Systems," to provide a dry film thickness of not less than 1.5 mils (0.038 mm).

2.8 GALVANIZING

A. Hot-Dip Galvanized Finish: Apply zinc coating by the hot-dip process to structural steel according to ASTM A 123/A 123M.

1. Fill vent and drain holes that will be exposed in the finished Work unless they will function as weep holes, by plugging with zinc solder and filing off smooth.
2. Galvanize lintels and shelf angles attached to structural-steel frame and located in exterior walls, u.n.o.
3. Galvanize all steel exposed to weather, u.n.o.

2.9 SOURCE QUALITY CONTROL

A. Testing Agency: Owner will engage an independent testing and inspecting agency to perform shop tests and inspections and prepare test reports.

1. Provide testing agency with access to places where structural-steel work is being fabricated or produced to perform tests and inspections.

B. Correct deficiencies in Work that test reports and inspections indicate does not comply with the Contract Documents.

C. Bolted Connections: Shop-bolted connections will be tested and inspected according to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts."

D. Welded Connections: In addition to visual inspection, shop-welded connections will be tested and inspected according to AWS D1.1/D1.1M and the following inspection procedures, at testing agency's option:

1. Liquid Penetrant Inspection: ASTM E 165.
2. Magnetic Particle Inspection: ASTM E 709; performed on root pass and on finished weld. Cracks or zones of incomplete fusion or penetration will not be accepted.
3. Ultrasonic Inspection: ASTM E 164.
4. Radiographic Inspection: ASTM E 94.

E. Full Penetration Welded Connections: In addition to visual inspection, complete joint penetration groove welds shall be ultrasonically tested for the entire weld length, in each designated joint per AWS D1.1 to the following extents:
1. 100 percent of welds splicing beams, girders, columns, or braces.
2. 100 percent of column to base plate welds at rigid (lateral) column frame bases.
3. 100 percent of CJP beam to column welds, continuity plate welds, and shear tabs.

F. Non-Destructive Testing of Welds:
1. Ultrasonic Testing (UT): ASTM E164
   a. Divide connections into groups containing not less than 40 connections. Test 25 percent of the connections in each group. If any weld is rejected, test all the connections in group.

G. In addition to visual inspection, perform magnetic particle testing for full length of fillet welds on continuity plates and backing bar removal areas, and 25% of remaining fillet welds.

H. In addition to visual inspection, shop-welded shear connectors will be tested and inspected according to requirements in AWS D1.1/D1.1M for stud welding and as follows:

1. Bend tests will be performed if visual inspections reveal either a less-than-continuous 360-degree flash or welding repairs to any shear connector.
2. Tests will be conducted on additional shear connectors if weld fracture occurs on shear connectors already tested, according to requirements in AWS D1.1/D1.1M.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify, with steel Erector present, elevations of concrete- and masonry-bearing surfaces and locations of anchor rods, bearing plates, and other embedments for compliance with requirements.

1. Prepare a certified survey of bearing surfaces, anchor rods, bearing plates, and other embedments showing dimensions, locations, angles, and elevations.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Provide temporary shores, guys, braces, and other supports during erection to keep structural steel secure, plumb, and in alignment against temporary construction loads and loads equal in intensity to design loads. Remove temporary supports when permanent structural steel, connections, and bracing are in place unless otherwise indicated.
   1. Do not remove temporary shoring supporting composite deck construction until cast-in-place concrete has attained its design compressive strength.

B. Templates shall be provided and be securely in place to preclude misplacements of anchor rods. Rods shall be installed at locations and with projections established by approved structural steel shop drawings. Subsequent displacement of anchor rods is the responsibility of the General Contractor.

3.3 ERECTION

A. Set structural steel accurately in locations and to elevations indicated and according to AISC 303 and AISC 360.

B. Base Bearing and Leveling Plates: Clean concrete- and masonry-bearing surfaces of bond-reducing materials, and roughen surfaces prior to setting plates. Clean bottom surface of plates.
   1. Set base and bearing plates for structural members shall be set level and to proper alignment with shim packs unless noted otherwise on the Contract Documents. Fabricator shall provide shim packs.
   2. Weld plate washers to top of baseplate.
   3. Snug-tighten anchor rods after supported members have been positioned and plumbed. Do not remove wedges or shims but, if protruding, cut off flush with edge of plate before packing with grout.
   4. Promptly pack grout solidly between bearing surfaces and plates so no voids remain. Neatly finish exposed surfaces; protect grout and allow to cure. Comply with manufacturer's written installation instructions for shrinkage-resistant grouts.

C. Maintain erection tolerances of structural steel within AISC's "Code of Standard Practice for Steel Buildings and Bridges."

D. Align and adjust various members that form part of complete frame or structure before permanently fastening. Before assembly, clean bearing surfaces and other surfaces that will be in permanent contact with members. Perform necessary adjustments to compensate for discrepancies in elevations and alignment.

   1. Level and plumb individual members of structure.
   2. Make allowances for difference between temperature at time of erection and mean temperature when structure is completed and in service.

E. Splice members only where indicated.

F. Do not use thermal cutting during erection unless approved by Architect. Finish thermally cut sections within smoothness limits in AWS D1.1/D1.1M.

G. Do not enlarge unfair holes in members by burning or using drift pins. Ream holes that must be enlarged to admit bolts.

H. Shear Connectors: Prepare steel surfaces as recommended by manufacturer of shear connectors. Use automatic end welding of headed-stud shear connectors according to AWS D1.1/D1.1M and manufacturer's written instructions.

3.4 FIELD CONNECTIONS

A. High-Strength Bolts: Install high-strength bolts according to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts" for type of bolt and type of joint specified.

1. Joint Type: Snug tightened.

B. Weld Connections: Comply with AWS D1.1/D1.1M for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work.

1. Comply with AISC 303 and AISC 360 for bearing, alignment, adequacy of temporary connections, and removal of paint on surfaces adjacent to field welds.
2. Remove backing bars or runoff tabs, back gouge, and grind steel smooth. Backing bars MUST be removed if the project is in Seismic Design Category C and D. Contractor may elect to leave backing bars in place for all other projects if all following requirements are met:
   a. Manufacturer shall submit a Certificate of Conformance and supporting Charpy V-Notch test reports showing filler metal used for backing bars has a toughness of 20 ft-lbs at 40 degrees F.
   b. Certificate shall be received by the Engineer prior to the start of steel erection.
3. Assemble and weld built-up sections by methods that will maintain true alignment of axes without exceeding tolerances in AISC's "Code of Standard Practice for Steel Buildings and Bridges" for mill material.

3.5 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified independent testing and inspecting agency to perform field quality control and testing, including special inspections required by local building codes and the International Building Codes.

B. General Field Inspection:
1. Verify location and setting of anchor rods by witness of Contractor’s final check prior to setting of steel members.
2. Verify plumbness of columns is within allowable tolerance per AISC Code and Commentary.
3. Verify that bracing and guying/cables, if required to secure framing during erection, are installed.

C. Bolted Connections: Bolted connections will be tested and inspected according to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts."
1. Minimum inspection requirements using the stated publication are as follows:
   a. All bolts indicated to be “slip-critical” shall be inspected.
   b. Two bolts in each bearing type bolted connection between girders and columns shall be inspected.
   c. 10 percent of the remaining bolts, but not less than 2 in each connection shall be inspected.

2. Bolts that fail shall be retightened and all remaining bolts in the connection shall be retested. Costs of retests on connections that fail shall be the Contractor's responsibility.

D. Welded Connections: Field welds will be visually inspected according to AWS D1.1/D1.1M.

1. In addition to visual inspection, field welds will be tested and inspected according to AWS D1.1/D1.1M and the following inspection procedures, at testing agency's option:

    a. Liquid Penetrant Inspection: ASTM E 165.
    b. Magnetic Particle Inspection: ASTM E 709; performed on root pass and on finished weld. Cracks or zones of incomplete fusion or penetration will not be accepted.
    c. Ultrasonic Inspection: ASTM E 164.
    d. Radiographic Inspection: ASTM E 94.
2. In addition to visual inspection, 100 percent of full-penetration, moment connection field welds shall be ultrasonically tested according to AWS D1.1.
3. Column splice welds shall be inspected by ultrasonic testing per AWS D1.1 to the following extent:
    a. Rigid (Lateral) Columns: 100% of splice welds at each level shall be tested.
    b. Non-Frame Columns: 25% of splice welds at each level shall be tested.

4. Non-Destructive Testing of Remaining Welds:
    a. Ultrasonic Testing (UT): ASTM E164
        1) Divide connections into groups containing not less than 40 connections. Test 25 percent of the connections in each group. If any weld is rejected, test all the connections in group.
5. Extent of testing procedure shall be the entire weld length in each designated joint.
6. Welds found unacceptable shall be repaired by methods permitted in AWS code and be retested. Costs of repair and additional testing shall be the Contractor's responsibility.

E. In addition to visual inspection, test and inspect field-welded shear connectors according to requirements in AWS D1.1/D1.1M for stud welding and as follows:

1. Perform bend tests if visual inspections reveal either a less-than-continuous 360-degree flash or welding repairs to any shear connector.
2. Conduct tests on additional shear connectors if weld fracture occurs on shear connectors already tested, according to requirements in AWS D1.1/D1.1M.

F. Correct deficiencies in Work that test reports and inspections indicate does not comply with the Contract Documents.

3.6 REPAIRS AND PROTECTION

A. Galvanized Surfaces: Clean areas where galvanizing is damaged or missing and repair galvanizing to comply with ASTM A 780.

B. Touchup Painting: Immediately after erection, clean exposed areas where primer is damaged or missing and paint with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.

1. Clean and prepare surfaces by SSPC-SP 2 hand-tool cleaning or SSPC-SP 3 power-tool cleaning.

C. Touchup Painting: Cleaning and touchup painting are specified in Section 09 91 13 "Exterior Painting" Section 09 91 23 "Interior Painting."

END OF SECTION 05 12 00

SECTION 05 21 00 - STEEL JOIST FRAMING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. K-series steel joists.
2. KCS-type K-series steel joists.
3. Joist accessories.

B. Related Requirements:

1. Section 03 30 00 "Cast-in-Place Concrete" for installing bearing plates in concrete.
2. Section 04 20 00 "Unit Masonry" for installing bearing plates in unit masonry.
3. Section 05 12 00 "Structural Steel Framing" for field-welded shear connectors.

1.3 SUSTAINABLE DESIGN REQUIREMENTS

A. Applicable LEED Credits

1. MRc2
2. MRc4
3. MRc5

B. LEED Requirements

1. MRc2: Construction Waste Management:

No less than the specified portion of all construction waste from the Project shall be diverted from disposal in a landfill and/or incineration in with the Project Requirements for Construction Waste Management and Disposal. Refer to Specification Sections 017419 Construction Waste Management and Disposal and 013510 Sustainable Design Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

2. MRc4: Recycled Content Material:

No less than the specified minimum proportion of the building materials shall contain post-consumer and pre-consumer waste materials in accordance with the Project Requirements for Recycled Content Materials. All materials counted towards the computations of the proportion of the Recycled Content Materials shall comply with the

standard minimum percentages of post-consumer waste materials and for the minimum percentages of pre-consumer waste materials. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

3. MRc5: Regionally Manufactured and/or Harvested Materials:

No less than the specified minimum proportion of the building materials shall be extracted, processed, and manufactured within 500 miles of the Project Site in accordance with the Project Requirements for Regionally Manufactured and/or Harvested Materials. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

1.4 DEFINITIONS

A. SJI's "Specifications": Steel Joist Institute's "Standard Specifications, Load Tables and Weight Tables for Steel Joists and Joist Girders."

B. Special Joists: Steel joists or joist girders requiring modification by manufacturer to support nonuniform, unequal, or special loading conditions that invalidate load tables in SJI's "Specifications."

1.5 ACTION SUBMITTALS

A. Product Data: For each type of joist, accessory, and product.

B. LEED Submittals:

1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Laboratory Test Reports for Credit EQ 4: For primers, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

C. Shop Drawings:

1. Include layout, designation, number, type, location, and spacing of joists.
2. Include joining and anchorage details, bracing, bridging, and joist accessories; splice and connection locations and details; and attachments to other construction.
3. Indicate locations and details of bearing plates to be embedded in other construction.
4. Indicate locations where erection diagonal bridging is required to be maintained as permanent bridging on the shop drawings.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer.

B. Welding certificates.

C. Manufacturer certificates.

D. Mill Certificates: For each type of bolt.

E. Comprehensive engineering analysis of special joists signed and sealed by the qualified professional engineer responsible for its preparation.

1.7 QUALITY ASSURANCE

A. Manufacturer Qualifications: A manufacturer certified by SJI to manufacture joists complying with applicable standard specifications and load tables in SJI's "Specifications."

1. Manufacturer's responsibilities include providing professional engineering services for designing special joists to comply with performance requirements.

B. Welding Qualifications: Qualify field-welding procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

1.8 DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, and handle joists as recommended in SJI's "Specifications."

B. Protect joists from corrosion, deformation, and other damage during delivery, storage, and handling.

1.9 SEQUENCING

A. Deliver steel bearing plates to be built into cast-in-place concrete and masonry construction.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Structural Performance: Provide special joists and connections capable of withstanding design loads indicated.

1. Use ASD; data are given at service-load level.
2. Design special joists to withstand design loads with live-load deflections no greater than the following:

a. Floor Joists: Vertical deflection of 1/360 of the span.
b. Roof Joists: Vertical deflection of 1/360 of the span.

B. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 50 percent.

2.2 K-SERIES STEEL JOISTS

A. Manufacture steel joists of type indicated according to "Standard Specifications for Open Web Steel Joists, K-Series" in SJI's "Specifications," with steel-angle top- and bottom-chord members, underslung ends, and parallel top chord.

1. Joist Type: K-series steel joists and KCS-type K-series steel joists.

B. Steel Joist Substitutes: Manufacture according to "Standard Specifications for Open Web Steel Joists, K-Series" in SJI's "Specifications," with steel-angle or -channel members.

C. Provide holes in chord members for connecting and securing other construction to joists.

D. Top-Chord Extensions: Extend top chords of joists with SJI's Type S top-chord extensions where indicated, complying with SJI's "Specifications."

E. Extended Ends: Extend bearing ends of joists with SJI's Type R extended ends where indicated, complying with SJI's "Specifications."

F. Camber joists according to SJI's "Specifications."

G. Equip bearing ends of joists with manufacturer's standard beveled ends or sloped shoes if joist slope exceeds 1/4 inch per 12 inches (1:48).

2.3 PRIMERS

A. Low-Emitting Materials: Paints and coatings shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

B. Primer: SSPC-Paint 15, or manufacturer's standard shop primer complying with performance requirements in SSPC-Paint 15.

C. Primer: Provide shop primer that complies with Section 09 91 23 "Interior Painting." And Section 09 96 00 "High-Performance Coatings."

2.4 JOIST ACCESSORIES

A. Bridging: Provide bridging anchors and number of rows of horizontal or diagonal bridging of material, size, and type required by SJI's "Specifications" for type of joist, chord size, spacing, and span. Furnish additional erection bridging if required for stability. Permanent diagonal bridging shall be provided at joist supported gymnasium equipment such that the load of the gymnasium equipment is distributed over two or more joists.

B. Fabricate steel bearing plates from ASTM A 36/A 36M steel with integral anchorages of sizes and thicknesses indicated. Hot-dip zinc coat according to ASTM A 123/A 123M.

C. Steel bearing plates with integral anchorages are specified in Section 055000 "Metal Fabrications."

D. Furnish ceiling extensions, either extended bottom-chord elements or a separate extension unit of enough strength to support ceiling construction. Extend ends to within 1/2 inch (13 mm) of finished wall surface unless otherwise indicated.

E. Carbon-Steel Bolts and Threaded Fasteners: ASTM A 307, Grade A (ASTM F 568M, Property Class 4.6), carbon-steel, hex-head bolts and threaded fasteners; carbon-steel nuts; and flat, unhardened steel washers.

1. Finish: Hot-dip zinc coating, ASTM A 153/A 153M, Class C.

F. High-Strength Bolts, Nuts, and Washers: ASTM A 325 (ASTM A 325M), Type 1, heavy hex steel structural bolts; ASTM A 563 (ASTM A 563M) heavy hex carbon-steel nuts; and ASTM F 436 (ASTM F 436M) hardened carbon-steel washers.

1. Finish: Hot-dip zinc coating, ASTM A 153/A 153M, Class C.

G. Welding Electrodes: Comply with AWS standards.

H. Galvanizing Repair Paint: ASTM A 780.

I. Furnish miscellaneous accessories including splice plates and bolts required by joist manufacturer to complete joist assembly.

2.5 CLEANING AND SHOP PAINTING

A. Clean and remove loose scale, heavy rust, and other foreign materials from fabricated joists and accessories by hand-tool cleaning, SSPC-SP 2 or power-tool cleaning, SSPC-SP 3.

B. Do not prime paint joists and accessories to receive sprayed fire-resistive materials.

C. Apply one coat of shop primer to joists and joist accessories to be primed to provide a continuous, dry paint film not less than 1 mil (0.025 mm) thick.

D. Shop priming of joists and joist accessories is specified in Section 09 91 23 "Interior Painting" and Section 09 96 00 "High-Performance Coatings."

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine supporting substrates, embedded bearing plates, and abutting structural framing for compliance with requirements for installation tolerances and other conditions affecting performance.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Do not install joists until supporting construction is in place and secured.

B. Install joists and accessories plumb, square, and true to line; securely fasten to supporting construction according to SJI's "Specifications," joist manufacturer's written recommendations, and requirements in this Section.

1. Before installation, splice joists delivered to Project site in more than one piece.
2. Space, adjust, and align joists accurately in location before permanently fastening.
3. Install temporary bracing and erection bridging, connections, and anchors to ensure that joists are stabilized during construction.
4. Delay rigidly connecting bottom-chord extensions to columns or supports until dead loads are applied.
5. Coordinate with Contract Drawings for locations where erection diagonal bridging shall be replaced with permanent horizontal bridging after deck is installed and fully welded. Contractor is responsible for coordination with all trades to allow for installation of duct work, piping and other utilities per the Contract Drawings. Locations where erection diagonal bridging is required to be maintained as permanent bridging shall be shown on the shop drawings.

C. Field weld joists to supporting steel bearing plates and framework. Coordinate welding sequence and procedure with placement of joists. Comply with AWS requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.

D. Bolt joists to supporting steel framework using carbon-steel bolts.

E. Bolt joists to supporting steel framework using high-strength structural bolts. Comply with Research Council on Structural Connection's "Specification for Structural Joints Using ASTM A 325 or ASTM A 490 Bolts" for high-strength structural bolt installation and tightening requirements.

F. Install and connect bridging concurrently with joist erection, before construction loads are applied. Anchor ends of bridging lines at top and bottom chords if terminating at walls or beams.

3.3 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified independent testing and inspecting agency to inspect field welds and bolted connections and to perform field tests and inspections and prepare test and inspection reports.

B. Visually inspect field welds according to AWS D1.1/D1.1M.

1. In addition to visual inspection, test field welds according to AWS D1.1/D1.1M and the following procedures, as applicable:

a. Liquid Penetrant Inspection: ASTM E 165.
b. Magnetic Particle Inspection: ASTM E 709.
c. Ultrasonic Testing: ASTM E 164.
d. Radiographic Testing: ASTM E 94.

C. Visually inspect bolted connections.

D. Correct deficiencies in Work that test and inspection reports have indicated are not in compliance with specified requirements.

E. Perform additional testing to determine compliance of corrected Work with specified requirements.

3.4 PROTECTION

A. Repair damaged galvanized coatings on galvanized items with galvanized repair paint according to ASTM A 780 and manufacturer's written instructions.

B. Touchup Painting: After installation, promptly clean, prepare, and prime or reprime field connections, rust spots, and abraded surfaces of prime-painted joists, bearing plates, abutting structural steel, and accessories.

1. Clean and prepare surfaces by hand-tool cleaning according to SSPC-SP 2, or power-tool cleaning according to SSPC-SP 3.
2. Apply a compatible primer of same type as primer used on adjacent surfaces.

C. Touchup Painting: Cleaning and touchup painting are specified in Section 09 91 23 "Interior Painting" and Section 099600 "High-Performance Coatings."

D. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer, that ensure that joists and accessories are without damage or deterioration at time of Substantial Completion.

END OF SECTION 05 21 00

SECTION 05 31 00 - STEEL DECKING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Roof deck.
2. Acoustical roof deck.
3. Cellular roof deck.
4. Acoustical cellular deck.
5. Composite floor deck.
6. Noncomposite form deck.

B. Related Requirements:

1. Section 03 30 00 "Cast-in-Place Concrete" for normal-weight and lightweight structural concrete fill over steel deck.
2. Section 05 12 00 "Structural Steel Framing" for shop- and field-welded shear connectors.
3. Section 05 50 00 "Metal Fabrications" for framing deck openings with miscellaneous steel shapes.
4. Section 09 91 13 "Exterior Painting" for repair painting of primed deck and finish painting of deck.
5. Section 09 91 23 "Interior Painting" for repair painting of primed deck and finish painting of deck.

1.3 SUSTAINABLE DESIGN REQUIREMENTS

A. Applicable LEED Credits

1. MRc2
2. MRc4
3. MRc5

B. LEED Requirements

1. MRc2: Construction Waste Management:

No less than the specified portion of all construction waste from the Project shall be diverted from disposal in a landfill and/or incineration in with the Project Requirements for Construction Waste Management and Disposal. Refer to Specification Sections 017419 Construction Waste Management and Disposal and 013510 Sustainable

Design Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

2. MRc4: Recycled Content Material:

No less than the specified minimum proportion of the building materials shall contain post-consumer and pre-consumer waste materials in accordance with the Project Requirements for Recycled Content Materials. All materials counted towards the computations of the proportion of the Recycled Content Materials shall comply with the standard minimum percentages of post-consumer waste materials and for the minimum percentages of pre-consumer waste materials. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

3. MRc5: Regionally Manufactured and/or Harvested Materials:

No less than the specified minimum proportion of the building materials shall be extracted, processed, and manufactured within 500 miles of the Project Site in accordance with the Project Requirements for Regionally Manufactured and/or Harvested Materials. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of deck, accessory, and product indicated.

B. LEED Submittals:

1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.

2. MRc2

3. MRc5

C. Shop Drawings:

1. Include layout and types of deck panels, anchorage details, reinforcing channels, pans, cut deck openings, special jointing, accessories, and attachments to other construction.

1.5 INFORMATIONAL SUBMITTALS

A. Welding certificates.

B. Product Certificates: For each type of steel deck.

C. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, indicating that each of the following complies with requirements:

1. Power-actuated mechanical fasteners.
2. Acoustical roof deck.

D. Evaluation Reports: For steel deck.

E. Field quality-control reports.

1.6 QUALITY ASSURANCE

A. Testing Agency Qualifications: Qualified according to ASTM E 329 for testing indicated.

B. Welding Qualifications: Qualify procedures and personnel according to AWS D1.3, "Structural Welding Code - Sheet Steel."

C. FM Global Listing: Provide steel roof deck evaluated by FM Global and listed in its "Approval Guide, Building Materials" for Class 1 fire rating and Class 1-90 windstorm ratings.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Protect steel deck from corrosion, deformation, and other damage during delivery, storage, and handling.

B. Stack steel deck on platforms or pallets and slope to provide drainage. Protect with a waterproof covering and ventilate to avoid condensation.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. AISI Specifications: Comply with calculated structural characteristics of steel deck according to AISI's "North American Specification for the Design of Cold-Formed Steel Structural Members."

B. Fire-Resistance Ratings: Comply with ASTM E 119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Indicate design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency.

C. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.

D. Low-Emitting Materials: Paints and coatings shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.2 ROOF DECK

A. Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. ASC Profiles, Inc.; a Blue Scope Steel company.
2. Canam United States; Canam Group Inc.
3. CMC Joist & Deck.
4. Consolidated Systems, Inc.; Metal Dek Group.
5. Cordeck.
6. DACS, Inc.
7. Epic Metals Corporation.
8. Marlyn Steel Decks, Inc.
9. New Millennium Building Systems, LLC.
10. Nucor Corp.; Vulcraft Group.
11. Roof Deck, Inc.
12. Valley Joist; Subsidiary of EBSCO Industries, Inc.
13. Verco Manufacturing Co.
14. Wheeling Corrugating Company; Div. of Wheeling-Pittsburgh Steel Corporation.

B. Roof Deck: Fabricate panels, without top-flange stiffening grooves, to comply with "SDI Specifications and Commentary for Steel Roof Deck," in SDI Publication No. 31, and with the following:
1. Galvanized and Shop-Primed Steel Sheet: ASTM A 653/A 653M, Structural Steel (SS), Grade 33 (230) G90 (Z180) zinc coating; cleaned, pretreated, and primed with manufacturer's standard baked-on, rust-inhibitive primer.

S. Slocum: Since this deck is usually not seen, select “manufacturer’s standard” for most economical option.

a. Color: White.
2. Deck Profile: As indicated in the documents.
3. Profile Depth: As indicated in the documents.
4. Design Uncoated-Steel Thickness: As indicated in the documents.
5. Span Condition: Triple span or more.
6. Side Laps: Overlapped or interlocking seam at Contractor's option.

2.3 ACOUSTICAL ROOF DECK

A. Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. ASC Profiles, Inc.; a Blue Scope Steel company.
2. Canam United States; Canam Group Inc.
3. CMC Joist & Deck.
4. Consolidated Systems, Inc.; Metal Dek Group.
5. Cordeck.
6. DACS, Inc.
7. Epic Metals Corporation.
8. Marlyn Steel Decks, Inc.
9. New Millennium Building Systems, LLC.
10. Nucor Corp.; Vulcraft Group.
11. Roof Deck, Inc.
12. Wheeling Corrugating Company; Div. of Wheeling-Pittsburgh Steel Corporation.

B. Acoustical Roof Deck: Fabricate panels, without top-flange stiffening grooves, to comply with "SDI Specifications and Commentary for Steel Roof Deck," in SDI Publication No. 31, and with the following:
   1. Galvanized and Shop-Primed Steel Sheet: ASTM A 653/A 653M, Structural Steel (SS), Grade 33 (230) G90 (Z180) zinc coating; cleaned, pretreated, and primed with manufacturer's standard baked-on, rust-inhibitive primer.

      a. Color: White.
   2. Deck Profile: As indicated in the documents.
   3. Cellular Deck Profile: As indicated in the documents, with bottom plate.
   4. Profile Depth: As indicated in the documents.
   5. Design Uncoated-Steel Thicknesses; Deck Unit/Bottom Plate: As indicated in the documents.
   6. Span Condition: Triple span or more.
   7. Side Laps: Overlapped or interlocking seam at Contractor's option.
   8. Acoustical Perforations: Cellular deck units with manufacturer's standard perforated flat-bottom plate welded to ribbed deck.
   9. Sound-Absorbing Insulation: Manufacturer's standard premolded roll or strip of glass or mineral fiber.

      a. Factory install sound-absorbing insulation into cells of cellular deck.

   10. Acoustical Performance: NRC 0.65, tested according to ASTM C 423.

2.4 CELLULAR ROOF DECK

A. Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

   1. ASC Profiles, Inc.; a Blue Scope Steel company.
   2. Canam United States; Canam Group Inc.
   3. CMC Joist & Deck.
   4. Consolidated Systems, Inc.; Metal Dek Group.
   5. Cordeck.
   6. DACS, Inc.
   7. Epic Metals Corporation.
   8. Marlyn Steel Decks, Inc.
   9. New Millennium Building Systems, LLC.
   10. Nucor Corp.; Vulcraft Group.
   11. Roof Deck, Inc.
   12. Wheeling Corrugating Company; Div. of Wheeling-Pittsburgh Steel Corporation.

B. Cellular Roof Deck: Fabricate panels, without top-flange stiffening grooves, to comply with "SDI Specifications and Commentary for Steel Roof Deck," in SDI Publication No. 31, and with the following:
   1. Galvanized and Shop-Primed Steel Sheet: ASTM A 653/A 653M, Structural Steel (SS), Grade 33 (230) G90 (Z180) zinc coating; cleaned, pretreated, and primed with manufacturer's standard baked-on, rust-inhibitive primer.

      a. Color: White.
   2. Cellular Deck Profile: As indicated in the documents, with bottom plate.
   3. Profile Depth: As indicated in the documents.

4. Design Uncoated-Steel Thicknesses; Deck Unit/Bottom Plate: As indicated in the documents.
5. Span Condition: Triple span or more.
6. Side Laps: Overlapped or interlocking seam at Contractor's option.

2.5 ACOUSTICAL CELLULAR DECK

A. Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. ASC Profiles, Inc.; a Blue Scope Steel company.
2. Canam United States; Canam Group Inc.
3. CMC Joist & Deck.
4. Consolidated Systems, Inc.; Metal Dek Group.
5. Cordeck.
6. DACS, Inc.
7. Epic Metals Corporation.
8. Marlyn Steel Decks, Inc.
9. New Millennium Building Systems, LLC.
10. Nucor Corp.; Vulcraft Group.
11. Roof Deck, Inc.
12. Wheeling Corrugating Company; Div. of Wheeling-Pittsburgh Steel Corporation.

B. Acoustical Cellular Deck: Fabricate panels, without top-flange stiffening grooves, to comply with "SDI Specifications and Commentary for Steel Roof Deck," in SDI Publication No. 31, and with the following:
1. Galvanized and Shop-Primed Steel Sheet: ASTM A 653/A 653M, Structural Steel (SS), Grade 33 (230) G90 (Z180) zinc coating; cleaned, pretreated, and primed with manufacturer's standard baked-on, rust-inhibitive primer.

   a. Color: White.
2. Cellular Deck Profile: As indicated in the documents, with bottom plate.
3. Profile Depth: As indicated in the documents.
4. Design Uncoated-Steel Thicknesses; Deck Unit/Bottom Plate: As indicated in the documents.
5. Span Condition: Triple span or more.
6. Side Laps: Overlapped or interlocking seam at Contractor's option.
7. Acoustical Perforations: Cellular deck units with manufacturer's standard perforated flat-bottom plate welded to ribbed deck.
8. Sound-Absorbing Insulation: Manufacturer's standard premolded roll or strip of glass or mineral fiber.

   a. Factory install sound-absorbing insulation into cells of cellular deck.

9. Acoustical Performance: NRC 0.65, tested according to ASTM C 423.

2.6 COMPOSITE FLOOR DECK

A. Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. ASC Profiles, Inc.; a Blue Scope Steel company.
2. Canam United States; Canam Group Inc.
3. CMC Joist & Deck.
4. Consolidated Systems, Inc.; Metal Dek Group.
5. Cordeck.
6. DACS, Inc.
7. Epic Metals Corporation.
8. Marlyn Steel Decks, Inc.
9. New Millennium Building Systems, LLC.
10. Nucor Corp.; Vulcraft Group.
11. Roof Deck, Inc.
12. Verco Manufacturing Co.
13. Wheeling Corrugating Company; Div. of Wheeling-Pittsburgh Steel Corporation.

B. Composite Floor Deck: Fabricate panels, with integrally embossed or raised pattern ribs and interlocking side laps, to comply with "SDI Specifications and Commentary for Composite Steel Floor Deck," in SDI Publication No. 31, with the minimum section properties indicated, and with the following:
1. Galvanized-Steel Sheet: ASTM A 653/A 653M, Structural Steel (SS), Grade 33 (230), G60 (Z180) zinc coating.
2. Galvanized and Shop-Primed Steel Sheet: ASTM A 653/A 653M, Structural Steel (SS), Grade 33 zinc coating; with unpainted top surface and cleaned and pretreated bottom surface primed with manufacturer's standard gray or white baked-on, rust-inhibitive primer.
3. Profile Depth: As indicated in the documents.
4. Design Uncoated-Steel Thickness: As indicated in the documents.
5. Span Condition: Triple span or more.

2.7 NONCOMPOSITE FORM DECK

A. Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. ASC Profiles, Inc.; a Blue Scope Steel company.
2. Canam United States; Canam Group Inc.
3. CMC Joist & Deck.
4. Consolidated Systems, Inc.; Metal Dek Group.
5. Cordeck.
6. DACS, Inc.
7. Epic Metals Corporation.
8. Marlyn Steel Decks, Inc.
9. New Millennium Building Systems, LLC.
10. Nucor Corp.; Vulcraft Group.
11. Roof Deck, Inc.
12. Verco Manufacturing Co.
13. Wheeling Corrugating Company; Div. of Wheeling-Pittsburgh Steel Corporation.

B. Noncomposite Form Deck: Fabricate ribbed-steel sheet noncomposite form-deck panels to comply with "SDI Specifications and Commentary for Noncomposite Steel Form Deck," in SDI Publication No. 31, with the minimum section properties indicated, and with the following:

1. Galvanized-Steel Sheet: ASTM A 653/A 653M, Structural Steel (SS), Grade 33 (230), G90 (Z275) zinc coating.

2. Profile Depth: As indicated in the documents.
3. Design Uncoated-Steel Thickness: As indicated in the documents.
4. Span Condition: As indicated in the documents.
5. Side Laps: Overlapped or interlocking seam at Contractor's option.

2.8 ACCESSORIES

A. General: Provide manufacturer's standard accessory materials for deck that comply with requirements indicated.

B. Mechanical Fasteners: Corrosion-resistant, low-velocity, power-actuated or pneumatically driven carbon-steel fasteners; or self-drilling, self-threading screws.

C. Side-Lap Fasteners: Corrosion-resistant, hexagonal washer head; self-drilling, carbon-steel screws, No. 10 (4.8-mm) minimum diameter.

D. Flexible Closure Strips: Vulcanized, closed-cell, synthetic rubber.

E. Miscellaneous Sheet Metal Deck Accessories: Steel sheet, minimum yield strength of 33,000 psi (230 MPa), not less than 0.0359-inch (0.91-mm) design uncoated thickness, of same material and finish as deck; of profile indicated or required for application.

F. Pour Stops and Girder Fillers: Steel sheet, minimum yield strength of 33,000 psi (230 MPa), of same material and finish as deck, and of thickness and profile recommended by SDI Publication No. 31 for overhang and slab depth.

G. Column Closures, End Closures, Z-Closures, and Cover Plates: Steel sheet, of same material, finish, and thickness as deck unless otherwise indicated.

H. Piercing Hanger Tabs: Piercing steel sheet hanger attachment devices for use with floor deck.

I. Weld Washers: Uncoated steel sheet, shaped to fit deck rib, 0.0598 inch (1.52 mm) thick, with factory-punched hole of 3/8-inch (9.5-mm) minimum diameter.

J. Flat Sump Plates: Single-piece steel sheet, 0.0747 inch (1.90 mm) thick, of same material and finish as deck. For drains, cut holes in the field.

K. Recessed Sump Pans: Single-piece steel sheet, 0.0747 inch (1.90 mm) thick, of same material and finish as deck, with 3-inch- (76-mm-) wide flanges and level or sloped recessed pans of 1-1/2-inch (38-mm) minimum depth. For drains, cut holes in the field.

L. Galvanizing Repair Paint: ASTM A 780.

M. Repair Paint: Manufacturer's standard rust-inhibitive primer of same color as primer.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine supporting frame and field conditions for compliance with requirements for installation tolerances and other conditions affecting performance.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

A. Install deck panels and accessories according to applicable specifications and commentary in SDI Publication No. 31, manufacturer's written instructions, and requirements in this Section.

B. Install temporary shoring before placing deck panels if required to meet deflection limitations.

C. Locate deck bundles to prevent overloading of supporting members.

D. Place deck panels on supporting frame and adjust to final position with ends accurately aligned and bearing on supporting frame before being permanently fastened. Do not stretch or contract side-lap interlocks.

1. Align cellular deck panels over full length of cell runs and align cells at ends of abutting panels.

E. Place deck panels flat and square and fasten to supporting frame without warp or deflection.

F. Cut and neatly fit deck panels and accessories around openings and other work projecting through or adjacent to deck.

G. Provide additional reinforcement and closure pieces at openings as required for strength, continuity of deck, and support of other work.

H. Comply with AWS requirements and procedures for manual shielded metal arc welding, appearance and quality of welds, and methods used for correcting welding work.

I. Mechanical fasteners may be used in lieu of welding to fasten deck. Locate mechanical fasteners and install according to deck manufacturer's written instructions.

3.3 ROOF-DECK INSTALLATION

A. Deck attachment shall be sufficient to develop diaphragm shear strength capacity indicated on the drawings, and shall be in accordance with the manufacturer’s recommendations. Attachment guidelines indicated in sections 3.3B through 3.3D are minimum requirements only.

B. Fasten roof-deck panels to steel supporting members by arc spot (puddle) welds of the surface diameter indicated or arc seam welds with an equal perimeter that is not less than 1-1/2 inches (38 mm) long, and as follows:

1. Weld Diameter: 5/8 inch, nominal.
2. Weld Spacing: Weld edge and interior ribs of deck units with a minimum of two welds per deck unit at each support. Space welds 12 inches in the field of roof and 6 inches (150 mm) apart in roof corners and perimeter, based on roof-area definitions in FMG Loss Prevention Data Sheet 1-28.

3. Weld Washers: Install weld washers at each weld location where metal thickness is less than 0.028 inches. Weld washers shall have a minimum thickness of 0.0598 inches and have a nominal 3/8 inch diameter whole.

C. Side-Lap and Perimeter Edge Fastening: Fasten side laps and perimeter edges of panels between supports, at intervals not exceeding the lesser of 1/2 of the span, 36 inches, and a minimum of 4 fasteners between supports. Use one of the two attachment methods as follows:

1. Mechanically fasten with self-drilling, No. 10 (4.8-mm-) diameter or larger, carbon-steel screws.
2. Fasten with a minimum of 1-1/2-inch- (38-mm-) long welds.

D. End Bearing: Install deck ends over supporting frame with a minimum end bearing of 2 inches (38 mm), with end joints as follows:

1. End Joints: Lapped 2 inches (51 mm) minimum or butted at Contractor's option.

E. Roof Sump Pans and Sump Plates: Install over openings provided in roof deck and weld or mechanically fasten flanges to top of deck. Space welds or mechanical fasteners not more than 12 inches (305 mm) apart with at least one weld or fastener at each corner.

1. Install reinforcing channels or zees in ribs to span between supports and weld or mechanically fasten.

F. Miscellaneous Roof-Deck Accessories: Install ridge and valley plates, finish strips, end closures, and reinforcing channels according to deck manufacturer's written instructions. Weld or mechanically fasten to substrate to provide a complete deck installation.

1. Weld cover plates at changes in direction of roof-deck panels unless otherwise indicated.

G. Flexible Closure Strips: Install flexible closure strips over partitions, walls, and where indicated. Install with adhesive according to manufacturer's written instructions to ensure complete closure.

H. Sound-Absorbing Insulation: Installation into topside ribs of deck as specified in Division 07 Section “Thermal Insulation”.

3.4 FLOOR-DECK INSTALLATION

A. Fasten floor-deck panels to steel supporting members by arc spot (puddle) welds of the surface diameter indicated and as follows:

1. Weld Diameter: 5/8 inch, nominal, minimum.
2. Weld Spacing: Weld edge ribs of panels at each support. Space additional welds an average of 12 inches (305 mm) apart, but not more than 18 inches (457 mm) apart.
3. Weld Spacing: Space and locate welds as indicated.
4. Weld Washers: Install weld washers at each weld location where metal thickness is less than 0.028 inches. Weld washers shall have a minimum thickness of 0.0598 inches and have a nominal 3/8 inch diameter whole.

B. Side-Lap and Perimeter Edge Fastening: Fasten side laps and perimeter edges of panels between supports, at intervals not exceeding the lesser of half of the span or 36 inches (914 mm), and as follows:

1. Mechanically fasten with self-drilling, No. 10 (4.8-mm-) diameter or larger, carbon-steel screws.
2. Fasten with a minimum of 1-1/2-inch- (38-mm-) long welds.

C. End Bearing: Install deck ends over supporting frame with a minimum end bearing of 2 inches with end joints as follows:

1. End Joints: Butted.

D. Pour Stops and Girder Fillers: Weld steel sheet pour stops and girder fillers to supporting structure according to SDI recommendations unless otherwise indicated.

E. Floor-Deck Closures: Weld steel sheet column closures, cell closures, and Z-closures to deck, according to SDI recommendations, to provide tight-fitting closures at open ends of ribs and sides of deck.

F. Install piercing hanger tabs at 14 inches apart in both directions, within 9 inches (228 mm) of walls at ends, and not more than 12 inches (305 mm) from walls at sides unless otherwise indicated.

3.5 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Field welds will be subject to inspection.

C. Testing agency will report inspection results promptly and in writing to Contractor and Architect.

D. Remove and replace work that does not comply with specified requirements.

E. Additional inspecting, at Contractor's expense, will be performed to determine compliance of corrected work with specified requirements.

3.6 PROTECTION

A. Galvanizing Repairs: Prepare and repair damaged galvanized coatings on both surfaces of deck with galvanized repair paint according to ASTM A 780 and manufacturer's written instructions.

B. Repair Painting: Wire brush and clean rust spots, welds, and abraded areas on both surfaces of prime-painted deck immediately after installation, and apply repair paint.

1. Apply repair paint, of same color as adjacent shop-primed deck, to bottom surfaces of deck exposed to view.
2. Wire brushing, cleaning, and repair painting of bottom deck surfaces are included in Section 09 91 13 "Exterior Painting" and Section 09 91 23 "Interior Painting."

C. Repair Painting: Wire brushing, cleaning, and repair painting of rust spots, welds, and abraded areas of both deck surfaces are included in Section 09 91 13 "Exterior Painting" and Section 09 91 23 "Interior Painting."

D. Provide final protection and maintain conditions to ensure that steel deck is without damage or deterioration at time of Substantial Completion.

END OF SECTION 05 31 00

SECTION 05 40 00 - COLD-FORMED METAL FRAMING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Exterior non-load-bearing wall framing.
2. Soffit framing.
3. Bracing

B. Related Requirements:

1. Section 055000 "Metal Fabrications" for masonry shelf angles and connections.
2. Division 09 Section "Non-Structural Metal Framing" for interior non-load-bearing, metal-stud framing and ceiling-suspension assemblies capable of withstanding design loads and deflection limits specified under “Performance Requirements” article with non-structural metal framing, as determined by professional engineer responsible for the engineering services in Section 054000.

1.3 SUSTAINABLE DESIGN REQUIREMENTS

A. Applicable Leed Credits

1. MRc2
2. MRc4
3. MRc5

B. LEED Requirements

1. MRc2: CONSTRUCTION WASTE MANAGEMENT

No less than the specified portion of all construction waste from the Project shall be diverted from disposal in a landfill and/or incineration in with the Project Requirements for Construction Waste Management and Disposal. Refer to Specification Sections 017419 Construction Waste Management and Disposal and 013510 Sustainable Design Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

2. MRc4: RECYCLED CONTENT MATERIAL

No less than the specified minimum proportion of the building materials shall contain post-consumer and pre-consumer waste materials in accordance with the Project Requirements for Recycled Content Materials. All materials counted

towards the computations of the proportion of the Recycled Content Materials shall comply with the standard minimum percentages of post-consumer waste materials and for the minimum percentages of pre-consumer waste materials. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures

3. MRc5: REGIONALLY MANUFACTURED HARVESTED MATERIALS

No less than the specified minimum proportion of the building materials shall be extracted, processed, and manufactured within 500 miles of the Project Site in accordance with the Project Requirements for Regionally Manufactured and/or Harvested Materials. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of cold-formed steel framing product and accessory.

B. Sustainable Design Submittals:

1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.

C. Shop Drawings:

1. Include layout, spacings, sizes, thicknesses, and types of cold-formed steel framing; fabrication; and fastening and anchorage details, including mechanical fasteners.
2. Indicate reinforcing channels, opening framing, supplemental framing, strapping, bracing, bridging, splices, accessories, connection details, and attachment to adjoining work.

D. Delegated-Design Submittal: For cold-formed steel framing.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For testing agency.

B. Welding certificates.

C. Product Test Reports: For each listed product, for tests performed by [manufacturer and witnessed by a qualified testing agency] [a qualified testing agency].

1. Steel sheet.
2. Expansion anchors.
3. Power-actuated anchors.
4. Mechanical fasteners.
5. Vertical deflection clips.
6. Horizontal drift deflection clips
7. Miscellaneous structural clips and accessories.

D. Research Reports: For non-standard cold-formed steel framing, from ICC-ES.

1.6 QUALITY ASSURANCE

A. Engineering Responsibility: Preparation of Shop Drawings, design calculations, and other structural data by a qualified professional engineer.

B. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of cold-formed metal framing that are similar to those indicated for this Project in material, design, and extent. The Professional Engineer shall prepare and seal design calculations, Shop drawings, and other structural data related to the work of this Section.

C. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with a minimum of five years experience.

D. Installer Qualifications: An experienced installer, with a minimum five years experience, who has completed cold-formed metal framing similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.

E. Testing Agency Qualifications: An independent testing agency, acceptable to authorities having jurisdiction, qualified according to ASTM E 329 to conduct the testing indicated.

F. Product Tests: Mill certificates or data from a qualified independent testing agency indicating steel sheet complies with requirements, including base-metal thickness, yield strength, tensile strength, total elongation, chemical requirements, ductility, and metallic-coating thickness.

G. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code--Steel," and AWS D1.3, "Structural Welding Code--Sheet Steel."

H. Fire-Test-Response Characteristics: Where indicated, provide cold-formed metal framing identical to that of assemblies tested for fire resistance per ASTM E 119 by a testing and inspecting agency acceptable to authorities having jurisdiction.

I. AISI Specifications and Standards: Comply with AISI's "North American Specification for the Design of Cold-Formed Steel Structural Members" and its "Standard for Cold-Formed Steel Framing - General Provisions."

1. Comply with AISI's "Standard for Cold-Formed Steel Framing - Truss Design."
2. Comply with AISI's "Standard for Cold-Formed Steel Framing - Header Design."

J. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 01 Section "Project Management and Coordination."

1.7 DELIVERY, STORAGE, AND HANDLING

A. Protect cold-formed metal framing from corrosion, deformation, and other damage during delivery, storage, and handling.

B. Store cold-formed metal framing, protect with a waterproof covering, and ventilate to avoid condensation.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering cold-formed metal framing that may be incorporated into the Work include, but are not limited to, the following:

B. Manufacturers: Subject to compliance with requirements, provide cold-formed metal framing by one of the following:

1. Allied Studco.
2. AllSteel Products, Inc.
3. California Expanded Metal Products Company.
4. Clark Steel Framing.
5. Consolidated Fabricators Corp.; Building Products Division.
6. Craco Metals Manufacturing, LLC.
7. Custom Stud, Inc.
8. Dale/Incor.
9. Design Shapes in Steel.
10. Dietrich Metal Framing; a Worthington Industries Company.
11. Formetal Co. Inc. (The).
12. Innovative Steel Systems.
13. MarinoWare; a division of Ware Industries.
14. Quail Run Building Materials, Inc.
15. SCAFCO Corporation.
16. Southeastern Stud & Components, Inc.
17. Steel Construction Systems.
18. Steeler, Inc.
19. Super Stud Building Products, Inc.
20. United Metal Products, Inc.

2.2 MATERIALS

A. Recycled Content of Steel Products: Provide products with an average recycled content of steel products so postconsumer recycled content plus one-half of preconsumer recycled content is not less than 25 percent.

B. Steel Sheet: ASTM A 1003/A 1003M, Structural Grade, Type H, metallic coated, of grade and coating weight as follows:

1. Grade: As required by structural performance .
2. Coating: G90 (Z275) or equivalent .

C. Steel Sheet for Vertical Deflection Clips: ASTM A 653/A 653M, structural steel, zinc coated, of grade and coating as follows:

1. Grade: As required by structural performance.
2. Coating: G90 (Z275).

2.3 EXTERIOR NON-LOAD-BEARING WALL FRAMING

A. Steel Studs: Manufacturer's standard C-shaped steel studs, of web depths indicated, punched, with stiffened flanges, and as follows:

1. Minimum Base-Metal Thickness: 0.0538 inch (1.37 mm).
2. Flange Width: 2 inches (51 mm).
3. Section Properties: As required by structural performance calculations.

B. Steel Track: Manufacturer's standard U-shaped steel track, of web depths indicated, unpunched, with unstiffened flanges, and as follows:

1. Minimum Base-Metal Thickness: 0.0538 inch (1.37 mm) Matching steel studs;
2. Flange Width: 1-1/4 inches (32 mm).

C. Vertical Deflection Clips: Manufacturer's standard bypass or head clips, capable of accommodating upward and downward vertical displacement of primary structure through positive mechanical attachment to stud web.

1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Dietrich Metal Framing; a Worthington Industries Company.
b. MarinoWare, a division of Ware Industries.
c. SCAFCO Corporation
d. The Steel Network, Inc.

D. Single Deflection Track: Manufacturer's single, deep-leg, U-shaped steel track; unpunched, with unstiffened flanges, of web depth to contain studs while allowing free vertical movement, with flanges designed to support horizontal and lateral loads and transfer them to the primary structure, and as follows:

1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

2. Minimum Base-Metal Thickness: 0.0538 inch (1.37 mm) .
3. Flange Width: 1 inch (25 mm) plus twice the design gap requirement .

E. Double Deflection Tracks: Manufacturer's double, deep-leg, U-shaped steel tracks, consisting of nested inner and outer tracks; unpunched, with unstiffened flanges.

1. Outer Track: Of web depth to allow free vertical movement of inner track, with flanges designed to support horizontal and lateral loads and transfer them to the primary structure, and as follows:

a. Minimum Base-Metal Thickness: 0.0538 inch (1.37 mm);
b. Flange Width: 1 inch (25 mm) plus twice the design gap requirement .

2. Inner Track: Of web depth indicated, and as follows:

a. Minimum Base-Metal Thickness: 0.0538 inch (1.37 mm);

b. Flange Width: equal to sum of outer deflection track flange width plus 1 inch (25 mm).

F. Drift Clips: Manufacturer's standard bypass or head clips, capable of isolating wall stud from upward and downward vertical displacement and lateral drift of primary structure.

2.4 FRAMING ACCESSORIES

A. Fabricate steel-framing accessories from steel sheet, ASTM A 1003/A 1003M, Structural Grade, Type H, metallic coated, of same grade and coating weight used for framing members.

B. Provide accessories of manufacturer's standard thickness and configuration, unless otherwise indicated, as follows:

1. Supplementary framing.
2. Bracing, bridging, and solid blocking.
3. Web stiffeners.
4. Anchor clips.
5. End clips.
6. Foundation clips.
7. Gusset plates.
8. Stud kickers, knee braces, and girts.
9. Joist hangers and end closures.
10. Hole reinforcing plates.
11. Backer plates.

2.5 ANCHORS, CLIPS, AND FASTENERS

A. Steel Shapes and Clips: ASTM A 36/A 36M, zinc coated by hot-dip process according to ASTM A 123/A 123M.

B. Anchor Bolts: ASTM F 1554, Grade 55, threaded carbon-steel and carbon-steel nuts; and flat, hardened-steel washers; zinc coated by hot-dip process according to ASTM A 153/A 153M, Class C. Size and type as recommended by Contractor’s registered professional engineer to suit fastening or anchorage condition.

C. Expansion Anchors: Fabricated from corrosion-resistant materials, with capability to sustain, without failure, a load equal to 5 times design load, as determined by testing per ASTM E 488 conducted by a qualified independent testing agency.

D. Power-Actuated Anchors: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with capability to sustain, without failure, a load equal to 10 times design load, as determined by testing per ASTM E 1190 conducted by a qualified independent testing agency.

E. Mechanical Fasteners: ASTM C 1513, corrosion-resistant-coated, self-drilling, self-tapping steel drill screws.

1. Head Type: Low-profile head beneath sheathing, manufacturer's standard elsewhere.

F. Welding Electrodes: Comply with AWS standards.

2.6 MISCELLANEOUS MATERIALS

A. Galvanizing Repair Paint: ASTM A 780.

B. Cement Grout: Portland cement, ASTM C 150, Type I; and clean, natural sand, ASTM C 404. Mix at ratio of 1 part cement to 2-1/2 parts sand, by volume, with minimum water required for placement and hydration.

C. Nonmetallic, Nonshrink Grout: Premixed, nonmetallic, noncorrosive, nonstaining grout containing selected silica sands, portland cement, shrinkage-compensating agents, and plasticizing and water-reducing agents, complying with ASTM C 1107, with fluid consistency and 30-minute working time.

D. Shims: Load bearing, high-density multimonomer plastic, nonleaching.

E. Sealer Gaskets: Closed-cell neoprene foam, 1/4 inch (6.4 mm) thick, selected from manufacturer's standard widths to match width of bottom track or rim track members.

2.7 FABRICATION

A. Fabricate cold-formed metal framing and accessories plumb, square, and true to line, and with connections securely fastened, according to referenced AISI's specifications and standards, manufacturer's written instructions, and requirements in this Section.

1. Fabricate framing assemblies using jigs or templates.
2. Cut framing members by sawing or shearing; do not torch cut.
3. Fasten cold-formed metal framing members by welding, screw fastening, clinch fastening, or riveting as standard with fabricator. Wire tying of framing members is not permitted.

    a. Comply with AWS D1.3 requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.
    b. Locate mechanical fasteners and install according to Shop Drawings, with screw penetrating joined members by not less than three exposed screw threads.

4. Fasten other materials to cold-formed metal framing by welding, bolting, or screw fastening, according to Shop Drawings.

B. Reinforce, stiffen, and brace framing assemblies to withstand handling, delivery, and erection stresses. Lift fabricated assemblies to prevent damage or permanent distortion.

C. Fabrication Tolerances: Fabricate assemblies level, plumb, and true to line to a maximum allowable tolerance variation of 1/8 inch in 10 feet (1:960) and as follows:

1. Spacing: Space individual framing members no more than plus or minus 1/8 inch (3 mm) from plan location. Cumulative error shall not exceed minimum fastening requirements of sheathing or other finishing materials.
2. Squareness: Fabricate each cold-formed metal framing assembly to a maximum out-of-square tolerance of 1/8 inch (3 mm).

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine supporting substrates and abutting structural framing for compliance with requirements for installation tolerances and other conditions affecting performance.

1. Proceed with installation only after unsatisfactory conditions have been corrected.

B. Verify all field dimensions and as per drawings

C. Verify site conditions and dimensions under provisions of Division 1, “Execution”.

3.2 PREPARATION

A. Before sprayed fire-resistive materials are applied, attach continuous angles, supplementary framing, or tracks to structural members indicated to receive sprayed fire-resistive materials.

B. After applying sprayed fire-resistive materials, remove only as much of these materials as needed to complete installation of cold-formed framing without reducing thickness of fire-resistive materials below that are required to obtain fire-resistance rating indicated. Protect remaining fire-resistive materials from damage.

C. Install load bearing shims or grout between the underside of wall bottom track or rim track and the top of foundation wall or slab at stud or joist locations to ensure a uniform bearing surface on supporting concrete or masonry construction.

D. Install sealer gaskets to isolate the underside of wall bottom track or rim track and the top of foundation wall or slab at stud or joist locations.

3.3 INSTALLATION, GENERAL

A. Cold-formed metal framing may be shop or field fabricated for installation, or it may be field assembled.

B. Install cold-formed metal framing according to AISI's "Standard for Cold-Formed Steel Framing - General Provisions" and to manufacturer's written instructions unless more stringent requirements are indicated.

C. Install shop- or field-fabricated, cold-formed framing and securely anchor to supporting structure.

1. Screw, bolt, or weld wall panels at horizontal and vertical junctures to produce flush, even, true-to-line joints with maximum variation in plane and true position between fabricated panels not exceeding 1/16 inch (1.6 mm).
2. Where applicable, fasten framing members to adjoining steel construction by welding.

D. Install cold-formed metal framing and accessories plumb, square, and true to line, and with connections securely fastened.

1. Cut framing members by sawing or shearing; do not torch cut.
2. Fasten cold-formed metal framing members by welding, screw fastening, clinch fastening, or riveting. Wire tying of framing members is not permitted.

    a. Comply with AWS D1.3 requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.
    b. Locate mechanical fasteners and install according to Shop Drawings, and complying with requirements for spacing, edge distances, and screw penetration.

E. Install framing members in one-piece lengths unless splice connections are indicated for track or tension members.

F. Install temporary bracing and supports to secure framing and support loads comparable in intensity to those for which structure was designed. Maintain braces and supports in place, undisturbed, until entire integrated supporting structure has been completed and permanent connections to framing are secured.

G. Do not bridge building expansion and control joints with cold-formed metal framing. Independently frame both sides of joints.

H. Install insulation, specified in Division 07 Section "Thermal Insulation," in built-up exterior framing members, such as headers, sills, boxed joists, and multiple studs at openings, that are inaccessible on completion of framing work.

I. Fasten hole reinforcing plate over web penetrations that exceed size of manufacturer's standard punched openings.

J. Erection Tolerances: Install cold-formed metal framing level, plumb, and true to line to a maximum allowable tolerance variation of 1/8 inch in 10 feet (1:960) and as follows:

    1. Space individual framing members no more than plus or minus 1/8 inch (3 mm) from plan location. Cumulative error shall not exceed minimum fastening requirements of sheathing or other finishing materials.

3.4 EXTERIOR NON-LOAD-BEARING WALL INSTALLATION

A. Install continuous tracks sized to match studs. Align tracks accurately and securely anchor to supporting structure as indicated on shop drawings and in accordance with design calculations. Butt weld joints in tracks or splice with channel inserts.

B. Fasten both flanges of studs to top and bottom track, unless otherwise indicated. Space studs as follows:

    1. Stud Spacing: 16 inches (406 mm).
    2. Positions studs vertically in tracks and space not more than 2 inches from abutting walls and at each side of openings, unless otherwise indicated. Install studs full length between tracks without splices. Provide doubled studs at openings 2-foot wide or larger. Provide tripled studs at corners, positioned to receive interior and exterior finishes. Fasten studs to top and bottom track by welding both flanges to tracks.

C. Set studs plumb, except as needed for diagonal bracing or required for nonplumb walls or warped surfaces and similar requirements.

D. Isolate non-load-bearing steel framing from building structure to prevent transfer of vertical loads while providing lateral support.

1. Install single-leg deflection tracks and anchor to building structure.
2. Install double deep-leg deflection tracks and anchor outer track to building structure.
3. Connect vertical deflection clips to bypassing or infill studs and anchor to building structure.
4. Connect drift clips to cold formed metal framing and anchor to building structure.

E. Install horizontal bridging in wall studs, spaced in rows indicated on Shop Drawings but not more than 48 inches (1220 mm) apart. Fasten at each stud intersection.

1. Top Bridging for Single Deflection Track: Install row of horizontal bridging within 12 inches (305 mm) of single deflection track. Install a combination of flat, taut, steel sheet straps of width and thickness indicated and stud or stud-track solid blocking of width and thickness matching studs. Fasten flat straps to stud flanges and secure solid blocking to stud webs or flanges.

    a. Install solid blocking at centers indicated on Shop Drawings.

2. Bridging: Cold-rolled steel channel welded or mechanically fastened to webs of punched studs.
3. Bridging: Combination of flat, taut, steel sheet straps of width and thickness indicated and stud-track solid blocking of width and thickness to match studs. Fasten flat straps to stud flanges and secure solid blocking to stud webs or flanges.
4. Bridging: Proprietary bridging bars installed according to manufacturer's written instructions.

F. Install miscellaneous framing and connections, including stud kickers, web stiffeners, clip angles, continuous angles, anchors, fasteners, and stud girts, to provide a complete and stable wall-framing system.

3.5 FIELD QUALITY CONTROL

A. Testing: Engage a qualified independent testing and inspecting agency to perform field tests and inspections and prepare test reports.

B. Field and shop welds will be subject to testing and inspecting.

C. Testing agency will report test results promptly and in writing to Contractor and Architect.

D. Remove and replace work where test results indicate that it does not comply with specified requirements.

E. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

F. Field inspection shall include, but is not limited to:

1. See that all steel is properly stored and protected.
2. Vertical and horizontal alignment of all metal studs before and after welding, and when directed by the Architect.
3. All joints, prior to welding, for required clearance and preparation.
4. Type of equipment and material used to make connections.
5. All welded and bolted field connections.
6. Check field touch-up painting prior to covering by architectural materials.
7. Inspector shall mark all bolted and welded connections when they are finally approved.

G. Notification: It shall be the responsibility of the Contractor to see that the Inspection Agency is supplied with a complete set of Contract Drawings and Specifications and approved Shop Drawings. It is the Contractor's responsibility to notify the Agency Construction Manager and Inspection Agency before the start of erection of steel, a sufficient time before such work is started in order that the Inspection Agency may properly schedule the required inspections.

H. Contractor's Responsibility: Acceptance of the field inspection done by the Inspection Agency pertaining to the cold formed metal framing does not relieve the Contractor of his responsibility to insure that the project has the proper sizes, strength, fabrication and erection procedures and any other requirements of the Contract Documents.

I. Certified reports indicating that all joints tested by non-destructive testing meet all of the requirements of the Contract Documents, shall be submitted to the Architect prior to completion of other work preventing access for any possible repairs.

J. Certified reports indicating that all joints tested by non-destructive testing meet all of the requirements of the Contract Documents shall be submitted to the Architect prior to completion of other work preventing access for any possible repairs.

K. Upon completion of the installation of the studs, the Contractor shall submit a written certification that the studs as erected meet all of the requirements of the Contract Documents.

3.6 REPAIRS AND PROTECTION

A. Galvanizing Repairs: Prepare and repair damaged galvanized coatings on fabricated and installed cold-formed metal framing with galvanized repair paint according to ASTM A 780 and manufacturer's written instructions.

B. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer that ensure that cold-formed metal framing is without damage or deterioration at time of Substantial Completion.

END OF SECTION 05 40 00

SECTION 05 50 00 - METAL FABRICATIONS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Steel framing and supports for ceiling-braced toilet compartments.
2. Steel framing and supports for mounted gymnasium equipment
3. Steel framing and supports for countertops.
4. Steel tube reinforcement for low partitions.
5. Steel framing and supports for mechanical and electrical equipment.
6. Steel framing and supports for hoist beams
7. Steel framing and supports for applications where framing and supports are not specified in other Sections.
8. Elevator machine beams, hoist beams,.
9. Steel shapes for supporting elevator door sills.
10. Shelf angles.
11. Metal ladders.
12. Elevator pit sump covers.
13. Miscellaneous steel trim including steel angle corner guards.
14. Loose bearing and leveling plates for applications where they are not specified in other Sections.

B. Products furnished, but not installed, under this Section include the following:

1. Loose steel lintels.
2. Anchor bolts, steel pipe sleeves, slotted-channel inserts, and wedge-type inserts indicated to be cast into concrete or built into unit masonry.
3. Steel weld plates and angles for casting into concrete for applications where they are not specified in other Sections.

C. Related Requirements:

1. Section 033000 "Cast-in-Place Concrete" for installing anchor bolts, steel pipe sleeves, slotted-channel inserts, wedge-type inserts, and other items cast into concrete.
2. Section 042000 "Unit Masonry" for installing loose lintels, anchor bolts, and other items built into unit masonry.
3. Division 05 Section "Metal Stairs."
4. Division 05 Section "Pipe and Tube Railings."
5. Section 051200 "Structural Steel Framing."
6. Division 07 section “Security Joint Sealants” for requirements for and locations to receive security joint sealants..

7. Divison 09 Section “High Performance Coatings” for priming and finishing of metal fabrications.
8. Division 10 Section "Wire Mesh Partitions."
9. Division 11 Section “Tamper-Proof Metal Fasteners for requirements for and locations to receive security fasteners”.
10. Section 129300 "Site Furnishings" for bicycle racks and bollards.

1.3 COORDINATION

A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.

B. Coordinate installation of metal fabrications that are anchored to or that receive other work. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

1.4 SUSTAINABLE DESIGN REQUIREMENTS

A. Applicable Leed Credits

1. MRc2
2. MRc4
3. MRc5
4. IEQc4.2

B. LEED Requirements

1. MRc2: CONSTRUCTION WASTE MANAGEMENT

No less than the specified portion of all construction waste from the Project shall be diverted from disposal in a landfill and/or incineration in with the Project Requirements for Construction Waste Management and Disposal. Refer to Specification Sections 017419 Construction Waste Management and Disposal and 013510 Sustainable Design Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

2. MRc4: RECYCLED CONTENT MATERIAL

No less than the specified minimum proportion of the building materials shall contain post-consumer and pre-consumer waste materials in accordance with the Project Requirements for Recycled Content Materials. All materials counted towards the computations of the proportion of the Recycled Content Materials shall comply with the standard minimum percentages of post-consumer waste materials and for the minimum percentages of pre-consumer waste materials. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures

3. MRc5: REGIONALLY MANUFACTURED HARVESTED MATERIALS

No less than the specified minimum proportion of the building materials shall be extracted, processed, and manufactured within 500 miles of the Project Site in accordance with the Project Requirements for Regionally Manufactured and/or Harvested Materials. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

4. IEQc4.2: LOW-EMITTING MATERIALS – PAINTS AND COATINGS

All paints and coatings in the building interior shall comply with the Project Requirements for Low Emitting Materials – Paints and Coatings. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

1.5 ACTION SUBMITTALS

A. Product Data: For the following:

1. Nonslip aggregates and nonslip-aggregate surface finishes.
2. Paint products.
3. Grout.

B. Shop Drawings: Show fabrication and installation details for metal fabrications.

1. Include plans, elevations, sections, and details of metal fabrications and their connections. Show anchorage and accessory items.

C. Coordination Drawings: Show components accommodating structural elements and mechanical, plumbing, fire-protection, fire-alarm, electrical, data and security electronics equipment.

D. Delegated-Design Submittal: For installed products indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For professional engineer.

B. Mill Certificates: Signed by stainless-steel manufacturers, certifying that products furnished comply with requirements.

C. Welding certificates.

D. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers, certifying that shop primers are compatible with topcoats.

1.7 QUALITY ASSURANCE

A. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

B. Welding Qualifications: Qualify procedures and personnel according to the following:

1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
3. AWS D1.6/D1.6M, "Structural Welding Code - Stainless Steel."

1.8 FIELD CONDITIONS

A. Field Measurements: Verify actual locations of walls and other construction contiguous with metal fabrications by field measurements before fabrication.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Design ladders including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

B. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes acting on exterior metal fabrications by preventing buckling, opening of joints, overstressing of components, failure of connections, and other detrimental effects.

1. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.

C. Structural Performance of Stairs: Metal stairs shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:

1. Uniform Load: 100 lbf/sq. ft. (4.79 kN/sq. m).
2. Concentrated Load: 300 lbf (1.33 kN) applied on an area of 4 sq. in. (2580 sq. mm).
3. Uniform and concentrated loads need not be assumed to act concurrently.
4. Stair Framing: Capable of withstanding stresses resulting from railing loads in addition to loads specified above.
5. Limit deflection of treads, platforms, and framing members to L/360 or 1/4 inch (6.4 mm), whichever is less.

D. Seismic Performance of Stairs: Metal stairs shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. Component Importance Factor: 1.5.

2.2 METALS

A. Metal Surfaces, General: Provide materials with smooth, flat surfaces unless otherwise indicated. For metal fabrications exposed to view in the completed Work, provide materials without seam marks, roller marks, rolled trade names, or blemishes.

B. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.

C. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.

D. Stainless-Steel Sheet, Strip, and Plate: ASTM A 240/A 240M or ASTM A 666, Type 304.

E. Stainless-Steel Bars and Shapes: ASTM A 276, Type 304.

F. Rolled-Steel Floor Plate: ASTM A 786/A 786M, rolled from plate complying with ASTM A 36/A 36M or ASTM A 283/A 283M, Grade C or D.

G. Rolled-Stainless-Steel Floor Plate: ASTM A 793.

H. Abrasive-Surface Floor Plate: Steel plate with abrasive granules rolled into surface or with abrasive material metallically bonded to steel.

I. Steel Tubing: ASTM A 500/A 500M, cold-formed steel tubing.

J. Steel Pipe: ASTM A 53/A 53M, Standard Weight (Schedule 40) unless otherwise indicated.

K. Zinc-Coated Steel Wire Rope: ASTM A 741.

1. Wire-Rope Fittings: Hot-dip galvanized-steel connectors with capability to sustain, without failure, a load equal to minimum breaking strength of wire rope with which they are used.

L. Slotted Channel Framing: Cold-formed metal box channels (struts) complying with MFMA-4.

1. Size of Channels: As indicated.
2. Material: Galvanized steel, ASTM A 653/A 653M, structural steel, Grade 33, with G90 coating; 0.079-inch nominal thickness.
3. Material: Cold-rolled steel, ASTM A 1008/A 1008M, structural steel, Grade 33; 0.0677-inch minimum thickness; hot-dip galvanized after fabrication.

M. Cast Iron: Either gray iron, ASTM A 48/A 48M, or malleable iron, ASTM A 47/A 47M, unless otherwise indicated.

N. Aluminum Plate and Sheet: ASTM B 209 (ASTM B 209M), Alloy 6061-T6.

O. Aluminum Extrusions: ASTM B 221 (ASTM B 221M), Alloy 6063-T6.

P. Aluminum-Alloy Rolled Tread Plate: ASTM B 632/B 632M, Alloy 6061-T6.

Q. Aluminum Castings: ASTM B 26/B 26M, Alloy 443.0-F.

R. Bronze Extrusions: ASTM B 455, Alloy UNS No. C38500 (extruded architectural bronze).

S. Bronze Castings: ASTM B 584, Alloy UNS No. C83600 (leaded red brass) or No. C84400 (leaded semired brass).

T. Nickel Silver Extrusions: ASTM B 151/B 151M, Alloy UNS No. C74500.

U. Nickel Silver Castings: ASTM B 584, Alloy UNS No. C97600 (20 percent leaded nickel bronze).

2.3 FASTENERS

A. General: Unless otherwise indicated, provide Type 304 stainless-steel fasteners for exterior use and zinc-plated fasteners with coating complying with ASTM B 633 or ASTM F 1941, Class Fe/Zn 5, at exterior walls. Select fasteners for type, grade, and class required.

1. Provide stainless-steel fasteners for fastening aluminum.

B. Anchor Bolts: ASTM F 1554, Grade 36, of dimensions indicated; with nuts, ASTM A 563; and, where indicated, flat washers.

1. Hot-dip galvanize or provide mechanically deposited, zinc coating where item being fastened is indicated to be galvanized.

C. Eyebolts: ASTM A 489.

D. Machine Screws: ASME B18.6.3.

E. Lag Screws: ASME B18.2.1.

F. Wood Screws: Flat head, ASME B18.6.1.

G. Plain Washers: Round, ASME B18.22.1.

H. Lock Washers: Helical, spring type, ASME B18.21.1.

I. Anchors, General: Anchors capable of sustaining, without failure, a load equal to six times the load imposed when installed in unit masonry and four times the load imposed when installed in concrete, as determined by testing according to ASTM E 488, conducted by a qualified independent testing agency.

J. Cast-in-Place Anchors in Concrete: Either threaded type or wedge type unless otherwise indicated; galvanized ferrous castings, either ASTM A 47/A 47M malleable iron or ASTM A 27/A 27M cast steel. Provide bolts, washers, and shims as needed, all hot-dip galvanized per ASTM F 2329.

K. Post-Installed Anchors: Torque-controlled expansion anchors or chemical anchors.

1. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B 633 or ASTM F 1941, Class Fe/Zn 5, unless otherwise indicated.
2. Material for Exterior Locations and Where Stainless Steel is Indicated: Alloy Group 1 stainless-steel bolts, ASTM F 593, and nuts, ASTM F 594.

L. Slotted-Channel Inserts: Cold-formed, hot-dip galvanized-steel box channels (struts) complying with MFMA-4, 1-5/8 by 7/8 inches by length indicated with anchor straps or studs not less than 3 inches long at not more than 8 inches o.c. Provide with temporary filler and tee-head bolts, complete with washers and nuts, all zinc-plated to comply with ASTM B 633, Class Fe/Zn 5, as needed for fastening to inserts.

2.4 MISCELLANEOUS MATERIALS

A. Shop Primers: Provide primers that comply Section 099123 Interior Painting," and Section 099600 "High-Performance Coatings."

B. Galvanizing Repair Paint: High-zinc-dust-content paint complying with SSPC-Paint 20 and compatible with paints specified to be used over it.

C. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187/D 1187M.

D. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C 1107/C 1107M. Provide grout specifically recommended by manufacturer for interior and exterior applications.

E. Concrete: Comply with requirements in Section 033000 "Cast-in-Place Concrete" for normal-weight, air-entrained, concrete with a minimum 28-day compressive strength of 3000 psi (20 MPa).

2.5 FABRICATION, GENERAL

A. Shop Assembly: Preassemble items in the shop to greatest extent possible. Disassemble units only as necessary for shipping and handling limitations. Use connections that maintain structural value of joined pieces. Clearly mark units for reassembly and coordinated installation.

B. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch (1 mm) unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.

C. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.

D. Form exposed work with accurate angles and surfaces and straight edges.

E. Weld corners and seams continuously to comply with the following:

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
2. Obtain fusion without undercut or overlap.
3. Remove welding flux immediately.
4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing.

F. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners or welds where possible. Where exposed fasteners are required, use Phillips flat-head (countersunk) fasteners unless otherwise indicated. Locate joints where least conspicuous.

G. Fabricate seams and other connections that are exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate.

H. Cut, reinforce, drill, and tap metal fabrications as indicated to receive finish hardware, screws, and similar items.

I. Provide for anchorage of type indicated; coordinate with supporting structure. Space anchoring devices to secure metal fabrications rigidly in place and to support indicated loads.

J. Where units are indicated to be cast into concrete or built into masonry, equip with integrally welded steel strap anchors, 1/8 by 1-1/2 inches (3.2 by 38 mm), with a minimum 6-inch (150-mm) embedment and 2-inch (50-mm) hook, not less than 8 inches (200 mm) from ends and corners of units and 24 inches (600 mm) o.c., unless otherwise indicated.

2.6 MISCELLANEOUS FRAMING AND SUPPORTS

A. General: Provide steel framing and supports not specified in other Sections as needed to complete the Work.

B. Fabricate units from steel shapes, plates, and bars of welded construction unless otherwise indicated. Fabricate to sizes, shapes, and profiles indicated and as necessary to receive adjacent construction.

1. Fabricate units from slotted channel framing where indicated.
2. Furnish inserts for units installed after concrete is placed.

C. Fabricate supports for operable partitions from continuous steel beams of sizes recommended by partition manufacturer with attached bearing plates, anchors, and braces as recommended by partition manufacturer. Drill or punch bottom flanges of beams to receive partition track hanger rods; locate holes where indicated on operable partition Shop Drawings.

D. Fabricate steel girders for wood frame construction from continuous steel shapes of sizes indicated.

1. Provide bearing plates welded to beams where indicated.
2. Drill or punch girders and plates for field-bolted connections where indicated.
3. Where wood nailers are attached to girders with bolts or lag screws, drill or punch holes at 24 inches (600 mm) o.c.

E. Fabricate steel pipe columns for supporting wood frame construction from steel pipe with steel baseplates and top plates as indicated. Drill or punch baseplates and top plates for anchor and connection bolts and weld to pipe with fillet welds all around. Make welds the same size as pipe wall thickness unless otherwise indicated.

1. Unless otherwise indicated, fabricate from Schedule 40 steel pipe.
2. Unless otherwise indicated, provide 1/2-inch (12.7-mm) baseplates with four 5/8-inch (16-mm) anchor bolts and 1/4-inch (6.4-mm) top plates.

F. Galvanize miscellaneous framing and supports where indicated.

G. Prime miscellaneous framing and supports with primer specified in Section 099600 "High-Performance Coatings" where indicated.

2.7 SHELF ANGLES

A. Fabricate shelf angles from steel angles of sizes indicated and for attachment to concrete framing. Provide horizontally slotted holes to receive 3/4-inch (19-mm) bolts, spaced not more than 6 inches (150 mm) from ends and 24 inches (600 mm) o.c., unless otherwise indicated.

1. Provide mitered and welded units at corners.
2. Provide open joints in shelf angles at expansion and control joints. Make open joint approximately 2 inches (50 mm) larger than expansion or control joint.

B. For cavity walls, provide vertical channel brackets to support angles from backup masonry and concrete.

C. Galvanize and prime shelf angles located in exterior walls.

D. Prime shelf angles located in exterior walls with primer specified in Section 099600 "High-Performance Coatings."

E. Furnish wedge-type concrete inserts, complete with fasteners, to attach shelf angles to cast-in-place concrete.

2.8 METAL LADDERS

A. General:

1. Comply with ANSI A14.3, except for elevator pit ladders.
2. For elevator pit ladders, comply with ASME A17.1/CSA B44.

B. Steel Ladders:

1. Space siderails 18 inches (457 mm) apart unless otherwise indicated.
2. Siderails: Continuous, 1/2-by-2-1/2-inch (12.7-by-64-mm) steel flat bars, with eased edges.
3. Rungs: 1-inch- (25-mm-) diameter steel bars.
4. Fit rungs in centerline of siderails; plug-weld and grind smooth on outer rail faces.
5. Provide nonslip surfaces on top of each rung, either by coating rung with aluminum-oxide granules set in epoxy-resin adhesive or by using a type of manufactured rung filled with aluminum-oxide grout.
6. Provide nonslip surfaces on top of each rung by coating with abrasive material metallically bonded to rung.
7. Support each ladder at top and bottom and not more than 60 inches (1500 mm) o.c. with welded or bolted steel brackets.
8. Prime ladders, including brackets and fasteners, with primer specified in Section 099600 "High-Performance Coatings."

2.9 ELEVATOR PIT SUMP COVERS

A. Fabricate from abrasive-surface floor plate with four 1-inch- (25-mm-) diameter holes for water drainage and for lifting.

B. Fabricate from welded or pressure-locked steel bar grating Limit openings in gratings to no more than 3/4 inch (19 mm) in least dimension.

C. Provide steel angle supports as indicated.

2.10 MISCELLANEOUS STEEL TRIM

A. Unless otherwise indicated, fabricate units from steel shapes, plates, and bars of profiles shown with continuously welded joints and smooth exposed edges. Miter corners and use concealed field splices where possible.

B. Provide cutouts, fittings, and anchorages as needed to coordinate assembly and installation with other work.

1. Provide with integrally welded steel strap anchors for embedding in concrete or masonry construction.

C. Galvanize and prime exterior miscellaneous steel trim.

D. Prime exterior miscellaneous steel trim with primer specified in Section 099600 "High-Performance Coatings."

2.11 LOOSE BEARING AND LEVELING PLATES

A. Provide loose bearing and leveling plates for steel items bearing on masonry or concrete construction. Drill plates to receive anchor bolts and for grouting.

B. Galvanize plates.

C. Prime plates with primer specified in Section 099600 "High-Performance Coatings."

2.12 LOOSE STEEL LINTELS

A. Fabricate loose steel lintels from steel angles and shapes of size indicated for openings and recesses in masonry walls and partitions at locations indicated. Fabricate in single lengths for each opening unless otherwise indicated. Weld adjoining members together to form a single unit where indicated.

B. Size loose lintels to provide bearing length at each side of openings equal to 1/12 of clear span, but not less than 8 inches (200 mm) unless otherwise indicated.

C. Galvanize and prime loose steel lintels located in exterior walls.

D. Prime loose steel lintels located in exterior walls with primer specified in Section 099600 "High-Performance Coatings."

2.13 STEEL WELD PLATES AND ANGLES

A. Provide steel weld plates and angles not specified in other Sections, for items supported from concrete construction as needed to complete the Work. Provide each unit with no fewer than two integrally welded steel strap anchors for embedding in concrete.

2.14 FINISHES, GENERAL

A. Finish metal fabrications after assembly.

B. Finish exposed surfaces to remove tool and die marks and stretch lines, and to blend into surrounding surface.

2.15 STEEL AND IRON FINISHES

A. Galvanizing: Hot-dip galvanize items as indicated to comply with ASTM A 153/A 153M for steel and iron hardware and with ASTM A 123/A 123M for other steel and iron products.

1. Do not quench or apply post galvanizing treatments that might interfere with paint adhesion.

B. Preparation for Shop Priming Galvanized Items: After galvanizing, thoroughly clean railings of grease, dirt, oil, flux, and other foreign matter, and treat with metallic phosphate process.

C. Shop prime iron and steel items not indicated to be galvanized unless they are to be embedded in concrete, sprayed-on fireproofing, or masonry, or unless otherwise indicated.

D. Shop Priming: Apply shop primer to comply with SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.

1. Stripe paint corners, crevices, bolts, welds, and sharp edges.

2.16 ALUMINUM FINISHES

A. As-Fabricated Finish: AA-M12.

B. Clear Anodic Finish: AAMA 611, Class I, AA-M12C22A41.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

A. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal fabrications. Set metal fabrications accurately in location, alignment, and elevation; with edges and surfaces level, plumb, true, and free of rack; and measured from established lines and levels.

B. Fit exposed connections accurately together to form hairline joints. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations. Do not weld, cut, or abrade surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.

C. Field Welding: Comply with the following requirements:

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
2. Obtain fusion without undercut or overlap.
3. Remove welding flux immediately.
4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.

D. Fastening to In-Place Construction: Provide anchorage devices and fasteners where metal fabrications are required to be fastened to in-place construction. Provide threaded fasteners for use with concrete and masonry inserts, toggle bolts, through bolts, lag screws, wood screws, and other connectors.

E. Provide temporary bracing or anchors in formwork for items that are to be built into concrete, masonry, or similar construction.

F. Corrosion Protection: Coat concealed surfaces of aluminum that come into contact with grout, concrete, masonry, wood, or dissimilar metals with the following:

1. Cast Aluminum: Heavy coat of bituminous paint.
2. Extruded Aluminum: Two coats of clear lacquer.

3.2 INSTALLING MISCELLANEOUS FRAMING AND SUPPORTS

A. General: Install framing and supports to comply with requirements of items being supported, including manufacturers' written instructions and requirements indicated on Shop Drawings.

B. Anchor supports for ceiling hung toilet partitions securely to, and rigidly brace from, building structure.

C. Support steel girders on solid grouted masonry, concrete, or steel pipe columns. Secure girders with anchor bolts embedded in grouted masonry or concrete or with bolts through top plates of pipe columns.

1. Where grout space under bearing plates is indicated for girders supported on concrete or masonry, install as specified in "Installing Bearing and Leveling Plates" Article.

D. Install pipe columns on concrete footings with grouted baseplates. Position and grout column baseplates as specified in "Installing Bearing and Leveling Plates" Article.

1. Grout baseplates of columns supporting steel girders after girders are installed and leveled.

3.3 INSTALLING BEARING AND LEVELING PLATES

A. Clean concrete and masonry bearing surfaces of bond-reducing materials, and roughen to improve bond to surfaces. Clean bottom surface of plates.

B. Set bearing and leveling plates on wedges, shims, or leveling nuts. After bearing members have been positioned and plumbed, tighten anchor bolts. Do not remove wedges or shims but, if protruding, cut off flush with edge of bearing plate before

packing with nonshrink grout. Pack grout solidly between bearing surfaces and plates to ensure that no voids remain.

3.4 ADJUSTING AND CLEANING

A. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas. Paint uncoated and abraded areas with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.

1. Apply by brush or spray to provide a minimum 2.0-mil (0.05-mm) dry film thickness.

B. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A 780/A 780M.

END OF SECTION 05 50 00

SECTION 05 51 13 - METAL PAN STAIRS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Preassembled steel stairs with concrete-filled treads.
2. Industrial-type, straight-run stairs with steel-grating treads
3. Steel tube railings attached to metal stairs.
4. Steel tube handrails attached to walls adjacent to metal stairs.
5. Railing gates at the level of exit discharge.

B. Related Requirements:

1. Section 033000 "Cast-in-Place Concrete" for concrete fill for stair treads and platforms.
2. Section 055213 "Pipe and Tube Railings" for pipe and tube railings.
3. Division 05 Section "Metal Fabrications" for metal treads and nosings installed at locations other than in metal stairs.
1. Division 07 section “Security Joint Sealants” for requirements for and locations to receive security joint sealants.
2. Division 09 Section “High-Performance Coatings” for shop- and touchup painting of metal stairs.
3. Division 11 Section “General Provisions for Detention Work”.
4. Division 11 Section “Tamper-Proof Metal Fasteners” for requirements for and locations to receive security fasteners.

1.3 COORDINATION

A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.

B. Coordinate installation of anchorages for metal stairs. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

C. Coordinate locations of hanger rods and struts with other work so that they do not encroach on required stair width and are within the fire-resistance-rated stair enclosure.

1.4 SUSTAINABLE DESIGN REQUIREMENTS

A. Applicable Leed Credits

1. MRc2
2. MRc4
3. MRc5
4. IEQc4.2

B. LEED Requirements

1. MRc2: CONSTRUCTION WASTE MANAGEMENT

No less than the specified portion of all construction waste from the Project shall be diverted from disposal in a landfill and/or incineration in with the Project Requirements for Construction Waste Management and Disposal. Refer to Specification Sections 017419 Construction Waste Management and Disposal and 013510 Sustainable Design Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

2. MRc4: RECYCLED CONTENT MATERIAL

No less than the specified minimum proportion of the building materials shall contain post-consumer and pre-consumer waste materials in accordance with the Project Requirements for Recycled Content Materials. All materials counted towards the computations of the proportion of the Recycled Content Materials shall comply with the standard minimum percentages of post-consumer waste materials and for the minimum percentages of pre-consumer waste materials. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures

3. MRc5: REGIONALLY MANUFACTURED HARVESTED MATERIALS

No less than the specified minimum proportion of the building materials shall be extracted, processed, and manufactured within 500 miles of the Project Site in accordance with the Project Requirements for Regionally Manufactured and/or Harvested Materials. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

4. IEQc4.2: LOW-EMITTING MATERIALS – PAINTS AND COATINGS

All paints and coatings in the building interior shall comply with the Project Requirements for Low Emitting Materials – Paints and Coatings. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

1.5 ACTION SUBMITTALS

A. Product Data: For metal pan stairs and the following:

1. Prefilled metal-pan-stair treads.

2. Nonslip aggregates and nonslip-aggregate finishes.
3. Abrasive nosings.
4. Photoluminescent Nosing

B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.

C. Samples for Verification: For each type and finish of nosing and tread.

D. Delegated-Design Submittal: For stairs and railings, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.6 INFORMATIONAL SUBMITTALS

A. Welding certificates.

B. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers certifying that shop primers are compatible with topcoats.

1.7 QUALITY ASSURANCE

A. Installer Qualifications: Fabricator of products.

B. Welding Qualifications: Qualify procedures and personnel according to the following:

1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
2. AWS D1.3/D1.3M, "Structural Welding Code - Sheet Steel."

PART 2 - PRODUCTS

2.1 MANUFACTURERS

Manufacturers: Subject to compliance with requirements, manufacturers whose products may be incorporated into the Work include, but are not limited to, the following

1. Alfab, Inc.
2. American Stair, Inc.
3. Lapeyre Stair Inc.
4. Pacific Stair Corporation.
5. Worthington Metal Fabricators.

2.2 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design stairs and railings.

B. Structural Performance of Stairs: Metal stairs shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:

1. Uniform Load: 100 lbf/sq. ft. (4.79 kN/sq. m).

2. Concentrated Load: 300 lbf (1.33 kN) applied on an area of 4 sq. in. (2580 sq. mm).
3. Uniform and concentrated loads need not be assumed to act concurrently.
4. Stair Framing: Capable of withstanding stresses resulting from railing loads in addition to loads specified above.
5. Limit deflection of treads, platforms, and framing members to L/360 or 1/4 inch (6.4 mm), whichever is less.

C. Seismic Performance of Stairs: Metal stairs shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. Component Importance Factor: 1.5.

D. Structural Performance of Railings: Railings shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:

1. Handrails and Top Rails of Guards:

a. Uniform load of 50 lbf/ft. (0.73 kN/m) applied in any direction.
b. Concentrated load of 200 lbf (0.89 kN) applied in any direction.
c. Uniform and concentrated loads need not be assumed to act concurrently.

2. Infill of Guards

a. Concentrated load of 50 lbf (0.22 kN) applied horizontally on an area of 1 sq. ft. (0.093 sq. m).
b. Infill load and other loads need not be assumed to act concurrently.

2.3 METALS

A. Metal Surfaces, General: Provide materials with smooth, flat surfaces unless otherwise indicated. For components exposed to view in the completed Work, provide materials without seam marks, roller marks, rolled trade names, or blemishes.

B. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.

C. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.

D. Steel Tubing: ASTM A 500 (cold formed) or ASTM A 513.

E. Cast Iron: Either gray iron, ASTM A 48/A 48M, or malleable iron, ASTM A 47/A 47M, unless otherwise indicated.

F. Uncoated, Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, either commercial steel, Type B, or structural steel, Grade 25 (Grade 170), unless another grade is required by design loads; exposed.

G. Uncoated, Hot-Rolled Steel Sheet: ASTM A 1011/A 1011M, either commercial steel, Type B, or structural steel, Grade 30 (Grade 205), unless another grade is required by design loads.

H. Galvanized-Steel Sheet: ASTM A 653/A 653M, G90 (Z275) coating, either commercial steel, Type B, or structural steel, Grade 33 (Grade 230), unless another grade is required by design loads.

I. Expanded-Metal, Carbon Steel: ASTM F 1267, Type I (expanded), Class 1 (uncoated).

1. Style Designation: 3/4 number 13.

J. Aluminum Extrusions: ASTM B 221 (ASTM B 221M), Alloy 6063-T6.

K. Aluminum Castings: ASTM B 26/B 26M, Alloy 443.0-F.

2.4 ABRASIVE NOSINGS

A. Extruded Units: Aluminum units with abrasive filler consisting of aluminum oxide, silicon carbide, or a combination of both, in an epoxy-resin binder. Fabricate units in lengths necessary to accurately fit openings or conditions.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. ACL Industries, Inc.
b. American Safety Tread Co., Inc.
c. Amstep Products.
d. Balco, Inc.

B. Nosing Insert: Provide Integral Stair Nosing System with Photoluminescent stair nosing requirements.

a) Products with self-illuminating guidance strip for direct installation or with integral nonconductive base isolator extrusion specifically designed to self-attached and position on edge of steel stair pan to assist with proper installation during placement of concrete for pan tread stairs. Tape, ply-wood or other non-integral temporary protections shall not be allowed.
b) Adhesives, fasteners, and any incidental materials required for a complete installation, as recommended by the stair nosing manufacturer.

C. Provide anchors for embedding units in concrete, either integral or applied to units, as standard with manufacturer.

D. Apply bituminous paint to concealed surfaces of cast-metal units set into concrete.

E. Apply clear lacquer to concealed surfaces of extruded units set into concrete.

2.5 FASTENERS

A. General: Provide zinc-plated fasteners with coating complying with ASTM B 633 or ASTM F 1941 (ASTM F 1941M), Class Fe/Zn 12 for exterior use, and Class Fe/Zn 5 where built into exterior walls. Select fasteners for type, grade, and class required.

B. Bolts and Nuts: Regular hexagon-head bolts, ASTM A 307, Grade A (ASTM F 568M, Property Class 4.6); with hex nuts, ASTM A 563 (ASTM A 563M); and, where indicated, flat washers.

C. Anchor Bolts: ASTM F 1554, Grade 36, of dimensions indicated; with nuts, ASTM A 563 (ASTM A 563M); and, where indicated, flat washers.

1. Provide mechanically deposited or hot-dip, zinc-coated anchor bolts for stairs indicated to be shop primed with zinc-rich primer.

D. Post-Installed Anchors: Torque-controlled expansion anchors or chemical anchors capable of sustaining, without failure, a load equal to six times the load imposed when installed in unit masonry and four times the load imposed when installed in concrete, as determined by testing according to ASTM E 488/E 488M, conducted by a qualified independent testing agency.

1. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B 633 or ASTM F 1941 (ASTM F 1941M), Class Fe/Zn 5, unless otherwise indicated.

2.6 MISCELLANEOUS MATERIALS

A. Shop Primers: Provide primers that comply with Section 099600 "High-Performance Coatings."

B. Shop Primer for Galvanized Steel: Primer formulated for exterior use over zinc-coated metal and compatible with finish paint systems indicated.

C. Galvanizing Repair Paint: High-zinc-dust-content paint complying with SSPC-Paint 20 and compatible with paints specified to be used over it.

D. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187/D 1187M.

E. Concrete Materials and Properties: Comply with requirements in Section 033000 "Cast-in-Place Concrete" for normal-weight, air-entrained, ready-mix concrete with a minimum 28-day compressive strength of 3000 psi (20 MPa) unless otherwise indicated.

F. Nonslip-Aggregate Concrete Finish: Factory-packaged abrasive aggregate made from fused, aluminum-oxide grits or crushed emery; rustproof and nonglazing; unaffected by freezing, moisture, or cleaning materials.

G. Welded Wire Reinforcement: ASTM A 185/A 185M, 6 by 6 inches (152 by 152 mm), W1.4 by W1.4, unless otherwise indicated.

2.7 PRECAST CONCRETE TREADS

A. Concrete Materials and Properties: Comply with requirements in Section 033000 "Cast-in-Place Concrete" for normal-weight, ready-mixed concrete with a minimum 28-day compressive strength of 5000 psi (35 MPa) and a total air content of not less than 4 percent or more than 6 percent.

B. Reinforcement: Galvanized, welded wire reinforcement, 2 by 2 inches (50 by 50 mm) by 0.062-inch- (1.6-mm-) diameter wire; comply with ASTM A 185/A 185M and ASTM A 82/A 82M, except for minimum wire size.

2.8 METAL BAR-GRATING TREADS

Metal Bar-Grating Stairs: Form treads to configurations shown from metal bar grating; fabricate to comply with NAAMM MBG 531, "Metal Bar Grating Manual."

1. Fabricate treads from welded or pressure-locked steel grating with 1-1/4-by-3/16-inch (32-by-5-mm) bearing bars at 15/16 inch (24 mm) o.c. and crossbars at 4 inches (100 mm) o.c.
2. Fabricate treads from welded or pressure-locked steel grating with openings in gratings no more than 5/16 inch (8 mm) in least dimension.
3. Surface: Plain.
4. Finish: Shop primed.
5. Fabricate grating treads with rolled-steel floor plate nosing and with steel angle or steel plate carrier at each end for stringer connections. Secure treads to stringers with bolts.

2.9 FABRICATION, GENERAL

A. Provide complete stair assemblies, including metal framing, hangers, struts, clips, brackets, bearing plates, and other components necessary to support and anchor stairs and platforms on supporting structure.

1. Join components by welding unless otherwise indicated.
2. Use connections that maintain structural value of joined pieces.

B. Preassembled Stairs: Assemble stairs in shop to greatest extent possible. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.

C. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch (1 mm) unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.

D. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.

E. Form exposed work with accurate angles and surfaces and straight edges.

F. Weld connections to comply with the following:

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
2. Obtain fusion without undercut or overlap.
3. Remove welding flux immediately.
4. Weld exposed corners and seams continuously unless otherwise indicated.
5. At exposed connections, finish exposed welds to comply with NOMMA's "Voluntary Joint Finish Standards" for Type 3 welds: partially dressed weld with spatter removed.

G. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners where possible. Where exposed fasteners are required, use Phillips flat-head (countersunk) screws or bolts unless otherwise indicated. Locate joints where least conspicuous.

2.10 STAIR RAILINGS

A. Comply with applicable requirements in Section 055213 "Pipe and Tube Railings."

1. Rails may be bent at corners, rail returns, and wall returns, instead of using prefabricated fittings.
2. Connect posts to stair framing by direct welding unless otherwise indicated.

B. Steel Tube Railings: Fabricate railings to comply with requirements indicated for design, dimensions, details, finish, and member sizes, including wall thickness of tube, post spacings, and anchorage, but not less than that needed to withstand indicated loads.

1. Rails and Posts: 1-1/2-inch- (38-mm-) square top and bottom rails and 1-1/2-inch- (38-mm-) square posts.
2. Picket Infill: 1/2-inch- (13-mm-) round pickets spaced less than 4 inches (100 mm) clear.

C. Welded Connections: Fabricate railings with welded connections. Cope components at connections to provide close fit, or use fittings designed for this purpose. Weld all around at connections, including at fittings.

1. Finish welds to comply with NOMMA's "Voluntary Joint Finish Standards" for Type 2 welds: completely sanded joint, some undercutting and pinholes are okay as shown in NAAMM AMP 521.

D. Form changes in direction of railings as follows:

1. As detailed.

E. For changes in direction made by bending, use jigs to produce uniform curvature for each repetitive configuration required. Maintain cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of components.

F. Close exposed ends of railing members with prefabricated end fittings.

G. Provide wall returns at ends of wall-mounted handrails unless otherwise indicated. Close ends of returns unless clearance between end of rail and wall is 1/4 inch (6 mm) or less.

H. Connect posts to stair framing by direct welding unless otherwise indicated.

I. Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, end closures, flanges, miscellaneous fittings, and anchors for interconnecting components and for attaching to other work. Furnish inserts and other anchorage devices for connecting to concrete or masonry work.

1. For nongalvanized railings, provide nongalvanized ferrous-metal fittings, brackets, fasteners, and sleeves, except galvanize anchors embedded in exterior masonry and concrete construction.
2. Provide type of bracket with flange tapped for concealed anchorage to threaded hanger bolt and that provides 1-1/2-inch (38-mm) clearance from inside face of handrail to finished wall surface.

2.11 STEEL-FRAMED STAIRS

A. NAAMM Stair Standard: Comply with "Recommended Voluntary Minimum Standards for Fixed Metal Stairs" in NAAMM AMP 510, "Metal Stairs Manual," Commercial Class, unless more stringent requirements are indicated.

B. Stair Framing:

1. Fabricate stringers of steel plates or channels.

    a. Provide closures for exposed ends of channel stringers.

2. Construct platforms of steel plate or channel headers and miscellaneous framing members as needed to comply with performance requirements.
3. Weld stringers to headers; weld framing members to stringers and headers.
4. Where masonry walls support metal stairs, provide temporary supporting struts designed for erecting steel stair components before installing masonry.

C. Metal Pan Stairs: Form risers, subtread pans, and subplatforms to configurations shown from steel sheet of thickness needed to comply with performance requirements, but not less than 0.067 inch (1.7 mm).
1. Steel Sheet: Galvanized-steel sheet.
2. Directly weld metal pans to stringers; locate welds on top of subtreads where they are concealed by concrete fill. Do not weld risers to stringers.
3. Attach risers and subtreads to stringers with brackets made of steel angles or bars. Weld brackets to stringers and attach metal pans to brackets by welding, riveting, or bolting.
4. Shape metal pans to include nosing integral with riser.
5. Attach abrasive nosings to risers.
6. At Contractor's option, provide stair assemblies with metal pan subtreads filled with reinforced concrete during fabrication.
7. Provide epoxy-resin-filled treads, reinforced with glass fibers, with slip-resistant, abrasive surface.
8. Provide subplatforms of configuration indicated or, if not indicated, the same as subtreads. Weld subplatforms to platform framing.

    a. Smooth Soffit Construction: Construct subplatforms with flat metal under surfaces to produce smooth soffits.

D. Abrasive-Coating-Finished, Formed-Metal Stairs: Form risers, treads, and platforms to configurations shown from steel sheet of thickness needed to comply with performance requirements, but not less than 0.097 inch (2.5 mm).

1. Steel Sheet: Uncoated hot-rolled steel sheet unless otherwise indicated.
2. Directly weld risers and treads to stringers; locate welds on underside of stairs.
3. Provide platforms of configuration indicated or, if not indicated, the same as treads. Weld platforms to platform framing.

4. Finish tread and platform surfaces with manufacturer's standard epoxy-bonded abrasive finish.

2.12 FINISHES

A. Finish metal stairs after assembly.

B. Preparation for Shop Priming: Prepare uncoated ferrous metal surfaces to comply with SSPC SP6/NACE No. 3, “Commercial Blast Cleaning.”

C. Apply shop primer to uncoated surfaces of metal stair components, except those with galvanized finishes and those to be embedded in concrete or masonry unless otherwise indicated. Comply with SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.

PART 3 - EXECUTION

3.1 INSTALLING METAL PAN STAIRS

A. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing metal stairs to in-place construction. Include threaded fasteners for concrete and masonry inserts, through-bolts, lag bolts, and other connectors.

B. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal stairs. Set units accurately in location, alignment, and elevation, measured from established lines and levels and free of rack.

C. Install metal stairs by welding stair framing to steel structure or to weld plates cast into concrete unless otherwise indicated.

D. Provide temporary bracing or anchors in formwork for items that are to be built into concrete, masonry, or similar construction.

E. Fit exposed connections accurately together to form hairline joints. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations. Do not weld, cut, or abrade surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.

F. Field Welding: Comply with requirements for welding in "Fabrication, General" Article.

G. Place and finish concrete fill for treads and platforms to comply with Section 033000 "Cast-in-Place Concrete."

1. Install abrasive nosings with anchors fully embedded in concrete. Center nosings on tread width.

3.2 ADJUSTING AND CLEANING

A. Touchup Painting: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint are specified in Section 099600 "High-Performance Coatings."

B. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A 780/A 780M.

END OF SECTION 05 51 13

SECTION 05 52 13 - PIPE AND TUBE RAILINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Steel pipe and tube railings.

B. Related Requirements:

1. Section 05 "Metal Pan Stairs" for steel tube railings associated with metal pan stairs.
2. Section 05 "Metal Grating Stairs" for steel tube railings associated with metal grating stairs.
3. Division 06 Section "Miscellaneous Rough Carpentry" for wood blocking for anchoring railings.
4. Division 07 section “Security Joint Sealants” for requirements for and locations to receive security joint sealants
5. Division 09 Section “High Performance Coatings” for shop finishing of steel tube railings.
6. Division 11 Section “Tamper-Proof Metal Fasteners” for requirements for and locations to receive security fasteners

1.3 SUSTAINABLE DESIGN REQUIREMENTS

A. Applicable Leed Credits

1. MRc2
2. MRc4
3. MRc5
4. IEQc4.2

B. LEED Requirements

1. MRc2: CONSTRUCTION WASTE MANAGEMENT

No less than the specified portion of all construction waste from the Project shall be diverted from disposal in a landfill and/or incineration in with the Project Requirements for Construction Waste Management and Disposal. Refer to Specification Sections 017419 Construction Waste Management and Disposal and 013510 Sustainable Design Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

2. MRc4: RECYCLED CONTENT MATERIAL

   No less than the specified minimum proportion of the building materials shall contain post-consumer and pre-consumer waste materials in accordance with the Project Requirements for Recycled Content Materials. All materials counted towards the computations of the proportion of the Recycled Content Materials shall comply with the standard minimum percentages of post-consumer waste materials and for the minimum percentages of pre-consumer waste materials. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures

3. MRc5: REGIONALLY MANUFACTURED HARVESTED MATERIALS

   No less than the specified minimum proportion of the building materials shall be extracted, processed, and manufactured within 500 miles of the Project Site in accordance with the Project Requirements for Regionally Manufactured and/or Harvested Materials. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

4. IEQc4.2: LOW-EMITTING MATERIALS – PAINTS AND COATINGS

   All paints and coatings in the building interior shall comply with the Project Requirements for Low Emitting Materials – Paints and Coatings. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

1.4 COORDINATION

A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.

B. Coordinate installation of anchorages for railings. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

C. Schedule installation so wall attachments are made only to completed walls. Do not support railings temporarily by any means that do not satisfy structural performance requirements.

1.5 ACTION SUBMITTALS

A. Product Data: For the following:

1. Manufacturer's product lines of mechanically connected railings.
2. Railing brackets.
3. Grout, anchoring cement, and paint products.

B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.

C. Samples: For each type of exposed finish required.

1. Sections of each distinctly different linear railing member, including handrails, top rails, posts, and balusters.
2. Fittings and brackets.
3. Assembled Sample of railing system, made from full-size components, including top rail, post, handrail, and infill. Sample need not be full height.

a. Show method of connecting and finishing members at intersections.

D. Delegated-Design Submittal: For railings, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For testing agency.

B. Welding certificates.

C. Mill Certificates: Signed by manufacturers of stainless-steel products certifying that products furnished comply with requirements.

D. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers certifying that shop primers are compatible with topcoats.

E. Product Test Reports: For pipe and tube railings, for tests performed by a qualified testing agency, according to ASTM E 894 and ASTM E 935.

1.7 QUALITY ASSURANCE

A. Welding Qualifications: Qualify procedures and personnel according to the following:

1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."

1.8 DELIVERY, STORAGE, AND HANDLING

A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

1.9 FIELD CONDITIONS

A. Field Measurements: Verify actual locations of walls and other construction contiguous with metal fabrications by field measurements before fabrication.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations: Obtain each type of railing from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design railings, including attachment to building construction.

B. Structural Performance: Railings, including attachment to building construction, shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:

1. Handrails and Top Rails of Guards:

a. Uniform load of 50 lbf/ ft. (0.73 kN/m) applied in any direction.
b. Concentrated load of 200 lbf (0.89 kN) applied in any direction.
c. Uniform and concentrated loads need not be assumed to act concurrently.

2. Infill of Guards:

a. Concentrated load of 50 lbf (0.22 kN) applied horizontally on an area of 1 sq. ft. (0.093 sq. m).
b. Infill load and other loads need not be assumed to act concurrently.

C. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.

1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C, material surfaces).

2.3 METALS, GENERAL

A. Metal Surfaces, General: Provide materials with smooth surfaces, without seam marks, roller marks, rolled trade names, stains, discolorations, or blemishes.

B. Brackets, Flanges, and Anchors: Cast or formed metal of same type of material and finish as supported rails unless otherwise indicated.

1. Provide type of bracket with flange tapped for concealed anchorage to threaded hanger bolt and that provides 1-1/2-inch (38-mm) clearance from inside face of handrail to finished wall surface.

2.4 STEEL AND IRON

A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.

B. Tubing: ASTM A 500 (cold formed) or ASTM A 513.

C. Pipe: ASTM A 53/A 53M, Type F or Type S, Grade A, Standard Weight (Schedule 40), unless another grade and weight are required by structural loads.

1. Provide galvanized finish for exterior installations and where indicated.

D. Plates, Shapes, and Bars: ASTM A 36/A 36M.

E. Cast Iron: Either gray iron, ASTM A 48/A 48M, or malleable iron, ASTM A 47/A 47M, unless otherwise indicated.

2.5 FASTENERS

A. General: Provide the following:

1. Hot-Dip Galvanized Railings: Type 304 stainless-steel or hot-dip zinc-coated steel fasteners complying with ASTM A 153/A 153M or ASTM F 2329 for zinc coating.

B. Fasteners for Anchoring Railings to Other Construction: Select fasteners of type, grade, and class required to produce connections suitable for anchoring railings to other types of construction indicated and capable of withstanding design loads.

C. Fasteners for Interconnecting Railing Components:

1. Provide concealed fasteners for interconnecting railing components and for attaching them to other work, unless otherwise indicated.
2. Provide tamper-resistant flat-head machine screws for exposed fasteners unless otherwise indicated.

D. Post-Installed Anchors: Torque-controlled expansion anchors or chemical anchors capable of sustaining, without failure, a load equal to 6 times the load imposed when installed in unit masonry and 4 times the load imposed when installed in concrete, as determined by testing according to ASTM E 488/E 488M, conducted by a qualified independent testing agency.

1. Material for Interior Locations: Carbon-steel components zinc-plated to comply with ASTM B 633 or ASTM F 1941 (ASTM F 1941M), Class Fe/Zn 5, unless otherwise indicated.

2.6 MISCELLANEOUS MATERIALS

A. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.

1. For railings, provide type and alloy as recommended by producer of metal to be welded and as required for color match, strength, and compatibility in fabricated items.

B. Etching Cleaner for Galvanized Metal: Complying with MPI#25.

C. Galvanizing Repair Paint: High-zinc-dust-content paint complying with SSPC-Paint 20 and compatible with paints specified to be used over it.

D. Shop Primers: Provide primers that comply with Section 099600 "High-Performance Coatings."

E. Intermediate Coats and Topcoats: Provide products that comply with Section 099600 "High-Performance Coatings."

F. Epoxy Intermediate Coat: Complying with MPI #77 and compatible with primer and topcoat.

G. Polyurethane Topcoat: Complying with MPI #72 and compatible with undercoat.

H. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187/D 1187M.

I. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C 1107/C 1107M. Provide grout specifically recommended by manufacturer for interior and exterior applications.

J. Anchoring Cement: Factory-packaged, nonshrink, nonstaining, hydraulic-controlled expansion cement formulation for mixing with water at Project site to create pourable anchoring, patching, and grouting compound.

1. Water-Resistant Product: At exterior locations provide formulation that is resistant to erosion from water exposure without needing protection by a sealer or waterproof coating and that is recommended by manufacturer for exterior use.

2.7 FABRICATION

A. General: Fabricate railings to comply with requirements indicated for design, dimensions, member sizes and spacing, details, finish, and anchorage, but not less than that required to support structural loads.

B. Shop assemble railings to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation. Use connections that maintain structural value of joined pieces.

C. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch (1 mm) unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.

D. Form work true to line and level with accurate angles and surfaces.

E. Fabricate connections that are exposed to weather in a manner that excludes water. Provide weep holes where water may accumulate.

F. Cut, reinforce, drill, and tap as indicated to receive finish hardware, screws, and similar items.

G. Connections: Fabricate railings with welded connections unless otherwise indicated.

H. Welded Connections: Cope components at connections to provide close fit, or use fittings designed for this purpose. Weld all around at connections, including at fittings.

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
2. Obtain fusion without undercut or overlap.
3. Remove flux immediately.
4. At exposed connections, finish exposed surfaces smooth and blended so no roughness shows after finishing and welded surface matches contours of adjoining surfaces.

I. Form Changes in Direction as Follows:

1. As detailed.

J. For changes in direction made by bending, use jigs to produce uniform curvature for each repetitive configuration required. Maintain cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of components.

K. Close exposed ends of railing members with prefabricated end fittings.

L. Provide wall returns at ends of wall-mounted handrails unless otherwise indicated. Close ends of returns unless clearance between end of rail and wall is 1/4 inch (6 mm) or less.

M. Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, flanges, miscellaneous fittings, and anchors to interconnect railing members to other work unless otherwise indicated.

1. At brackets and fittings fastened to gypsum board partitions, provide crush-resistant fillers or other means to transfer loads through wall finishes to structural supports and prevent bracket or fitting rotation and crushing of substrate.

N. Provide inserts and other anchorage devices for connecting railings to concrete or masonry work. Fabricate anchorage devices capable of withstanding loads imposed by railings. Coordinate anchorage devices with supporting structure.

O. For railing posts set in concrete, provide steel sleeves not less than 6 inches (150 mm) long with inside dimensions not less than 1/2 inch (13 mm) greater than outside dimensions of post, with metal plate forming bottom closure.

P. For removable railing posts, fabricate slip-fit sockets from steel tube or pipe whose ID is sized for a close fit with posts; limit movement of post without lateral load, measured at top, to not more than one-fortieth of post height. Provide socket covers designed and fabricated to resist being dislodged.

1. Provide chain with eye, snap hook, and staple across gaps formed by removable railing sections at locations indicated. Fabricate from same metal as railings.

Q. Toe Boards: Provide toe boards at railings around openings and at edge of open-sided floors and platforms.

2.8 STEEL AND IRON FINISHES

A. Galvanized Railings:
   1. Comply with ASTM A 123/A 123M for hot-dip galvanized railings.
   2. Comply with ASTM A 153/A 153M for hot-dip galvanized hardware.
   3. Do not quench or apply post galvanizing treatments that might interfere with paint adhesion.
   4. Fill vent and drain holes that are exposed in the finished Work, unless indicated to remain as weep holes, by plugging with zinc solder and filing off smooth.

B. For galvanized railings, provide hot-dip galvanized fittings, brackets, fasteners, sleeves, and other ferrous components.

C. Preparing Galvanized Railings for Shop Priming: After galvanizing, thoroughly clean railings of grease, dirt, oil, flux, and other foreign matter, and treat with etching cleaner.

D. Primer Application: Apply shop primer to prepared surfaces of railings unless otherwise indicated. Comply with requirements in SSPC-PA 1, "Shop, Field, and Maintenance Painting of Steel," for shop painting. Primer need not be applied to surfaces to be embedded in concrete or masonry.

   1. Shop prime uncoated railings with unless primers specified in Section 099600 "High-Performance Coatings" are indicated.

E. Shop-Painted Finish: Comply with Section 099600 "High-Performance Coatings."

   1. Color: Match Architect's sample.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine assemblies, where reinforced to receive anchors, to verify that locations of concealed reinforcements are clearly marked for Installer. Locate reinforcements and mark locations if not already done.

3.2 INSTALLATION, GENERAL

A. Fit exposed connections together to form tight, hairline joints.

B. Perform cutting, drilling, and fitting required for installing railings. Set railings accurately in location, alignment, and elevation; measured from established lines and levels and free of rack.

   1. Do not weld, cut, or abrade surfaces of railing components that are coated or finished after fabrication and that are intended for field connection by mechanical or other means without further cutting or fitting.
   2. Set posts plumb within a tolerance of 1/16 inch in 3 feet (2 mm in 1 m).
   3. Align rails so variations from level for horizontal members and variations from parallel with rake of steps and ramps for sloping members do not exceed 1/4 inch in 12 feet (6 mm in 3.5 m).

C. Control of Corrosion: Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.

1. Coat, with a heavy coat of bituminous paint, concealed surfaces of aluminum that are in contact with grout, concrete, masonry, wood, or dissimilar metals.

D. Adjust railings before anchoring to ensure matching alignment at abutting joints.

E. Fastening to In-Place Construction: Use anchorage devices and fasteners where necessary for securing railings and for properly transferring loads to in-place construction.

3.3 RAILING CONNECTIONS

A. Welded Connections: Use fully welded joints for permanently connecting railing components. Comply with requirements for welded connections in "Fabrication" Article whether welding is performed in the shop or in the field.

B. Expansion Joints: Install expansion joints at locations indicated but not farther apart than required to accommodate thermal movement. Provide slip-joint internal sleeve extending 2 inches (50 mm) beyond joint on either side, fasten internal sleeve securely to one side, and locate joint within 6 inches (150 mm) of post.

3.4 ANCHORING POSTS

A. Use metal sleeves preset and anchored into concrete for installing posts. After posts are inserted into sleeves, fill annular space between post and sleeve with nonshrink, nonmetallic grout, mixed and placed to comply with anchoring material manufacturer's written instructions.

B. Leave anchorage joint exposed with 1/8-inch (3-mm) buildup, sloped away from post.

C. Anchor posts to metal surfaces with oval flanges, angle type, or floor type as required by conditions, connected to posts and to metal supporting members as follows:
1. For steel pipe railings, weld flanges to post and bolt to metal supporting surfaces.

D. Install removable railing sections, where indicated, in slip-fit metal sockets cast in concrete.

3.5 ATTACHING RAILINGS

A. Anchor railing ends at walls with round flanges anchored to wall construction and welded to railing ends.

B. Attach railings to wall with wall brackets. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads.

C. Secure wall brackets and railing end flanges to building construction as follows:

1. For concrete and solid masonry anchorage, use drilled-in expansion shields and hanger or lag bolts.
2. For hollow masonry anchorage, use toggle bolts.

3.6 ADJUSTING AND CLEANING

A. Clean by washing thoroughly with clean water and soap and rinsing with clean water.

B. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with the same material as used for shop painting to comply with SSPC-PA 1 requirements for touching up shop-painted surfaces.

1. Apply by brush or spray to provide a minimum 2.0-mil (0.05-mm) dry film thickness.

C. Touchup Painting: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint are specified in Section 099113 "Exterior Painting," Section 099123 "Interior Painting," and Section 099600 "High-Performance Coatings."

D. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas, and repair galvanizing to comply with ASTM A 780/A 780M.

3.7 PROTECTION

A. Protect finishes of railings from damage during construction period with temporary protective coverings approved by railing manufacturer. Remove protective coverings at time of Substantial Completion.

END OF SECTION 05 52 13

SECTION 06 10 53 - MISCELLANEOUS ROUGH CARPENTRY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Rooftop equipment bases and support curbs.
2. Wood blocking, cants, and nailers.
3. Wood furring.
4. Plywood backing panels.

B. Related Requirements:

1. Section 061600 "Sheathing" for sheathing.

1.3 DEFINITIONS

A. Boards or Strips: Lumber of less than 2 inches nominal (38 mm actual) size in least dimension.

B. Dimension Lumber: Lumber of 2 inches nominal (38 mm actual) or greater size but less than 5 inches nominal (114 mm actual) size in least dimension.

C. Lumber grading agencies, and the abbreviations used to reference them, include the following:

1. NeLMA: Northeastern Lumber Manufacturers' Association.
2. NHLA: National Hardwood Lumber Association.
3. NLGA: National Lumber Grades Authority.
4. SPIB: The Southern Pine Inspection Bureau.
5. WCLIB: West Coast Lumber Inspection Bureau.
6. WWPA: Western Wood Products Association.

1.4 SUSTAINABLE DESIGN REQUIREMENTS

A. Applicable LEED Credits

1. MRc2
2. MRc4
3. MRc5
4. MRc7
5. IEQc4.2

6. IEQc4.4

B. LEED Requirements

1. MRc2: CONSTRUCTION WASTE MANAGEMENT

   No less than the specified portion of all construction waste from the Project shall be diverted from disposal in a landfill and/or incineration in with the Project Requirements for Construction Waste Management and Disposal. Refer to Specification Sections 017419 Construction Waste Management and Disposal and 013510 Sustainable Design Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

2. MRc4: Recycled Content Material

   No less than the specified minimum proportion of the building materials shall contain post-consumer and pre-consumer waste materials in accordance with the Project Requirements for Recycled Content Materials. All materials counted towards the computations of the proportion of the Recycled Content Materials shall comply with the standard minimum percentages of post-consumer waste materials and for the minimum percentages of pre-consumer waste materials. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

3. MRc5: REGIONALLY MANUFACTURED HARVESTED MATERIALS

   No less than the specified minimum proportion of the building materials shall be extracted, processed, and manufactured within 500 miles of the Project Site in accordance with the Project Requirements for Regionally Manufactured and/or Harvested Materials. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

4. MRc7: CERTIFIED WOOD

   No less than the specified proportion of the building (permanently installed wood-based materials and products and all wood-based materials and products in construction) shall be certified by the Forest Stewardship Council (FSC) in accordance with the Project Requirements. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

5. IEQc4.2: LOW-EMITTING MATERIALS – PAINTS AND COATINGS

   All paints and coatings in the building interior shall comply with the Project Requirements for Low Emitting Materials – Paints and Coatings. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

6. IEQc4.4: LOW EMITTING MATERIALS – COMPOSITE WOOD AND AGRIFIBER PRODUCTS

All composite wood and agrifiber products installed in the building interior and all laminating adhesives used to fabricate on-site and/or off-site shall comply with the Project Requirements for Low-Emitting Materials – Composite Wood and Agrifiber Products. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of process and factory-fabricated product. Indicate component materials and dimensions and include construction and application details.

1. Include data for wood-preservative treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements. Indicate type of preservative used and net amount of preservative retained.
2. Include data for fire-retardant treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements. Include physical properties of treated materials based on testing by a qualified independent testing agency.
3. For fire-retardant treatments, include physical properties of treated lumber both before and after exposure to elevated temperatures, based on testing by a qualified independent testing agency according to ASTM D 5664.
4. For products receiving a waterborne treatment, include statement that moisture content of treated materials was reduced to levels specified before shipment to Project site.

1.6 INFORMATIONAL SUBMITTALS

A. Evaluation Reports: For the following, from ICC-ES:

1. Preservative-treated wood.
2. Fire-retardant-treated wood.
3. Power-driven fasteners.
4. Post-installed anchors.
5. Metal framing anchors.

1.7 QUALITY ASSURANCE

A. Testing Agency Qualifications: For testing agency providing classification marking for fire-retardant-treated material, an inspection agency acceptable to authorities having jurisdiction that periodically performs inspections to verify that the material bearing the classification marking is representative of the material tested.

B. Manufacturer Qualifications: A qualified manufacturer that is certified for chain of custody by an FSC-accredited certification body.

C. Vendor Qualifications: A vendor that is certified for chain of custody by an FSC-accredited certification body.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Stack lumber flat with spacers beneath and between each bundle to provide air circulation. Protect lumber from weather by covering with waterproof sheeting, securely anchored. Provide for air circulation around stacks and under coverings.

PART 2 - PRODUCTS

2.1 WOOD PRODUCTS, GENERAL

A. Regional Materials: Dimension lumber[**, except treated materials,**] shall be manufactured within 500 miles (800 km) of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within 500 miles (800 km) of Project site.

B. Certified Wood: Lumber and plywood shall be certified as "FSC Pure" or "FSC Mixed Credit" according to FSC STD-01-00 and FSC STD-40-004.

C. Lumber: DOC PS 20 and applicable rules of grading agencies indicated. If no grading agency is indicated, provide lumber that complies with the applicable rules of any rules-writing agency certified by the ALSC Board of Review. Provide lumber graded by an agency certified by the ALSC Board of Review to inspect and grade lumber under the rules indicated.

1. Factory mark each piece of lumber with grade stamp of grading agency.

D. Maximum Moisture Content of Lumber: 19 percent 19 percent for 2-inch nominal (38-mm actual) thickness or less; no limit for more than 2-inch nominal (38-mm actual) thickness unless otherwise indicated.

2.2 WOOD-PRESERVATIVE-TREATED MATERIALS

A. Preservative Treatment by Pressure Process: AWPA U1; Use Category UC2 for interior construction not in contact with ground, Use Category UC3b for exterior construction not in contact with ground, and Use Category UC4a for items in contact with ground.

1. Preservative Chemicals: Acceptable to authorities having jurisdiction and containing no arsenic or chromium. Do not use inorganic boron (SBX) for sill plates.
2. For exposed items indicated to receive a stained or natural finish, chemical formulations shall not require incising, contain colorants, bleed through, or otherwise adversely affect finishes.

B. Kiln-dry lumber after treatment to a maximum moisture content of 19 percent. Do not use material that is warped or does not comply with requirements for untreated material.

C. Mark lumber with treatment quality mark of an inspection agency approved by the ALSC Board of Review.

D. Application: Treat items indicated on Drawings, and the following:

1. Wood cants, nailers, curbs, equipment support bases, blocking, stripping, and similar members in connection with roofing, flashing, vapor barriers, and waterproofing.
2. Wood floor plates that are installed over concrete slabs-on-grade.

2.3 FIRE-RETARDANT-TREATED MATERIALS

A. General: Where fire-retardant-treated materials are indicated, materials shall comply with requirements in this article, that are acceptable to authorities having jurisdiction, and with fire-test-response characteristics specified as determined by testing identical products per test method indicated by a qualified testing agency.

B. Fire-Retardant-Treated Lumber and Plywood by Pressure Process: Products with a flame-spread index of 25 or less when tested according to ASTM E 84, and with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than 10.5 feet (3.2 m) beyond the centerline of the burners at any time during the test.

1. Treatment shall not promote corrosion of metal fasteners.
2. Interior Type A: Treated materials shall have a moisture content of 28 percent or less when tested according to ASTM D 3201 at 92 percent relative humidity. Use where exterior type is not indicated.

C. Kiln-dry lumber after treatment to a maximum moisture content of 19 percent. Kiln-dry plywood after treatment to a maximum moisture content of 15 percent.

D. Identify fire-retardant-treated wood with appropriate classification marking of qualified testing agency.

1. For exposed lumber indicated to receive a stained or natural finish, mark end or back of each piece.

E. Application: Treat items indicated on Drawings, and the following:
1. Concealed blocking.
2. Wood cants, nailers, curbs, equipment support bases, blocking, and similar members in connection with roofing.
3. Plywood backing panels.

2.4 MISCELLANEOUS LUMBER

A. General: Provide miscellaneous lumber indicated and lumber for support or attachment of other construction, including the following:

1. Blocking.
2. Nailers.
3. Rooftop equipment bases and support curbs.
4. Cants.
5. Furring.
6. Grounds.

B. Dimension Lumber Items: Standard, Stud, or No. 3 grade lumber of any of the following species:

1. Hem-fir (north); NLGA.
2. Mixed southern pine or southern pine; SPIB.
3. Spruce-pine-fir; NLGA.
4. Hem-fir; WCLIB or WWPA.
5. Spruce-pine-fir (south); NeLMA, WCLIB, or WWPA.
6. Western woods; WCLIB or WWPA.
7. Northern species; NLGA.
8. Eastern softwoods; NeLMA.

C. For blocking not used for attachment of other construction, Utility, Stud, or No. 3 grade lumber of any species may be used provided that it is cut and selected to eliminate defects that will interfere with its attachment and purpose.

D. For blocking and nailers used for attachment of other construction, select and cut lumber to eliminate knots and other defects that will interfere with attachment of other work.

E. For furring strips for installing plywood or hardboard paneling, select boards with no knots capable of producing bent-over nails and damage to paneling.

2.5 PLYWOOD BACKING PANELS

A. Equipment Backing Panels: Plywood, DOC PS 1, Exterior, A-C, fire-retardant treated, in thickness indicated or, if not indicated, not less than 3/4-inch (19-mm) nominal thickness.

2.6 FASTENERS

A. General: Provide fasteners of size and type indicated that comply with requirements specified in this article for material and manufacture.

1. Where carpentry is exposed to weather, in ground contact, pressure-preservative treated, or in area of high relative humidity, provide fasteners with hot-dip zinc coating complying with ASTM A 153/A 153M.

B. Nails, Brads, and Staples: ASTM F 1667.

C. Screws for Fastening to Metal Framing: ASTM C 1002, length as recommended by screw manufacturer for material being fastened.

D. Power-Driven Fasteners: Fastener systems with an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC70.

2.7 MISCELLANEOUS MATERIALS

A. Adhesives for Gluing Furring to Concrete or Masonry: Formulation complying with ASTM D 3498 that is approved for use indicated by adhesive manufacturer.

1. Adhesives shall have a VOC content of 70 g/L or less.

B. Flexible Flashing: Composite, self-adhesive, flashing product consisting of a pliable, butyl rubber or rubberized-asphalt compound, bonded to a high-density polyethylene

film, aluminum foil, or spunbonded polyolefin to produce an overall thickness of not less than 0.025 inch (0.6 mm).

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

A. Framing Standard: Comply with AF&PA's WCD 1, "Details for Conventional Wood Frame Construction," unless otherwise indicated.

B. Set carpentry to required levels and lines, with members plumb, true to line, cut, and fitted. Fit carpentry accurately to other construction. Locate furring, nailers, blocking,and similar supports to comply with requirements for attaching other construction.

C. Install plywood backing panels by fastening to studs; coordinate locations with utilities requiring backing panels. Install fire-retardant-treated plywood backing panels with classification marking of testing agency exposed to view.

D. Install metal framing anchors to comply with manufacturer's written instructions. Install fasteners through each fastener hole.

E. Do not splice structural members between supports unless otherwise indicated.

F. Provide blocking and framing as indicated and as required to support facing materials, fixtures, specialty items, and trim.

1. Provide metal clips for fastening gypsum board or lath at corners and intersections where framing or blocking does not provide a surface for fastening edges of panels. Space clips not more than 16 inches (406 mm) o.c.

G. Provide fire blocking in furred spaces, stud spaces, and other concealed cavities as indicated and as follows:

1. Fire block furred spaces of walls, at each floor level, at ceiling, and at not more than 96 inches (2438 mm) o.c. with solid wood blocking or noncombustible materials accurately fitted to close furred spaces.
2. Fire block concealed spaces of wood-framed walls and partitions at each floor level, at ceiling line of top story, and at not more than 96 inches (2438 mm) o.c. Where fire blocking is not inherent in framing system used, provide closely fitted solid wood blocks of same width as framing members and 2-inch nominal (38-mm actual) thickness.
3. Fire block concealed spaces between floor sleepers with same material as sleepers to limit concealed spaces to not more than 100 sq. ft. (9.3 sq. m) and to solidly fill space below partitions.
4. Fire block concealed spaces behind combustible cornices and exterior trim at not more than 20 feet (6 m) o.c.

H. Sort and select lumber so that natural characteristics do not interfere with installation or with fastening other materials to lumber. Do not use materials with defects that interfere with function of member or pieces that are too small to use with minimum number of joints or optimum joint arrangement.

I. Comply with AWPA M4 for applying field treatment to cut surfaces of preservative-treated lumber.

1. Use inorganic boron for items that are continuously protected from liquid water.
2. Use copper naphthenate for items not continuously protected from liquid water.

J. Where wood-preservative-treated lumber is installed adjacent to metal decking, install continuous flexible flashing separator between wood and metal decking.

K. Securely attach carpentry work to substrate by anchoring and fastening as indicated, complying with the following:

1. Table 2304.9.1, "Fastening Schedule," in ICC's International Building Code.
2. Table R602.3(1), "Fastener Schedule for Structural Members," and Table R602.3(2), "Alternate Attachments," in ICC's International Residential Code for One- and Two-Family Dwellings.
3. ICC-ES evaluation report for fastener.

L. Use steel common nails unless otherwise indicated. Select fasteners of size that will not fully penetrate members where opposite side will be exposed to view or will receive finish materials. Make tight connections between members. Install fasteners without splitting wood. Drive nails snug but do not countersink nail heads unless otherwise indicated.

3.2 WOOD BLOCKING AND NAILER INSTALLATION

A. Install where indicated and where required for attaching other work. Form to shapes indicated and cut as required for true line and level of attached work. Coordinate locations with other work involved.

B. Attach items to substrates to support applied loading. Recess bolts and nuts flush with surfaces unless otherwise indicated.

C. Provide permanent grounds of dressed, pressure-preservative-treated, key-beveled lumber not less than 1-1/2 inches (38 mm) wide and of thickness required to bring face of ground to exact thickness of finish material. Remove temporary grounds when no longer required.

3.3 WOOD FURRING INSTALLATION

A. Install level and plumb with closure strips at edges and openings. Shim with wood as required for tolerance of finish work.

3.4 PROTECTION

A. Protect wood that has been treated with inorganic boron (SBX) from weather. If, despite protection, inorganic boron-treated wood becomes wet, apply EPA-registered borate treatment. Apply borate solution by spraying to comply with EPA-registered label.

B. Protect miscellaneous rough carpentry from weather. If, despite protection, miscellaneous rough carpentry becomes wet, apply EPA-registered borate treatment. Apply borate solution by spraying to comply with EPA-registered label.

END OF SECTION 06 10 53

SECTION 06 16 00 - SHEATHING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Wall sheathing.
2. Sheathing joint and penetration treatment.

B. Related Requirements:

1. Section 061053 "Miscellaneous Rough Carpentry" for plywood backing panels.
2. Section 072500 "Weather Barriers" for water-resistive barrier applied over wall sheathing.

1.3 SUSTAINABLE DESIGN REQUIREMENTS

A. Applicable LEED Credits

1. MRc2
2. MRc4
3. MRc5

B. LEED Requirements

1. MRc2: Construction Waste Management

   No less than the specified portion of all construction waste from the Project shall be diverted from disposal in a landfill and/or incineration in with the Project Requirements for Construction Waste Management and Disposal. Refer to Specification Sections 017419 Construction Waste Management and Disposal and 013510 Sustainable Design Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

2. MRc4: Recycled Content Material

   No less than the specified minimum proportion of the building materials shall contain post-consumer and pre-consumer waste materials in accordance with the Project Requirements for Recycled Content Materials. All materials counted towards the computations of the proportion of the Recycled Content Materials shall comply with the standard minimum percentages of post-consumer waste materials and for the minimum percentages of pre-consumer waste materials. Refer to Specification Section 013510 Sustainable Project Requirements.

Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

3. MRc5: REGIONALLY MANUFACTURED HARVESTED MATERIALS

No less than the specified minimum proportion of the building materials shall be extracted, processed, and manufactured within 500 miles of the Project Site in accordance with the Project Requirements for Regionally Manufactured and/or Harvested Materials. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of process and factory-fabricated product. Indicate component materials and dimensions and include construction and application details.

1. Include data for wood-preservative treatment from chemical treatment manufacturer and certification by treating plant that treated plywood complies with requirements. Indicate type of preservative used and net amount of preservative retained.
2. Include data for fire-retardant treatment from chemical treatment manufacturer and certification by treating plant that treated plywood complies with requirements. Include physical properties of treated materials.
3. For fire-retardant treatments, include physical properties of treated plywood both before and after exposure to elevated temperatures, based on testing by a qualified independent testing agency according to ASTM D 5516.
4. For products receiving waterborne treatment, include statement that moisture content of treated materials was reduced to levels specified before shipment to Project site.

1.5 QUALITY ASSURANCE

A. Testing Agency Qualifications: For testing agency providing classification marking for fire-retardant-treated material, an inspection agency acceptable to authorities having jurisdiction that periodically performs inspections to verify that the material bearing the classification marking is representative of the material tested.

B. Vendor Qualifications: A vendor that is certified for chain of custody by an FSC-accredited certification body.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Stack panels flat with spacers beneath and between each bundle to provide air circulation. Protect sheathing from weather by covering with waterproof sheeting, securely anchored. Provide for air circulation around stacks and under coverings.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Resistance Ratings: As tested according to ASTM E 119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Fire-Resistance Ratings: Indicated by design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency.

2.2 WALL SHEATHING

A. Glass-Mat Gypsum Wall Sheathing: ASTM C 1177/1177M.

1. Products: Subject to compliance with requirements, provide one of the following:

a. CertainTeed Corporation; GlasRoc.
b. G-P Gypsum Corporation; Dens-Glass Gold.
c. Temple-Inland Inc.; GreenGlass
d. United States Gypsum Co.; Securock.

2. Type and Thickness: Regular, 1/2 inch (13 mm) and Type X, 5/8 inch (15.9 mm) thick.
3. Size: 48 by 96 inches (1219 by 2438 mm) for vertical installation.

B.

2.3 FASTENERS

A. General: Provide fasteners of size and type indicated that comply with requirements specified in this article for material and manufacture.

1. For wall sheathing, provide fasteners with hot-dip zinc coating complying with ASTM A 153/A 153M.

B. Nails, Brads, and Staples: ASTM F 1667.

C. Power-Driven Fasteners: Fastener systems with an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC70.

D. Screws for Fastening Gypsum Sheathing to Cold-Formed Metal Framing: Steel drill screws, in length recommended by sheathing manufacturer for thickness of sheathing to be attached.

1. For steel framing less than 0.0329 inch (0.835 mm) thick, use screws that comply with ASTM C 1002.
2. For steel framing from 0.033 to 0.112 inch (0.84 to 2.84 mm) thick, use screws that comply with ASTM C 954.

2.4 SHEATHING JOINT-AND-PENETRATION TREATMENT MATERIALS

A. Sealant for Glass-Mat Gypsum Sheathing: Elastomeric, medium-modulus, neutral-curing silicone joint sealant compatible with joint substrates formed by gypsum sheathing and other materials, recommended by sheathing manufacturer for application indicated and complying with requirements for elastomeric sealants specified in Section 079200 "Joint Sealants."

B. Sealant for Glass-Mat Gypsum Sheathing: Silicone emulsion sealant complying with ASTM C 834, compatible with sheathing tape and sheathing and recommended by tape and sheathing manufacturers for use with glass-fiber sheathing tape and for covering exposed fasteners.

1. Sheathing Tape: Self-adhering glass-fiber tape, minimum 2 inches (50 mm) wide, 10 by 10 or 10 by 20 threads/inch (390 by 390 or 390 by 780 threads/m), of type recommended by sheathing and tape manufacturers for use with silicone emulsion sealant in sealing joints in glass-mat gypsum sheathing and with a history of successful in-service use.

2.5 MISCELLANEOUS MATERIALS

A. Adhesives for Field Gluing Panels to Wood Framing: Formulation complying with APA AFG-01 that is approved for use with type of construction panel indicated by manufacturers of both adhesives and panels.

1. Adhesive shall have a VOC content of 70 g/L or less.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

A. Do not use materials with defects that impair quality of sheathing or pieces that are too small to use with minimum number of joints or optimum joint arrangement. Arrange joints so that pieces do not span between fewer than three support members.

B. Cut panels at penetrations, edges, and other obstructions of work; fit tightly against abutting construction unless otherwise indicated.

C. Securely attach to substrate by fastening as indicated, complying with the following:

1. Table 2304.9.1, "Fastening Schedule," in the ICC's International Building Code.

D. Use common wire nails unless otherwise indicated. Select fasteners of size that will not fully penetrate members where opposite side will be exposed to view or will receive finish materials. Make tight connections. Install fasteners without splitting wood.

E. Coordinate wall sheathing installation with flashing and joint-sealant installation so these materials are installed in sequence and manner that prevent exterior moisture from passing through completed assembly.

F. Do not bridge building expansion joints; cut and space edges of panels to match spacing of structural support elements.

G. Coordinate sheathing installation with installation of materials installed over sheathing so sheathing is not exposed to precipitation or left exposed at end of the workday when rain is forecast.

3.2 GYPSUM SHEATHING INSTALLATION

A. Comply with GA-253 and with manufacturer's written instructions.
   1. Fasten gypsum sheathing to cold-formed metal framing with screws.
   2. Install panels with a 3/8-inch (9.5-mm) gap where non-load-bearing construction abuts structural elements.
   3. Install panels with a 1/4-inch (6.4-mm) gap where they abut masonry or similar materials that might retain moisture, to prevent wicking.

B. Apply fasteners so heads bear tightly against face of sheathing, but do not cut into facing.

C. Horizontal Installation: Install sheathing with V-grooved edge down and tongue edge up. Interlock tongue with groove to bring long edges in contact with edges of adjacent panels without forcing. Abut ends over centers of studs, and stagger end joints of adjacent panels not less than one stud spacing. Attach at perimeter and within field of panel to each stud.

   1. Space fasteners approximately 8 inches (200 mm) o.c. and set back a minimum of 3/8 inch (9.5 mm) from edges and ends of panels.
   2. For sheathing under stucco cladding, panels may be initially tacked in place with screws if overlying self-furring metal lath is screw-attached through sheathing to studs immediately after sheathing is installed.

D. Vertical Installation: Install vertical edges centered over studs. Abut ends and edges with those of adjacent panels. Attach at perimeter and within field of panel to each stud.

   1. Space fasteners approximately 8 inches (200 mm) o.c. and set back a minimum of 3/8 inch (9.5 mm) from edges and ends of panels.
   2. For sheathing under stucco cladding, panels may be initially tacked in place with screws if overlying self-furring metal lath is screw-attached through sheathing to studs immediately after sheathing is installed.

E. Seal sheathing joints according to sheathing manufacturer's written instructions.

   1. Apply elastomeric sealant to joints and fasteners and trowel flat. Apply sufficient amount of sealant to completely cover joints and fasteners after troweling. Seal other penetrations and openings.
   2. Apply glass-fiber sheathing tape to glass-mat gypsum sheathing joints and apply and trowel sealant to embed entire face of tape in sealant. Apply sealant to exposed fasteners with a trowel so fasteners are completely covered. Seal other penetrations and openings.

END OF SECTION 06 16 00

SECTION 06 41 16 - PLASTIC-LAMINATE-FACED ARCHITECTURAL CABINETS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Plastic-laminate-faced architectural cabinets.
2. Wood furring, blocking, shims, and hanging strips for installing plastic-laminate-faced architectural cabinets unless concealed within other construction before cabinet installation.

B. Related Requirements:

1. Section 061053 "MiscellaneousRough Carpentry" for wood furring, blocking, shims, and hanging strips required for installing cabinets and concealed within other construction before cabinet installation.
2. Section 123661 “Simulated Stone Countertops”
3. Section 123616 “Metal Countertops”
4. Division 7 Section “Security Joint Sealants” for requirements for and locations to receive security joint sealants.
5. Division 11 Section “Tamper-Proof Metal Fasteners” for requirements for and locations to receive security fasteners.

1.3 DEFINITIONS

A. Interior architectural woodwork includes wood furring, blocking, shims, and hanging strips for installing woodwork items unless concealed within other construction before woodwork installation.

1.4 SUSTAINABLE DESIGN REQUIREMENTS

A. Applicable LEED Credits

1. MRc2
2. MRc4
3. MRc5
4. MRc7
5. IEQ4.1
6. IEQc4.2
7. IEQc4.4

B. LEED Requirements

1. MRc2: CONSTRUCTION WASTE MANAGEMENT

   No less than the specified portion of all construction waste from the Project shall be diverted from disposal in a landfill and/or incineration in with the Project Requirements for Construction Waste Management and Disposal. Refer to Specification Sections 017419 Construction Waste Management and Disposal and 013510 Sustainable Design Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

2. MRc4: Recycled Content Material

   No less than the specified minimum proportion of the building materials shall contain post-consumer and pre-consumer waste materials in accordance with the Project Requirements for Recycled Content Materials. All materials counted towards the computations of the proportion of the Recycled Content Materials shall comply with the standard minimum percentages of post-consumer waste materials and for the minimum percentages of pre-consumer waste materials. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

3. MRc5: REGIONALLY MANUFACTURED HARVESTED MATERIALS

   No less than the specified minimum proportion of the building materials shall be extracted, processed, and manufactured within 500 miles of the Project Site in accordance with the Project Requirements for Regionally Manufactured and/or Harvested Materials. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

4. MRc7: CERTIFIED WOOD

   No less than the specified proportion of the building (permanently installed wood-based materials and products and all wood-based materials and products in construction) shall be certified by the Forest Stewardship Council (FSC) in accordance with the Project Requirements. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

5. IEQc4.1: LOW-EMITTING MATERIALS – SEALANT AND ADHESIVES

   All sealants, adhesives, and sealant primers used on the interior of the building shall comply with the Project Requirements for Low Emitting Materials – Sealants and Adhesives. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

6. IEQc4.2: LOW-EMITTING MATERIALS – PAINTS AND COATINGS

   All paints and coatings in the building interior shall comply with the Project Requirements for Low Emitting Materials – Paints and Coatings. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

7. IEQc4.4: LOW EMITTING MATERIALS – COMPOSITE WOOD AND AGRIFIBER PRODUCTS

   All composite wood and agrifiber products installed in the building interior and all laminating adhesives used to fabricate on-site and/or off-site shall comply with the Project Requirements for Low-Emitting Materials – Composite Wood and Agrifiber Products. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product, including panel products, high-pressure decorative laminate, adhesive for bonding plastic laminate, and cabinet hardware and accessories.

   1. Include data for fire-retardant treatment from chemical-treatment manufacturer and certification by treating plant that treated materials comply with requirements.

B. Shop Drawings: Show location of each item, dimensioned plans and elevations, large-scale details, attachment devices, and other components.

   1. Show details full size.
   2. Show locations and sizes of furring, blocking, and hanging strips, including concealed blocking and reinforcement specified in other Sections.
   3. Show locations and sizes of cutouts and holes for electrical switches, outlets and other items installed in architectural plastic-laminate cabinets.
   4. Apply AWI Quality Certification Program label to Shop Drawings.

C. Samples for Initial Selection:
   1. PVC edging strips

D. Samples for Verification:

   1. Plastic laminates, 8 by 10 inches (200 by 250 mm), for each type, color, pattern, and surface finish, with one sample applied to core material and specified edge material applied to one edge.
   2. Corner pieces as follows:

      a. Cabinet-front frame joints between stiles and rails, as well as exposed end pieces, 18 inches (450 mm) high by 18 inches (450 mm) wide by 6 inches (150 mm) deep.
      b. Miter joints for standing trim.

   3. Exposed cabinet hardware and accessories, one unit for each type.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer and fabricator.

B. Product Certificates: For each type of product.

C. Woodwork Quality Standard Compliance Certificates: AWI Quality Certification Program certificates.

D. Evaluation Reports: For fire-retardant-treated materials, from ICC-ES.

1.7 QUALITY ASSURANCE

A. Fabricator Qualifications: Shop that employs skilled workers who custom fabricate products similar to those required for this Project and whose products have a record of successful in-service performance. Shop is a certified participant in AWI's Quality Certification Program.

B. Installer Qualifications: Certified participant in AWI's Quality Certification Program.

C. Testing Agency Qualifications: For testing agency providing classification marking for fire-retardant-treated material, an inspection agency acceptable to authorities having jurisdiction that periodically performs inspections to verify that the material bearing the classification marking is representative of the material tested.

D. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

1. Build mockups of typical plastic-laminate cabinets as shown on Drawings.
2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Do not deliver cabinets until painting and similar operations that could damage woodwork have been completed in installation areas. If cabinets must be stored in other than installation areas, store only in areas where environmental conditions comply with requirements specified in "Field Conditions" Article.

1.9 FIELD CONDITIONS

A. Environmental Limitations: Do not deliver or install cabinets until building is enclosed, wet work is complete, and HVAC system is operating and maintaining temperature and relative humidity at occupancy levels during the remainder of the construction period.

B. Field Measurements: Where cabinets are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication, and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

1. Locate concealed framing, blocking, and reinforcements that support cabinets by field measurements before being enclosed, and indicate measurements on Shop Drawings.

C. Established Dimensions: Where cabinets are indicated to fit to other construction, establish dimensions for areas where cabinets are to fit. Provide allowance for trimming at site, and coordinate construction to ensure that actual dimensions correspond to established dimensions.

1.10 COORDINATION

A. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of Work specified in other Sections to ensure that cabinets can be supported and installed as indicated.

B. Hardware Coordination: Distribute copies of approved hardware schedule specified in Section 087111 "Door Hardware (Descriptive Specification)" to fabricator of architectural woodwork; coordinate Shop Drawings and fabrication with hardware requirements.

C. Electrical Coordination: Distribute copies of approved lighting fixture schedule as indicated on drawings to fabricator of architectural woodwork; coordinate Shop Drawings and fabrication with lighting requirements.

PART 2 - PRODUCTS

2.1 PLASTIC-LAMINATE-FACED ARCHITECTURAL CABINETS

A. Quality Standard: Unless otherwise indicated, comply with the "Architectural Woodwork Standards" for grades of architectural plastic-laminate cabinets indicated for construction, finishes, installation, and other requirements.

1. Provide labels and certificates from AWI certification program indicating that woodwork, including installation, complies with requirements of grades specified.
2. The Contract Documents contain selections chosen from options in the quality standard and additional requirements beyond those of the quality standard. Comply with those selections and requirements in addition to the quality standard.

B. Grade: Custom.

C. Certified Wood: Wood products shall be certified as "FSC Pure"according to FSC STD-01-00 and FSC STD-40-004.

D. Type of Construction: Frameless.

E. Cabinet, Door, and Drawer Front Interface Style: Flush overlay.

F. High-Pressure Decorative Laminate: NEMA LD 3, grades as indicated or, if not indicated, as required by woodwork quality standard.

1. Manufacturer: Subject to compliance with requirements, provide high-pressure decorative laminates by one of the following:

a. Abet Laminati, Inc.
b. Arborite; Division of ITW Canada, Inc.
c. Formica Corporation. **Basis-of-Design**
d. Lamin-Art, Inc.
e. Nevamar Company, LLC; Decorative Products Div.
f. Wilsonart International; Div. of Premark International, Inc.

G. Laminate Cladding for Exposed Surfaces:

1. Horizontal Surfaces: Grade HGS.
2. Postformed Surfaces: Grade HGP.
3. Vertical Surfaces: Grade HGS.
4. Edges: PVC

H. Materials for Semiexposed Surfaces:

1. Surfaces Other Than Drawer Bodies: Thermoset decorative panels.

   a. Edges of Plastic-Laminate Shelves: PVC edge banding, 0.12 inch (3 mm) thick, matching laminate in color, pattern, and finish.
   b. Edges of Thermoset Decorative Panel Shelves: PVC or polyester edge banding.
   c. For semiexposed backs of panels with exposed plastic-laminate surfaces, provide surface of high-pressure decorative laminate.

2. Drawer Sides and Backs: Thermoset decorative panels with PVC or polyester edge banding.

I. Dust Panels: 1/4-inch (6.4-mm) plywood or tempered hardboard above compartments and drawers unless located directly under tops.

J. Concealed Backs of Panels with Exposed Plastic-Laminate Surfaces: High-pressure decorative laminate, NEMA LD 3, Grade BKL.

K. Drawer Construction: Fabricate with exposed fronts fastened to subfront with mounting screws from interior of body.

1. Join subfronts, backs, and sides with glued rabbeted joints supplemented by mechanical fasteners or glued dovetail joints.

L. Colors, Patterns, and Finishes: Provide materials and products that result in colors and textures of exposed laminate surfaces complying with the following requirements:
1. As indicated on drawings.

2.2 WOOD MATERIALS

A. Wood Products: Provide materials that comply with requirements of referenced quality standard for each type of woodwork and quality grade specified unless otherwise indicated.

1. Wood Moisture Content: 5 to 10 percent.

B. Composite Wood and Agrifiber Products: Provide materials that comply with requirements of referenced quality standard for each type of woodwork and quality grade specified unless otherwise indicated.

C. Composite Wood Products: Products shall be made without urea formaldehyde.

D. Wood Products: Comply with the following:

1. Hardboard: AHA A135.4.
2. Medium-Density Fiberboard: ANSI A208.2, Grade MD, made with binder containing no urea formaldehyde.

3. Particleboard: ANSI A208.1, Grade M-2-Exterior Glue.
4. Particleboard: Straw-based particleboard complying with requirements in ANSI A208.1, Grade M-2, except for density.
5. Softwood Plywood: DOC PS 1, Medium Density Overlay.
6. Veneer-Faced Panel Products (Hardwood Plywood): HPVA HP-1, made with adhesive containing no urea formaldehyde.

2.3 CABINET HARDWARE AND ACCESSORIES

A. General: Provide cabinet hardware and accessory materials associated with architectural cabinets except for items specified in Section 087111 "Door Hardware"

B. Frameless Concealed Hinges (European Type): BHMA A156.9, B01602, 135 degrees of opening, self-closing.

C. Back-Mounted Pulls: BHMA A156.9, B02011.

D. Wire Pulls: Back mounted, solid metal, 5 inches (127 mm) long, 2-1/2 inches (63.5 mm) deep, and 5/16 inch (8 mm) in diameter.

E. Catches: Magnetic catches, BHMA A156.9, B03141.

F. Shelf Rests: BHMA A156.9, B04013; metal, two-pin type with shelf hold-down clip.

G. Drawer Slides: BHMA A156.9.

1. Heavy Duty (Grade 1HD-100 and Grade 1HD-200): Side mounted; full-extension type; zinc-plated steel ball-bearing slides.
2. Box Drawer Slides: Grade 1HD-100; for drawers not more than 6 inches (150 mm) high and 24 inches (600 mm) wide.
3. File Drawer Slides: Grade 1HD-200; for drawers more than 6 inches (150 mm) high or 24 inches (600 mm) wide.

H. Door Locks: BHMA A156.11, E07121.

I. Drawer Locks: BHMA A156.11, E07041.

J. Door and Drawer Silencers: BHMA A156.16, L03011.

K. Exposed Hardware Finishes: For exposed hardware, provide finish that complies with BHMA A156.18 for BHMA finish number indicated.
1. Satin Stainless Steel: BHMA 630.

L. For concealed hardware, provide manufacturer's standard finish that complies with product class requirements in BHMA A156.9.

M. Grommets for Cable Passage through Countertops (locations inaccessible to detainees): 2-inch (51-mm) OD, black , molded-plastic grommets and matching plastic caps with slot for wire passage.

N. Secure Grommets (at student computer stations and other locations accessible to detainees): 13-7/8 inches wide by 2-13/16 inches deep, anodized aluminum, satin finish, removable lid with dust-blocking brushes at cable opening.

1. Product: Provide “Max 1/B-94” by Doug Mockett & Company, Inc. Secure lid in place with tamper-proof fasteners.

O. Legs: Mockett, TL28P-3.
1. Finish: Satin chrome

2.4 MISCELLANEOUS MATERIALS

A. Furring, Blocking, Shims, and Hanging Strips: Softwood or hardwood lumber, kiln dried to less than 15 percent moisture content.

B. Anchors: Select material, type, size, and finish required for each substrate for secure anchorage. Provide metal expansion sleeves or expansion bolts for post-installed anchors. Use nonferrous-metal or hot-dip galvanized anchors and inserts at inside face of exterior walls and at floors.

C. Adhesives: Do not use adhesives that contain urea formaldehyde.

D. Adhesive for Bonding Plastic Laminate: Unpigmented contact cement.

1. Adhesive for Bonding Edges: Hot-melt adhesive or adhesive specified above for faces.

2.5 FABRICATION

A. Fabricate cabinets to dimensions, profiles, and details indicated.

B. Complete fabrication, including assembly and hardware application, to maximum extent possible before shipment to Project site. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.

1. Notify Architect seven days in advance of the dates and times woodwork fabrication will be complete.
2. Trial fit assemblies at fabrication shop that cannot be shipped completely assembled. Install dowels, screws, bolted connectors, and other fastening devices that can be removed after trial fitting. Verify that various parts fit as intended and check measurements of assemblies against field measurements before disassembling for shipment.

C. Shop-cut openings to maximum extent possible to receive hardware, appliances, electrical work, and similar items. Locate openings accurately and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs.

D. Fabricate countertops to dimensions, profiles, and details indicated. Provide front and end overhang of 1 inch (25 mm) over base cabinets

PART 3 - EXECUTION

3.1 PREPARATION

A. Before installation, condition cabinets to average prevailing humidity conditions in installation areas.

B. Before installing cabinets, examine shop-fabricated work for completion and complete work as required.

3.2 INSTALLATION

A. Grade: Install cabinets to comply with same grade as item to be installed.

B. Assemble cabinets and complete fabrication at Project site to the extent that it was not completed in the shop.

C. Install cabinets level, plumb, true, and straight. Shim as required with concealed shims. Install level and plumb to a tolerance of 1/8 inch in 96 inches (3 mm in 2400 mm).

D. Scribe and cut cabinets to fit adjoining work, refinish cut surfaces, and repair damaged finish at cuts.

E. Anchor cabinets to anchors or blocking built in or directly attached to substrates. Secure with countersunk, concealed fasteners and blind nailing. Use fine finishing nails or finishing screws for exposed fastening, countersunk and filled flush with woodwork.

1. Use filler matching finish of items being installed.

F. Cabinets: Install without distortion so doors and drawers fit openings properly and are accurately aligned. Adjust hardware to center doors and drawers in openings and to provide unencumbered operation. Complete installation of hardware and accessory items as indicated.

1. Install cabinets with no more than 1/8 inch in 96-inch (3 mm in 2400-mm) sag, bow, or other variation from a straight line.
2. Fasten wall cabinets through back, near top and bottom, and at ends not more than 16 inches (400 mm) o.c.

G. Countertops:
1. Grade: Install countertops to comply with same grade as item to be installed.
2. Install countertops level, plumb, true, and straight. Shim as required with concealed shims. Install level and plumb to a tolerance of 1/8 inch in 96 inches (3 mm in 2400 mm).
3. Scribe and cut countertops to fit adjoining work, refinish cut surfaces, and repair damaged finish at cuts.
4. Anchor securely by screwing through corner blocks of base cabinets or other supports into underside of countertop.
5. Install countertops with no more than 1/8 inch in 96-inch (3 mm in 2400-mm) sag, bow, or other variation from a straight line.
6. Secure backsplashes to tops with concealed metal brackets at 16 inches (400 mm) o.c. and to walls with adhesive.

7. Seal junctures of tops, splashes, and walls with mildew-resistant silicone sealant or another permanently elastic sealing compound recommended by countertop material manufacturer.

3.3 ADJUSTING AND CLEANING

A. Repair damaged and defective cabinets and countertops, where possible, to eliminate functional and visual defects; where not possible to repair, replace woodwork. Adjust joinery for uniform appearance.

B. Clean, lubricate, and adjust hardware.

C. Clean cabinets and countertops on exposed and semiexposed surfaces.

END OF SECTION 06 41 16

SECTION 07 13 26 - SELF-ADHERING SHEET WATERPROOFING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Modified bituminous sheet waterproofing.

B. Related Requirements:

1. Division 07 Section "Joint Sealants" for joint-sealant materials and installation.
2. Division 07 Section “Thermal Insulation” for insulation installed under this Section.

1.3 SUSTAINABLE DESIGN REQUIREMENTS

A. Applicable LEED Credits

1. MRc2
2. MRc4
3. MRc5
4. IEQc4.2

B. LEED Requirements

1. MRc2: CONSTRUCTION WASTE MANAGEMENT

   No less than the specified portion of all construction waste from the Project shall be diverted from disposal in a landfill and/or incineration in with the Project Requirements for Construction Waste Management and Disposal. Refer to Specification Sections 017419 Construction Waste Management and Disposal and 013510 Sustainable Design Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

2. MRc4: Recycled Content Material

   No less than the specified minimum proportion of the building materials shall contain post-consumer and pre-consumer waste materials in accordance with the Project Requirements for Recycled Content Materials. All materials counted towards the computations of the proportion of the Recycled Content Materials shall comply with the standard minimum percentages of post-consumer waste materials and for the minimum percentages of pre-consumer waste materials. Refer to Specification Section 013510 Sustainable Project Requirements.

Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

3. MRc5: REGIONALLY MANUFACTURED HARVESTED MATERIALS

   No less than the specified minimum proportion of the building materials shall be extracted, processed, and manufactured within 500 miles of the Project Site in accordance with the Project Requirements for Regionally Manufactured and/or Harvested Materials. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

4. IEQc4.2: LOW-EMITTING MATERIALS – PAINTS AND COATINGS

   All paints and coatings in the building interior shall comply with the Project Requirements for Low Emitting Materials – Paints and Coatings. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

   1. Include construction details, material descriptions, and tested physical and performance properties of waterproofing.
   2. Include manufacturer's written instructions for evaluating, preparing, and treating substrate.

B. Shop Drawings: Show locations and extent of waterproofing and details of substrate joints and cracks, sheet flashings, penetrations, inside and outside corners, tie-ins with adjoining waterproofing, and other termination conditions.

   1. Include setting drawings showing layout, sizes, sections, profiles, and joint details of pedestal-supported concrete pavers.

C. Samples: For each exposed product and for each color and texture specified, including the following products:

   1. 8-by-8-inch (200-by-200-mm) square of waterproofing and flashing sheet.
   2. 8-by-8-inch (200-by-200-mm) square of insulation.
   3. 4-by-4-inch (100-by-100-mm) square of drainage panel.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Field quality-control reports.

C. Sample Warranties: For special warranties.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by waterproofing manufacturer.

1.7 FIELD CONDITIONS

A. Environmental Limitations: Apply waterproofing within the range of ambient and substrate temperatures recommended by waterproofing manufacturer. Do not apply waterproofing to a damp or wet substrate.

1. Do not apply waterproofing in snow, rain, fog, or mist.

B. Maintain adequate ventilation during preparation and application of waterproofing materials.

1.8 WARRANTY

A. Manufacturer's Warranty: Manufacturer's standard materials-only warranty in which manufacturer agrees to furnish replacement waterproofing material for waterproofing that does not comply with requirements or that fails to remain watertight within specified warranty period.

1. Warranty does not include failure of waterproofing due to failure of substrate prepared and treated according to requirements or formation of new joints and cracks in substrate exceeding 1/16 inch (1.6 mm) in width.
2. Warranty Period: Five years from date of Substantial Completion.

B. Installer's Special Warranty: Specified form,signed by Installer, covering Work of this Section, for warranty period of two years.

1. Warranty includes removing and reinstalling protection board, drainage panels, insulation, pedestals, and pavers on plaza decks.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

A. Source Limitations for Waterproofing System: Obtain waterproofing materials, protection course, and molded-sheet drainage panels from single source from single manufacturer.

2.2 MODIFIED BITUMINOUS SHEET WATERPROOFING

A. Modified Bituminous Sheet: Not less than 60-mil- (1.5-mm-) thick, self-adhering sheet consisting of 56 mils (1.4 mm) of rubberized asphalt laminated to a 4-mil- (0.10-mm-) thick, polyethylene film with release liner on adhesive side and formulated for application with primer or surface conditioner that complies with VOC limits of authorities having jurisdiction.

1. Products: Subject to compliance with requirements, provide one of the following:

    a. Carlisle Coatings & Waterproofing Inc.; CCW MiraDRI 860/861.
    b. CETCO Building Materials Group; Envirosheet.
    c. Henry Company; Blueskin WP 200.
    d. Meadows, W. R., Inc.; SealTight Mel-Rol.
    e. Polyguard Products; Polyguard 650.
    f. Tamko Roofing Products, Inc.; TW-60.

2. Physical Properties:

    a. Tensile Strength: 250 psi (1.7 MPa) minimum; ASTM D 412, Die C, modified.
    b. Ultimate Elongation: 300 percent minimum; ASTM D 412, Die C, modified.
    c. Low-Temperature Flexibility: Pass at minus 20 deg F (minus 29 deg C); ASTM D 1970.
    d. Crack Cycling: Unaffected after 100 cycles of 1/8-inch (3-mm) movement; ASTM C 836.
    e. Puncture Resistance: 40 lbf (180 N) minimum; ASTM E 154.
    f. Hydrostatic-Head Resistance: 150 feet (45 m) minimum; ASTM D 5385.
    g. Water Absorption: 0.15 percent weight-gain maximum after 48-hour immersion at 70 deg F (21 deg C); ASTM D 570.
    h. Vapor Permeance: 0.05 perms (2.9 ng/Pa x s x sq. m); ASTM E 96, Water Method.

2.3 AUXILIARY MATERIALS

A. General: Furnish auxiliary materials recommended by waterproofing manufacturer for intended use and compatible with sheet waterproofing.

    1. Furnish liquid-type auxiliary materials that comply with VOC limits of authorities having jurisdiction.

B. Primer: Liquid waterborne primer recommended for substrate by sheet-waterproofing material manufacturer.

C. Surface Conditioner: Liquid, waterborne surface conditioner recommended for substrate by sheet-waterproofing material manufacturer.

D. Liquid Membrane: Elastomeric, two-component liquid, cold fluid applied, of trowel grade or low viscosity.

E. Substrate Patching Membrane: Low-viscosity, two-component, modified asphalt coating.

F. Metal Termination Bars: Aluminum bars, approximately 1 by 1/8 inch (25 by 3 mm) thick, predrilled at 9-inch (229-mm) centers.

2.4 MOLDED-SHEET DRAINAGE PANELS

A. Nonwoven-Geotextile-Faced, Molded-Sheet Drainage Panel: Manufactured composite subsurface drainage panels consisting of a nonwoven, needle-punched geotextile facing with an apparent opening size not exceeding No. 70 (0.21-mm) sieve laminated

to one side with or without a polymeric film bonded to the other side of a studded, nonbiodegradable, molded-plastic-sheet drainage core, with a vertical flow rate of 9 to 15 gpm per ft. (112 to 188 L/min. per m).

B. Woven-Geotextile-Faced, Molded-Sheet Drainage Panel: Manufactured composite subsurface drainage panels consisting of a woven-geotextile facing with an apparent opening size not exceeding No. 40 (0.425-mm) sieve laminated to one side with or without a polymeric film bonded to the other side of a studded, nonbiodegradable, molded-plastic-sheet drainage core, with a horizontal flow rate not less than 2.8 gpm per ft. (35 L/min. per m).

1. Puncture strength: 105 lbs.
2. Compressive Strength: 30,000 psf.

2.5 INSULATION

A. Insulation, General: Comply with Section 072100 "Thermal Insulation."

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the waterproofing.

1. Verify that concrete has cured and aged for minimum time period recommended in writing by waterproofing manufacturer.
2. Verify that substrate is visibly dry and within the moisture limits recommended in writing by manufacturer. Test for capillary moisture by plastic sheet method according to ASTM D 4263.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SURFACE PREPARATION

A. Clean, prepare, and treat substrates according to manufacturer's written instructions. Provide clean, dust-free, and dry substrates for waterproofing application.

B. Mask off adjoining surfaces not receiving waterproofing to prevent spillage and overspray affecting other construction.

C. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.

D. Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids.

E. Prepare, fill, prime, and treat joints and cracks in substrates. Remove dust and dirt from joints and cracks according to ASTM D 4258.

1. Install sheet strips of width according to manufacturer's written instructions and center over treated construction and contraction joints and cracks exceeding a width of 1/16 inch (1.6 mm) or 1/8 inch (3 mm) for modified bituminous deck-paving waterproofing.

F. Bridge and cover isolation joints and discontinuous deck-to-wall and deck-to-deck joints with overlapping sheet strips of widths according to manufacturer's written instructions.

1. Invert and loosely lay first sheet strip over center of joint. Firmly adhere second sheet strip to first and overlap to substrate.

G. Corners: Prepare, prime, and treat inside and outside corners according to ASTM D 6135.

1. Install membrane strips centered over vertical inside corners. Install 3/4-inch (19-mm) fillets of liquid membrane on horizontal inside corners and as follows:

a. At footing-to-wall intersections, extend liquid membrane in each direction from corner or install membrane strip centered over corner.
b. At plaza-deck-to-wall intersections, extend liquid membrane or sheet strips onto deck waterproofing and to finished height of sheet flashing.

H. Prepare, treat, and seal vertical and horizontal surfaces at terminations and penetrations through waterproofing and at drains and protrusions according to ASTM D 6135.

3.3 MODIFIED BITUMINOUS SHEET-WATERPROOFING APPLICATION

A. Install modified bituminous sheets according to waterproofing manufacturer's written instructions and recommendations in ASTM D 6135.

B. Apply primer to substrates at required rate and allow it to dry. Limit priming to areas that will be covered by sheet waterproofing in same day. Reprime areas exposed for more than 24 hours.

C. Apply and firmly adhere sheets over area to receive waterproofing. Accurately align sheets and maintain uniform 2-1/2-inch- (64-mm-) minimum lap widths and end laps. Overlap and seal seams, and stagger end laps to ensure watertight installation.

1. When ambient and substrate temperatures range between 25 and 40 deg F (minus 4 and plus 5 deg C), install self-adhering, modified bituminous sheets produced for low-temperature application. Do not use low-temperature sheets if ambient or substrate temperature is higher than 60 deg F (16 deg C).

D. Two-Ply Application: Install sheets to form a membrane with lap widths not less than 50 percent of sheet widths, to provide a minimum of two thicknesses of sheet membrane over areas to receive waterproofing.

E. Horizontal Application: Apply sheets from low to high points of decks to ensure that laps shed water.

F. Apply continuous sheets over already-installed sheet strips, bridging substrate cracks, construction, and contraction joints.

G. Seal edges of sheet-waterproofing terminations with mastic.

H. Install sheet-waterproofing and auxiliary materials to tie into adjacent waterproofing.

I. Repair tears, voids, and lapped seams in waterproofing not complying with requirements. Slit and flatten fishmouths and blisters. Patch with sheet waterproofing extending 6 inches (150 mm) beyond repaired areas in all directions.

J. Immediately install protection course with butted joints over waterproofing membrane.

3.4 MOLDED-SHEET DRAINAGE-PANEL INSTALLATION

A. Place and secure molded-sheet drainage panels, with geotextile facing away from wall or deck substrate, according to manufacturer's written instructions. Use adhesives or other methods that do not penetrate waterproofing. Lap edges and ends of geotextile to maintain continuity. Protect installed molded-sheet drainage panels during subsequent construction.

1. For vertical applications, install board insulation before installing drainage panels.

3.5 INSULATION INSTALLATION

A. Install one or more layers of board insulation to achieve required thickness over waterproofed surfaces. Cut and fit to within 3/4 inch (19 mm) of projections and penetrations.

B. On vertical surfaces, set insulation units in adhesive or tape applied according to manufacturer's written instructions.

3.6 IELD QUALITY CONTROL

A. Engage a site representative qualified by waterproofing membrane manufacturer to inspect substrate conditions, surface preparation, membrane application, flashings, protection, and drainage components, and to furnish daily reports to Architect.

B. Prepare test and inspection reports.

3.7 PROTECTION, REPAIR, AND CLEANING

A. Do not permit foot or vehicular traffic on unprotected membrane.

B. Protect waterproofing from damage and wear during remainder of construction period.

C. Correct deficiencies in or remove waterproofing that does not comply with requirements; repair substrates, reapply waterproofing, and repair sheet flashings.

D. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION 07 13 26

SECTION 07 14 16 - COLD FLUID-APPLIED WATERPROOFING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Polyurethane waterproofing.

B. Related Requirements:

1. Section 079200 "Joint Sealants" for joint-sealant materials and installation.

1.3 SUSTAINABLE DESIGN REQUIREMENTS

A. Applicable LEED Credits

1. MRc2
2. MRc4
3. MRc5
4. IEQc4.2

B. LEED Requirements

1. MRc2: CONSTRUCTION WASTE MANAGEMENT

   No less than the specified portion of all construction waste from the Project shall be diverted from disposal in a landfill and/or incineration in with the Project Requirements for Construction Waste Management and Disposal. Refer to Specification Sections 017419 Construction Waste Management and Disposal and 013510 Sustainable Design Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

2. MRc4: Recycled Content Material

   No less than the specified minimum proportion of the building materials shall contain post-consumer and pre-consumer waste materials in accordance with the Project Requirements for Recycled Content Materials. All materials counted towards the computations of the proportion of the Recycled Content Materials shall comply with the standard minimum percentages of post-consumer waste materials and for the minimum percentages of pre-consumer waste materials. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

3. MRc5: REGIONALLY MANUFACTURED HARVESTED MATERIALS

   No less than the specified minimum proportion of the building materials shall be extracted, processed, and manufactured within 500 miles of the Project Site in accordance with the Project Requirements for Regionally Manufactured and/or Harvested Materials. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

4. IEQc4.2: LOW-EMITTING MATERIALS – PAINTS AND COATINGS

   All paints and coatings in the building interior shall comply with the Project Requirements for Low Emitting Materials – Paints and Coatings. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product indicated. Include manufacturer's written instructions for evaluating, preparing, and treating substrate, technical data, and tested physical and performance properties of waterproofing.

B. Shop Drawings: Show locations and extent of waterproofing. Include details for substrate joints and cracks, sheet flashings, penetrations, inside and outside corners, tie-ins with adjoining waterproofing, and other termination conditions.

C. Samples: For the following products:

   1. Flashing sheet, 10 by 8 inches (250 by 200 mm).
   2. Drainage panel, 4 by 4 inches (100 by 100 mm).

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Field quality-control reports.

C. Sample Warranties: For special warranties.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by waterproofing manufacturer.

1.7 FIELD CONDITIONS

A. Environmental Limitations: Apply waterproofing within the range of ambient and substrate temperatures recommended in writing by waterproofing manufacturer.

1. Do not apply waterproofing to a damp or wet substrate, when relative humidity exceeds 85 percent, or when temperatures are less than 5 deg F (3 deg C) above dew point.
2. Do not apply waterproofing in snow, rain, fog or mist, or when such weather conditions are imminent during application and curing period.

B. Maintain adequate ventilation during application and curing of waterproofing materials.

1.8 WARRANTY

A. Manufacturer's Special Warranty: Manufacturer agrees to repair or replace waterproofing that fails in materials or workmanship within specified warranty period.

1. Warranty Period: Five years from date of Substantial Completion.
2. Warranty does not include failure of waterproofing due to failure of substrate prepared and treated according to requirements or formation of new joints and cracks in substrate that exceed 1/16 inch (1.6 mm) in width.

3.

B. Installer's Special Warranty: Specified form,signed by Installer, covering Work of this Section, for warranty period of two years.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

A. Source Limitations for Waterproofing System: Obtain waterproofing materials from single source from single manufacturer.

2.2 SINGLE-COMPONENT POLYURETHANE WATERPROOFING

A. Single-Component, Modified Polyurethane Waterproofing: Comply with ASTM C 836 and with manufacturer's written physical requirements.

1. Products: Subject to compliance with requirements, provide one of the following:

a. Carlisle Coatings & Waterproofing Inc.; CCW-525.
b. CETCO; LDC 60.
c. Pacific Polymers International, Inc.; Elasto-Deck B.T. 100% Solids .
d. Tremco Incorporated; Vulkem 250 GC .

2.3 AUXILIARY MATERIALS

A. General: Provide auxiliary materials recommended in writing by waterproofing manufacturer for intended use and compatible with one another and with waterproofing.

1. Furnish liquid-type auxiliary materials that comply with VOC limits of authorities having jurisdiction.

B. Primer: Manufacturer's standard primer, sealer, or surface conditioner; factory-formulated acrylic latex, polyurethane, or epoxy.

C. Sheet Flashing: 50-mil- (1.3-mm-) minimum, nonstaining, uncured sheet neoprene.

1. Adhesive: Manufacturer's recommended contact adhesive.

D. Membrane-Reinforcing Fabric: Manufacturer's recommended fiberglass mesh or polyester fabric, manufacturer's standard weight.

E. Joint Reinforcing Strip: Manufacturer's recommended fiberglass mesh or polyester fabric.

F. Joint Sealant: Multicomponent polyurethane sealant, compatible with waterproofing; ASTM C 920, Type M, Class 25 or greater; Grade NS for sloping and vertical applications and Grade P for deck applications; Use NT exposure; and as recommended by manufacturer for substrate and joint conditions.

1. Backer Rod: Closed-cell polyethylene foam.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance.

1. Verify that concrete has cured and aged for minimum time period recommended by waterproofing manufacturer.
2. Verify that substrate is visibly dry and free of moisture. Test for capillary moisture by plastic sheet method according to ASTM D 4263.
3. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SURFACE PREPARATION

A. Clean and prepare substrate according to manufacturer's written recommendations. Provide clean, dust-free, and dry substrate for waterproofing application.

B. Mask off adjoining surfaces not receiving waterproofing to prevent spillage or overspray affecting other construction.

C. Close off deck drains and other deck penetrations to prevent spillage and migration of waterproofing fluids.

D. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, acid residues, and other penetrating contaminants or film-forming coatings from concrete.

1. Abrasive blast clean concrete surfaces uniformly to expose top surface of fine aggregate according to ASTM D 4259 with a self-contained, recirculating, blast-cleaning apparatus. Remove material to provide a sound surface free of laitance, glaze, efflorescence, curing compounds, concrete hardeners, or form-

release agents. Remove remaining loose material and clean surfaces according to ASTM D 4258.

E. Remove fins, ridges, and other projections and fill honeycomb, aggregate pockets, and other voids.

3.3 PREPARATION AT TERMINATIONS AND PENETRATIONS

A. Prepare vertical and horizontal surfaces at terminations and penetrations through waterproofing and at expansion joints, drains, and sleeves according to ASTM C 898 and ASTM C 1471 and manufacturer's written instructions.

B. Prime substrate unless otherwise instructed by waterproofing manufacturer.

C. Apply waterproofing in two separate applications, and embed a joint reinforcing strip in the first preparation coat when recommended by waterproofing manufacturer.

1. Provide sealant cants around penetrations and at inside corners of deck-to-wall butt joints when recommended by waterproofing manufacturer.

3.4 JOINT AND CRACK TREATMENT

A. Prepare, treat, rout, and fill joints and cracks in substrate according to ASTM C 898 and ASTM C 1471 and waterproofing manufacturer's written instructions. Remove dust and dirt from joints and cracks, complying with ASTM D 4258, before coating surfaces.

1. Comply with ASTM C 1193 for joint-sealant installation.
2. Apply bond breaker between sealant and preparation strip.
3. Prime substrate and apply a single thickness of preparation strip extending a minimum of 3 inches (75 mm) along each side of joint. Apply waterproofing in two separate applications and embed a joint reinforcing strip in the first preparation coat.

3.5 WATERPROOFING APPLICATION

A. Apply waterproofing according to ASTM C 898 and ASTM C 1471 and manufacturer's written instructions.

B. Start installing waterproofing in presence of manufacturer's technical representative.

C. Apply primer over prepared substrate.

D. Unreinforced Waterproofing Applications: Mix materials and apply waterproofing by spray, roller, notched squeegee, trowel, or other application method suitable to slope of substrate.

1. Apply one or more coats of waterproofing to obtain a seamless membrane free of entrapped gases, with an average dry film thickness of 60 mils (1.5 mm) and a minimum dry film thickness of 50 mils (1.3 mm) at any point .
2. Apply waterproofing to prepared wall terminations and vertical surfaces.
3. Verify wet film thickness of waterproofing every 100 sq. ft. (9.3 sq. m).

E. Install protection course with butted joints over nominally cured membrane before starting subsequent construction operations.

1. Molded-sheet drainage panels may be used in place of a separate protection course to vertical applications when approved by waterproofing manufacturer.

3.6 FIELD QUALITY CONTROL

A. Engage a full time site representative qualified by the waterproofing membrane manufacturer to inspect substrate conditions, surface preparation, and application of the membrane, flashings, protection, and drainage components; and to furnish daily reports to Architect.

B. Flood Testing: Flood test each deck area for leaks, according to recommendations in ASTM D 5957, after completing waterproofing but before overlaying construction is placed. Install temporary containment assemblies, plug or dam drains, and flood with potable water.

1. Flood to an average depth of 2-1/2 inches (64 mm) with a minimum depth of 1 inch (25 mm) and not exceeding a depth of 4 inches (100 mm). Maintain 2 inches (50 mm) of clearance from top of sheet flashings.
2. Flood each area for 48 hours.
3. After flood testing, repair leaks, repeat flood tests, and make further repairs until waterproofing installation is watertight.

C. Engage an independent testing agency to observe flood testing and examine underside of decks and terminations for evidence of leaks during flood testing.

3.7 CURING, PROTECTION, AND CLEANING

A. Cure waterproofing according to manufacturer's written recommendations, taking care to prevent contamination and damage during application stages and curing.

1. Do not permit foot or vehicular traffic on unprotected membrane.

B. Protect waterproofing from damage and wear during remainder of construction period.

C. Protect installed insulation drainage panels from damage due to ultraviolet light, harmful weather exposures, physical abuse, and other causes. Immediately after installation, provide temporary coverings where insulation will be subject to abuse and cannot be concealed and protected by permanent construction.

D. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION 07 14 16

SECTION 07 18 00 - TRAFFIC COATINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes traffic coatings and pavement markings for the following applications:

1. Outdoor recreation areas.

B. Related Requirements:

1. Division 03 Section "Cast-in-Place Concrete" for concrete substrates.

1.3 SUSTAINABLE DESIGN REQUIREMENTS

A. Applicable LEED Credits

1. MRc2
2. MRc4
3. MRc5
4. IEQc4.2

B. LEED Requirements

1. MRc2: CONSTRUCTION WASTE MANAGEMENT

   No less than the specified portion of all construction waste from the Project shall be diverted from disposal in a landfill and/or incineration in with the Project Requirements for Construction Waste Management and Disposal. Refer to Specification Sections 017419 Construction Waste Management and Disposal and 013510 Sustainable Design Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

2. MRc4: Recycled Content Material

   No less than the specified minimum proportion of the building materials shall contain post-consumer and pre-consumer waste materials in accordance with the Project Requirements for Recycled Content Materials. All materials counted towards the computations of the proportion of the Recycled Content Materials shall comply with the standard minimum percentages of post-consumer waste materials and for the minimum percentages of pre-consumer waste materials. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

3. MRc5: REGIONALLY MANUFACTURED HARVESTED MATERIALS

   No less than the specified minimum proportion of the building materials shall be extracted, processed, and manufactured within 500 miles of the Project Site in accordance with the Project Requirements for Regionally Manufactured and/or Harvested Materials. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

4. IEQc4.2: LOW-EMITTING MATERIALS – PAINTS AND COATINGS

   All paints and coatings in the building interior shall comply with the Project Requirements for Low Emitting Materials – Paints and Coatings. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product, including installation instructions.

B. Shop Drawings: For traffic coatings.

   1. Include details for treating substrate joints and cracks, flashings, deck penetrations, and other termination conditions.
   2. Include plans showing layout of pavement markings, lane separations, and defined parking spaces. Indicate, with international symbol of accessibility, spaces allocated for people with disabilities.

C. Samples for Initial Selection: For each type of exposed finish.

D. Samples for Verification: For each type of exposed finish, prepared on rigid backing.

   1. Provide stepped Samples on backing to illustrate buildup of traffic coatings.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Product Certificates: For each type of traffic coating.

C. Field quality-control reports.

D. Sample Warranty: For special warranty.

1.6 CLOSEOUT SUBMITTALS

A. Maintenance Data: For traffic coatings to include in maintenance manuals.

1.7 QUALITY ASSURANCE

A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.

B. Mockups: Build mockups to set quality standards for materials and execution.

1. Build mockup for each traffic coating and substrate to receive traffic coatings.
2. Size: 200 sq. ft. (18.5 sq. m) of each substrate to demonstrate surface preparation, joint and crack treatment, thickness, texture, color, and standard of workmanship.
3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 FIELD CONDITIONS

A. Environmental Limitations: Apply traffic coatings within the range of ambient and substrate temperatures recommended in writing by manufacturer. Do not apply traffic coatings to damp or wet substrates, when temperatures are below 40 deg F (5 deg C), when relative humidity exceeds 85 percent, or when temperatures are less than 5 deg F (3 deg C) above dew point.

1. Do not apply traffic coatings in snow, rain, fog, or mist, or when such weather conditions are imminent during the application and curing period. Apply only when frost-free conditions occur throughout the depth of substrate.

B. Do not install traffic coating until items that penetrate membrane have been installed.

C. Pavement-Marking Paint: Proceed with pavement marking only on clean, dry surfaces and at a minimum ambient or surface temperature of 40 deg F (4.4 deg C) for oil-based materials 50 deg F (10 deg C) for water-based materials, and not exceeding 95 deg F (35 deg C).

1.9 WARRANTY

A. Manufacturer's Warranty: Manufacturer agrees to repair or replace traffic coating that fails in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Adhesive or cohesive failures.
b. Abrasion or tearing failures.
c. Surface crazing or spalling.
d. Intrusion of water, oils, gasoline, grease, salt, deicer chemicals, or acids into deck substrate.

2. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

A. Material Compatibility: Provide primers; base-, intermediate-, and topcoat; and accessory materials that are compatible with one another and with substrate under conditions of service and application, as demonstrated by manufacturer based on testing and field experience.

B. Source Limitations:

1. Obtain traffic coatings from single source from single manufacturer.
2. Obtain primary traffic-coating materials, including primers, from traffic-coating manufacturer. Obtain accessory materials including aggregates, sheet flashings, joint sealants, and substrate repair materials of types and from sources recommended in writing by primary material manufacturer.
3. Obtain pavement-marking paint from single source from single manufacturer.

2.2 TRAFFIC COATING - EXTERIOR

A. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following:

1. LymTal International, Inc.; Iso-Flex 760U-HL Low Odor HVT..
2. Pacific Polymers International, Inc.; Elasto-Deck 5000 T.C..
3. Tremco Incorporated, Sealant/Waterproofing Division; Vulkem 360/NF/950NF/951NF.

B. Primer: Manufacturer's standard factory-formulated primer recommended for substrate and conditions indicated.

C. Preparatory and Base Coats: Single- or multicomponent, aromatic liquid urethane elastomer.

D. Intermediate Coat: Single- or multicomponent, aliphatic liquid urethane elastomer .

E. Topcoat: Single- or multicomponent, aliphatic liquid urethane elastomer.

1. Color: As selected by Architect from manufacturer's full range .

F. Component Coat Thicknesses: As recommended by manufacturer for substrate and service conditions indicated, but not less than the following (measured excluding aggregate):

1. Base Coat: 25 mils minimum dry film thickness.
2. Intermediate Coat: 15 mils minimum dry film thickness.
3. Topcoat: 12 mils minimum dry film thickness.

G. Aggregate: Uniformly graded, washed silicon carbide sand of particle sizes, shape, and minimum hardness recommended in writing by traffic coating manufacturer.

1. Spreading Rate: As recommended by manufacturer for substrate and service conditions indicated, but not less than the following:

a. Intermediate Coat: 8 to 10 lb/100 sq. ft. (3.6 to 4.5 kg/10 sq. m) .
b. Topcoat: 8 to 10 lb/100 sq. ft. (3.6 to 4.5 kg/10 sq. m) .

2.3 ACCESSORY MATERIALS

A. Joint Sealants: As specified in Division 07 Section "Joint Sealants."

B. Sheet Flashing: Nonstaining.

1. Minimum Thickness: 60 mils (1.5 mm) .
2. Material: Sheet material recommended in writing by traffic coating manufacturer .

C. Adhesive: Contact adhesive recommended in writing by traffic coating manufacturer.

D. Reinforcing Strip: Fiberglass mesh recommended in writing by traffic coating manufacturer.

2.4 PAVEMENT MARKINGS

A. Pavement-Marking Paint: Latex, waterborne emulsion, lead and chromate free, ready mixed, complying with FS TT-P-1952, with drying time of less than 45 minutes.

1. Color: Yellow.

a. Use blue for spaces accessible to people with disabilities.

B. Glass Beads: AASHTO M 247, Type 1.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for surface smoothness, surface moisture, and other conditions affecting performance of traffic-coating work.

B. Verify that substrates are visibly dry and free of moisture.

1. Test for moisture according to ASTM D 4263.
2. Test for moisture content by method recommended in writing by traffic-coating manufacturer.

C. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of traffic-coating work.

D. Proceed with installation only after substrate construction and penetrating work have been completed and unsatisfactory conditions have been corrected.

1. Begin coating application only after minimum concrete-curing and -drying period recommended in writing by traffic-coating manufacturer has passed and after substrates are dry.
2. Application of coating indicates acceptance of surfaces and conditions.

3.2 PREPARATION

A. General: Before applying traffic coatings, clean and prepare substrates according to ASTM C 1127 and manufacturer's written instructions to produce clean, dust-free, dry substrate for traffic-coating application. Remove projections, fill voids, and seal joints if any, as recommended in writing by traffic-coating manufacturer.

B. Schedule preparation work so dust and other contaminants from process do not fall on wet, newly coated surfaces.

C. Mask adjoining surfaces not receiving traffic coatings to prevent overspray, spillage, leaking, and migration of coatings. Prevent traffic-coating materials from entering deck substrate penetrations and clogging weep holes and drains.

D. Concrete Substrates: Mechanically abrade surface to a uniform profile acceptable to manufacturer, according to ASTM D 4259. Do not acid etch.

1. Remove grease, oil, paints, and other penetrating contaminants from concrete.
2. Remove concrete fins, ridges, and other projections.
3. Remove laitance, glaze, efflorescence, curing compounds, concrete hardeners, form-release agents, and other incompatible materials that might affect coating adhesion.
4. Remove remaining loose material to provide a sound surface, and clean surfaces according to ASTM D 4258.

3.3 TERMINATIONS AND PENETRATIONS

A. Prepare vertical and horizontal surfaces at terminations and penetrations through traffic coatings and at expansion joints, drains, and sleeves according to ASTM C 1127 and manufacturer's written instructions.

B. Provide sealant cants at penetrations and at reinforced and nonreinforced, deck-to-wall butt joints.

C. Terminate edges of deck-to-deck expansion joints with preparatory base-coat strip.

D. Install sheet flashings at deck-to-wall expansion and dynamic joints, and bond to deck and wall substrates according to manufacturer's written recommendations.

3.4 JOINT AND CRACK TREATMENT

A. Prepare, treat, rout, and fill joints and cracks in substrates according to ASTM C 1127 and manufacturer's written recommendations. Before coating surfaces, remove dust and dirt from joints and cracks according to ASTM D 4258.

1. Comply with recommendations in ASTM C 1193 for joint-sealant installation.

B. Apply reinforcing strip in traffic-coating system where recommended in writing by traffic-coating manufacturer.

3.5 TRAFFIC-COATING APPLICATION

A. Apply traffic coating according to ASTM C 1127 and manufacturer's written instructions.

B. Apply number of coats of specified compositions for each type of traffic coating at locations as indicated on Drawings.

C. Start traffic-coating application in presence of manufacturer's technical representative.

D. Verify that wet film thickness of each coat complies with requirements every 100 sq. ft. (9 sq. m).

E. Uniformly broadcast aggregate on coats specified to receive aggregate. Embed aggregate according to manufacturer's written instructions. After coat dries, sweep away excess aggregate.

F. Apply traffic coatings to prepared wall terminations and vertical surfaces to height indicated; omit aggregate on vertical surfaces.

G. Cure traffic coatings. Prevent contamination and damage during application and curing stages.

3.6 PAVEMENT MARKINGS

A. Do not apply pavement-marking paint for striping and other markings until layout, colors, and placement have been verified with Architect and traffic coating has cured.

B. Sweep and clean surface to eliminate loose material and dust.

C. Apply pavement-marking paint with mechanical equipment to produce markings of dimensions indicated with uniform straight edges. Apply at manufacturer's recommended rates for a 15-mil- (0.4-mm-) minimum, wet film thickness.

1. Apply graphic symbols and lettering with paint-resistant, die-cut stencils, firmly secured to surface. Mask an extended area beyond edges of each stencil to prevent paint application beyond stencil. Apply paint so that it cannot run beneath stencil.
2. Broadcast glass beads uniformly into wet pavement-marking paint at a rate of 6 lb/gal. (0.72 kg/L).

3.7 FIELD QUALITY CONTROL

A. Testing: Engage a qualified testing agency to perform the following field tests and inspections and prepare test reports:

1. Samples of material delivered to Project site shall be taken, identified, sealed, and certified in presence of Owner and Contractor.
2. Testing agency shall perform tests for characteristics specified, using applicable referenced testing procedures.

3. Testing agency shall verify thickness of coatings during traffic coating application.
4. If test results show traffic coating materials do not comply with requirements, remove noncomplying materials, prepare surfaces, and reapply traffic coatings.

B. Final Traffic Coating Inspection: Arrange for traffic coating manufacturer's technical personnel to inspect membrane installation on completion.

1. Notify Architect or Owner 48 hours in advance of date and time of inspection.

C. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.8 PROTECTING AND CLEANING

A. Protect traffic coatings from damage and wear during remainder of construction period.

B. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION 071800

SECTION 07 21 00 - THERMAL INSULATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Foam-plastic board insulation.
2. Mineral wool board insulation.
3. Mineral-wool blanket insulation.
4. Spray polyurethane foam insulation.
5. Geofoam insulation for built-up interior concrete slab and steps

B. Related Requirements:

1. Divison 03 Section “Cast-in-Place Concrete” for vapor retarders installed under concrete slabs-on-grade.
2. Division 04 Section "Unit Masonry" for insulation installed in cavity walls.
3. Division 07 Section "Direct-Applied Finish System" for insulation specified as part of these systems.
4. Division 07 Section "Thermoplastic Polyolefin (TPO) Roofing" for insulation specified as part of roofing construction.
5. Division 07 Section "Fire-Resistive Joint Systems" for insulation installed as part of a perimeter fire-resistive joint system.
6. Division 09 Section “Gypsum Board” for sound attenuation blankets installed within gypsum and metal-framed wall assemblies.

1.3 SUSTAINABLE DESIGN REQUIREMENTS

A. Applicable LEED Credits

1. MRc2
2. MRc4
3. MRc5
4. IEQc4.2

B. LEED Requirements

1. MRc2: CONSTRUCTION WASTE MANAGEMENT

No less than the specified portion of all construction waste from the Project shall be diverted from disposal in a landfill and/or incineration in with the Project Requirements for Construction Waste Management and Disposal. Refer to Specification Sections 017419 Construction Waste Management and Disposal

and 013510 Sustainable Design Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

2. MRc4: Recycled Content Material

   No less than the specified minimum proportion of the building materials shall contain post-consumer and pre-consumer waste materials in accordance with the Project Requirements for Recycled Content Materials. All materials counted towards the computations of the proportion of the Recycled Content Materials shall comply with the standard minimum percentages of post-consumer waste materials and for the minimum percentages of pre-consumer waste materials. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

3. MRc5: REGIONALLY MANUFACTURED HARVESTED MATERIALS

   No less than the specified minimum proportion of the building materials shall be extracted, processed, and manufactured within 500 miles of the Project Site in accordance with the Project Requirements for Regionally Manufactured and/or Harvested Materials. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

4. IEQc4.2: LOW-EMITTING MATERIALS – PAINTS AND COATINGS

   All paints and coatings in the building interior shall comply with the Project Requirements for Low Emitting Materials – Paints and Coatings. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1.5 INFORMATIONAL SUBMITTALS

A. Product Test Reports: For each product, for tests performed by a qualified testing agency.

B. Evaluation Reports: For foam-plastic insulation, from ICC-ES.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Protect insulation materials from physical damage and from deterioration due to moisture, soiling, and other sources. Store inside and in a dry location. Comply with manufacturer's written instructions for handling, storing, and protecting during installation.

B. Protect foam-plastic board insulation as follows:

1. Do not expose to sunlight except to necessary extent for period of installation and concealment.
2. Protect against ignition at all times. Do not deliver foam-plastic board materials to Project site until just before installation time.
3. Quickly complete installation and concealment of foam-plastic board insulation in each area of construction.

PART 2 - PRODUCTS

2.1 FOAM-PLASTIC BOARD INSULATION

A. Extruded-Polystyrene Board Insulation: ASTM C 578, of type and minimum compressive strength indicated below, with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, per ASTM E 84.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following :

a. DiversiFoam Products.
b. Dow Chemical Company (The).
c. Owens Corning.
d. Pactiv Building Products.

2. Type IV, 25 psi.

2.2 MINERAL-WOOL BOARD INSULATION

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Roxul Inc.
2. Thermafiber.

B. Unfaced, Mineral-Wool Board Insulation: ASTM C 612; with maximum flame-spread and smoke-developed indexes of 15 and zero, respectively, per ASTM E 84; passing ASTM E 136 for combustion characteristics

1. Nominal density of 4 lb/cu. ft. (64 kg/cu. m), Types IA and IB, thermal resistivity of 4 deg F x h x sq. ft./Btu x in. at 75 deg F (27.7 K x m/W at 24 deg C).

2.3 MINERAL-WOOL BLANKETS

A. Insulation shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

B. Mineral-Wool Blanket, Unfaced: ASTM C 665, Type I (blankets without membrane facing); consisting of fibers; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively, per ASTM E 84; passing ASTM E 136 for combustion characteristics.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following

    a. Roxul Inc.
    b. Thermafiber.

2.4 SPRAY POLYURETHANE FOAM INSULATION

A. Closed-Cell Polyurethane Foam Insulation: ASTM C 1029, Type II, with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, per ASTM E 84.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following :

    a. BASF Corporation.
    b. BaySystems NorthAmerica, LLC.
    c. Dow Chemical Company (The).
    d. ERSystems, Inc.
    e. Gaco Western Inc.
    f. Henry Company.
    g. NCFI; Division of Barnhardt Mfg. Co.
    h. SWD Urethane Company.
    i. Volatile Free, Inc.

2. Minimum density of 1.5 lb/cu. ft., thermal resistivity of 6.2 deg F x h x sq. ft./Btu x in. at 75 deg F.

B. Open-Cell Polyurethane Foam Insulation: Spray-applied polyurethane foam using water as a blowing agent, with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, per ASTM E 84.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following :

    a. BaySystems NorthAmerica, LLC.
    b. Demilec (USA) LLC.
    c. Gaco Western Inc.
    d. Icynene Inc.
    e. SWD Urethane Company.

2. Minimum density of 0.4 lb/cu. ft., thermal resistivity of 3.4 deg F x h x sq. ft./Btu x in. at 75 deg F.

2.5 GEOFOAM

A. Extruded-Polystyrene Board Insulation: ASTM C 578, Type IV, 1.55-lb/cu. ft. density, 25-psi compressive strength .

B. Connectors: Geofoam manufacturer's multibarbed, galvanized-steel sheet connectors or Deformed steel reinforcing bars, 3/4 inch in diameter .

2.6 THERMAL BARRIERS

A. Spray-applied thermal barrier coating: Water-based coating, limiting temperature rise of underlying spray polyurethane foam insulation to not more than 121 degrees F after 15 minutes of fire exposure complying with the standard time temperature curve of ASTM E 119.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited, to the following:

a. International Fireproof Technology Inc.; DC315

2.7 INSULATION FASTENERS

A. Adhesively Attached, Angle-Shaped, Spindle-Type Anchors: Angle welded to projecting spindle; capable of holding insulation of specified thickness securely in position indicated with self-locking washer in place.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

a. Gemco; 90-Degree Insulation Hangers.

2. Angle: Formed from 0.030-inch- thick, perforated, galvanized carbon-steel sheet with each leg 2 inches square.
3. Spindle: Copper-coated, low-carbon steel; fully annealed; 0.105 inch in diameter; length to suit depth of insulation indicated.

B. Anchor Adhesive: Product with demonstrated capability to bond insulation anchors securely to substrates indicated without damaging insulation, fasteners, and substrates.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

a. AGM Industries, Inc.; TACTOO Adhesive.
b. Gemco; Tuff Bond Hanger Adhesive.

2.8 EXTRUDED POLYSTYRENE FOAM-PLASTIC BOARD

A. Extruded polystyrene boards in this article are also called "XPS boards." Roman numeral designators in ASTM C 578 are assigned in a fixed random sequence, and their numeric order does not reflect increasing strength or other characteristics.

B. Extruded Polystyrene Board, Type IV: ASTM C 578, Type IV, 25-psi (173-kPa) minimum compressive strength; unfaced; maximum flame-spread and smoke-developed indexes of 25 and 450, respectively, per ASTM E 84.

PART 3 - EXECUTION

3.1 PREPARATION

A. Clean substrates of substances that are harmful to insulation or that interfere with insulation attachment.

3.2 INSTALLATION, GENERAL

A. Comply with insulation manufacturer's written instructions applicable to products and applications indicated.

B. Install insulation that is undamaged, dry, and unsoiled and that has not been left exposed to ice, rain, or snow at any time.

C. Extend insulation to envelop entire area to be insulated. Cut and fit tightly around obstructions and fill voids with insulation. Remove projections that interfere with placement.

D. Provide sizes to fit applications indicated and selected from manufacturer's standard thicknesses, widths, and lengths. Apply single layer of insulation units to produce thickness indicated unless multiple layers are otherwise shown or required to make up total thickness.

3.3 INSTALLATION OF BELOW-GRADE INSULATION

A. On vertical footing and foundation wall surfaces, set insulation units using manufacturer's recommended adhesive according to manufacturer's written instructions.

1. If not otherwise indicated, extend insulation a minimum of 24 inches below exterior grade line.

B. On horizontal surfaces under slabs, loosely lay insulation units according to manufacturer's written instructions. Stagger end joints and tightly abut insulation units.

1. If not otherwise indicated, extend insulation a minimum of 24 inches in from exterior walls.

3.4 INSTALLATION OF INSULATION FOR FRAMED CONSTRUCTION

A. Insulation: Install in cavities formed by framing members according to the following requirements:

1. Use insulation widths and lengths that fill the cavities formed by framing members. If more than one length is required to fill the cavities, provide lengths that will produce a snug fit between ends.
2. Place insulation in cavities formed by framing members to produce a friction fit between edges of insulation and adjoining framing members.
3. Maintain 3-inch (76-mm) clearance of insulation around recessed lighting fixtures not rated for or protected from contact with insulation.

4. For metal-framed wall cavities where cavity heights exceed 96 inches (2438 mm), support unfaced blankets mechanically and support faced blankets by taping flanges of insulation to flanges of metal studs.
5. Vapor-Retarder-Faced Blankets: Tape joints and ruptures in vapor-retarder facings, and seal each continuous area of insulation to ensure airtight installation.

B. Miscellaneous Voids: Install insulation in miscellaneous voids and cavity spaces where required to prevent gaps in insulation using the following materials:

1. Mineral wool Insulation: Compact to approximately 40 percent of normal maximum volume equaling a density of approximately 2.5 lb/cu. ft. (40 kg/cu. m).
2. Spray Polyurethane Insulation: Apply according to manufacturer's written instructions.

C. Spray-Applied Cellulosic Insulation: Apply spray-applied insulation according to manufacturer's written instructions. Do not apply insulation until installation of pipes, ducts, conduits, wiring, and electrical outlets in walls is completed and windows, electrical boxes, and other items not indicated to receive insulation are masked. After insulation is applied, make flush with face of studs by using method recommended by insulation manufacturer.

3.5 GEOFOAM FILL

A. Install geofoam blocks in layers with abutting edges and ends and with the long dimension of each block at right angles to blocks in each subsequent layer. Offset joints of blocks in successive layers.

B. Install geofoam connectors at each layer of geofoam to resist horizontal displacement according to geofoam manufacturer's written instructions.

3.6 PROTECTION

A. Protect installed insulation from damage due to harmful weather exposures, physical abuse, and other causes. Provide temporary coverings or enclosures where insulation is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.

END OF SECTION 07 21 00

SECTION 07 24 15 –DIRECT-APPLIED FINISH SYSTEM

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Direct-applied finish system (DAFS) on exterior cement board and monolithic concrete.

B. Related Sections:

   1. Division 05 Section "Cold-Formed Metal Framing" for structural, load-bearing (transverse and axial) steel studs and joists that support lath and portland cement plaster.
   2. Division 06 Section "Sheathing" for sheathing and water-resistant barriers included in portland cement plaster assemblies.
   3. Section 079200 "Joint Sealants" for sealing joints in DAS with elastomeric joint sealants.

1.3 PERFORMANCE REQUIREMENTS

A. DAFS Performance: Comply with the following:

   1. Bond Integrity: Free from bond failure within DAFS components or between system and supporting wall construction, resulting from exposure to fire, wind loads, weather, or other in-service conditions.

B. Provide DAFS having physical properties and structural performance that comply with the following:

   1. Absorption-Freeze Resistance: No visible deleterious effects and negligible weight loss after 60 cycles per EIMA 101.01.
   2. Accelerated Weathering: Five samples per ICC-ES AC219 showing no cracking, checking, crazing, erosion, rusting, blistering, peeling, delamination, or other characteristics that might affect performance as a wall cladding after testing for 2000 hours when viewed under 5 times magnification per ASTM G 153 or ASTM G 155 .
   3. Accelerated Weathering: Five samples per ICC-ES AC219 showing no cracking, checking, crazing, erosion, rusting, blistering, peeling, delamination, or other characteristics that might affect performance as a wall cladding after testing for 2000 hours when viewed under 5 times magnification per ASTM G 153 or ASTM G 155 .
   4. Salt-Spray Resistance: No deleterious affects when tested according to ICC-ES AC219.

5. Tensile Adhesion: No failure in the base coat or finish coat when tested per ICC-ES AC219.
6. Water Resistance: Three samples, each consisting of 1/2-inch-thick DAFS applied to on 1/2-inch- (12.7-mm-) thick gypsum board; cured for 28 days; and showing no cracking, checking, crazing, erosion, rusting, blistering, peeling, or delamination after testing for 14 days per ASTM D 2247.

1.4 SUSTAINABLE DESIGN REQUIREMENTS

A. Applicable LEED Credits

1. MRc2
2. MRc4
3. MRc5
4. IEQc4.2

B. LEED Requirements

1. MRc2: CONSTRUCTION WASTE MANAGEMENT

No less than the specified portion of all construction waste from the Project shall be diverted from disposal in a landfill and/or incineration in with the Project Requirements for Construction Waste Management and Disposal. Refer to Specification Sections 017419 Construction Waste Management and Disposal and 013510 Sustainable Design Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

2. MRc4: Recycled Content Material

No less than the specified minimum proportion of the building materials shall contain post-consumer and pre-consumer waste materials in accordance with the Project Requirements for Recycled Content Materials. All materials counted towards the computations of the proportion of the Recycled Content Materials shall comply with the standard minimum percentages of post-consumer waste materials and for the minimum percentages of pre-consumer waste materials. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

3. MRc5: REGIONALLY MANUFACTURED HARVESTED MATERIALS

No less than the specified minimum proportion of the building materials shall be extracted, processed, and manufactured within 500 miles of the Project Site in accordance with the Project Requirements for Regionally Manufactured and/or Harvested Materials. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

4. IEQc4.2: LOW-EMITTING MATERIALS – PAINTS AND COATINGS

All paints and coatings in the building interior shall comply with the Project Requirements for Low Emitting Materials – Paints and Coatings. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor

shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings: Show locations and installation of control and expansion joints including plans, elevations, sections, details of components, and attachments to other work.

C. Samples for Initial Selection: For each type of factory-prepared finish coat indicated.

1. Include similar Samples of joint sealants and exposed accessories involving color selection.

D. Samples for Verification: For each type of factory-prepared colored textured finish coat indicated; 12 by 12 inches (305 by 305 mm), and prepared on rigid backing.

1. Include sealants and exposed accessory Samples to verify color selected.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer, fabricator/erector, and testing agency.

B. Manufacturer Certificates: Signed by manufacturers certifying that DAFSS complies with requirements.

C. Material or Product Certificates: For cementitious materials and aggregates and for insulation, from manufacturer.

D. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for each water-/weather-resistive barrier, insulation, reinforcing mesh, joint sealant, and coating.

E. Field quality-control reports.

1.7 CLOSEOUT SUBMITTALS

A. Maintenance Data: For DAFS to include in maintenance manuals.

1.8 QUALITY ASSURANCE

A. Installer Qualifications: An installer who is certified in writing by DAFS manufacturer as qualified to install manufacturer's system using trained workers .
1. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

B. Source Limitations: Obtain DAFS components from single source from single manufacturer and from sources approved by manufacturer as compatible with system components.

C. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution and set quality standards for fabrication and installation.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in original, unopened packages with manufacturers' labels intact and clearly identifying products.

B. Store materials inside under cover and keep them dry and protected against damage from weather, direct sunlight, surface contamination, corrosion, construction traffic, and other causes.

1. Stack insulation board flat and off the ground.
2. Protect plastic insulation against ignition at all times. Do not deliver plastic insulating materials to Project site before installation time.

1.10 PROJECT CONDITIONS

A. Weather Limitations: Maintain ambient temperatures above 40 deg F (4.4 deg C) for a minimum of 24 hours before, during, and after adhesives or coatings are applied. Do not apply coatings during rainfall. Proceed with installation only when existing and forecasted weather conditions and ambient outdoor air, humidity, and substrate temperatures permit finish to be applied, dried, and cured according to manufacturers' written instructions and warranty requirements.

1.11 COORDINATION

A. Coordinate installation of DAFS with related Work specified in other Sections to ensure that wall assemblies, including sheathing, flashing, trim, joint sealants, windows, and doors, are protected against damage from the effects of weather, age, corrosion, moisture, and other causes. Do not allow water to penetrate behind flashing and barrier coating of DAFS.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Acrocrete, Inc.
2. Dryvit Systems, Inc.
3. Finestone; Degussa Wall Systems, Inc.
4. Sto Corp.

2.2 ACCESSORIES

A. General: Comply with ASTM C 1063 and coordinate depth of trim and accessories with thicknesses and number of plaster coats required.

B. Exterior Cement Board: Not less than 7/16-inch- (11-mm-) thick, fiber cement board complying with ASTM C 1186, Type A, for exterior applications.

1. Fasteners: Wafer-head or flat-head steel drill screws complying with ASTM C 954, with an organic-polymer coating or other corrosion-protective coating having a salt-spray resistance of more than 500 hours per ASTM B 117.

a. Size and Length: As recommended by sheathing manufacturer for type and thickness of sheathing board to be attached.

2.3 MISCELLANEOUS MATERIALS

A. Water for Mixing: Potable and free of substances capable of affecting plaster set or of damaging plaster, lath, or accessories.

B. Fiber for Base Coat: Alkaline-resistant glass or polypropylene fibers, 1/2 inch (13 mm) long, free of contaminants, manufactured for use in portland cement plaster.

C. Bonding Compound: ASTM C 932.

2.4 DIRECT-APPLIED FINISH MATERIALS

A. Base-Coat Materials: DAFS manufacturer's standard mixture complying with one of the following:

1. Job-mixed formulation of portland cement complying with ASTM C 150, Type I, white or natural color; and manufacturer's standard polymer-emulsion adhesive designed for use with portland cement.
2. Job-combined formulation of manufacturer's standard polymer-emulsion adhesive and manufacturer's standard dry mix containing portland cement.
3. Factory-blended dry formulation of portland cement, dry polymer admixture, and inert fillers to which only water is added at Project site.

B. Primer: DAFS manufacturer's standard factory-mixed, elastomeric-polymer primer for preparing base-coat surface for application of finish coat.

C. Finish-Coat Materials: DAFS manufacturer's standard acrylic-based coating with enhanced mildew resistance complying with the following:

1. Factory-mixed formulation of polymer-emulsion binder, colorfast mineral pigments, sound stone particles, and fillers.
2. Colors: As selected by Architect from manufacturer's full range.

2.5 MIXING

A. General: Comply with Direct-Applied Finish manufacturer's requirements for combining and mixing materials. Do not introduce admixtures, water, or other materials except as

recommended by Direct-Applied Finish manufacturer. Mix materials in clean containers. Use materials within time period specified by Direct-Applied Finish manufacturer or discard.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of EIFS and DAFS.

B. Examine roof edges, wall framing, flashings, openings, substrates, and junctures at other construction for suitable conditions where EIFS and DAFS will be installed.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

1. Begin coating application only after surfaces are dry.
2. Application of coating indicates acceptance of surfaces and conditions.

3.2 PREPARATION

A. Protect contiguous work from moisture deterioration and soiling caused by application of DAFS. Provide temporary covering and other protection needed to prevent spattering of exterior finish coats on other work.

B. Protect DAFS, substrates, and wall construction behind them from inclement weather during installation. Prevent penetration of moisture behind EIFS and deterioration of substrates.

C. Prepare and clean substrates to comply with DAFS manufacturer's written instructions to obtain optimum bond between substrate and adhesive for insulation.

1. Concrete Substrates: Provide clean, dry, neutral-pH substrate for insulation installation. Verify suitability of substrate by performing bond and moisture tests recommended by/DAFS manufacturer.

3.3 EXTERIOR CEMENT-BOARD INSTALLATION

A. Exterior Cement Board: Install on metal framing to comply with cement-board manufacturer's written instructions and evaluation report acceptable to authorities having jurisdiction. Install board with steel drill screws spaced no more than 8 inches (203 mm) o.c. along framing with perimeter fasteners at least 3/8 inch (9.6 mm) but less than 5/8 inch (15.9 mm) from edges of boards.

3.4 INSTALLING ACCESSORIES

A. Install according to ASTM C 1063 and at locations indicated on Drawings.

B. Reinforcement for External Corners:

1. Install cornerbead at exterior locations.

C. Control Joints: Install control joints in specific locations approved by Architect for visual effect as follows:

1. As required to delineate plasterwork into areas (panels) of the following maximum sizes:

a. Vertical Surfaces: 144 sq. ft. (13.4 sq. m).
b. Horizontal and other Nonvertical Surfaces: 100 sq. ft. (9.3 sq. m).

2. At distances between control joints of not greater than 18 feet (5.5 m) o.c.
3. As required to delineate plasterwork into areas (panels) with length-to-width ratios of not greater than 2-1/2:1.
4. Where control joints occur in surface of construction directly behind plaster.
5. Where plasterwork areas change dimensions, to delineate rectangular-shaped areas (panels) and to relieve the stress that occurs at the corner formed by the dimension change.
6.

3.5 BASE-COAT INSTALLATION

A. Base Coat: Apply to exposed surfaces of insulation and/or exterior cement board in minimum thickness recommended in writing by DAFS manufacturer, but not less than 1/16-inch (1.6-mm) dry-coat thickness.

3.6 FINISH-COAT INSTALLATION

A. Primer: Apply over dry base coat according to DAFS manufacturer's written instructions.

B. Finish Coat: Apply over dry primed base coat, maintaining a wet edge at all times for uniform appearance, in thickness required by DAFS manufacturer to produce a uniform finish of color and texture matching approved sample and free of cold joints, shadow lines, and texture variations.

1. Texture: As selected by Architect from manufacturer's full range.

3.7 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Remove and replace DAFS where test results indicate that DAFS does not comply with specified requirements.

C. Prepare test and inspection reports.

3.8 PROTECTION

A. Remove temporary covering and protection of other work. Promptly remove coating materials from window and door frames and other surfaces outside areas indicated to receive DAFS coatings.

END OF SECTION 07 24 15

SECTION 07 26 00 - VAPOR RETARDERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Polyethylene vapor retarders.
2. Fire-retardant, reinforced-polyethylene vapor retarders.

B. Related Requirements:

1. Section 033000 "Cast-in-Place Concrete" for under-slab vapor retarders.
2. Section 072100 "Thermal Insulation" for vapor retarders integral with insulation products.

1.3 SUSTAINABLE DESIGN REQUIREMENTS

A. Applicable LEED Credits

1. MRc2
2. MRc4
3. MRc5
4. IEQc4.2

B. LEED Requirements

1. MRc2: CONSTRUCTION WASTE MANAGEMENT

   No less than the specified portion of all construction waste from the Project shall be diverted from disposal in a landfill and/or incineration in with the Project Requirements for Construction Waste Management and Disposal. Refer to Specification Sections 017419 Construction Waste Management and Disposal and 013510 Sustainable Design Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

2. MRc4: Recycled Content Material

   No less than the specified minimum proportion of the building materials shall contain post-consumer and pre-consumer waste materials in accordance with the Project Requirements for Recycled Content Materials. All materials counted towards the computations of the proportion of the Recycled Content Materials shall comply with the standard minimum percentages of post-consumer waste materials and for the minimum percentages of pre-consumer waste materials.

Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

3. MRc5: REGIONALLY MANUFACTURED HARVESTED MATERIALS

   No less than the specified minimum proportion of the building materials shall be extracted, processed, and manufactured within 500 miles of the Project Site in accordance with the Project Requirements for Regionally Manufactured and/or Harvested Materials. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

4. IEQc4.2: LOW-EMITTING MATERIALS – PAINTS AND COATINGS

   All paints and coatings in the building interior shall comply with the Project Requirements for Low Emitting Materials – Paints and Coatings. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1.5 INFORMATIONAL SUBMITTALS

A. Product Test Reports: For each product, for tests performed by a qualified testing agency.

PART 2 - PRODUCTS

2.1 POLYETHYLENE VAPOR RETARDERS

A. Polyethylene Vapor Retarders: ASTM D 4397, 10-mil- (0.25-mm-) thick sheet, with maximum permeance rating of 0.1 perm (5.7 ng/Pa x s x sq. m).

2.2 FIRE-RETARDANT, REINFORCED-POLYETHYLENE VAPOR RETARDERS

A. Fire-Retardant, Reinforced-Polyethylene Vapor Retarders: Sheet with outer layers of polyethylene film laminated to an inner reinforcing layer consisting of either nonwoven grid of nylon cord or polyester scrim and weighing not less than 20 lb/1000 sq. ft. (9 kg/100 sq. m), with maximum permeance rating of 0.1 perm (5.7 ng/Pa x s x sq. m).

   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

      a. DiversiFoam Products.
      b. Dow Chemical Company (The).
      c. Owens Corning.

2. Surface-Burning Characteristics: Maximum flame-spread and smoke-developed indexes of 75 and 200, respectively, per ASTM E 84.

2.3 ACCESSORIES

A. Vapor-Retarder Tape: Pressure-sensitive tape of type recommended by vapor-retarder manufacturer for sealing joints and penetrations in vapor retarder.

B. Adhesive for Vapor Retarders: Product recommended by vapor-retarder manufacturer and has demonstrated capability to bond vapor retarders securely to substrates indicated.

C. Vapor-Retarder Fasteners: Pancake-head, self-tapping steel drill screws; with fender washers.

PART 3 - EXECUTION

3.1 PREPARATION

A. Clean substrates of substances that are harmful to vapor retarders, including removing projections capable of puncturing vapor retarders.

3.2 INSTALLATION OF VAPOR RETARDERS ON FRAMING

A. Place vapor retarders on side of construction indicated on Drawings.

B. Extend vapor retarders to extremities of areas to protect from vapor transmission. Secure vapor retarders in place with adhesives, vapor retarder fasteners, or other anchorage system as recommended by manufacturer. Extend vapor retarders to cover miscellaneous voids in insulated substrates, including those filled with loose-fiber insulation.

C. Seal vertical joints in vapor retarders over framing by lapping no fewer than two studs and sealing with vapor-retarder tape according to vapor-retarder manufacturer's written instructions. Locate all joints over framing members or other solid substrates.

D. Seal joints caused by pipes, conduits, electrical boxes, and similar items penetrating vapor retarders with vapor-retarder tape to create an airtight seal between penetrating objects and vapor retarders.

E. Repair tears or punctures in vapor retarders immediately before concealment by other work. Cover with vapor-retarder tape or another layer of vapor retarders.

3.3 PROTECTION

A. Protect vapor retarders from damage until concealed by permanent construction.

END OF SECTION 07 26 00

SECTION 07 27 26 - FLUID-APPLIED MEMBRANE AIR BARRIERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes fluid-applied, vapor-retarding and vapor-permeable membrane air barriers.

B. Related Requirements:

1. Division 04 Section "Unit Masonry" for embedded flashings.
2. Division 06 Section "Sheathing" for wall sheathings and wall sheathing joint-and-penetration treatments.
3. Division 07 Section "Thermal Insulation" for foam-plastic board insulation.
4. Division 07 Section "Sheet Metal Flashing and Trim" for sheet metal flashings.
5. Division 07 Section "Joint Sealants" for joint-sealant materials and installation.

1.3 DEFINITIONS

A. Air-Barrier Material: A primary element that provides a continuous barrier to the movement of air.

B. Air-Barrier Accessory: A transitional component of the air barrier that provides continuity.

C. Air-Barrier Assembly: The collection of air-barrier materials and accessory materials applied to an opaque wall, including joints and junctions to abutting construction, to control air movement through the wall.

1.4 SUSTAINABLE DESIGN REQUIREMENTS

A. Applicable LEED Credits

1. MRc2
2. MRc4
3. MRc5
4. IEQc4.2

B. LEED Requirements

1. MRc2: CONSTRUCTION WASTE MANAGEMENT

No less than the specified portion of all construction waste from the Project shall be diverted from disposal in a landfill and/or incineration in with the Project Requirements for Construction Waste Management and Disposal. Refer to Specification Sections 017419 Construction Waste Management and Disposal and 013510 Sustainable Design Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

2. MRc4: Recycled Content Material

   No less than the specified minimum proportion of the building materials shall contain post-consumer and pre-consumer waste materials in accordance with the Project Requirements for Recycled Content Materials. All materials counted towards the computations of the proportion of the Recycled Content Materials shall comply with the standard minimum percentages of post-consumer waste materials and for the minimum percentages of pre-consumer waste materials. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

3. MRc5: REGIONALLY MANUFACTURED HARVESTED MATERIALS

   No less than the specified minimum proportion of the building materials shall be extracted, processed, and manufactured within 500 miles of the Project Site in accordance with the Project Requirements for Regionally Manufactured and/or Harvested Materials. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

4. IEQc4.2: LOW-EMITTING MATERIALS – PAINTS AND COATINGS

   All paints and coatings in the building interior shall comply with the Project Requirements for Low Emitting Materials – Paints and Coatings. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

   1. Include manufacturer's written instructions for evaluating, preparing, and treating substrate; technical data; and tested physical and performance properties of products.

B. Sustainable Design Submittals:

   1. Product Data: For coatings, indicating VOC content.
   2. Laboratory Test Reports: For coatings, indicating compliance with requirements for low-emitting materials.

C. Shop Drawings: For air-barrier assemblies.

1. Show locations and extent of air barrier. Include details for substrate joints and cracks, counterflashing strips, penetrations, inside and outside corners, terminations, and tie-ins with adjoining construction.
2. Include details of interfaces with other materials that form part of air barrier.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer. Include list of ABAA-certified installers and supervisors employed by the Installer, who work on Project.

B. Product Certificates: From air-barrier manufacturer, certifying compatibility of air barriers and accessory materials with Project materials that connect to or that come in contact with the barrier.

C. Product Test Reports: For each air-barrier assembly, for tests performed by a qualified testing agency.

1.7 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

1. Installer shall be licensed by ABAA according to ABAA's Quality Assurance Program and shall employ ABAA-certified installers and supervisors on Project.

B. Mockups: Build mockups to set quality standards for materials and execution and for preconstruction testing.

1. Build integrated mockups of exterior wall assembly , 150 sq. ft. (14 sq. m), incorporating backup wall construction, external cladding, window, storefront, door frame and sill, insulation, ties and other penetrations, and flashing to demonstrate surface preparation, crack and joint treatment, application of air barriers, and sealing of gaps, terminations, and penetrations of air-barrier assembly.

    a. Coordinate construction of mockups to permit inspection by Owner's testing agency of air barrier before external insulation and cladding are installed.
    b. Include junction with roofing membrane, building corner condition, and foundation wall intersection.
    c. If Architect determines mockups do not comply with requirements, reconstruct mockups and apply air barrier until mockups are approved.

2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 PRECONSTRUCTION TESTING

A. Preconstruction Testing Service: Owner will engage a qualified testing agency to perform preconstruction testing on field mockups.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Remove and replace liquid materials that cannot be applied within their stated shelf life.

B. Protect stored materials from direct sunlight.

1.10 FIELD CONDITIONS

A. Environmental Limitations: Apply air barrier within the range of ambient and substrate temperatures recommended by air-barrier manufacturer.

1. Protect substrates from environmental conditions that affect air-barrier performance.
2. Do not apply air barrier to a damp or wet substrate or during snow, rain, fog, or mist.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

A. Source Limitations: Obtain primary air-barrier materials and air-barrier accessories from single source from single manufacturer.

B. VOC Content: 250 g/L or less.

C. Low-Emitting Materials: Products shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

2.2 PERFORMANCE REQUIREMENTS

A. General: Air barrier shall be capable of performing as a continuous vapor-retarding permeable air barrier and as a liquid-water drainage plane flashed to discharge to the exterior incidental condensation or water penetration. Air-barrier assemblies shall be capable of accommodating substrate movement and of sealing substrate expansion and control joints, construction material changes, penetrations, tie-ins to installed waterproofing, and transitions at perimeter conditions without deterioration and air leakage exceeding specified limits.

2.3 FLUID-APPLIED MEMBRANE AIR BARRIER

A. Fluid-Applied, Vapor-Retarding Membrane Air Barrier: synthetic polymer membrane.

1. Products: Subject to compliance with requirements, provide one of the following:

    a. Synthetic Polymer Membrane, non-combustible:

        1) Henry Company; Air-Bloc 21 FR.
        2) Carlisle; Fire Resist Barritech NP

2. Physical and Performance Properties:

    a. Membrane Air Permeance: Not to exceed 0.004 cfm x sq. ft. of surface area at 1.57-lbf/sq. ft. (0.02 L/s x sq. m of surface area at 75-Pa) pressure difference; ASTM E 2178.
    b. Membrane Vapor Permeance: Not to exceed 0.1 perm (5.8 ng/Pa x s x sq. m) ; ASTM E 96.

B. Fluid-Applied, Vapor-Permeable Membrane Air Barrier: synthetic polymer membrane.

1. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following:

    a. Synthetic Polymer Membrane:

        1) Carlisle; Fire Resist Barritech VP
        2) Grace. W.R. & Co.; Perm-A-Barrier VPL

2. Physical and Performance Properties:

    a. Membrane Air Permeance: Not to exceed 0.004 cfm/ sq. ft. of surface area at 1.57-lbf/sq. ft. (0.02 L/s x sq. m of surface area at 75-Pa) pressure difference; ASTM E 2178.
    b. Membrane Vapor Permeance: Not less than 10 perms (580 ng/Pa x s x sq. m) ; ASTM E 96.

2.4 AUXILIARY MATERIALS

A. General: Auxiliary materials recommended by air barrier manufacturer for intended use and compatible with air barrier membrane. Liquid-type auxiliary materials shall comply with VOC limits of authorities having jurisdiction.

B. Primer: Liquid waterborne primer recommended for substrate by manufacturer of air barrier material.

C. Counterflashing Strip: Modified bituminous, 40-mil- (1.0-mm-) thick, self-adhering sheet consisting of 32 mils (0.8 mm) of rubberized asphalt laminated to an 8-mil- (0.2-mm-) thick, crosslaminated polyethylene film with release liner backing.

D. Modified Bituminous Transition Strip: Vapor-retarding, 40-mil- (1.0-mm-) thick, smooth-surfaced, self-adhering; consisting of 36 mils (0.9 mm) of rubberized asphalt laminated to a 4-mil- (0.1-mm-) thick polyethylene film with release liner backing.

E. Adhesive-Coated Transition Strip: Vapor-permeable, 17-mil- (0.43-mm-) thick, self-adhering strip consisting of an adhesive coating over a permeable laminate with a permeance of 37 perms (2145 ng/Pa x s x sq. m).

F. Joint Sealant: ASTM C 920, single-component, neutral-curing silicone; Class 100/50 (low-modulus), Grade NS, Use NT related to exposure, and, as applicable to joint substrates indicated, Use O. Comply with Division 07 Section "Joint Sealants."

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance.

1. Verify that substrates are sound and free of oil, grease, dirt, excess mortar, or other contaminants.
2. Verify that concrete has cured and aged for minimum time period recommended by air barrier manufacturer.
3. Verify that concrete is visibly dry and free of moisture. Test for capillary moisture by plastic sheet method according to ASTM D 4263.
4. Verify that masonry joints are flush and completely filled with mortar.
5. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SURFACE PREPARATION

A. Clean, prepare, treat, and seal substrate according to manufacturer's written instructions. Provide clean, dust-free, and dry substrate for air barrier application.

B. Mask off adjoining surfaces not covered by air barrier to prevent spillage and overspray affecting other construction.

C. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.

D. Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids in concrete with substrate patching membrane.

E. Remove excess mortar from masonry ties, shelf angles, and other obstructions.

F. At changes in substrate plane, apply sealant or termination mastic beads at sharp corners and edges to form a smooth transition from one plane to another.

G. Cover gaps in substrate plane and form a smooth transition from one substrate plane to another with stainless-steel sheet mechanically fastened to structural framing to provide continuous support for air barrier.

3.3 JOINT TREATMENT

A. Concrete and Masonry: Prepare, treat, rout, and fill joints and cracks in substrate according to ASTM C 1193 and air barrier manufacturer's written instructions. Remove dust and dirt from joints and cracks complying with ASTM D 4258 before coating surfaces.

1. Prime substrate and apply a single thickness of preparation coat strip extending a minimum of 3 inches (75 mm) along each side of joints and cracks. Apply a double thickness of air barrier membrane and embed a joint reinforcing strip in preparation coat.

B. Gypsum Sheathing: Fill joints greater than 1/4 inch (6 mm) with sealant according to ASTM C 1193 and with air barrier manufacturer's written instructions. Apply first layer of fluid air barrier membrane at joints. Tape joints with joint reinforcing strip after first layer is dry. Apply a second layer of fluid air barrier membrane over joint reinforcing strip.

3.4 TRANSITION STRIP INSTALLATION

A. Install strips, transition strips, and auxiliary materials according to air barrier manufacturer's written instructions to form a seal with adjacent construction and maintain a continuous air barrier.

1. Coordinate the installation of air barrier with installation of roofing membrane and base flashing to ensure continuity of air barrier with roofing membrane.
2. Install modified bituminous strip on roofing membrane or base flashing so that a minimum of 3 inches (75 mm) of coverage is achieved over both substrates.

B. Apply primer to substrates at required rate and allow to dry. Limit priming to areas that will be covered by air barrier sheet in same day. Reprime areas exposed for more than 24 hours.

1. Prime glass-fiber-surfaced gypsum sheathing with number of prime coats needed to achieve required bond, with adequate drying time between coats.

C. Connect and seal exterior wall air barrier membrane continuously to roofing membrane air barrier, concrete below-grade structures, floor-to floor construction, exterior glazing and window systems, glazed curtain-wall systems, storefront systems, exterior louvers, exterior door framing, and other construction used in exterior wall openings, using accessory materials .

D. At end of each working day, seal top edge of strips and transition strips to substrate with termination mastic.

E. Apply joint sealants forming part of air barrier assembly within manufacturer's recommended application temperature ranges. Consult manufacturer when sealant cannot be applied within these temperature ranges.

F. Wall Openings: Prime concealed perimeter frame surfaces of windows, curtain walls, storefronts, and doors. Apply modified bituminous transition strip or adhesive-coated transition strip so that a minimum of 3 inches (75 mm) of coverage is achieved over both substrates. Maintain 3 inches (75 mm) of full contact over firm bearing to perimeter frames with not less than 1 inch (25 mm) of full contact.

1. Modified Bituminous and Adhesive-Coated Transition Strips: Roll firmly to enhance adhesion.
2. Apply transition strips to isolate preservative-treated wood from metal curtainwall and windo framing.

G. Fill gaps in perimeter frame surfaces of windows, curtain walls, storefronts, and doors, and miscellaneous penetrations of air barrier membrane with foam sealant.

H. Seal strips and transition strips around masonry reinforcing or ties and penetrations with termination mastic.

I. Seal top of through-wall flashings to air barrier with an additional 6-inch- (150-mm-) wide, modified bituminous strip.

J. Seal exposed edges of strips at seams, cuts, penetrations, and terminations not concealed by metal counterflashings or ending in reglets with termination mastic.

K. Repair punctures, voids, and deficient lapped seams in strips and transition strips. Slit and flatten fishmouths and blisters. Patch with transition strips extending 6 inches (150 mm) beyond repaired areas in strip direction.

3.5 AIR BARRIER MEMBRANE INSTALLATION

A. Apply air barrier membrane to form a seal with strips and transition strips and to achieve a continuous air barrier according to air barrier manufacturer's written instructions.

B. Apply air barrier membrane within manufacturer's recommended application temperature ranges.

C. Apply primer to substrates at required rate and allow to dry. Limit priming to areas that will be covered by air barrier sheet in same day. Reprime areas exposed for more than 24 hours.

1. Prime glass-fiber-surfaced gypsum sheathing with number of prime coats needed to achieve required bond, with adequate drying time between coats.

D. Apply a continuous unbroken air barrier to substrates according to the following minimum thickness. Apply membrane in full contact around protrusions such as masonry ties.

1. Vapor-Retarding Membrane Air Barrier: Apply to manufacturer’s required minimum thickness for trowel-applied or spray-applied membrane.
2. Vapor-Permeable Membrane Air Barrier: Apply to manufacturer’s required minimum thickness for trowel-applied or spray-applied membrane.

E. Lap liquid applied membrane 1 inch over self-adhering transition membranes to seal leading edge according to air barrier manufacturer's written instructions.

F. Do not cover air barrier until it has been tested and inspected by Owner's testing agency.

G. Correct deficiencies in or remove air barrier that does not comply with requirements; repair substrates and reapply air barrier components.

3.6 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections and prepare test reports.

B. Inspections: Air barrier materials and installation are subject to inspection for compliance with requirements. Inspections may include the following:

1. Continuity of air barrier system has been achieved throughout the building envelope with no gaps or holes.
2. Continuous structural support of air barrier system has been provided.
3. Masonry and concrete surfaces are smooth, clean and free of cavities, protrusions, and mortar droppings.
4. Site conditions for application temperature and dryness of substrates have been maintained.
5. Maximum exposure time of materials to UV deterioration has not been exceeded.
6. Surfaces have been primed, if applicable.
7. Laps in strips and transition strips have complied with minimum requirements and have been shingled in the correct direction (or mastic has been applied on exposed edges), with no fishmouths.
8. Termination mastic has been applied on cut edges.
9. Strips and transition strips have been firmly adhered to substrate.
10. Compatible materials have been used.
11. Transitions at changes in direction and structural support at gaps have been provided.
12. Connections between assemblies (membrane and sealants) have complied with requirements for cleanliness, preparation and priming of surfaces, structural support, integrity, and continuity of seal.
13. All penetrations have been sealed.

3.7 CLEANING AND PROTECTION

A. Protect air barrier system from damage during application and remainder of construction period, according to manufacturer's written instructions.

1. Protect air barrier from exposure to UV light and harmful weather exposure as required by manufacturer. Remove and replace air barrier exposed for more than 30 days.
2. Protect air barrier from contact with creosote, uncured coal-tar products, TPO, EPDM, flexible PVC membranes, and sealants not approved by air barrier manufacturer.

B. Clean spills, stains, and soiling from construction that would be exposed in the completed work using cleaning agents and procedures recommended by manufacturer of affected construction.

C. Remove masking materials after installation.

END OF SECTION 07 27 26

SECTION 07 41 13.16 - STANDING-SEAM METAL ROOF PANELS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes
1. Standing-seam metal roof panels.
2. Seam-mounted snow guards.
3. Gutters and Downspouts

B. Related Sections:

1. Section 075423 ‘Thermoplastic Polyolefin (TPO) Roofing’, for roofing insulation.
2. Section 076200 ‘Sheet Metal Flashing And Trim’
3. Section 077100 ‘’Roof Specialties’ for roof edge drainage systems

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
2. Review methods and procedures related to metal panel installation, including manufacturer's written instructions.
3. Examine support conditions for compliance with requirements, including alignment between and attachment to structural members.
4. Review structural loading limitations of deck during and after roofing.
5. Review flashings, special details, drainage, penetrations, equipment curbs, and condition of other construction that affect metal panels.
6. Review governing regulations and requirements for insurance, certificates, and tests and inspections if applicable.
7. Review temporary protection requirements for metal panel systems during and after installation.
8. Review procedures for repair of metal panels damaged after installation.
9. Document proceedings, including corrective measures and actions required, and furnish copy of record to each participant.

1.4 SUSTAINABLE DESIGN REQUIREMENTS

A. Applicable LEED Credits

1. SSc7.2

2. MRc2
3. MRc4
4. MRc5
5. IEQc4.2

B. LEED Requirements

1. SSc7.2:

   All roofing materials shall comply with the project requirements for Heat Island Effect, Roof. See Section 013510 Sustainable Design Requirements.Contractor shall provide LEED credit verification as per section 013300 Submittal Procedures.

2. MRc2: CONSTRUCTION WASTE MANAGEMENT

   No less than the specified portion of all construction waste from the Project shall be diverted from disposal in a landfill and/or incineration in with the Project Requirements for Construction Waste Management and Disposal. Refer to Specification Sections 017419 Construction Waste Management and Disposal and 013510 Sustainable Design Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

3. MRc4: Recycled Content Material

   No less than the specified minimum proportion of the building materials shall contain post-consumer and pre-consumer waste materials in accordance with the Project Requirements for Recycled Content Materials. All materials counted towards the computations of the proportion of the Recycled Content Materials shall comply with the standard minimum percentages of post-consumer waste materials and for the minimum percentages of pre-consumer waste materials. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

4. MRc5: REGIONALLY MANUFACTURED HARVESTED MATERIALS

   No less than the specified minimum proportion of the building materials shall be extracted, processed, and manufactured within 500 miles of the Project Site in accordance with the Project Requirements for Regionally Manufactured and/or Harvested Materials. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

5. IEQc4.2: Low Emitting Materials: Paints and Coatings

   All paints and coatings in the building interior shall comply with the Project Requirements for Low Emitting Materials – Paints and Coatings. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of panel and accessory.

B. Sustainable Design Submittals:

1. Product Test Reports: For roof materials, documentation indicating that roof materials comply with Solar Reflectance Index requirements.
2. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.

C. Shop Drawings:

1. Include fabrication and installation layouts of metal panels; details of edge conditions, joints, panel profiles, corners, anchorages, attachment system, trim, flashings, closures, and accessories; and special details.
2. Accessories: Include details of the flashing, trim, and anchorage systems, at a scale of not less than 1-1/2 inches per 12 inches (1:10).

D. Samples for Initial Selection: For each type of metal panel indicated with factory-applied color finishes.

1. Include similar Samples of trim and accessories involving color selection.

E. Samples for Verification: For each type of exposed finish required, prepared on Samples of size indicated below.

1. Metal Panels: 12 inches (305 mm) long by actual panel width. Include clips, fasteners, closures, and other metal panel accessories.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Product Test Reports: For each product, for tests performed by a qualified testing agency.

C. Field quality-control reports.

D. Sample Warranties: For special warranties.

1.7 CLOSEOUT SUBMITTALS

A. Maintenance Data: For metal panels to include in maintenance manuals.

1.8 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

B. UL-Certified, Portable Roll-Forming Equipment: UL-certified, portable roll-forming equipment capable of producing metal panels warranted by manufacturer to be the same as factory-formed products. Maintain UL certification of portable roll-forming equipment for duration of work.

C. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.

1. Build mockups for typical roof area only, including accessories.

a. Size: 12 feet (3.5 m) long by 6 feet (1.75 m).
b. Each type of exposed seam and seam termination.

2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
3. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Deliver components, metal panels, and other manufactured items so as not to be damaged or deformed. Package metal panels for protection during transportation and handling.

B. Unload, store, and erect metal panels in a manner to prevent bending, warping, twisting, and surface damage.

C. Stack metal panels horizontally on platforms or pallets, covered with suitable weathertight and ventilated covering. Store metal panels to ensure dryness, with positive slope for drainage of water. Do not store metal panels in contact with other materials that might cause staining, denting, or other surface damage.

D. Retain strippable protective covering on metal panels during installation.

1.10 FIELD CONDITIONS

A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit assembly of metal panels to be performed according to manufacturers' written instructions and warranty requirements.

1.11 COORDINATION

A. Coordinate sizes and locations of roof curbs, equipment supports, and roof penetrations with actual equipment provided.

B. Coordinate metal panel installation with rain drainage work, flashing, trim, construction of soffits, and other adjoining work to provide a leakproof, secure, and noncorrosive installation.

1.12 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of metal panel systems that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Structural failures including rupturing, cracking, or puncturing.
b. Deterioration of metals and other materials beyond normal weathering.

2. Warranty Period: Two years from date of Substantial Completion.

B. Special Warranty on Panel Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal panels that show evidence of deterioration of factory-applied finishes within specified warranty period.

1. Exposed Panel Finish: Deterioration includes, but is not limited to, the following:

a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.

2. Finish Warranty Period: 20 years from date of Substantial Completion.

C. Special Weather tightness Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace standing-seam metal roof panel assemblies that fail to remain weathertight, including leaks, within specified warranty period.

1. Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. General: Provide metal roof panel system meeting performance requirements as determined by application of specified tests by a qualified testing agency on manufacturer's standard assemblies.

B. Air Infiltration: Maximum 0.03 cfm/sq. ft. (0.3 L/s per sq. m) per ASTM E 1680 at a static-air-pressure difference of 4 lbf/sq. ft. (191.5 Pa).

C. Water Penetration Static Pressure: No uncontrolled water penetration at a static pressure of 6.4 lbf/sq. ft(306.4 Pa) when tested per ASTM E 1646.

D. Structural Performance: Provide metal panel systems capable of withstanding the effects of the following loads, based on testing according to ASTM E 1592:

1. Wind Loads: As indicated on Drawings.
2. Other Design Loads: As indicated on Drawings.
3. Deflection Limits: For wind loads, no greater than 1/180 of the span.

E. Hydrostatic-Head Resistance: No water penetration when tested according to ASTM E 2140.

F. Wind-Uplift Resistance: Provide metal roof panel assemblies that comply with UL 580 for wind-uplift-resistance class indicated.

1. Uplift Rating: UL 90.

G. FM Global Listing: Provide metal roof panels and component materials that comply with requirements in FM Global 4471 as part of a panel roofing system and that are listed in FM Global's "Approval Guide" for Class 1 or noncombustible construction, as applicable. Identify materials with FM Global markings.

1. Fire/Windstorm Classification: Class 1A- 90.
2. Hail Resistance: SH.

H. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

1. Temperature Change (Range): 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

I. Energy Performance:

1. Solar Reflectance Index: Minimum 78 for roof slopes of 2:12 or less and 29 for roof slopes greater than 2:12 per ASTM E 1980.

J. Fire Performance Characteristics: Provide metal roof panel system with the following fire-test characteristics.

1. Surface-Burning Characteristics: Provide metal roof panel system with the following characteristics when tested per ASTM E 84.
   a. Flame spread index: 25 or less.
   b. Smoke developed index: 450 or less.

K. Snow Guards Performance Requirements: Provide snow guards that withstand exposure to weather and resist thermally induced movement without failure, rattling, or fastener disengagement due to defective manufacture, fabrication, installation, or other defects in construction.
1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

L. Structural Performance:
1. Snow Loads: As indicated on Drawings.

2.2 STANDING-SEAM METAL ROOF PANELS

A. General: Provide factory-formed metal roof panels designed to be installed by lapping and interconnecting raised side edges of adjacent panels with joint type indicated and mechanically attaching panels to supports using concealed clips in side laps. Include clips, cleats, pressure plates, and accessories required for weathertight installation.

1. Steel Panel Systems: Unless more stringent requirements are indicated, comply with ASTM E 1514.

B. Vertical-Rib, Seamed-Joint, Standing-Seam Metal Roof Panels: Formed with vertical ribs at panel edges and intermediate stiffening ribs symmetrically spaced between ribs; designed for sequential installation by mechanically attaching panels to supports using concealed clips located under one side of panels, engaging opposite edge of adjacent panels, and mechanically seaming panels together.

1. Basis of Design: CENTRIA, SRS3 Structural Standing Seam Metal Roof Panel System.

2. Metallic-Coated Steel Sheet: Aluminum-zinc alloy-coated steel sheet complying with ASTM A 792/A 792M, Class AZ50 (Class AZM150) coating designation; structural quality. Prepainted by the coil-coating process to comply with ASTM A 755/A 755M.

a. Nominal Thickness: 0.036 inch (0.91 mm).
b. Surface: Smooth

3. Clips: Two-piece floating to accommodate thermal movement.

a. Material: 0.062-inch- (1.59-mm-) thick, stainless-steel sheet.

4. Panel Coverage: 18 inches (457 mm).

2.3 UNDERLAYMENT MATERIALS

A. Self-Adhering, High-Temperature Underlayment: Provide self-adhering, cold-applied, sheet underlayment, a minimum of 30 mils (0.76 mm) thick, consisting of slip-resistant, polyethylene-film top surface laminated to a layer of butyl or SBS-modified asphalt adhesive, with release-paper backing. Provide primer when recommended by underlayment manufacturer.

1. Thermal Stability: Stable after testing at 240 deg F (116 deg C); ASTM D 1970.
2. Low-Temperature Flexibility: Passes after testing at minus 20 deg F (29 deg C); ASTM D 1970.
3. <Double click here to find, evaluate, and insert list of manufacturers and products.>

B. Slip Sheet: Manufacturer's recommended slip sheet, of type required for application.

2.4 RAIL-TYPE SNOW GUARDS

A. Seam-Mounted, Rail-Type Snow Guards:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Alpine SnowGuards, a division of Vermont Slate & Copper Services, Inc. “SnowMaxSnowMax Standing Seam Fence-Style Snow Guard. **Basis of Design**
b. LMCurbs.
c. Sno-Gem, Inc.

d. Snow Management Systems.
e. TRA SNOW & SUN, INC.
f. S-5

2. Description: Snow guard rails fabricated from metal pipes, bars, or extrusions, anchored to brackets and equipped with one rail with color-matching inserts of material and finish used for metal roofing.
3. Material and Finish: Aluminum; Custom finish to match metal roof.

2.5 MISCELLANEOUS MATERIALS

A. Miscellaneous Metal Subframing and Furring: ASTM C 645; cold-formed, metallic-coated steel sheet, ASTM A 653/A 653M, G90 (Z275 hot-dip galvanized) coating designation or ASTM A 792/A 792M, Class AZ50 (Class AZM150) coating designation unless otherwise indicated. Provide manufacturer's standard sections as required for support and alignment of metal panel system.

B. Panel Accessories: Provide components required for a complete, weathertight panel system including trim, copings, fasciae, mullions, sills, corner units, clips, flashings, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of metal panels unless otherwise indicated.

1. Closures: Provide closures at eaves and ridges, fabricated of same metal as metal panels.
2. Backing Plates: Provide metal backing plates at panel end splices, fabricated from material recommended by manufacturer.
3. Closure Strips: Closed-cell, expanded, cellular, rubber or crosslinked, polyolefin-foam or closed-cell laminated polyethylene; minimum 1-inch- (25-mm-) thick, flexible closure strips; cut or premolded to match metal panel profile. Provide closure strips where indicated or necessary to ensure weathertight construction.

C. Flashing and Trim: Provide flashing and trim formed from same material as metal panels as required to seal against weather and to provide finished appearance. Locations include, but are not limited to, eaves, rakes, corners, bases, framed openings, ridges, fasciae, and fillers.
1. Finish flashing and trim to match metal roof panels.

D. Gutters: Formed from same material as roof panels, complete with end pieces, outlet tubes, and other special pieces as required. Fabricate in minimum 96-inch- (2400-mm-) long sections, of size and metal thickness according to SMACNA's "Architectural Sheet Metal Manual." Furnish gutter supports spaced a maximum of 36 inches (914 mm) o.c., fabricated from same metal as gutters. Provide wire ball strainers of compatible metal at outlets.

1. Size: As indicated on drawings.
2. Finish gutters to match metal panels.

E. Downspouts: Formed from same material as roof panels. Fabricate in 10-foot- (3-m-) long sections, complete with formed elbows and offsets, of size and metal thickness according to SMACNA's "Architectural Sheet Metal Manual."

1. Finish colors at cast stone: Match cast stone.
2. Finish colors at metal panel system: Match metal panel
3. Size: As indicated on drawings

F. Panel Fasteners: Self-tapping screws designed to withstand design loads.

G. Panel Sealants: Provide sealant type recommended by manufacturer that are compatible with panel materials, are nonstaining, and do not damage panel finish.

1. Sealant Tape: Pressure-sensitive, 100 percent solids, gray polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape 1/2 inch (13 mm) wide and 1/8 inch (3 mm) thick.
2. Joint Sealant: ASTM C 920; elastomeric polyurethane or silicone sealant; of type, grade, class, and use classifications required to seal joints in metal panels and remain weathertight; and as recommended in writing by metal panel manufacturer.
3. Butyl-Rubber-Based, Solvent-Release Sealant: ASTM C 1311.

2.6 FABRICATION

A. General: Fabricate and finish metal panels and accessories at the factory, by manufacturer's standard procedures and processes, as necessary to fulfill indicated performance requirements demonstrated by laboratory testing. Comply with indicated profiles and with dimensional and structural requirements.

B. On-Site Fabrication: Subject to compliance with requirements of this Section, metal panels may be fabricated on-site using UL-certified, portable roll-forming equipment if panels are of same profile and warranted by manufacturer to be equal to factory-formed panels. Fabricate according to equipment manufacturer's written instructions and to comply with details shown.

C. Provide panel profile, including major ribs and intermediate stiffening ribs, if any, for full length of panel.

D. Fabricate metal panel joints with factory-installed captive gaskets or separator strips that provide a weathertight seal and prevent metal-to-metal contact, and that minimize noise from movements.

E. Sheet Metal Flashing and Trim: Fabricate flashing and trim to comply with manufacturer's recommendations and recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to design, dimensions, metal, and other characteristics of item indicated.

1. Form exposed sheet metal accessories that are without excessive oil canning, buckling, and tool marks and that are true to line and levels indicated, with exposed edges folded back to form hems.
2. Seams for Other Than Aluminum: Fabricate nonmoving seams in accessories with flat-lock seams. Tin edges to be seamed, form seams, and solder.
3. Sealed Joints: Form nonexpansion, but movable, joints in metal to accommodate sealant and to comply with SMACNA standards.
4. Conceal fasteners and expansion provisions where possible. Exposed fasteners are not allowed on faces of accessories exposed to view.
5. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal recommended in writing by metal panel manufacturer.

a. Size: As recommended by SMACNA's "Architectural Sheet Metal Manual" or metal panel manufacturer for application, but not less than thickness of metal being secured.

2.7 FINISHES

A. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

B. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in same piece are unacceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

C. Steel Roof Panels and Accessories:

1. Three-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

a. Basis of Design: CENTRIA Duraguard Plus.

1) Color: #971 “Chromium Grey”

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, metal panel supports, and other conditions affecting performance of the Work.

1. Examine primary and secondary roof framing to verify that rafters, purlins, angles, channels, and other structural panel support members and anchorages have been installed within alignment tolerances required by metal roof panel manufacturer.
2. Examine solid roof sheathing to verify that sheathing joints are supported by framing or blocking and that installation is within flatness tolerances required by metal roof panel manufacturer.

a. Verify that air- or water-resistive barriers have been installed over sheathing or backing substrate to prevent air infiltration or water penetration.

B. Examine roughing-in for components and systems penetrating metal panels to verify actual locations of penetrations relative to seam locations of metal panels before installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Miscellaneous Supports: Install subframing, furring, and other miscellaneous panel support members and anchorages according to ASTM C 754 and metal panel manufacturer's written recommendations.

3.3 UNDERLAYMENT INSTALLATION

A. Self-Adhering Sheet Underlayment: Apply primer if required by manufacturer. Comply with temperature restrictions of underlayment manufacturer for installation. Apply at locations indicated, wrinkle free, in shingle fashion to shed water, and with end laps of not less than 6 inches (152 mm) staggered 24 inches (610 mm) between courses. Overlap side edges not less than 3-1/2 inches (90 mm). Extend underlayment into gutter trough. Roll laps with roller. Cover underlayment within 14 days.
   1. Apply over the roof area indicated below:

      a. Roof perimeter for a distance up from eaves of 36 inches (914 mm) beyond interior wall line.
      b. Around penetrating elements for a distance from element of 18 inches (460 mm).

B. Slip Sheet: Apply slip sheet over underlayment before installing metal roof panels.

C. Flashings: Install flashings to cover underlayment to comply with requirements specified in Section 076200 "Sheet Metal Flashing and Trim."

3.4 METAL PANEL INSTALLATION

A. General: Install metal panels according to manufacturer's written instructions in orientation, sizes, and locations indicated. Install metal roof panels in one piece lengths from the ridge to eave. Install panels perpendicular to supports unless otherwise indicated. Anchor metal panels and other components of the Work securely in place, with provisions for thermal and structural movement.

   1. Shim or otherwise plumb substrates receiving metal panels.
   2. Flash and seal metal panels at perimeter of all openings. Fasten with self-tapping screws. Do not begin installation until air- or water-resistive barriers and flashings that will be concealed by metal panels are installed.
   3. Install screw fasteners in predrilled holes.
   4. Locate and space fastenings in uniform vertical and horizontal alignment.
   5. Install flashing and trim as metal panel work proceeds.
   6. Locate panel splices over, but not attached to, structural supports. Stagger panel splices and end laps to avoid a four-panel lap splice condition.
   7. Align bottoms of metal panels and fasten with blind rivets, bolts, or self-tapping screws. Fasten flashings and trim around openings and similar elements with self-tapping screws.
   8. Provide weathertight escutcheons for pipe- and conduit-penetrating panels.

B. Fasteners:

   1. Steel Panels: Use stainless-steel fasteners for surfaces exposed to the exterior; use galvanized-steel fasteners for surfaces exposed to the interior.

C. Anchor Clips: Anchor metal roof panels and other components of the Work securely in place, using manufacturer's approved fasteners according to manufacturers' written instructions.

D. Metal Protection: Where dissimilar metals contact each other or corrosive substrates, protect against galvanic action as recommended in writing by metal panel manufacturer.

E. Standing-Seam Metal Roof Panel Installation: Fasten metal roof panels to supports with concealed clips at each standing-seam joint at location, spacing, and with fasteners recommended in writing by manufacturer.

1. Install clips to supports with self-tapping fasteners.
2. Install pressure plates at locations indicated in manufacturer's written installation instructions.
3. Seamed Joint: Crimp standing seams with manufacturer-approved, motorized seamer tool so clip, metal roof panel, and factory-applied sealant are completely engaged.
4. Watertight Installation:

    a. Apply a continuous ribbon of sealant or tape to seal joints of metal panels, using sealant or tape as recommend in writing by manufacturer as needed to make panels watertight.
    b. Provide sealant or tape between panels and protruding equipment, vents, and accessories.
    c. At panel splices, nest panels with minimum 6-inch (152-mm) end lap, sealed with sealant and fastened together by interlocking clamping plates.

F. Accessory Installation: Install accessories with positive anchorage to building and weathertight mounting, and provide for thermal expansion. Coordinate installation with flashings and other components.

1. Install components required for a complete metal panel system including trim, copings, corners, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items. Provide types indicated by metal roof panel manufacturers; or, if not indicated, types recommended by metal roof panel manufacturer.

G. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, and set units true to line and level as indicated. Install work with laps, joints, and seams that will be permanently watertight and weather resistant.

1. Install exposed flashing and trim that is without buckling and tool marks, and that is true to line and levels indicated, with exposed edges folded back to form hems. Install sheet metal flashing and trim to fit substrates and achieve waterproof and weather-resistant performance.
2. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of 10 feet (3 m) with no joints allowed within 24 inches (610 mm) of corner or intersection. Where lapped expansion provisions cannot be used or would not be sufficiently weather resistant and waterproof, form expansion joints of intermeshing hooked flanges, not less than 1 inch (25 mm) deep, filled with mastic sealant (concealed within joints).

H. Gutters: Join sections with riveted and soldered or lapped and sealed joints. Attach gutters to eave with gutter hangers spaced not more than 36 inches (914 mm) o.c. using manufacturer's standard fasteners. Provide end closures and seal watertight with sealant. Provide for thermal expansion.

I. Downspouts: Join sections with telescoping joints. Provide fasteners designed to hold downspouts securely 1 inch (25 mm) away from walls; locate fasteners at top and bottom and at approximately 60 inches (1524 mm) o.c. in between.

1. Provide elbows at base of downspouts to direct water away from building.
2. Connect downspouts to underground drainage system indicated.

J. Roof Curbs: Install flashing around bases where they meet metal roof panels.

K. Pipe Flashing: Form flashing around pipe penetration and metal roof panels. Fasten and seal to metal roof panels as recommended by manufacturer.

3.5 ERECTION TOLERANCES

A. Installation Tolerances: Shim and align metal panel units within installed tolerance of 1/4 inch in 20 feet (6 mm in 6 m) on slope and location lines as indicated and within 1/8-inch (3-mm) offset of adjoining faces and of alignment of matching profiles.

3.6 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect metal roof panel installation, including accessories. Report results in writing.

B. Remove and replace applications of metal roof panels where tests and inspections indicate that they do not comply with specified requirements.

C. Additional tests and inspections, at Contractor's expense, are performed to determine compliance of replaced or additional work with specified requirements.

D. Prepare test and inspection reports.

3.7 CLEANING AND PROTECTION

A. Remove temporary protective coverings and strippable films, if any, as metal panels are installed, unless otherwise indicated in manufacturer's written installation instructions. On completion of metal panel installation, clean finished surfaces as recommended by metal panel manufacturer. Maintain in a clean condition during construction.

B. Replace metal panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION 07 41 13.16

SECTION 07 42 13.13 - FORMED METAL WALL PANELS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Exposed-fastener, lap-seam aluminum metal wall panels.

B. Related Sections:
1. Section 074213.23 "Metal Composite Material Wall Panels" for metal-faced composite wall panels.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.
1. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
2. Review methods and procedures related to metal panel installation, including manufacturer's written instructions.
3. Examine support conditions for compliance with requirements, including alignment between and attachment to structural members.
4. Review flashings, special siding details, wall penetrations, openings, and condition of other construction that affect metal panels.
5. Review governing regulations and requirements for insurance, certificates, and tests and inspections if applicable.
6. Review temporary protection requirements for metal panel assembly during and after installation.
7. Review of procedures for repair of metal panels damaged after installation.
8. Document proceedings, including corrective measures and actions required, and furnish copy of record to each participant.

1.4 SUSTAINABLE DESIGN REQUIREMENTS

A. Applicable LEED Credits

1. MRc2
2. MRc4
3. MRc5
4. IEQc4.1

B. LEED Requirements

1. MRc2: CONSTRUCTION WASTE MANAGEMENT

No less than the specified portion of all construction waste from the Project shall be diverted from disposal in a landfill and/or incineration in with the Project Requirements for Construction Waste Management and Disposal. Refer to Specification Sections 017419 Construction Waste Management and Disposal and 013510 Sustainable Design Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

2. MRc4: Recycled Content Material

No less than the specified minimum proportion of the building materials shall contain post-consumer and pre-consumer waste materials in accordance with the Project Requirements for Recycled Content Materials. All materials counted towards the computations of the proportion of the Recycled Content Materials shall comply with the standard minimum percentages of post-consumer waste materials and for the minimum percentages of pre-consumer waste materials. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

3. MRc5: REGIONALLY MANUFACTURED HARVESTED MATERIALS

No less than the specified minimum proportion of the building materials shall be extracted, processed, and manufactured within 500 miles of the Project Site in accordance with the Project Requirements for Regionally Manufactured and/or Harvested Materials. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

4. IEQc4.1: Low Emitting Materials: Sealants and Adhesives

All sealants, adhesives, and sealant primers used on the interior of the building shall comply with the Project Requirements for Low Emitting Materials – Sealants and Adhesives. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of panel and accessory.

B. Shop Drawings:

1. Include fabrication and installation layouts of metal panels; details of edge conditions, joints, panel profiles, corners, anchorages, attachment system, trim, flashings, closures, and accessories; and special details.
2. Accessories: Include details of the flashing, trim, and anchorage systems, at a scale of not less than 1-1/2 inches per 12 inches (1:10).

C. Samples for Initial Selection: For each type of metal panel indicated with factory-applied finishes.

1. Include Samples of trim and accessories involving color selection.

D. Samples for Verification: For each type of exposed finish, prepared on Samples of size indicated below:

1. Metal Panels: 12 inches (305 mm) long by actual panel width. Include fasteners, closures, and other metal panel accessories.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Product Test Reports: For each product, for tests performed by a qualified testing agency.

C. Field quality-control reports.

D. Sample Warranties: For special warranties.

1.7 CLOSEOUT SUBMITTALS

A. Maintenance Data: For metal panels to include in maintenance manuals.

1.8 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

B. UL-Certified, Portable Roll-Forming Equipment: UL-certified, portable roll-forming equipment capable of producing metal panels warranted by manufacturer to be the same as factory-formed products. Maintain UL certification of portable roll-forming equipment for duration of work.

C. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.

1. Build mockup of typical metal panel assembly, including corner, supports, attachments, and accessories.
2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Deliver components, metal panels, and other manufactured items so as not to be damaged or deformed. Package metal panels for protection during transportation and handling.

B. Unload, store, and erect metal panels in a manner to prevent bending, warping, twisting, and surface damage.

C. Stack metal panels horizontally on platforms or pallets, covered with suitable weathertight and ventilated covering. Store metal panels to ensure dryness, with positive slope for drainage of water. Do not store metal panels in contact with other materials that might cause staining, denting, or other surface damage.

D. Retain strippable protective covering on metal panels during installation.

E. Copper Panels: Wear gloves when handling to prevent fingerprints and soiling of surface.

1.10 FIELD CONDITIONS

A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit assembly of metal panels to be performed according to manufacturers' written instructions and warranty requirements.

1.11 COORDINATION

A. Coordinate metal panel installation with rain drainage work, flashing, trim, construction of soffits, and other adjoining work to provide a leakproof, secure, and noncorrosive installation.

1.12 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of metal panel systems that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Structural failures including rupturing, cracking, or puncturing.
b. Deterioration of metals and other materials beyond normal weathering.

2. Warranty Period: Two years from date of Substantial Completion.

B. Special Warranty on Panel Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal panels that show evidence of deterioration of factory-applied finishes within specified warranty period.

1. Exposed Panel Finish: Deterioration includes, but is not limited to, the following:

a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.

b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.

2. Finish Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Structural Performance: Provide metal panel systems capable of withstanding the effects of the following loads, based on testing according to ASTM E 1592:

1. Wind Loads: As indicated on Drawings.
2. Other Design Loads: As indicated on Drawings.
3. Deflection Limits: For wind loads, no greater than 1/240 of the span.

B. Air Infiltration: Air leakage of not more than 0.06 cfm/sq. ft. (0.3 L/s per sq. m) when tested according to ASTM E 283 at the following test-pressure difference:

1. Test-Pressure Difference: 6.24 lbf/sq. ft. (300 Pa).

C. Water Penetration under Static Pressure: No water penetration when tested according to ASTM E 331 at the following test-pressure difference:

1. Test-Pressure Difference: 6.24 lbf/sq. ft. (300 Pa).

D. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

1. Temperature Change (Range): 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

E. Fire-Resistance Ratings: Comply with ASTM E 119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Indicate design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency.

2.2 EXPOSED-FASTENER, LAP-SEAM METAL WALL PANELS

A. General: Provide factory-formed metal panels designed to be field assembled by lapping side edges of adjacent panels and mechanically attaching panels to supports using exposed fasteners in side laps. Include accessories required for weathertight installation.

1. Aluminum Sheet: Coil-coated sheet, ASTM B 209 (ASTM B 209M), alloy as standard with manufacturer, with temper as required to suit forming operations and structural performance required.

B. Tapered-Rib-Profile, Exposed-Fastener Metal Wall Panels : Formed with raised, trapezoidal major ribs and intermediate stiffening ribs symmetrically spaced between major ribs.

1. Basis-of-Design: Centria Provile Series BR5-36.

a. Nominal Thickness: 0.040 inch (1.02 mm).
b. Surface: [**Smooth, flat**] [**Embossed**] finish.
c. Exterior Finish: Two-coat mica fluoropolymer.
d. Color: Centria Color 9946 Silversmith.

2.3 MISCELLANEOUS MATERIALS

A. Miscellaneous Metal Subframing and Furring: ASTM C 645, cold-formed, metallic-coated steel sheet, ASTM A 653/A 653M, G90 (Z275 hot-dip galvanized) coating designation or ASTM A 792/A 792M, Class AZ50 (Class AZM150) aluminum-zinc-alloy coating designation unless otherwise indicated. Provide manufacturer's standard sections as required for support and alignment of metal panel system.

B. Panel Accessories: Provide components required for a complete, weathertight panel system including trim, copings, fasciae, mullions, sills, corner units, clips, flashings, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of metal panels unless otherwise indicated.

1. Closures: Provide closures at eaves and rakes, fabricated of same metal as metal panels.
2. Backing Plates: Provide metal backing plates at panel end splices, fabricated from material recommended by manufacturer.
3. Closure Strips: Closed-cell, expanded, cellular, rubber or crosslinked, polyolefin-foam or closed-cell laminated polyethylene; minimum 1-inch- (25-mm-) thick, flexible closure strips; cut or premolded to match metal panel profile. Provide closure strips where indicated or necessary to ensure weathertight construction.

C. Flashing and Trim: Provide flashing and trim formed from same material as metal panels as required to seal against weather and to provide finished appearance. Locations include, but are not limited to, bases, drips, sills, jambs, corners, endwalls, framed openings, rakes, fasciae, parapet caps, soffits, reveals, and fillers. Finish flashing and trim with same finish system as adjacent metal panels.

D. Panel Fasteners: Self-tapping screws designed to withstand design loads. Provide exposed fasteners with heads matching color of metal panels by means of plastic caps or factory-applied coating. Provide EPDM or PVC sealing washers for exposed fasteners.

E. Panel Sealants: Provide sealant type recommended by manufacturer that are compatible with panel materials, are nonstaining, and do not damage panel finish.

1. Sealant Tape: Pressure-sensitive, 100 percent solids, gray polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape 1/2 inch (13 mm) wide and 1/8 inch (3 mm) thick.
2. Joint Sealant: ASTM C 920; elastomeric polyurethane or silicone sealant; of type, grade, class, and use classifications required to seal joints in metal panels and

remain weathertight; and as recommended in writing by metal panel manufacturer.

3. Butyl-Rubber-Based, Solvent-Release Sealant: ASTM C 1311.

2.4 FABRICATION

A. General: Fabricate and finish metal panels and accessories at the factory, by manufacturer's standard procedures and processes, as necessary to fulfill indicated performance requirements demonstrated by laboratory testing. Comply with indicated profiles and with dimensional and structural requirements.

B. On-Site Fabrication: Subject to compliance with requirements of this Section, metal panels may be fabricated on-site using UL-certified, portable roll-forming equipment if panels are of same profile and warranted by manufacturer to be equal to factory-formed panels. Fabricate according to equipment manufacturer's written instructions and to comply with details shown.

C. Provide panel profile, including major ribs and intermediate stiffening ribs, if any, for full length of panel.

D. Fabricate metal panel joints with factory-installed captive gaskets or separator strips that provide a weathertight seal and prevent metal-to-metal contact, and that minimize noise from movements.

E. Sheet Metal Flashing and Trim: Fabricate flashing and trim to comply with manufacturer's recommendations and recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to design, dimensions, metal, and other characteristics of item indicated.

1. Form exposed sheet metal accessories that are without excessive oil canning, buckling, and tool marks and that are true to line and levels indicated, with exposed edges folded back to form hems.
2. Seams for Aluminum: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with epoxy seam sealer. Rivet joints for additional strength.
3. Sealed Joints: Form nonexpansion, but movable, joints in metal to accommodate sealant and to comply with SMACNA standards.
4. Conceal fasteners and expansion provisions where possible. Exposed fasteners are not allowed on faces of accessories exposed to view.
5. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal recommended in writing by metal panel manufacturer.

a. Size: As recommended by SMACNA's "Architectural Sheet Metal Manual" or metal wall panel manufacturer for application but not less than thickness of metal being secured.

2.5 FINISHES

A. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

B. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable

variations in same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

C. Aluminum Panels and Accessories:

1. Mica Fluoropolymer: AAMA 621. Two-coat fluoropolymer finish with suspended mica flakes containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
2. Concealed Finish: Apply pretreatment and manufacturer's standard white or light-colored acrylic or polyester backer finish consisting of prime coat and wash coat with a minimum total dry film thickness of 0.5 mil (0.013 mm).

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, metal panel supports, and other conditions affecting performance of the Work.

1. Examine wall framing to verify that girts, angles, channels, studs, and other structural panel support members and anchorage have been installed within alignment tolerances required by metal wall panel manufacturer.
2. Examine wall sheathing to verify that sheathing joints are supported by framing or blocking and that installation is within flatness tolerances required by metal wall panel manufacturer.

a. Verify that air- or water-resistive barriers have been installed over sheathing or backing substrate to prevent air infiltration or water penetration.

B. Examine roughing-in for components and systems penetrating metal panels to verify actual locations of penetrations relative to seam locations of metal panels before installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Miscellaneous Supports: Install subframing, furring, and other miscellaneous panel support members and anchorages according to ASTM C 754 and metal panel manufacturer's written recommendations.

3.3 METAL PANEL INSTALLATION

A. General: Install metal panels according to manufacturer's written instructions in orientation, sizes, and locations indicated. Install panels perpendicular to supports unless otherwise indicated. Anchor metal panels and other components of the Work securely in place, with provisions for thermal and structural movement.

1. Shim or otherwise plumb substrates receiving metal panels.
2. Flash and seal metal panels at perimeter of all openings. Fasten with self-tapping screws. Do not begin installation until air- or water-resistive barriers and flashings that will be concealed by metal panels are installed.
3. Install screw fasteners in predrilled holes.
4. Locate and space fastenings in uniform vertical and horizontal alignment.
5. Install flashing and trim as metal panel work proceeds.
6. Locate panel splices over, but not attached to, structural supports. Stagger panel splices and end laps to avoid a four-panel lap splice condition.
7. Align bottoms of metal panels and fasten with blind rivets, bolts, or self-tapping screws. Fasten flashings and trim around openings and similar elements with self-tapping screws.
8. Provide weathertight escutcheons for pipe- and conduit-penetrating panels.

B. Fasteners:

1. Aluminum Panels: Use aluminum or stainless-steel fasteners for surfaces exposed to the exterior; use aluminum or galvanized-steel fasteners for surfaces exposed to the interior.

C. Metal Protection: Where dissimilar metals contact each other or corrosive substrates, protect against galvanic action as recommended in writing by metal panel manufacturer.

D. Lap-Seam Metal Panels: Fasten metal panels to supports with fasteners at each lapped joint at location and spacing recommended by manufacturer.

1. Lap ribbed or fluted sheets one full rib. Apply panels and associated items true to line for neat and weathertight enclosure.
2. Provide metal-backed washers under heads of exposed fasteners bearing on weather side of metal panels.
3. Locate and space exposed fasteners in uniform vertical and horizontal alignment. Use proper tools to obtain controlled uniform compression for positive seal without rupture of washer.
4. Install screw fasteners with power tools having controlled torque adjusted to compress washer tightly without damage to washer, screw threads, or panels. Install screws in predrilled holes.
5. Flash and seal panels with weather closures at perimeter of all openings.

E. Watertight Installation:

1. Apply a continuous ribbon of sealant or tape to seal lapped joints of metal panels, using sealant or tape as recommend by manufacturer on side laps of nesting-type panels; and elsewhere as needed to make panels watertight.
2. Provide sealant or tape between panels and protruding equipment, vents, and accessories.
3. At panel splices, nest panels with minimum 6-inch (152-mm) end lap, sealed with sealant and fastened together by interlocking clamping plates.

F. Accessory Installation: Install accessories with positive anchorage to building and weathertight mounting, and provide for thermal expansion. Coordinate installation with flashings and other components.

1. Install components required for a complete metal panel system including trim, copings, corners, seam covers, flashings, sealants, gaskets, fillers, closure strips,

and similar items. Provide types indicated by metal wall panel manufacturer; or, if not indicated, provide types recommended by metal panel manufacturer.

G. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, and set units true to line and level as indicated. Install work with laps, joints, and seams that are permanently watertight.

1. Install exposed flashing and trim that is without buckling and tool marks, and that is true to line and levels indicated, with exposed edges folded back to form hems. Install sheet metal flashing and trim to fit substrates and achieve waterproof performance.
2. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of 10 feet (3 m) with no joints allowed within 24 inches (610 mm) of corner or intersection. Where lapped expansion provisions cannot be used or would not be sufficiently waterproof, form expansion joints of intermeshing hooked flanges, not less than 1 inch (25 mm) deep, filled with mastic sealant (concealed within joints).

3.4 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect completed metal wall panel installation, including accessories.

C. Remove and replace metal wall panels where tests and inspections indicate that they do not comply with specified requirements.

D. Additional tests and inspections, at Contractor's expense, are performed to determine compliance of replaced or additional work with specified requirements.

E. Prepare test and inspection reports.

3.5 CLEANING AND PROTECTION

A. Remove temporary protective coverings and strippable films, if any, as metal panels are installed, unless otherwise indicated in manufacturer's written installation instructions. On completion of metal panel installation, clean finished surfaces as recommended by metal panel manufacturer. Maintain in a clean condition during construction.

B. After metal panel installation, clear weep holes and drainage channels of obstructions, dirt, and sealant.

C. Replace metal panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION 074213.13

SECTION 07 42 13.19 - INSULATED METAL WALL PANELS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Foamed-insulation-core metal wall panels.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Meet with Owner, Architect, Owner's insurer if applicable, metal panel Installer, metal panel manufacturer's representative, structural-support Installer, and installers whose work interfaces with or affects metal panels, including installers of doors, windows, and louvers.
2. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
3. Review methods and procedures related to metal panel installation, including manufacturer's written instructions.
4. Examine support conditions for compliance with requirements, including alignment between and attachment to structural members.
5. Review flashings, special siding details, wall penetrations, openings, and condition of other construction that affect metal panels.
6. Review governing regulations and requirements for insurance, certificates, and tests and inspections if applicable.
7. Review temporary protection requirements for metal panel assembly during and after installation.
8. Review procedures for repair of metal panels damaged after installation.
9. Document proceedings, including corrective measures and actions required, and furnish copy of record to each participant.

1.4 SUSTAINABLE DESIGN REQUIREMENTS

A. Applicable LEED Credits

1. MRc2
2. MRc4
3. MRc5
4. IEQc4.1

B. LEED Requirements

1. MRc2: CONSTRUCTION WASTE MANAGEMENT

No less than the specified portion of all construction waste from the Project shall be diverted from disposal in a landfill and/or incineration in with the Project Requirements for Construction Waste Management and Disposal. Refer to Specification Sections 017419 Construction Waste Management and Disposal and 013510 Sustainable Design Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

2. MRc4: Recycled Content Material

No less than the specified minimum proportion of the building materials shall contain post-consumer and pre-consumer waste materials in accordance with the Project Requirements for Recycled Content Materials. All materials counted towards the computations of the proportion of the Recycled Content Materials shall comply with the standard minimum percentages of post-consumer waste materials and for the minimum percentages of pre-consumer waste materials. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

3. MRc5: REGIONALLY MANUFACTURED HARVESTED MATERIALS

No less than the specified minimum proportion of the building materials shall be extracted, processed, and manufactured within 500 miles of the Project Site in accordance with the Project Requirements for Regionally Manufactured and/or Harvested Materials. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

4. IEQc4.1: Low Emitting Materials: Sealants and Adhesives

All sealants, adhesives, and sealant primers used on the interior of the building shall comply with the Project Requirements for Low Emitting Materials – Sealants and Adhesives. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of panel and accessory.

B. Sustainable Design Submittals:

1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.

C. Shop Drawings:

1. Include fabrication and installation layouts of metal panels; details of edge conditions, joints, panel profiles, corners, anchorages, attachment system, trim, flashings, closures, and accessories; and special details.
2. Accessories: Include details of the flashing, trim, and anchorage systems, at a scale of not less than 1-1/2 inches per 12 inches (1:10).

D. Samples for Initial Selection: For each type of metal panel indicated with factory-applied color finishes.

1. Include similar Samples of trim and accessories involving color selection.

E. Samples for Verification: For each type of exposed finish, prepared on Samples of size indicated below.

1. Metal Panels: 12 inches (305 mm) long by actual panel width. Include fasteners, closures, and other metal panel accessories.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Product Test Reports: For each product, tests performed by a qualified testing agency.

C. Field quality-control reports.

D. Sample Warranties: For special warranties.

1.7 CLOSEOUT SUBMITTALS

A. Maintenance Data: For metal panels to include in maintenance manuals.

1.8 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

B. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.

1. Build mockup of typical metal panel assembly, including corner, soffits, supports, attachments, and accessories.
2. Water-Spray Test: Conduct water-spray test of metal panel assembly mockup, testing for water penetration according to AAMA 501.2.
3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Deliver components, metal panels, and other manufactured items so as not to be damaged or deformed. Package metal panels for protection during transportation and handling.

B. Unload, store, and erect metal panels in a manner to prevent bending, warping, twisting, and surface damage.

C. Stack metal panels horizontally on platforms or pallets, covered with suitable weathertight and ventilated covering. Store metal panels to ensure dryness, with positive slope for drainage of water. Do not store metal panels in contact with other materials that might cause staining, denting, or other surface damage.

D. Retain strippable protective covering on metal panels during installation.

1.10 FIELD CONDITIONS

A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit assembly of metal panels to be performed according to manufacturers' written instructions and warranty requirements.

1.11 COORDINATION

A. Coordinate metal panel installation with rain drainage work, flashing, trim, construction of soffits, and other adjoining work to provide a leakproof, secure, and noncorrosive installation.

1.12 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of metal panel systems that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Structural failures including rupturing, cracking, or puncturing.
b. Deterioration of metals and other materials beyond normal weathering.

2. Warranty Period: Two years from date of Substantial Completion.

B. Special Warranty on Panel Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal panels that show evidence of deterioration of factory-applied finishes within specified warranty period.

1. Exposed Panel Finish: Deterioration includes, but is not limited to, the following:

a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.

2. Finish Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Structural Performance: Provide metal panel systems capable of withstanding the effects of the following loads, based on testing according to ASTM E 72:

1. Wind Loads: As indicated on Drawings.
2. Other Design Loads: As indicated on Drawings.
3. Deflection Limits: For wind loads, no greater than 1/240 of the span.

B. Air Infiltration: Air leakage of not more than 0.06 cfm/sq. ft. (0.3 L/s per sq. m) when tested according to ASTM E 283 at the following test-pressure difference:

1. Test-Pressure Difference: 6.24 lbf/sq. ft. (300 Pa).

C. Water Penetration under Static Pressure: No water penetration when tested according to ASTM E 331 at the following test-pressure difference:

1. Test-Pressure Difference: 6.24 lbf/sq. ft. (300 Pa).

D. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

1. Temperature Change (Range): 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

E. Fire-Test-Response Characteristics: Provide metal wall panels and system components with the following fire-test-response characteristics, as determined by testing identical panels and system components per test method indicated below by UL or another testing and inspecting agency acceptable to authorities having jurisdiction. Identify products with appropriate markings of applicable testing agency.

1. Fire-Resistance Characteristics: Provide materials and construction tested for fire resistance per ASTM E 119.
2. Intermediate-Scale Multistory Fire Test: Tested mockup, representative of completed multistory wall assembly of which wall panel is a part, complies with NFPA 285 for test method and required fire-test-response characteristics of exterior non-load-bearing wall panel assemblies.
3. Radiant Heat Exposure: No ignition when tested according to NFPA 268.
4. Potential Heat: Acceptable level when tested according to NFPA 259.
5. Surface-Burning Characteristics: Provide wall panels with a flame-spread index of 25 or less and a smoke-developed index of 450 or less, per ASTM E 84.

2.2 FOAMED-INSULATION-CORE METAL WALL PANELS

A. General: Provide factory-formed and -assembled metal wall panels fabricated from two metal facing sheets and insulation core foamed in place during fabrication, and with joints between panels designed to form weathertight seals. Include accessories required for weathertight installation.

1. Insulation Core: Modified isocyanurate foam using a non-CFC blowing agent, with maximum flame-spread and smoke-developed indexes of 25 and 450, respectively.

a. Closed-Cell Content: 90 percent when tested according to ASTM D 6226.
b. Density: 2.7 lb/cu. ft. when tested according to ASTM D 1622.
c. Compressive Strength: Minimum 20 psi (140 kPa) when tested according to ASTM D 1621.
d. Shear Strength: 26 psi (179 kPa) when tested according to ASTM C 273/C 273M.

B. Concealed-Fastener, Foamed-Insulation-Core Metal Wall Panels: Formed with tongue-and-groove panel edges; designed for sequential installation by interlocking panel edges and mechanically attaching panels to supports using concealed clips or fasteners.

1. Basis of Design Product: Provide CENTRIA Architectural Systems “Formawall Dimension Series Insulated Core Metal Wall Panels”, or comparable product, subject to compliance with requirements.

2. Metallic-Coated Steel Sheet: Facings of zinc-coated (galvanized) steel sheet complying with ASTM A 653/A 653M, G90 (Z275) coating designation, or aluminum-zinc alloy-coated steel sheet complying with ASTM A 792/A 792M, Class AZ50 (Class AZM150) coating designation; structural quality. Prepainted by the coil-coating process to comply with ASTM A 755/A 755M.

a. Nominal Thickness: [**0.030 inch (0.76 mm)**].
b. Surface: Smooth, flat.
c. Exterior Finish: Two-coat mica fluoropolymer.

1) Color: Match formed metal wall panels.

d. Interior Finish: 0.2 mil primer with 0.6 mil acrylic color coat.

1) Color: As selected by Architect from manufacturer's full range.

3. Panel Coverage: Custom widths indicated.
4. Panel Thickness: 2.5 inches (64 mm).
5. Thermal-Resistance Value (R-Value): R-17 according to ASTM C 1363.
6.

2.3 MISCELLANEOUS MATERIALS

A. Miscellaneous Metal Subframing and Furring: ASTM C 645, cold-formed, metallic-coated steel sheet, ASTM A 653/A 653M, G90 (Z275 hot-dip galvanized) coating designation or ASTM A 792/A 792M, Class AZ50 (Class AZM150) aluminum-zinc-alloy

coating designation unless otherwise indicated. Provide manufacturer's standard sections as required for support and alignment of metal panel system.

B. Panel Accessories: Provide components required for a complete, weathertight panel system including trim, copings, fasciae, mullions, sills, corner units, clips, flashings, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of metal panels unless otherwise indicated.

1. Closures: Provide closures at eaves and rakes, fabricated of same metal as metal panels.
2. Backing Plates: Provide metal backing plates at panel end splices, fabricated from material recommended by manufacturer.
3. Closure Strips: Closed-cell, expanded, cellular, rubber or crosslinked, polyolefin-foam or closed-cell laminated polyethylene; minimum 1-inch- (25-mm-) thick, flexible closure strips; cut or premolded to match metal panel profile. Provide closure strips where indicated or necessary to ensure weathertight construction.

C. Flashing and Trim: Provide flashing and trim formed from same material as metal panels as required to seal against weather and to provide finished appearance. Locations include, but are not limited to, bases, drips, sills, jambs, corners, endwalls, framed openings, rakes, fasciae, parapet caps, soffits, reveals, and fillers. Finish flashing and trim with same finish system as adjacent metal panels.

D. Panel Fasteners: Self-tapping screws designed to withstand design loads. Provide exposed fasteners with heads matching color of metal panels by means of plastic caps or factory-applied coating. Provide EPDM or PVC sealing washers for exposed fasteners.

E. Panel Sealants: Provide sealant type recommended by manufacturer that are compatible with panel materials, are nonstaining, and do not damage panel finish.

1. Sealant Tape: Pressure-sensitive, 100 percent solids, gray polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape 1/2 inch (13 mm) wide and 1/8 inch (3 mm) thick.
2. Joint Sealant: ASTM C 920; elastomeric polyurethane or silicone sealant; of type, grade, class, and use classifications required to seal joints in metal panels and remain weathertight; and as recommended in writing by metal panel manufacturer.
3. Butyl-Rubber-Based, Solvent-Release Sealant: ASTM C 1311.

2.4 FABRICATION

A. General: Fabricate and finish metal panels and accessories at the factory, by manufacturer's standard procedures and processes, as necessary to fulfill indicated performance requirements demonstrated by laboratory testing. Comply with indicated profiles and with dimensional and structural requirements.

B. Provide panel profile, including major ribs and intermediate stiffening ribs, if any, for full length of panel.

C. Fabricate metal panel joints with factory-installed captive gaskets or separator strips that provide a weathertight seal and prevent metal-to-metal contact, and that minimize noise from movements.

D. Sheet Metal Flashing and Trim: Fabricate flashing and trim to comply with manufacturer's recommendations and recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to design, dimensions, metal, and other characteristics of item indicated.

1. Form exposed sheet metal accessories that are without excessive oil canning, buckling, and tool marks and that are true to line and levels indicated, with exposed edges folded back to form hems.
2. Seams for Other Than Aluminum: Fabricate nonmoving seams in accessories with flat-lock seams. Tin edges to be seamed, form seams, and solder.
3. Sealed Joints: Form nonexpansion, but movable, joints in metal to accommodate sealant and to comply with SMACNA standards.
4. Conceal fasteners and expansion provisions where possible. Exposed fasteners are not allowed on faces of accessories exposed to view.
5. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal recommended in writing by metal panel manufacturer.

a. Size: As recommended by SMACNA's "Architectural Sheet Metal Manual" or metal wall panel manufacturer for application but not less than thickness of metal being secured.

2.5 FINISHES

A. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

B. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

C. Steel Panels and Accessories:
1. Mica Fluoropolymer: AAMA 621. Two-coat fluoropolymer finish with suspended mica flakes containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
2. Concealed Finish: Apply pretreatment and manufacturer's standard white or light-colored acrylic or polyester backer finish consisting of prime coat and wash coat with a minimum total dry film thickness of 0.8 mil.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, metal panel supports, and other conditions affecting performance of the Work.

1. Examine wall framing to verify that girts, angles, channels, studs, and other structural panel support members and anchorage have been installed within alignment tolerances required by metal wall panel manufacturer.
2. Examine wall sheathing to verify that sheathing joints are supported by framing or blocking and that installation is within flatness tolerances required by metal wall panel manufacturer.

    a. Verify that air- or water-resistive barriers have been installed over sheathing or backing substrate to prevent air infiltration or water penetration.

B. Examine roughing-in for components and systems penetrating metal panels to verify actual locations of penetrations relative to seam locations of metal panels before installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Miscellaneous Supports: Install subframing, furring, and other miscellaneous panel support members and anchorages according to ASTM C 754 and metal panel manufacturer's written recommendations.

3.3 METAL PANEL INSTALLATION

A. General: Install metal panels according to manufacturer's written instructions in orientation, sizes, and locations indicated. Install panels perpendicular to supports unless otherwise indicated. Anchor metal panels and other components of the Work securely in place, with provisions for thermal and structural movement.

1. Shim or otherwise plumb substrates receiving metal panels.
2. Flash and seal metal panels at perimeter of all openings. Fasten with self-tapping screws. Do not begin installation until air- or water-resistive barriers and flashings that will be concealed by metal panels are installed.
3. Install screw fasteners in predrilled holes.
4. Locate and space fastenings in uniform vertical and horizontal alignment.
5. Install flashing and trim as metal panel work proceeds.
6. Locate panel splices over, but not attached to, structural supports. Stagger panel splices and end laps to avoid a four-panel lap splice condition.
7. Align bottoms of metal panels and fasten with blind rivets, bolts, or self-tapping screws. Fasten flashings and trim around openings and similar elements with self-tapping screws.
8. Provide weathertight escutcheons for pipe- and conduit-penetrating panels.

B. Fasteners:

1. Steel Panels: Use stainless-steel fasteners for surfaces exposed to the exterior; use galvanized-steel fasteners for surfaces exposed to the interior.

C. Metal Protection: Where dissimilar metals contact each other or corrosive substrates, protect against galvanic action as recommended in writing by metal panel manufacturer.

D. Joint Sealers: Install gaskets, joint fillers, and sealants where indicated and where required for weathertight performance of metal wall panel assemblies. Provide types of gaskets, fillers, and sealants indicated by metal panel manufacturer; or, if not indicated, provide types recommended by metal wall panel manufacturer.

1. Seal metal wall panel end laps with double beads of tape or sealant, full width of panel. Seal side joints where recommended by metal wall panel manufacturer.
2. Prepare joints and apply sealants to comply with requirements in Section 079200 "Joint Sealants."

3.4 INSULATED METAL WALL PANEL INSTALLATION

A. General: Apply continuous ribbon of sealant to panel joint on concealed side of insulated metal wall panels as vapor seal; apply sealant to panel joint on exposed side of panels for weather seal.

1. Fasten foamed-insulation-core metal wall panels to supports with fasteners at each lapped joint at location and spacing and with fasteners recommended by manufacturer.
2. Apply panels and associated items true to line for neat and weathertight enclosure. Avoid "panel creep" or application not true to line.
3. Provide metal-backed washers under heads of exposed fasteners on weather side of insulated metal wall panels.
4. Locate and space exposed fasteners in uniform vertical and horizontal alignment. Use proper tools to obtain controlled uniform compression for positive seal without rupture of washer.
5. Provide sealant tape at lapped joints of insulated metal wall panels and between panels and protruding equipment, vents, and accessories.
6. Apply a continuous ribbon of sealant tape to panel side laps and elsewhere as needed to make panels weathertight.
7. Apply snap-on battens to exposed-fastener, insulated-core metal wall panel seams to conceal fasteners.

B. Foamed-Insulation-Core Metal Wall Panels: Fasten metal wall panels to supports with concealed clips at each joint at location and spacing and with fasteners recommended by manufacturer. Fully engage tongue and groove of adjacent panels.

1. Install clips to supports with self-tapping fasteners.

C. Accessory Installation: Install accessories with positive anchorage to building and weathertight mounting, and provide for thermal expansion. Coordinate installation with flashings and other components.

1. Install components required for a complete metal panel system including trim, copings, corners, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items. Provide types indicated by metal panel manufacturer; or, if not indicated, provide types recommended by metal panel manufacturer.

D. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, and set units true to line and level. Install work with laps, joints, and seams that are permanently watertight.

1. Install exposed flashing and trim that is without buckling and tool marks, and that is true to line and levels indicated, with exposed edges folded back to form hems. Install sheet metal flashing and trim to fit substrates and to achieve waterproof performance.
2. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of 10 feet (3 m) with no joints allowed within 24 inches (610 mm) of corner or intersection. Where lapped expansion provisions cannot be used or would not be sufficiently waterproof, form expansion joints of intermeshing hooked flanges, not less than 1 inch (25 mm) deep, filled with mastic sealant (concealed within joints).

3.5 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Water-Spray Test: After installation, test area of assembly as directed by Architect for water penetration according to AAMA 501.2.

C. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect completed metal wall panel installation, including accessories.

D. Metal wall panels will be considered defective if they do not pass test and inspections.

E. Additional tests and inspections, at Contractor's expense, are performed to determine compliance of replaced or additional work with specified requirements.

F. Prepare test and inspection reports.

3.6 CLEANING AND PROTECTION

A. Remove temporary protective coverings and strippable films, if any, as metal panels are installed, unless otherwise indicated in manufacturer's written installation instructions. On completion of metal panel installation, clean finished surfaces as recommended by metal panel manufacturer. Maintain in a clean condition during construction.

B. After metal panel installation, clear weep holes and drainage channels of obstructions, dirt, and sealant.

C. Replace metal panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION 074213.19

SECTION 07 54 23 - THERMOPLASTIC POLYOLEFIN (TPO) ROOFING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Adhered thermoplastic polyolefin (TPO) roofing system.
2. Vapor retarder.
3. Roof insulation.

B. Section includes the installation of insulation strips in ribs of roof deck. Insulation strips are furnished under Section 053100 "Steel Decking."

C. Related Requirements:

1. Division 06 Section " Miscellaneous Rough Carpentry" for wood nailers, curbs, and blocking.
2. Division 07 Section "Sheet Metal Flashing and Trim" for metal roof penetration flashings, flashings, and counterflashings.
3. Division 07 Section "Joint Sealants" for joint sealants, joint fillers, and joint preparation.
4. Division 22 Section "Storm Drainage Piping Specialties" for roof drains.

1.3 DEFINITIONS

A. Roofing Terminology: Definitions in ASTM D 1079 and glossary in NRCA's "The NRCA Roofing and Waterproofing Manual" apply to work of this Section.

B. TPO: Thermoplastic polyolefin.

1.4 PREINSTALLATION MEETINGS

A. Preliminary Roofing Conference: Before starting roof deck construction, conduct conference at Project site.

1. Meet with Owner, Architect, Owner's insurer if applicable, testing and inspecting agency representative, roofing Installer, roofing system manufacturer's representative, deck Installer, and installers whose work interfaces with or affects roofing, including installers of roof accessories and roof-mounted equipment.
2. Review methods and procedures related to roofing installation, including manufacturer's written instructions.

3. Review and finalize construction schedule, and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
4. Review deck substrate requirements for conditions and finishes, including flatness and fastening.
5. Review structural loading limitations of roof deck during and after roofing.
6. Review base flashings, special roofing details, roof drainage, roof penetrations, equipment curbs, and condition of other construction that affects roofing system.
7. Review governing regulations and requirements for insurance and certificates if applicable.
8. Review temporary protection requirements for roofing system during and after installation.
9. Review roof observation and repair procedures after roofing installation.

B. Preinstallation Roofing Conference: Conduct conference at Project site.

1. Meet with Owner, Architect, Owner's insurer if applicable, testing and inspecting agency representative, roofing Installer, roofing system manufacturer's representative, deck Installer, and installers whose work interfaces with or affects roofing, including installers of roof accessories and roof-mounted equipment.
2. Review methods and procedures related to roofing installation, including manufacturer's written instructions.
3. Review and finalize construction schedule, and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
4. Examine deck substrate conditions and finishes for compliance with requirements, including flatness and fastening.
5. Review structural loading limitations of roof deck during and after roofing.
6. Review base flashings, special roofing details, roof drainage, roof penetrations, equipment curbs, and condition of other construction that affects roofing system.
7. Review governing regulations and requirements for insurance and certificates if applicable.
8. Review temporary protection requirements for roofing system during and after installation.
9. Review roof observation and repair procedures after roofing installation.

1.5 SUSTAINABLE DESIGN REQUIREMENTS

A. Applicable LEED Credits

1. SSc7.2
2. MRc2
3. MRc4
4. MRc5
5. IEQc4.1

B. LEED Requirements

1. SSc7.2:

   All roofing materials shall comply with the project requirements for Heat Island Effect, Roof. See Section 013510 Sustainable Design Requirements. Contractor shall provide LEED credit verification as per section 013300 Submittal Procedures.

2. MRc2: CONSTRUCTION WASTE MANAGEMENT

   No less than the specified portion of all construction waste from the Project shall be diverted from disposal in a landfill and/or incineration in with the Project Requirements for Construction Waste Management and Disposal. Refer to Specification Sections 017419 Construction Waste Management and Disposal and 013510 Sustainable Design Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

3. MRc4: Recycled Content Material

   No less than the specified minimum proportion of the building materials shall contain post-consumer and pre-consumer waste materials in accordance with the Project Requirements for Recycled Content Materials. All materials counted towards the computations of the proportion of the Recycled Content Materials shall comply with the standard minimum percentages of post-consumer waste materials and for the minimum percentages of pre-consumer waste materials. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

4. MRc5: REGIONALLY MANUFACTURED HARVESTED MATERIALS

   No less than the specified minimum proportion of the building materials shall be extracted, processed, and manufactured within 500 miles of the Project Site in accordance with the Project Requirements for Regionally Manufactured and/or Harvested Materials. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

5. IEQc4.1: Low Emitting Materials: Sealants and Adhesives

   All sealants, adhesives, and sealant primers used on the interior of the building shall comply with the Project Requirements for Low Emitting Materials – Sealants and Adhesives. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

1.6 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

   1. Product Test Reports: For roof materials, documentation indicating that roof materials comply with Solar Reflectance Index requirements.
   2. Product Data: For adhesives and sealants, indicating VOC content.
   3. Laboratory Test Reports: For adhesives and sealants, indicating compliance with requirements for low-emitting materials.

C. Shop Drawings: For roofing system. Include plans, elevations, sections, details, and attachments to other work, including:

   1. Base flashings and membrane terminations.

2. Tapered insulation, including slopes.

D. Samples for Verification: For the following products:

1. Sheet roofing, of color required.
2. Walkway pads or rolls, of color required.

1.7 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer and manufacturer.

B. Manufacturer Certificates: Signed by roofing manufacturer certifying that roofing system complies with requirements specified in "Performance Requirements" Article.

1. Submit evidence of compliance with performance requirements.

C. Product Test Reports: For components of roofing system, tests performed by manufacturer and witnessed by a qualified testing agency.

D. Research/Evaluation Reports: For components of roofing system, from ICC-ES.

E. Field quality-control reports.

F. Sample Warranties: For manufacturer's special warranties.

1.8 CLOSEOUT SUBMITTALS

A. Maintenance Data: For roofing system to include in maintenance manuals.

1.9 QUALITY ASSURANCE

A. Manufacturer Qualifications: A qualified manufacturer that is FM Global approved for roofing system identical to that used for this Project.

B. Installer Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive manufacturer's special warranty.

1.10 DELIVERY, STORAGE, AND HANDLING

A. Deliver roofing materials to Project site in original containers with seals unbroken and labeled with manufacturer's name, product brand name and type, date of manufacture, approval or listing agency markings, and directions for storing and mixing with other components.

B. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by roofing system manufacturer. Protect stored liquid material from direct sunlight.

1. Discard and legally dispose of liquid material that cannot be applied within its stated shelf life.

C. Protect roof insulation materials from physical damage and from deterioration by sunlight, moisture, soiling, and other sources. Store in a dry location. Comply with insulation manufacturer's written instructions for handling, storing, and protecting during installation.

D. Handle and store roofing materials, and place equipment in a manner to avoid permanent deflection of deck.

1.11 FIELD CONDITIONS

A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit roofing system to be installed according to manufacturer's written instructions and warranty requirements.

1.12 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of roofing system that fail in materials or workmanship within specified warranty period.

1. Special warranty includes roofing, base flashings, roof insulation, cover boards, substrate board, roofing accessories, and other components of roofing system.
2. Warranty Period: 10 years from date of Substantial Completion.

B. Special Project Warranty: Submit roofing Installer's warranty, on warranty form at end of this Section, signed by Installer, covering the Work of this Section, including all components of roofing system such as roofing, base flashing, roof insulation, fasteners, cover boards, substrate boards, vapor retarders, roof pavers, and walkway products, for the following warranty period:

1. Warranty Period: Two years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following :

a. Carlisle SynTec Incorporated.
b. Custom Seal Roofing.
c. Firestone Building Products Company.
d. GAF Materials Corporation.
e. GenFlex Roofing Systems.
f. Johns Manville.
g. Mule-Hide Products Co., Inc.
h. Stevens Roofing Systems; Division of JPS Elastomerics.
i. Versico Incorporated.

B. Source Limitations: Obtain components including roof insulation for roofing system from same manufacturer as membrane roofing or manufacturer approved by membrane roofing manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. General Performance: Installed roofing and base flashings shall withstand specified uplift pressures, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Roofing and base flashings shall remain watertight.

1. Accelerated Weathering: Roofing system shall withstand 2000 hours of exposure when tested according to ASTM G 152, ASTM G 154, or ASTM G 155.
2. Impact Resistance: Roofing system shall resist impact damage when tested according to ASTM D 3746 or ASTM D 4272.

B. Material Compatibility: Roofing materials shall be compatible with one another and adjacent materials under conditions of service and application required, as demonstrated by roofing manufacturer based on testing and field experience.

C. FM Global Listing: Roofing, base flashings, and component materials shall comply with requirements in FM Global 4450 or FM Global 4470 as part of a built-up roofing system, and shall be listed in FM Global's "RoofNav" for Class 1 or noncombustible construction, as applicable. Identify materials with FM Global markings.

1. Fire/Windstorm Classification: Class 1A-60.
2. Hail-Resistance Rating: MH.

D. Solar Reflectance Index: Not less than 78 when calculated according to ASTM E 1980, based on testing identical products by a qualified testing agency.

E. Energy Star Listing: Roofing system shall be listed on the DOE's ENERGY STAR "Roof Products Qualified Product List" for low-slope roof products.

F. Energy Performance: Roofing system shall have an initial solar reflectance of not less than 0.70 and an emissivity of not less than 0.75 when tested according to CRRC-1.

G. Exterior Fire-Test Exposure: ASTM E 108 or UL 790, Class A; for application and roof slopes indicated; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

H. Fire-Resistance Ratings: Comply with fire-resistance-rated assembly designs indicated. Identify products with appropriate markings of applicable testing agency.

2.3 TPO ROOFING

A. Fabric-Reinforced TPO Sheet: ASTM D 6878, internally fabric- or scrim-reinforced, uniform, flexible fabric-backed TPO sheet.

1. Thickness: 60 mils (1.5 mm), nominal.
2. Exposed Face Color: White.

2.4 AUXILIARY ROOFING MATERIALS

A. General: Auxiliary materials recommended by roofing system manufacturer for intended use and compatible with roofing.

1. Liquid-type auxiliary materials shall comply with VOC limits of authorities having jurisdiction.
2. Adhesives and sealants shall comply with the following limits for VOC content:

    a. Plastic Foam Adhesives: 50 g/L.
    b. Gypsum Board and Panel Adhesives: 50 g/L.
    c. Multipurpose Construction Adhesives: 70 g/L.
    d. Fiberglass Adhesives: 80 g/L.
    e. Contact Adhesives: 80 g/L.
    f. PVC Welding Compounds: 510 g/L.
    g. Other Adhesives: 250 g/L.
    h. Single-Ply Roof Membrane Sealants: 450 g/L.
    i. Nonmembrane Roof Sealants: 300 g/L.
    j. Sealant Primers for Nonporous Substrates: 250 g/L.
    k. Sealant Primers for Porous Substrates: 775 g/L.

3. Adhesives and sealants shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

B. Sheet Flashing: Manufacturer's standard unreinforced TPO sheet flashing, 55 mils (1.4 mm) thick, minimum, of same color as TPO sheet.

C. Bonding Adhesive: Manufacturer's standard, water based.

D. Slip Sheet: Manufacturer's standard, of thickness required for application.

E. Metal Termination Bars: Manufacturer's standard, predrilled stainless-steel or aluminum bars, approximately 1 by 1/8 inch (25 by 3 mm) thick; with anchors.

F. Metal Battens: Manufacturer's standard, aluminum-zinc-alloy-coated or zinc-coated steel sheet, approximately 1 inch wide by 0.05 inch thick (25 mm wide by 1.3 mm thick), prepunched.

G. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Global 4470, designed for fastening roofing to substrate, and acceptable to roofing system manufacturer.

H. Miscellaneous Accessories: Provide pourable sealers, preformed cone and vent sheet flashings, preformed inside and outside corner sheet flashings, T-joint covers, lap sealants, termination reglets, and other accessories.

2.5 VAPOR RETARDER

A. Laminated Sheet: Kraft paper, two layers, laminated with asphalt and edge reinforced with woven fiberglass yarn with maximum permeance rating of 0.50 perm (29 ng/Pa x s x sq. m) and with manufacturer's standard adhesive.

2.6 ROOF INSULATION

A. General: Preformed roof insulation boards manufactured or approved by TPO membrane roofing manufacturer, selected from manufacturer's standard sizes suitable

for application, of thicknesses indicated and that produce FM Approvals-approved roof insulation.

B. Polyisocyanurate Board Insulation: ASTM C 1289, Type II, Class I, Grade 3, felt or glass-fiber mat facer on both major surfaces.

C. Tapered Insulation: Provide factory-tapered insulation boards fabricated to slope of 1/4 inch per 12 inches (1:48) unless otherwise indicated.

D. Provide preformed saddles, crickets, tapered edge strips, and other insulation shapes where indicated for sloping to drain. Fabricate to slopes indicated.

2.7 INSULATION ACCESSORIES

A. General: Furnish roof insulation accessories recommended by insulation manufacturer for intended use and compatibility with membrane roofing.

B. Bead-Applied Insulation Adhesive: Insulation manufacturer's recommended bead-applied, low-rise, one- or multicomponent urethane adhesive formulated to attach roof insulation to substrate or to another insulation layer.

C. Thermal Barrier Underlayment: ASTM C 1177/C 1177M, glass-mat, water-resistant gypsum substrate, 1/4 inch (16 mm) thick.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

D. Georgia-Pacific Corporation; Dens Deck Board

E. Cover Board: ASTM C 1177/C 1177M, glass-mat, water-resistant gypsum substrate, 5/8 inch (16 mm) thick, factory primed.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

a. Georgia-Pacific Corporation; Dens Deck Prime .

2.8 WALKWAYS

A. Flexible Walkways: Factory-formed, nonporous, heavy-duty, slip-resisting, surface-textured walkway pads or rolls, approximately 3/16 inch (5 mm) thick and acceptable to roofing system manufacturer.

1. Color: White

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the Work:

1. Verify that roof openings and penetrations are in place, curbs are set and braced, and roof-drain bodies are securely clamped in place.
2. Verify that wood blocking, curbs, and nailers are securely anchored to roof deck at penetrations and terminations and that nailers match thicknesses of insulation.
3. Verify that minimum concrete drying period recommended by roofing system manufacturer has passed.
4. Verify that concrete substrate is visibly dry and free of moisture. Test for capillary moisture by plastic sheet method according to ASTM D 4263.
5. Verify that concrete-curing compounds that will impair adhesion of roofing components to roof deck have been removed.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Clean substrate of dust, debris, moisture, and other substances detrimental to roofing installation according to roofing system manufacturer's written instructions. Remove sharp projections.

B. Prevent materials from entering and clogging roof drains and conductors and from spilling or migrating onto surfaces of other construction. Remove roof-drain plugs when no work is taking place or when rain is forecast.

C. Install insulation strips according to acoustical roof deck manufacturer's written instructions.

3.3 ROOFING INSTALLATION, GENERAL

A. Install roofing system according to roofing system manufacturer's written instructions.

B. Complete terminations and base flashings and provide temporary seals to prevent water from entering completed sections of roofing system at the end of the workday or when rain is forecast. Remove and discard temporary seals before beginning work on adjoining roofing.

C. Install roofing and auxiliary materials to tie in to existing roofing to maintain weathertightness of transition and to not void warranty for existing roofing system.

3.4 VAPOR-RETARDER INSTALLATION

A. Laminate Sheet: Loosely lay laminate-sheet vapor retarder in a single layer over area to receive vapor retarder, side and end lapping each sheet a minimum of 2 inches (50 mm) and 6 inches (150 mm), respectively. Continuously seal side and end laps with tape.

B. Completely seal vapor retarder at terminations, obstructions, and penetrations to prevent air movement into roofing system.

3.5 INSULATION INSTALLATION

A. Coordinate installing roofing system components so insulation is not exposed to precipitation or left exposed at the end of the workday.

B. Comply with roofing system and insulation manufacturer's written instructions for installing roof insulation.

C. Install tapered insulation under area of roofing to conform to slopes indicated.

D. Install insulation under area of roofing to achieve required thickness. Where overall insulation thickness is 2.7 inches (68 mm) or greater, install two or more layers with joints of each succeeding layer staggered from joints of previous layer a minimum of 6 inches (150 mm) in each direction.

1. Where installing composite and noncomposite insulation in two or more layers, install noncomposite board insulation for bottom layer and intermediate layers, if applicable, and install composite board insulation for top layer.

E. Trim surface of insulation where necessary at roof drains so completed surface is flush and does not restrict flow of water.

F. Install insulation with long joints of insulation in a continuous straight line with end joints staggered between rows, abutting edges and ends between boards. Fill gaps exceeding 1/4 inch (6 mm) with insulation.

1. Cut and fit insulation within 1/4 inch (6 mm) of nailers, projections, and penetrations.

G. Mechanically Fastened Insulation: Install each layer of insulation and secure to deck using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to deck type.

1. Fasten insulation according to requirements in FM Global's "RoofNav" for specified Windstorm Resistance Classification.
2. Fasten insulation to resist uplift pressure at corners, perimeter, and field of roof.

H. Mechanically Fastened and Adhered Insulation: Install each layer of insulation to deck using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to deck type.

1. Fasten first layer of insulation according to requirements in FM Global's "RoofNav" for specified Windstorm Resistance Classification.
2. Fasten first layer of insulation to resist uplift pressure at corners, perimeter, and field of roof.
3. Set each subsequent layer of insulation in a solid mopping of hot roofing asphalt, applied within plus or minus 25 deg F (14 deg C) of equiviscous temperature.
4. Set each subsequent layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
5. Set each subsequent layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.

I. Install cover boards over insulation with long joints in continuous straight lines with end joints staggered between rows. Offset joints of insulation below a minimum of 6 inches (150 mm) in each direction. Loosely butt cover boards together.

1. Fasten cover boards according to requirements in FM Global's "RoofNav" for specified Windstorm Resistance Classification.
2. Fasten cover boards to resist uplift pressure at corners, perimeter, and field of roof.

J. Install slip sheet over insulation and immediately beneath roofing.

3.6 BASE FLASHING INSTALLATION

A. Install sheet flashings and preformed flashing accessories, and adhere to substrates according to roofing system manufacturer's written instructions.

B. Apply bonding adhesive to substrate and underside of sheet flashing at required rate, and allow to partially dry. Do not apply to seam area of flashing.

C. Flash penetrations and field-formed inside and outside corners with cured or uncured sheet flashing.

D. Clean seam areas, overlap, and firmly roll sheet flashings into the adhesive. Hot-air weld side and end laps to ensure a watertight seam installation.

E. Terminate and seal top of sheet flashings.

3.7 WALKWAY INSTALLATION

A. Flexible Walkways: Install walkway products in locations indicated. Heat weld to substrate or adhere walkway products to substrate with compatible adhesive according to roofing system manufacturer's written instructions.

3.8 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to inspect substrate conditions, surface preparation, membrane application, flashings, protection, and drainage components, and to furnish reports to Architect.

1. Electric Field Vector Mapping (EFVM): Testing agency shall survey entire roof area for potential leaks using electric field vector mapping (EFVM).

B. Final Roof Inspection: Arrange for roofing system manufacturer's technical personnel to inspect roofing installation on completion.

C. Repair or remove and replace components of roofing system where inspections indicate that they do not comply with specified requirements.

D. Additional testing and inspecting, at Contractor's expense, will be performed to determine if replaced or additional work complies with specified requirements.

3.9 PROTECTING AND CLEANING

A. Protect roofing system from damage and wear during remainder of construction period. When remaining construction does not affect or endanger roofing, inspect roofing for

deterioration and damage, describing its nature and extent in a written report, with copies to Architect and Owner.

B. Correct deficiencies in or remove roofing system that does not comply with requirements, repair substrates, and repair or reinstall roofing system to a condition free of damage and deterioration at time of Substantial Completion and according to warranty requirements.

C. Clean overspray and spillage from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

3.10 ROOFING INSTALLER'S WARRANTY

A. WHEREAS _____ of _____, herein called the "Roofing Installer," has performed roofing and associated work ("work") on the following project:

1. Owner: _____.
2. Address: _____.
3. Building Name/Type: _____.
4. Address: _____.
5. Area of Work: _____.
6. Acceptance Date: _____.
7. Warranty Period: 20 years.
8. Expiration Date: _____.

B. AND WHEREAS Roofing Installer has contracted (either directly with Owner or indirectly as a subcontractor) to warrant said work against leaks and faulty or defective materials and workmanship for designated Warranty Period,

C. NOW THEREFORE Roofing Installer hereby warrants, subject to terms and conditions herein set forth, that during Warranty Period he will, at his own cost and expense, make or cause to be made such repairs to or replacements of said work as are necessary to correct faulty and defective work and as are necessary to maintain said work in a watertight condition.

D. This Warranty is made subject to the following terms and conditions:

1. Specifically excluded from this Warranty are damages to work and other parts of the building, and to building contents, caused by:

    a. Lightning;
    b. Peak gust wind speed exceeding 90 mph (m/sec);
    c. Fire;
    d. Failure of roofing system substrate, including cracking, settlement, excessive deflection, deterioration, and decomposition;
    e. Faulty construction of parapet walls, copings, chimneys, skylights, vents, equipment supports, and other edge conditions and penetrations of the work;
    f. Vapor condensation on bottom of roofing; and
    g. Activity on roofing by others, including construction contractors, maintenance personnel, other persons, and animals, whether authorized or unauthorized by Owner.

2. When work has been damaged by any of foregoing causes, Warranty shall be null and void until such damage has been repaired by Roofing Installer and until cost and expense thereof have been paid by Owner or by another responsible party so designated.
3. Roofing Installer is responsible for damage to work covered by this Warranty but is not liable for consequential damages to building or building contents resulting from leaks or faults or defects of work.
4. During Warranty Period, if Owner allows alteration of work by anyone other than Roofing Installer, including cutting, patching, and maintenance in connection with penetrations, attachment of other work, and positioning of anything on roof, this Warranty shall become null and void on date of said alterations, but only to the extent said alterations affect work covered by this Warranty. If Owner engages Roofing Installer to perform said alterations, Warranty shall not become null and void unless Roofing Installer, before starting said work, shall have notified Owner in writing, showing reasonable cause for claim, that said alterations would likely damage or deteriorate work, thereby reasonably justifying a limitation or termination of this Warranty.
5. During Warranty Period, if original use of roof is changed and it becomes used for, but was not originally specified for, a promenade, work deck, spray-cooled surface, flooded basin, or other use or service more severe than originally specified, this Warranty shall become null and void on date of said change, but only to the extent said change affects work covered by this Warranty.
6. Owner shall promptly notify Roofing Installer of observed, known, or suspected leaks, defects, or deterioration and shall afford reasonable opportunity for Roofing Installer to inspect work and to examine evidence of such leaks, defects, or deterioration.
7. This Warranty is recognized to be the only warranty of Roofing Installer on said work and shall not operate to restrict or cut off Owner from other remedies and resources lawfully available to Owner in cases of roofing failure. Specifically, this Warranty shall not operate to relieve Roofing Installer of responsibility for performance of original work according to requirements of the Contract Documents, regardless of whether Contract was a contract directly with Owner or a subcontract with Owner's General Contractor.

E. IN WITNESS THEREOF, this instrument has been duly executed this _____ day of _____, _____.

1. Authorized Signature: _____.
2. Name: _____.
3. Title: _____.
4.

END OF SECTION 07 54 23

SECTION 07 62 00 - SHEET METAL FLASHING AND TRIM

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Manufactured through-wall flashing with counterflashing.
2. Manufactured reglets with counterflashing.
3. Formed low-slope roof sheet metal fabrications.
4. Formed wall sheet metal fabrications.
5. Formed equipment support flashing.
6. Formed overhead-piping safety pans.
7.

B. Related Requirements:

1. Section 061053 "Miscellaneous Rough Carpentry" for wood nailers, curbs, and blocking.
2. Section 076200 “Standing-Seam Metal Roof Panels” Installation of sheet metal flashing trim integral with roofing, and gutters and downspouts
3. Section 075423 “Thermoplastic Polyolefin (TPO) Roofing” Installation of sheet metal flashing and trim integral with roofing.
4. Section 074213.23 “Metal Composite Material Wall Panels" for sheet metal flashing and trim integral with metal wall panels.
5. Section 077200 "Roof Accessories" for set-on-type curbs, equipment supports, roof hatches, vents, and other manufactured roof accessory units.

1.3 COORDINATION

A. Coordinate sheet metal flashing and trim layout and seams with sizes and locations of penetrations to be flashed, and joints and seams in adjacent materials.

B. Coordinate sheet metal flashing and trim installation with adjoining roofing and wall materials, joints, and seams to provide leakproof, secure, and noncorrosive installation.

1.4 SUSTAINABLE DESIGN REQUIREMENTS

A. Applicable LEED Credits

1. SSc7.2
2. MRc2
3. MRc4

4. MRc5
5. IEQc4.1

B. SSc7.2 REDUCTION OF HEAT ISLANDS, ROOF SURFACES

1. All roofing materials shall comply with the project requirements for Heat Island Effect, Roof. See Section 018113 Sustainable Design Requirements.
2. Contractor shall provide LEED credit verification as per section 013300 Submittal Procedures.

C. MRc2: CONSTRUCTION WASTE MANAGEMENT

1. No less than the specified minimum proportion of all construction waste from the project shall be diverted from disposal in a landfill and/or incineration in accordance with the project requirements for Construction Waste Management. See Section 018113 Sustainable Design Requirements.
2. Contractor shall provide LEED credit verification as per section 013300 Submittal Procedures.

D. MRc4: Recycled Content Material

1. No less than the specified minimum proportion of the building materials shall contain post-consumer and pre-consumer waste materials in accordance with the project requirements for Recycled Content Materials. All materials counted toward the computation of the proportion of the Recycled Content Materials shall comply with the standard for the minimum percentages of post-consumer waste materials and for the minimum percentage of pre-consumer waste materials. See Section 018113 Sustainable Design Requirements.
2. Contractor shall provide LEED credit verification as per Section 013300 Submittal Procedures.

E. MRc5: REGIONALLY MANUFACTURED HARVESTED MATERIALS

1. No less than the specified proportion of the building materials shall be extracted, processed, and manufactured within 500 miles of the project site in accordance with the project requirements for Regionally Manufactured and/or Harvested Materials. See Section 018113 Sustainable Design Requirements.
2. Contractor shall provide LEED credit verification as per Section 013300 Submittal Procedures

F. IEQc4.1; Low-Emitting Materials – Sealants and Adhesives

1. All sealants, adhesives, and sealant primers used on the interior of the building shall comply with the Project Requirements for Low Emitting Materials – Sealants and Adhesives. Refer to Specification Section 013510 Sustainable Project Requirements.
2. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each manufactured product and accessory.

B. Sustainable Design Submittals:

1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.

C. Shop Drawings: For sheet metal flashing and trim.

1. Include plans, elevations, sections, and attachment details.
2. Detail fabrication and installation layouts, expansion-joint locations, and keyed details. Distinguish between shop- and field-assembled work.
3. Include identification of material, thickness, weight, and finish for each item and location in Project.
4. Include details for forming, including profiles, shapes, seams, and dimensions.
5. Include details for joining, supporting, and securing, including layout and spacing of fasteners, cleats, clips, and other attachments. Include pattern of seams.
6. Include details of termination points and assemblies.
7. Include details of expansion joints and expansion-joint covers, including showing direction of expansion and contraction from fixed points.
8. Include details of roof-penetration flashing.
9. Include details of edge conditions, including eaves, ridges, valleys, rakes, crickets, and counterflashings as applicable.
10. Include details of special conditions.
11. Include details of connections to adjoining work.
12. Detail formed flashing and trim at scale of not less than 1-1/2 inches per 12 inches (1:10).

D. Samples for Initial Selection: For each type of sheet metal and accessory indicated with factory-applied finishes.

E. Samples for Verification: For each type of exposed finish.

1. Sheet Metal Flashing: 12 inches (300 mm) long by actual width of unit, including finished seam and in required profile. Include fasteners, cleats, clips, closures, and other attachments.
2. Trim, Metal Closures, Expansion Joints, Joint Intersections, and Miscellaneous Fabrications: 12 inches (300 mm) long and in required profile. Include fasteners and other exposed accessories.
3. Unit-Type Accessories and Miscellaneous Materials: Full-size Sample.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For fabricator.

B. Product Certificates: For each type of coping and roof edge flashing that is FM Approvals approved.

C. Product Test Reports: For each product, for tests performed by a qualified testing agency.

D. Sample Warranty: For special warranty.

1.7 CLOSEOUT SUBMITTALS

A. Maintenance Data: For sheet metal flashing and trim, and its accessories, to include in maintenance manuals.

1.8 QUALITY ASSURANCE

A. Fabricator Qualifications: Employs skilled workers who custom fabricate sheet metal flashing and trim similar to that required for this Project and whose products have a record of successful in-service performance.

1. For copings and roof edge flashings that are SPRI ES-1 tested and FM Approvals approved, shop shall be listed as able to fabricate required details as tested and approved.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Do not store sheet metal flashing and trim materials in contact with other materials that might cause staining, denting, or other surface damage. Store sheet metal flashing and trim materials away from uncured concrete and masonry.

B. Protect strippable protective covering on sheet metal flashing and trim from exposure to sunlight and high humidity, except to extent necessary for period of sheet metal flashing and trim installation.

1.10 WARRANTY

A. Special Warranty on Finishes: Manufacturer agrees to repair finish or replace sheet metal flashing and trim that shows evidence of deterioration of factory-applied finishes within specified warranty period.

1. Exposed Panel Finish: Deterioration includes, but is not limited to, the following:

a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.

2. Finish Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. General: Sheet metal flashing and trim assemblies shall withstand wind loads, structural movement, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Completed sheet metal flashing and trim shall not rattle, leak, or loosen, and shall remain watertight.

B. Sheet Metal Standard for Flashing and Trim: Comply with NRCA's "The NRCA Roofing Manual" and SMACNA's "Architectural Sheet Metal Manual" requirements for dimensions and profiles shown unless more stringent requirements are indicated.

C. FM Approvals Listing: Manufacture and install copings and roof edge flashings that are listed in FM Approvals' "RoofNav" and approved for windstorm classification, Class 1-60. Identify materials with name of fabricator and design approved by FM Approvals.

D. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes to prevent buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

2.2 SHEET METALS

A. General: Protect mechanical and other finishes on exposed surfaces from damage by applying a strippable, temporary protective film before shipping.

B. Stainless-Steel Sheet: ASTM A 240/A 240M or ASTM A 666, Type 304, dead soft, fully annealed.

1. Finish: 2D (dull, cold rolled).
2. Surface: Smooth, flat.

2.3 UNDERLAYMENT MATERIALS

A. Polyethylene Sheet: 6-mil- thick polyethylene sheet complying with ASTM D 4397.

B. Felt: ASTM D 226, Type II (No. 30), asphalt-saturated organic felt, nonperforated.

C. Self-Adhering, High-Temperature Sheet: Minimum 30 to 40 mils thick, consisting of slip-resisting polyethylene-film top surface laminated to layer of butyl or SBS-modified asphalt adhesive, with release-paper backing; cold applied. Provide primer when recommended by underlayment manufacturer.

1. Thermal Stability: ASTM D 1970; stable after testing at 240 deg F.
2. Low-Temperature Flexibility: ASTM D 1970; passes after testing at minus 20 deg F.
3. Products: Subject to compliance with requirements, provide one of the following:

a. Carlisle Coatings & Waterproofing Inc.; CCW WIP 300HT.
b. Grace Construction Products, a unit of W. R. Grace & Co.; Ultra.
c. Henry Company; Blueskin PE200 HT.
d. Metal-Fab Manufacturing, LLC; MetShield.
e. Owens Corning; WeatherLock Metal High Temperature Underlayment.

D. Slip Sheet: Building paper, 3-lb/100 sq. ft. minimum, rosin sized.

2.4 MISCELLANEOUS MATERIALS

A. General: Provide materials and types of fasteners, solder, welding rods, protective coatings, separators, sealants, and other miscellaneous items as required for complete sheet metal flashing and trim installation and recommended by manufacturer of primary sheet metal or manufactured item unless otherwise indicated.

B. Fasteners: Wood screws, annular threaded nails, self-tapping screws, self-locking rivets and bolts, and other suitable fasteners designed to withstand design loads and recommended by manufacturer of primary sheet metal or manufactured item.

1. General: Blind fasteners or self-drilling screws, gasketed, with hex-washer head.

a. Exposed Fasteners: Heads matching color of sheet metal using plastic caps or factory-applied coating.
b. Blind Fasteners: High-strength aluminum or stainless-steel rivets suitable for metal being fastened.
c. Spikes and Ferrules: Same material as gutter; with spike with ferrule matching internal gutter width.

2. Fasteners for Stainless-Steel Sheet: Series 300 stainless steel.

C. Solder:

1. For Stainless Steel: ASTM B 32, Grade Sn60, with an acid flux of type recommended by stainless-steel sheet manufacturer.

D. Sealant Tape: Pressure-sensitive, 100 percent solids, gray polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape 1/2 inch wide and 1/8 inch thick.

E. Elastomeric Sealant: ASTM C 920, elastomeric silicone polymer sealant; low modulus; of type, grade, class, and use classifications required to seal joints in sheet metal flashing and trim and remain watertight.

F. Butyl Sealant: ASTM C 1311, single-component, solvent-release butyl rubber sealant; polyisobutylene plasticized; heavy bodied for hooked-type expansion joints with limited movement.

G. Bituminous Coating: Cold-applied asphalt emulsion complying with ASTM D 1187.

H. Asphalt Roofing Cement: ASTM D 4586, asbestos free, of consistency required for application.

2.5 FABRICATION, GENERAL

A. General: Custom fabricate sheet metal flashing and trim to comply with recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to design, dimensions, geometry, metal thickness, and other characteristics of item indicated. Fabricate items at the shop to greatest extent possible.

1. Fabricate sheet metal flashing and trim in thickness or weight needed to comply with performance requirements, but not less than that specified for each application and metal.

2. Obtain field measurements for accurate fit before shop fabrication.
3. Form sheet metal flashing and trim without excessive oil canning, buckling, and tool marks and true to line and levels indicated, with exposed edges folded back to form hems.
4. Conceal fasteners and expansion provisions where possible. Exposed fasteners are not allowed on faces exposed to view.

B. Fabrication Tolerances: Fabricate sheet metal flashing and trim that is capable of installation to a tolerance of 1/4 inch in 20 feet on slope and location lines as indicated and within 1/8-inch offset of adjoining faces and of alignment of matching profiles.

C. Fabrication Tolerances: Fabricate sheet metal flashing and trim that is capable of installation to tolerances specified in MCA's "Guide Specification for Residential Metal Roofing."

D. Sealed Joints: Form nonexpansion but movable joints in metal to accommodate elastomeric sealant.

E. Expansion Provisions: Where lapped expansion provisions cannot be used, form expansion joints of intermeshing hooked flanges, not less than 1 inch deep, filled with butyl sealant concealed within joints.

F. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal.

G. Fabricate cleats and attachment devices of sizes as recommended by SMACNA's "Architectural Sheet Metal Manual" and by FMG Loss Prevention Data Sheet 1-49 for application, but not less than thickness of metal being secured.

H. Seams: Fabricate nonmoving seams with flat-lock seams. Tin edges to be seamed, form seams, and solder.

I. Do not use graphite pencils to mark metal surfaces.

2.6 LOW-SLOPE ROOF SHEET METAL FABRICATIONS

A. Roof-Penetration Flashing: Fabricate from the following materials:

1. Stainless Steel: 0.019 inch thick.

B. Roof-Drain Flashing: Fabricate from the following materials:

1. Stainless Steel: 0.016 inch thick.

2.7 WALL SHEET METAL FABRICATIONS

A. Through-Wall Flashing: Fabricate continuous flashings in minimum 96-inch- long, but not exceeding 12-foot- long, sections, under copings, at shelf angles, and where indicated. Fabricate discontinuous lintel, sill, and similar flashings to extend 6 inches beyond each side of wall openings. Form with 2-inch- high, end dams where flashing is discontinuous. Fabricate from the following materials:
1. Stainless Steel: 0.016 inch thick.

2.8 MISCELLANEOUS SHEET METAL FABRICATIONS

A. Equipment Support Flashing: Fabricate from the following materials:

1. Stainless Steel: 0.019 inch thick.

B. Overhead-Piping Safety Pans: Fabricate from the following materials:

1. Stainless Steel: 0.025 inch thick.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, to verify actual locations, dimensions and other conditions affecting performance of the Work.

1. Verify compliance with requirements for installation tolerances of substrates.
2. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored.

B. For the record, prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 UNDERLAYMENT INSTALLATION

A. General: Install underlayment as indicated on Drawings.

B. Polyethylene Sheet: Install polyethylene sheet with adhesive for anchorage to minimize use of mechanical fasteners under sheet metal flashing and trim. Apply in shingle fashion to shed water, with lapped and taped joints of not less than 2 inches.

C. Felt Underlayment: Install felt underlayment with adhesive for temporary anchorage to minimize use of mechanical fasteners under sheet metal flashing and trim. Apply in shingle fashion to shed water, with lapped joints of not less than 2 inches.

D. Self-Adhering Sheet Underlayment: Install self-adhering sheet underlayment, wrinkle free. Apply primer if required by underlayment manufacturer. Comply with temperature restrictions of underlayment manufacturer for installation; use primer rather than nails for installing underlayment at low temperatures. Apply in shingle fashion to shed water, with end laps of not less than 6 inches staggered 24 inches between courses. Overlap side edges not less than 3-1/2 inches. Roll laps with roller. Cover underlayment within 14 days.

3.3 INSTALLATION, GENERAL

A. General: Anchor sheet metal flashing and trim and other components of the Work securely in place, with provisions for thermal and structural movement. Use fasteners,

solder, welding rods, protective coatings, separators, sealants, and other miscellaneous items as required to complete sheet metal flashing and trim system.

1. Install sheet metal flashing and trim true to line and levels indicated. Provide uniform, neat seams with minimum exposure of solder, welds, and sealant.
2. Install sheet metal flashing and trim to fit substrates and to result in watertight performance. Verify shapes and dimensions of surfaces to be covered before fabricating sheet metal.
3. Space cleats not more than 12 inches apart. Anchor each cleat with two fasteners. Bend tabs over fasteners.
4. Install exposed sheet metal flashing and trim without excessive oil canning, buckling, and tool marks.
5. Install sealant tape where indicated.
6. Torch cutting of sheet metal flashing and trim is not permitted.
7. Do not use graphite pencils to mark metal surfaces.

B. Metal Protection: Where dissimilar metals will contact each other or corrosive substrates, protect against galvanic action by painting contact surfaces with bituminous coating or by other permanent separation as recommended by SMACNA.

1. Coat back side of uncoated aluminum and stainless-steel sheet metal flashing and trim with bituminous coating where flashing and trim will contact wood, ferrous metal, or cementitious construction.
2. Underlayment: Where installing metal flashing directly on cementitious or wood substrates, install a course of felt underlayment and cover with a slip sheet or install a course of polyethylene sheet.

C. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of 10 feet with no joints allowed within 24 inches of corner or intersection. Where lapped expansion provisions cannot be used or would not be sufficiently watertight, form expansion joints of intermeshing hooked flanges, not less than 1 inch deep, filled with sealant concealed within joints.

D. Fastener Sizes: Use fasteners of sizes that will penetrate metal decking not less than recommended by fastener manufacturer to achieve maximum pull-out resistance .

E. Seal joints as shown and as required for watertight construction.

1. Where sealant-filled joints are used, embed hooked flanges of joint members not less than 1 inch into sealant. Form joints to completely conceal sealant. When ambient temperature at time of installation is moderate, between 40 and 70 deg F, set joint members for 50 percent movement each way. Adjust setting proportionately for installation at higher ambient temperatures. Do not install sealant-type joints at temperatures below 40 deg F.
2. Prepare joints and apply sealants to comply with requirements in Division 07 Section "Joint Sealants."

F. Soldered Joints: Clean surfaces to be soldered, removing oils and foreign matter. Pre-tin edges of sheets to be soldered to a width of 1-1/2 inches, except reduce pre-tinning where pre-tinned surface would show in completed Work.

1. Do not solder metallic-coated steel and aluminum sheet.
2. Pre-tinning is not required for zinc-tin alloy-coated stainless steel and zinc-tin alloy-coated copper.

3. Do not use torches for soldering. Heat surfaces to receive solder and flow solder into joint. Fill joint completely. Completely remove flux and spatter from exposed surfaces.
4. Stainless-Steel Soldering: Tin edges of uncoated sheets using solder recommended for stainless steel and acid flux. Promptly remove acid flux residue from metal after tinning and soldering. Comply with solder manufacturer's recommended methods for cleaning and neutralization.
5. Copper Soldering: Tin edges of uncoated copper sheets using solder for copper.

3.4 ROOF FLASHING INSTALLATION

A. General: Install sheet metal flashing and trim to comply with performance requirements, sheet metal manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, set units true to line, and level as indicated. Install work with laps, joints, and seams that will be permanently watertight and weather resistant.

B. Pipe or Post Counterflashing: Install counterflashing umbrella with close-fitting collar with top edge flared for elastomeric sealant, extending a minimum of 4 inches over base flashing. Install stainless-steel draw band and tighten.

C. Counterflashing: Coordinate installation of counterflashing with installation of base flashing. Insert counterflashing in reglets or receivers and fit tightly to base flashing. Extend counterflashing 4 inches over base flashing. Lap counterflashing joints a minimum of 4 inches and bed with sealant. Secure in a waterproof manner by means of anchor and washer at 36-inch centers.

D. Roof-Penetration Flashing: Coordinate installation of roof-penetration flashing with installation of roofing and other items penetrating roof. Seal with elastomeric sealant and clamp flashing to pipes that penetrate roof.

3.5 WALL FLASHING INSTALLATION

A. General: Install sheet metal wall flashing to intercept and exclude penetrating moisture according to SMACNA recommendations and as indicated. Coordinate installation of wall flashing with installation of wall-opening components such as windows, doors, and louvers.

B. Reglets: Installation of reglets is specified in Division 03 Section "Cast-in-Place Concrete" and Division 04 Section "Unit Masonry."

C. Opening Flashings in Frame Construction: Install continuous head, sill, jamb, and similar flashings to extend 4 inches beyond wall openings.

3.6 MISCELLANEOUS FLASHING INSTALLATION

A. Overhead-Piping Safety Pans: Suspend pans independent from structure above as indicated on Drawings. Pipe and install drain line to plumbing waste or drainage system.

B. Equipment Support Flashing: Coordinate installation of equipment support flashing with installation of roofing and equipment. Weld or seal flashing with elastomeric sealant to equipment support member.

3.7 ERECTION TOLERANCES

A. Installation Tolerances: Shim and align sheet metal flashing and trim within installed tolerance of 1/4 inch in 20 feet on slope and location lines as indicated and within 1/8-inch offset of adjoining faces and of alignment of matching profiles.

B. Installation Tolerances: Shim and align sheet metal flashing and trim within installed tolerances specified in MCA's "Guide Specification for Residential Metal Roofing."

3.8 CLEANING AND PROTECTION

A. Clean exposed metal surfaces of substances that interfere with uniform oxidation and weathering.

B. Clean and neutralize flux materials. Clean off excess solder.

C. Clean off excess sealants.

D. Remove temporary protective coverings and strippable films as sheet metal flashing and trim are installed unless otherwise indicated in manufacturer's written installation instructions. On completion of installation, remove unused materials and clean finished surfaces. Maintain in a clean condition during construction.

E. Replace sheet metal flashing and trim that have been damaged or that have deteriorated beyond successful repair by finish touchup or similar minor repair procedures

END OF SECTION 07 62 00

SECTION 07 71 00 - ROOF SPECIALTIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Copings.
2. Roof-edge specialties.
3. Roof-edge drainage systems.
4. Reglets and counterflashings.

B. Related Requirements:

1. Division 06 Section "Miscellaneous Rough Carpentry" for wood nailers, curbs, and blocking.
2. Division 07 Section “Composite Wall Panels” for copings provided as part of composite wall panel system.
3. Division 07 Section "Sheet Metal Flashing and Trim" for custom- and site-fabricated sheet metal flashing and trim.
4. Division 07 Section "Roof Accessories" for set-on-type curbs, equipment supports, roof hatches, vents, and other manufactured roof accessory units.
5. Division 07 Section "Joint Sealants" for field-applied sealants between roof specialties and adjacent materials.
6. Division 07 Section “Standing-seam Metal Roof Panels” for Gutters and Downspouts.

1.3 SUSTAINABLE DESIGN REQUIREMENTS

A. Applicable LEED Credits

1. MRc2
2. MRc4
3. MRc5
4. IEQc4.1

B. LEED Requirements

1. MRc2: CONSTRUCTION WASTE MANAGEMENT

No less than the specified portion of all construction waste from the Project shall be diverted from disposal in a landfill and/or incineration in with the Project Requirements for Construction Waste Management and Disposal. Refer to Specification Sections 017419 Construction Waste Management and Disposal

and 013510 Sustainable Design Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

2. MRc4: Recycled Content Material

   No less than the specified minimum proportion of the building materials shall contain post-consumer and pre-consumer waste materials in accordance with the Project Requirements for Recycled Content Materials. All materials counted towards the computations of the proportion of the Recycled Content Materials shall comply with the standard minimum percentages of post-consumer waste materials and for the minimum percentages of pre-consumer waste materials. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

3. MRc5: REGIONALLY MANUFACTURED HARVESTED MATERIALS

   No less than the specified minimum proportion of the building materials shall be extracted, processed, and manufactured within 500 miles of the Project Site in accordance with the Project Requirements for Regionally Manufactured and/or Harvested Materials. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

4. IEQc4.1: Low Emitting Materials: Sealants and Adhesives

   All sealants, adhesives, and sealant primers used on the interior of the building shall comply with the Project Requirements for Low Emitting Materials – Sealants and Adhesives. Refer to Specification Section 013510 Sustainable Project Requirements. Contractor shall provide LEED verification as per Specification Section 013300 Submittal Procedures.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

   1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.

B. Sustainable Design Submittals:

   1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.

C. Shop Drawings: For roof specialties.

   1. Include plans, elevations, expansion-joint locations, keyed details, and attachments to other work. Distinguish between plant- and field-assembled work.
   2. Include details for expansion and contraction; locations of expansion joints, including direction of expansion and contraction.
   3. Indicate profile and pattern of seams and layout of fasteners, cleats, clips, and other attachments.
   4. Detail termination points and assemblies, including fixed points.
   5. Include details of special conditions.

D. Samples: For each type of roof specialty and for each color and texture specified.

E. Samples for Initial Selection: For each type of roof specialty indicated with factory-applied color finishes.

F. Samples for Verification:

1. Include Samples of each type of roof specialty to verify finish and color selection, in manufacturer's standard sizes.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer.

B. Product Certificates: For each type of roof specialty.

C. Product Test Reports: For copings and roof-edge flashings, for tests performed by a qualified testing agency.

D. Sample Warranty: For manufacturer's special warranty.

1.6 CLOSEOUT SUBMITTALS

A. Maintenance Data: For roofing specialties to include in maintenance manuals.

1.7 QUALITY ASSURANCE

A. Manufacturer Qualifications: A qualified manufacturer offering products meeting requirements that are FM Approvals listed for specified class and SPRI ES-1 tested to specified design pressure.

B. Source Limitations: Obtain roof specialties approved by manufacturer providing roofing-system warranty

C. DELIVERY, STORAGE, AND HANDLING

D. Do not store roof specialties in contact with other materials that might cause staining, denting, or other surface damage. Store roof specialties away from uncured concrete and masonry.

E. Protect strippable protective covering on roof specialties from exposure to sunlight and high humidity, except to extent necessary for the period of roof-specialty installation.

1.8 FIELD CONDITIONS

A. Field Measurements: Verify profiles and tolerances of roof-specialty substrates by field measurements before fabrication, and indicate measurements on Shop Drawings.

B. Coordination: Coordinate roof specialties with flashing, trim, and construction of parapets, roof deck, roof and wall panels, and other adjoining work to provide a leakproof, secure, and noncorrosive installation.

1.9 WARRANTY

A. Special Warranty on Painted Finishes: Manufacturer agrees to repair finish or replace roof specialties that show evidence of deterioration of factory-applied finishes within specified warranty period.

1. Fluoropolymer Finish: Deterioration includes, but is not limited to, the following:

a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.

2. Finish Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. General Performance: Roof specialties shall withstand exposure to weather and resist thermally induced movement without failure, rattling, leaking, or fastener disengagement due to defective manufacture, fabrication, installation, or other defects in construction.

B. FM Approvals' Listing: Manufacture and install copings roof-edge specialties that are listed in FM Approvals' "RoofNav" and approved for windstorm classification. Identify materials with FM Approvals' markings.

C. SPRI Wind Design Standard: Manufacture and install copings roof-edge specialties tested according to SPRI ES-1 and capable of resisting the following design pressures:

1. Design Pressure: As indicated on Drawings.

D. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes to prevent buckling, opening of joints, hole elongation, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Provide clips that resist rotation and avoid shear stress as a result of thermal movements. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

1. Temperature Change (Range): 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

2.2 EXPOSED METALS

A. Aluminum Sheet: ASTM B 209, alloy as standard with manufacturer for finish required, with temper to suit forming operations and performance required.

1. Surface: Smooth, flat finish.

2. Exposed Coil-Coated Finishes: Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

    a. Three-Coat Fluoropolymer: AAMA 620. System consisting of primer, fluoropolymer color coat, and clear fluoropolymer topcoat, with both color coat and clear topcoat containing not less than 70 percent PVDF resin by weight.
    b. Concealed Surface: Pretreat with manufacturer's standard white or light-colored acrylic or polyester backer finish, consisting of prime coat and wash coat with a minimum total dry film thickness of 0.5 mil.

B. Aluminum Extrusions: ASTM B 221, alloy and temper recommended by manufacturer for type of use and finish indicated, finished as follows:

1. Exposed High-Performance Organic Finish: Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

    a. Three-Coat Fluoropolymer: AAMA 2605. System consisting of primer, fluoropolymer color coat, and clear fluoropolymer topcoat, with both color coat and clear topcoat containing not less than 70 percent PVDF resin by weight.

2.3 CONCEALED METALS

A. Aluminum Sheet: ASTM B 209, alloy and temper recommended by manufacturer for type of use and structural performance indicated, mill finished.

B. Aluminum Extrusions: ASTM B 221, alloy and temper recommended by manufacturer for type of use and structural performance indicated, mill finished.

C. Stainless-Steel Sheet: ASTM A 240/A 240M or ASTM A 666, Type 304.

D. Zinc-Coated (Galvanized) Steel Sheet: ASTM A 653/A 653M, G90 coating designation.

2.4 UNDERLAYMENT MATERIALS

A. Felt: ASTM D 226, Type II (No. 30), asphalt-saturated organic felt, nonperforated.

B. Slip Sheet: Building paper, 3-lb/100 sq. ft. minimum, rosin sized.

2.5 MISCELLANEOUS MATERIALS

A. General: Provide materials and types of fasteners, protective coatings, sealants, and other miscellaneous items required by manufacturer for a complete installation.

B. Fasteners: Manufacturer's recommended fasteners, suitable for application and designed to meet performance requirements. Furnish the following unless otherwise indicated:

1. Exposed Penetrating Fasteners: Gasketed screws with hex washer heads matching color of sheet metal.
2. Fasteners for Aluminum: Aluminum or Series 300 stainless steel.
3. Fasteners for Stainless-Steel Sheet: Series 300 stainless steel.

C. Elastomeric Sealant: ASTM C 920, elastomeric silicone polymer sealant of type, grade, class, and use classifications required by roofing-specialty manufacturer for each application.

D. Butyl Sealant: ASTM C 1311, single-component, solvent-release butyl rubber sealant; polyisobutylene plasticized; heavy bodied for hooked-type expansion joints with limited movement.

E. Bituminous Coating: Cold-applied asphalt emulsion complying with ASTM D 1187.

2.6 COPINGS

A. Copings: Manufactured coping system consisting of formed-metal coping cap in section lengths not exceeding 12 feet , concealed anchorage; corner units, end cap units, and concealed splice plates with same finish as coping caps.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following :

    a. Architectural Products Company.
    b. ATAS International, Inc.
    c. Castle Metal Products.
    d. Cheney Flashing Company.
    e. Hickman Company, W. P.
    f. Johns Manville.
    g. Merchant & Evans, Inc.
    h. Metal-Era, Inc.
    i. Metal-Fab Manufacturing, LLC.
    j. MM Systems Corporation.
    k. National Sheet Metal Systems, Inc.
    l. Perimeter Systems; a division of Southern Aluminum Finishing Company, Inc.
    m. Petersen Aluminum Corporation.

2. Coping-Cap Material: Formed aluminum, 0.063 inch thick minimu, and as required to meet performance requirements.

    a. Finish: Three-coat fluoropolymer
    b. Colors:
        1) Color 1- Custom color to match the metal wall panel
        2) Color 2- Architect to select form manufacturer’s standard colors to match precast
        3) Color 3- Architect to select form manufacturer’s standard colors to match SUI building coping

3. Corners: Factory mitered and mechanically clinched and sealed watertight.
4. Coping-Cap Attachment Method: Snap-on , fabricated from coping-cap material.
5. Snap-on-Coping Anchor Plates: Concealed, galvanized-steel sheet, 12 inches wide, with integral cleats.

2.7 ROOF-EDGE FLASHINGS

A. Canted Roof-Edge Fascia and Gravel Stop : Manufactured, two-piece, roof-edge fascia consisting of snap-on metal fascia cover in section lengths not exceeding 12 feet and a continuous formed galvanized-steel sheet cant, 0.028 inch thick, minimum, with extended vertical leg terminating in a drip-edge cleat. Provide matching corner units.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following :

    a. Architectural Products Company.
    b. ATAS International, Inc.
    c. Castle Metal Products.
    d. Cheney Flashing Company.
    e. Hickman Company, W. P.
    f. Johns Manville.
    g. Merchant & Evans, Inc.
    h. Metal-Era, Inc.
    i. Metal-Fab Manufacturing, LLC.
    j. MM Systems Corporation.
    k. National Sheet Metal Systems, Inc.
    l. Petersen Aluminum Corporation.

2. Fascia Cover: Fabricated from the following exposed metal:

    a. Formed Aluminum: 0.063 inch thick minimum and as required to meet performance requirements.
    b. Extruded Aluminum: 0.080 inch thick.

3. Corners: Factory mitered and mechanically clinched and sealed watertight.
4. Splice Plates: Concealed, of same material, finish, and shape as fascia cover.

B. Roof-Edge Fascia: Manufactured, two-piece, roof-edge fascia consisting of snap-on metal fascia cover in section lengths not exceeding 12 feet and a continuous formed- or extruded-aluminum anchor bar with integral drip-edge cleat to engage fascia cover. Provide matching corner units.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Hickman Company, W. P.
    b. Johns Manville.
    c. Metal-Era, Inc.
    d. Metal-Fab Manufacturing, LLC.
    e. National Sheet Metal Systems, Inc.
    f. Perimeter Systems; a division of Southern Aluminum Finishing Company, Inc.

2. Fascia Cover: Fabricated from the following exposed metal:

    a. Formed Aluminum: 0.063 inch thick minimum and as required to meet performance requirements.

3. Corners: Factory mitered and mechanically clinched and sealed watertight.
4. Splice Plates: Concealed, of same material, finish, and shape as fascia cover.

C. Aluminum Finish: Three-coat fluoropolymer.

1. Color: Match copings

2.8 ROOF-EDGE DRAINAGE SYSTEMS

A. Parapet Scuppers: Manufactured with closure flange trim to exterior, 4-inch- (100-mm-) wide wall flanges to interior, and base extending 4 inches (100 mm) beyond cant or tapered strip into field of roof.

1. Fabricate from the following exposed metal:

a. Stainless Steel: 24 Gauge.

2. Size: as indicated on drawings

B. Conductor Heads: Manufactured conductor heads, each with flanged back and stiffened top edge and of dimensions and shape indicated, complete with outlet tube that nests into upper end of downspout, exterior flange trim, and built-in overflow.

1. Fabricate from the following exposed metal:

a. Formed Aluminum: 0.032 inch (0.81 mm) thick.

2. Size: as indicated on drawings

a. Colors: Architect selected form manufacturer's stand colors

1) Metal panel – match metal panel
2) Brick – match brick

C. Splash Pans: Fabricate from the following exposed metal:

1. Formed Aluminum: 0.040 inch (1.02 mm) thick.
2. Size: as indicated on drawings

D. Aluminum Finish: Two-coat fluoropolymer.

1. Color: As indicated on drawings.

2.9 REGLETS AND COUNTERFLASHINGS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following :

1. Castle Metal Products.
2. Cheney Flashing Company.
3. Fry Reglet Corporation.
4. Heckmann Building Products Inc.
5. Hickman Company, W. P.
6. Keystone Flashing Company, Inc.
7. Metal-Era, Inc.
8. Metal-Fab Manufacturing, LLC.

9. MM Systems Corporation.
10. National Sheet Metal Systems, Inc.

B. Reglets: Manufactured units formed to provide secure interlocking of separate reglet and counterflashing pieces, from the following exposed metal:

1. Stainless Steel: 0.025 inch thick.
2. Corners: Factory mitered and continuously welded.
3. Surface-Mounted Type: Provide reglets with slotted holes for fastening to substrate, with neoprene or other suitable weatherproofing washers, and with channel for sealant at top edge.
4. Concrete Type, Embedded: Provide temporary closure tape to keep reglet free of concrete materials, special fasteners for attaching reglet to concrete forms, and guides to ensure alignment of reglet section ends.
5. Masonry Type, Embedded: Provide reglets with offset top flange for embedment in masonry mortar joint.
6. Multiuse Type, Embedded: For multiuse embedment in cast-in-place concrete and masonry mortar joints.

C. Counterflashings: Manufactured units of heights to overlap top edges of base flashings by 4 inches and in lengths not exceeding 12 feet designed to snap into reglets or through-wall-flashing receiver and compress against base flashings with joints lapped, from the following exposed metal:

1. Formed Aluminum: 0.032 inch thick.
2. Stainless Steel: thick.

D. Accessories:

1. Flexible-Flashing Retainer: Provide resilient plastic or rubber accessory to secure flexible flashing in reglet where clearance does not permit use of standard metal counterflashing or where reglet is provided separate from metal counterflashing.
2. Counterflashing Wind-Restraint Clips: Provide clips to be installed before counterflashing to prevent wind uplift of counterflashing lower edge.

E. Aluminum Finish: Three-coat fluoropolymer.

1. Color: As indicated on drawings.

F. Stainless-Steel Finish: No. 2B (bright, cold rolled, unpolished).

2.10 GENERAL FINISH REQUIREMENTS

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, to verify actual locations, dimensions, and other conditions affecting performance of the Work.

B. Examine walls, roof edges, and parapets for suitable conditions for roof specialties.

C. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 UNDERLAYMENT INSTALLATION

A. Felt Underlayment: Install with adhesive for temporary anchorage to minimize use of mechanical fasteners under roof specialties. Apply in shingle fashion to shed water, with lapped joints of not less than 2 inches.

B. Self-Adhering Sheet Underlayment: Install wrinkle free. Apply primer if required by underlayment manufacturer. Comply with temperature restrictions of underlayment manufacturer for installation; use primer rather than nails for installing underlayment at low temperatures. Apply in shingle fashion to shed water. Overlap edges not less than 3-1/2 inches. Roll laps with roller. Cover underlayment within 14 days.

C. Polyethylene Sheet: Install with adhesive for temporary anchorage to minimize use of mechanical fasteners under roof specialties. Apply in shingle fashion to shed water, with lapped and taped joints of not less than 2 inches.

D. Slip Sheet: Install with tape or adhesive for temporary anchorage to minimize use of mechanical fasteners under roof specialties. Apply in shingle fashion to shed water, with lapped joints of not less than 2 inches.

3.3 INSTALLATION, GENERAL

A. General: Install roof specialties according to manufacturer's written instructions. Anchor roof specialties securely in place, with provisions for thermal and structural movement. Use fasteners, solder, protective coatings, separators, sealants, and other miscellaneous items as required to complete roof-specialty systems.

1. Install roof specialties level, plumb, true to line and elevation; with limited oil-canning and without warping, jogs in alignment, buckling, or tool marks.
2. Provide uniform, neat seams with minimum exposure of solder and sealant.
3. Install roof specialties to fit substrates and to result in watertight performance. Verify shapes and dimensions of surfaces to be covered before manufacture.
4. Torch cutting of roof specialties is not permitted.
5. Do not use graphite pencils to mark metal surfaces.

B. Metal Protection: Protect metals against galvanic action by separating dissimilar metals from contact with each other or with corrosive substrates by painting contact surfaces

with bituminous coating or by other permanent separation as recommended by manufacturer.

1. Coat concealed side of uncoated aluminum and stainless-steel roof specialties with bituminous coating where in contact with wood, ferrous metal, or cementitious construction.
2. Underlayment: Where installing metal flashing directly on cementitious or wood substrates, install a course of self-adhering, high-temperature sheet underlayment or polyethylene sheet.
3. Bed flanges in thick coat of asphalt roofing cement where required by manufacturers of roof specialties for waterproof performance.

C. Expansion Provisions: Allow for thermal expansion of exposed roof specialties.

1. Space movement joints at a maximum of 12 feet with no joints within 18 inches of corners or intersections unless otherwise shown on Drawings.
2. When ambient temperature at time of installation is between 40 and 70 deg F, set joint members for 50 percent movement each way. Adjust setting proportionately for installation at higher ambient temperatures.

D. Fastener Sizes: Use fasteners of sizes that will penetrate substrate not less than recommended by fastener manufacturer to achieve maximum pull-out resistance.

E. Seal joints with elastomeric sealant as required by roofing-specialty manufacturer.

F. Seal joints as required for watertight construction. Place sealant to be completely concealed in joint. Do not install sealants at temperatures below 40 deg F.

G. Soldered Joints: Clean surfaces to be soldered, removing oils and foreign matter. Pre-tin edges of sheets to be soldered to a width of 1-1/2 inches except reduce pre-tinning where pre-tinned surface would show in completed Work. Tin edges of uncoated copper sheets using solder for copper. Do not use torches for soldering. Heat surfaces to receive solder and flow solder into joint. Fill joint completely. Completely remove flux and spatter from exposed surfaces.

3.4 COPING INSTALLATION

A. Install cleats, anchor plates, and other anchoring and attachment accessories and devices with concealed fasteners.

B. Anchor copings to meet performance requirements.

1. Interlock face and back leg drip edges of snap-on coping cap into cleated anchor plates anchored to substrate at manufacturer's required spacing that meets performance requirements .

3.5 ROOF-EDGE FLASHING INSTALLATION

A. Install cleats, cants, and other anchoring and attachment accessories and devices with concealed fasteners.

B. Anchor roof edgings with manufacturer's required devices, fasteners, and fastener spacing to meet performance requirements.

3.6 ROOF-EDGE DRAINAGE-SYSTEM INSTALLATION

A. General: Install components to produce a complete roof-edge drainage system according to manufacturer's written instructions. Coordinate installation of roof perimeter flashing with installation of roof-edge drainage system.

B. Downspouts: Join sections with manufacturer's standard telescoping joints. Provide hangers with fasteners designed to hold downspouts securely to walls and 1 inch (25 mm) away from walls; locate fasteners at top and bottom and at approximately 60 inches (1500 mm) o.c.

1. Provide elbows at base of downspout to direct water away from building.
2. Connect downspouts to underground drainage system indicated.

C. Splash Pans: Install where downspouts discharge on low-slope roofs . Set in elastomeric sealant.

D. Parapet Scuppers: Install scuppers through parapet where indicated. Continuously support scupper, set to correct elevation, and seal flanges to interior wall face, over cants or tapered edge strips, and under roofing membrane.

1. Anchor scupper closure trim flange to exterior wall and seal or solder to scupper.
2. Loosely lock front edge of scupper with conductor head.
3. Seal or solder exterior wall scupper flanges into back of conductor head.

E. Conductor Heads: Anchor securely to wall with elevation of conductor top edge 1 inch (25 mm) below scupper discharge.

3.7 REGLET AND COUNTERFLASHING INSTALLATION
